THE INTERNATIONAL YEAR BOOK for 1900, is announced on the first page of this week's LITERARY DIGEST. It is a handsome volume of about 900 royal octavo pages, a veritable encyclopædia for the year 1900, and an invaluable addition to any of the general encyclopædias. Every LITERARY DIGEST reader should take advantage of the offer made in the advertisement of Dodd, Mead & Company.

# You will take a Pianola to Your Summer Cottage

**Why not purchase one now and have the benefit of it during the time you still remain in town?**

**The Presence of a Pianola in the Home** Enables you and every member of your household to play upon the piano even if you literally do not know one note from another—not only one or two selections, but every piece of music ever written for the pianoforte. Grand and light opera, Liszt's Rhapsodies, Sousa's marches, Strauss waltzes, and the latest rag-time hits are practically "on you fingers' ends." You have all the pleasure of hand playing because you control the expression, which is the soul of music.

The spontaneity with which the public has recognized the special value of the Pianola in the country home appears like mental telegraphy. This entertainer is considered a necessity in every well-equipped Summer Home. Have you considered the Pianola question in relation to *your* Summer Home? It would pay you to look into this matter now. The demand for Pianolas during the month of May a year ago reached such proportions that we were considerably embarrassed in supplying instruments in woods to match pianos, and in many instances we were obliged to delay shipment.

The price of the Pianola is $250

*If unable to call, send for catalog E.*

The Pianola being placed in position to play upright piano. The Pianola does not injure the piano in any way Its felt-covered fingers rest upon the piano keys and strike the notes in the proper relation one to another as indicated on the music-sheet. Estimate for yourself the profit and pleasure the Pianola would bring you in a SINGLE year.

# PIANO

Our unique method of selling may interest you. Where no dealer sells our pianos we sell direct; practically bring our large Boston establishment, Factory and Warerooms to your door. We will quote you our lowest prices, explain our Easy Pay System, as available in the most remote village in the United States as if you lived in Boston or New York. More than this, if our careful selection of a piano fails to please you, in other words, if you don't want it after seeing and trying it, it returns to us and we pay railroad freights both ways. We solicit correspondence.

**IVERS & POND PIANO CO.,**
**121 Boylston St., Boston, Mass.**

## A PERFECT FORM.

Send for the "Standard Chart of Physical Culture." Hang it on the wall of your bed-chamber. It shows you by carefully prepared illustrations and instructions how to develop your body to the ideal of perfection. Sent for 10 cents in stamps or silver. State sex.

# A Good Deal of Nonsense

## About "Blood Purifiers" and "Tonics."

Every drop of blood, every bone, nerve and tissue in the body can be renewed in but one way, and this is, from wholesome food properly digested. There is no other way and the idea that a medicine in itself can purify the blood or supply new tissues and strong nerves is ridiculous and on a par with the folderol that dyspepsia or indigestion is a germ disease or that other fallacy, that a weak stomach which refuses to digest food can be made to do so, by irritating and inflaming the bowels by pills and cathartics.

Stuart's Dyspepsia Tablets cure indigestion, sour stomach, gas and bloating after meals because they furnish the digestive principles which weak stomachs lack, and unless the deficiency of pepsin and diastase is supplied it is useless to attempt to cure stomach trouble by the use of "tonics," "pills" and "cathartics" which have absolutely no digestive power, and their only effect is to give a temporary stimulation.

One grain of the active principle in Stuart's Dyspepsia Tablets will digest 3,000 grains of meat, eggs and similar foods and experiments have shown that they will do this in a glass bottle at proper temperature, but of course are more effective in the stomach.

There is probably no remedy so universally used as Stuart's Tablets because it is not only the sick and ailing, but well people who use them at every meal to insure perfect digestion and assimilation of the food.

People who enjoy fair health take Stuart's Tablets as regularly as they take their meals, because they want to keep well. Prevention is always better than cure and Stuart's Dyspepsia Tablets do both; they prevent indigestion and they remove it where it exists. The regular use of one or two of them after meals will demonstrate their merit and efficiency better than any other argument.

THE TOMPKINS-CORBIN Herbal preparations for the treatment of

# Bright's Disease and Diabetes

are not patent medicines and cannot be procured at the druggists. Dr. Tompkins makes a careful and personal investigation before prescribing.

**FREE** If you will send four ounces of urine by express, prepaid, Dr. Tompkins will make a careful and thorough analysis, ABSOLUTELY FREE OF CHARGE, and advise you promptly of the result.

We will gladly send you our book on request. It contains valuable information on these diseases; also, the names of hundreds of prominent persons who have been CURED by our treatment.

## The International Cable Match.

NEITHER SIDE WINS.

The Sixth International Cable-Match between Great Britain and the United States was played on April 19th and 20th, and resulted in a Draw by the score of 5 to 5. The pairings and openings were as follows:

| B'ds. | America. | | Great Britain. | Openings. |
|---|---|---|---|---|
| 1 | Pillsbury | vs. | Blackburne | Sicilian Defense. |
| 2 | Showalter | vs. | Mason | Irregular. |
| 3 | Barry | vs. | Lee | Irregular. |
| 4 | Hodges | vs. | Mills | Ruy Lopez. |
| 5 | Hymes | vs. | Atkins | Ruy Lopez. |
| 6 | Voigt | vs. | Bellingham | Sicilian Defense. |
| 7 | Marshall | vs. | Ward | Q's Gam. Declined. |
| 8 | Bampton | vs. | Jackson | Giuoco Piano. |
| 9 | Newman | vs. | Jacobs | Dutch Opening. |
| 10 | Howell | vs. | Mitchell | Q's Gam. Declined. |

The Americans had the White pieces on the odd-numbered boards, and the Englishmen the White on the even-numbered boards.

Very great interest was manifested in this match, as the United States had won two straight matches, and if they had won this match the magnificent and valuable Newnes trophy would remain permanently in America.

The score:

| *America.* | | *Great Britain.* | |
|---|---|---|---|
| Pillsbury | 1 | Blackburne | 0 |
| Showalter | 0 | Mason | 1 |
| Barry | ½ | Lee | ½ |
| Hodges | ½ | Miles | ½ |
| Hymes | 1 | Atkins | 3 |
| Voigt | ½ | Bellingham | ½ |
| Marshall | 0 | Ward | 1 |
| Bampton | ½ | Jackson | ½ |
| Newman | 1 | Jacobs | 0 |
| Howell | 0 | Mitchell | 1 |
| Total | 5 | Total | 5 |

Record of matches:

| AMERICA. | | | GREAT BRITAIN. | | |
|---|---|---|---|---|---|
| *Year.* | *Won.* | *Lost.* | *Year.* | *Won.* | *Lost.* |
| 1896 | 4½ | 3½ | 1896 | 3½ | 4½ |
| 1897 | 4½ | 5½ | 1897 | 5½ | 4½ |
| 1898 | 4½ | 5½ | 1898 | 5½ | 4½ |
| 1899 | 6 | 4 | 1899 | 4 | 6 |
| 1900 | 6 | 4 | 1900 | 4 | 6 |
| 1901 | 5 | 5 | 1901 | 5 | 5 |
| Totals | 30½ | 27½ | Totals | 27½ | 30½ |

According to the conditions of the contest three matches must be won consecutively, and, on account of this Draw, the entire series will have to be played again, and the games now played do not count.

## One of Our Solvers Beats Pillsbury.

The following game was one of nine played by Pillsbury *sans voir*:

Vienna Opening.

| PILLSBURY. *White.* | A. S ORMSBY. *Black.* | PILLSBURY. *White.* | A. S ORMSBY. *Black.* |
|---|---|---|---|
| 1 P—K 4 | P—K 4 | 11 B—B 4 | P—B 3 |
| 2 Kt—Q B 3 | Kt—Q B 3 | 12 Castles | P—Q 4 |
| 3 P—B 4 | P x P | 13 P x P | P x P |
| 4 Kt—B 3 | P—K Kt 4 | 14 B—Kt 3 | B—K 3 |
| 5 P—K R 4 | P—Kt 5 | 15 Q—K 2 | Q—Q 2 |
| 6 Kt—K Kt 5 | P—K R 4 | 16 Q R—Ksq | R—R 3 |
| 7 P—Q 4 | P—B 3 | 17 Q—K 3 | Castles |
| 8 B x P | P x Kt | 18 B—R 4 | Kt—B 3 |
| 9 B x Kt P | B—K 2 | 19 Kt—Kt 5 | P—R 3 |
| 10 B x B | Q Kt x B | 20 Resigns. | |

## A Fine Ending.

*The Deutsches Wochenschach*, Berlin, publishes the following interesting end-game, which occurred recently between Marco and Hailig:

WHITE (Marco): K on K Kt sq; Q on Q Kt 3; Bs on Q B 4 and Q R 3; Kt on Q B 3; Rs on K B sq and Q sq; Ps on K 5, K B 2, K Kt 2, K R 2, Q R 2.

BLACK (Hailig): K on K sq; Q on K Kt 3; Bs on Q B sq and Q Kt 3; Kt on K Kt sq; Rs on K R sq and Q R sq; Ps on K B 2, K Kt 2, K R 2, Q 2, Q B 3, Q Kt 2, Q R 2.

White, having the move, wins very brilliantly in eight moves.

**SENT FREE AND PREPAID.**

To cure chronic indigestion and constipation perfectly and permanently. The Vernal Remedy Company of Buffalo, N. Y., will send a trial bottle of Vernal Saw Palmetto Berry Wine FREE and PREPAID to any reader of LITERARY DIGEST. Sold at all grocery stores—order it next time.

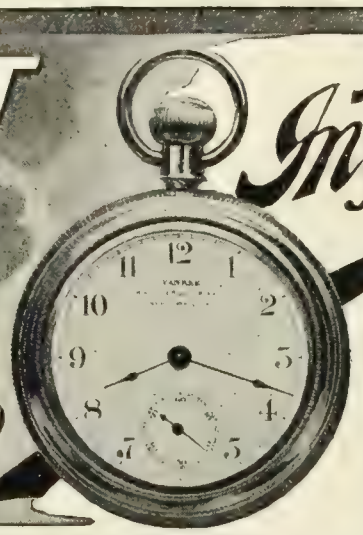
CORRECT TIME FOR A DOLLAR!



The Ingersoll

Guaranteed

The remarkable success which has been awarded the Ingersoll Dollar Watch has not been unearned or easily won. Continued success does not alight at random upon this enterprise or that, but, rather, it rewards the untiring efforts of intelligent and meritorious endeavors.

Nine years of steady natural growth has been the history of this watch, achieved against the prejudices of the many who "knew" that "a watch couldn't be made for a dollar," and in spite of the opposition of dealers who wanted to sell higher priced watches.

No watch today, no matter what its price, enjoys a better reputation for accuracy and reliability than the Ingersoll; its sales are larger by far than those of any other watch in the world. If you need a handsome, trustworthy timepiece, try the Ingersoll, and if it is not entirely satisfactory send it back and get your money.

*For sale by 10,000 dealers throughout the country, or the latest model sent, postpaid, in U. S. and Canada for* $1 00 *by the maker.*

ADDRESS ROBT. H. INGERSOLL & BRO. Dept. 17 67 CORTLANDT ST. NEW YORK CITY.

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, **Pantasote** does not rot, peel or crack, contains no rubber, cellulose or other dangerously inflammable substances, and is not affected by heat, cold or climate. Made in standard colors, plain or figured.

A piece, 18 x 18 inches, sufficient to cover a chair seat, will be sent for 25 cents.

*Sample Free!* *15x6 inches, enough to make a Sewing Companion, sent for 2c. stamp with your upholsterer's name*

"Received the highest award at the Philadelphia Export Exposition over all competitors by recommendation of committee appointed by Franklin Institute."

**Caution!** There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

THE PANTASOTE COMPANY

1877 For 23 Years 1900

we have successfully treated all forms of

CANCER

Tumors and other new growths except in the stomach, other abdominal organs and the Thoracic Cavity

**Without the Use of the Knife**

As a logical result of our success

**The Berkshire Hills Sanatorium**

has, from a humble beginning, become the largest and most elegantly appointed private institution in the world for the treatment of a special class of diseases, and has no rivals. It is conducted by a graduate of standing in the Regular School of Medicine, and upon a strictly ethical and professional basis. Any physician who desires to investigate our method of treatment will be entertained as our guest.

**All Physicians are Cordially Invited**

Upon receipt of a description of any case of Cancer or Tumor, we will mail, prepaid and securely sealed, THE MOST VALUABLE AND COMPREHENSIVE TREATISE ever published on this special subject, and will give you an opinion as to what can be accomplished by our method of treatment.

We do not print testimonials, but can, by permission, refer you to former patients whom we have successfully treated, that were similarly afflicted.

DRS. W. E. BROWN & SON, North Adams, Mass.

Catarrh Cured Free

A wonderful home remedy that quickly cures Catarrh where the mucous drops down the throat and lungs, sickening the stomach and causing bad breath and many diseases including consumption. The discoverer, C. E. Gauss, 341 Main St., Marshall, Mich., will gladly send to any address a trial package of the remedy so you can try it at home and be satisfied that it is a genuine catarrh cure. Write to-day, it's free.

# The Literary Digest

VOL. XXII., NO. 18 NEW YORK, MAY 4, 1901. WHOLE NUMBER, 576

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### GEORGE D. HERRON AND HIS "SOCIAL APOSTOLATE."

A STORM of controversy has been raging during the past few weeks, first in the Iowa papers, later in the press of New York and the East, over the life and character of Prof. George D. Herron, whose recent announcement of the formation of a "Social Apostolate" of Christian Socialism, and initiation of a "Social Crusade" in Chicago and New York, were followed by a suit for divorce brought against him by his wife and granted by the courts at Algona, Iowa, on the ground of "desertion." The facts that led up to the divorce, as printed in press despatches, may be briefly summarized as follows: Dr. Herron, now thirty-nine years old, was ordained a Congregationalist minister at the age of twenty-two, and married at that time Mary V. Everhard, of Ripon, Wis. He had by her four children, the youngest of whom is seven years old. For six years he preached in Wisconsin and Minnesota. Later he accepted a call of the First Congregational Church at Burlington, Iowa, but in 1893 he left this pulpit to fill a "chair of applied Christianity" in Iowa College, Grinnell, created and endowed by one of his parishioners, Mrs. E. D. Rand. Mrs. Rand, with her daughter, Miss Carrie Rand, took up her residence in Grinnell, and constituted herself one of Professor Herron's most ardent supporters. For seven years he lectured regularly at Iowa College; a year ago he resigned, in a letter that elicited commendation even from papers bitterly opposed to his economic teachings, on condition that the endowment fund be left with the college. Last summer he traveled in Europe with Mrs. Rand and her daughter, returning home in October to take part in the political campaign. On March 22 last, Mrs. Herron obtained a legal separation from him, receiving a large alimony under the terms of the divorce. It is inferred that the greater part, if not all, of this alimony was paid by Miss Rand, and that Professor Herron intends to marry her.

Professor Herron's enemies declare that he has been guilty of conduct "unbecoming a Christian and a gentleman," and a trial on such a charge before the Iowa Congregational Association is promised. Most of the Iowa papers have bitterly denounced him, and W. G. Wray, editor of the Grinnell *Herald*, describes him as a "modern Jekyll." A large number of the most prominent of his fellow townsmen unite in declaring that their sympathies are with Mrs. Herron and that they "deem him a cruel and faithless husband." Last week a severe attack upon Professor Herron by Dr. Newell Dwight Hillis, of Brooklyn, successor of Dr. Lyman Abbott, attracted national attention. Dr. Hillis says he is either a "monster" or a "coward," and continues:

"I can not hear what Herron says, because the sobs of his deserted babes thunder in my ears. If he will publicly renounce this woman friend and break his pledges to her for their announced marriage; if he will then rinse out his mouth with sulfuric acid and cleanse it of foul pledges; if he will ask the judge to remarry him to his deserted wife; if he will return to his little children and, when they are old enough to understand it, beg their forgiveness, I will, after I am confident of his penitence, gladly meet him on any platform, tho I will never have any interest in the economic statements of a man whose intellect can be guilty of uch vagaries."

GEORGE DAVIS HERRON.

In a later statement, Dr. Josiah Strong, of New York, makes almost equally severe statements. Professor Herron's conduct, he maintains, and that of his "female accomplice," has been "despicable beyond the resources of my vocabulary to express," and he says that "if all the facts in the case were known these people would not be tolerated in any self-respecting society for an hour." Both Dr. Strong and Dr. Hillis and other prominent clergymen had been invited to speak before a New York City club, together with Professor Herron. On learning that the professor was to be one of the speakers, the others declined, and the above utterances have come as a result of the incident.

Professor Herron refuses to make any reply to his accusers, the reason for his silence being attributed by his intimate friend, Franklin H. Wentworth, to his belief that a policy of "non-resistance" is best in such a case as this, and that "a lie will in the end destroy itself." Mrs. Herron, when seen at Tryon, N. C., last week also refused to discuss the divorce suit, beyond saying that it became necessary for Dr. Herron and herself to separate. "I think that Dr. Herron is exactly right in refusing to say a word for publication," she said. She added she was grateful to Dr. Hillis for his well-meant efforts, but styled his refusal to speak with her former husband as "silly." Her attention being called to the denunciation of the Grinnell residents, she remarked

that "those Grinnell people are actuated not so much by sympathy for me as by a desire to down Dr. Herron politically." She further said that for eight years Miss Rand had been as intimate in their home as if she were a sister of herself or Dr. Herron, and she declared that neither Dr. Herron nor Miss Rand had a better friend in the world than herself. "Professor Herron is a man whose life is based on the highest ethical ideals," says Edwin Markham, the poet; "he is a victim of circumstances. He is placed in a position where he can not state the truth of his case without seeming to disparage others. He is the type of man who would rather suffer wrong than seem to do wrong." Ernest H. Crosby, of New York, who has known Professor Herron for many years, declares that "he is incapable of a low thought or action. He is one of the best men in the country, the latchet of whose shoes these gentlemen who are criticizing him are unworthy to unloose." The Rev. William Thurston Brown, of Rochester, a close friend and a member of the "Social Apostolate," sees nothing disgraceful in the matter of the divorce, contending that the whole tragedy arose from absolute incompatibility of temperament, and that the charge of "desertion" was simply the legal fiction to which both parties agreed in order to get a separation. He continues (in the May *Arena*, New York):

"Those of us who are at all acquainted with George D. Herron know that his soul is white. We do not need any testimony on that point. We who know him know that the every-day consciousness of his life, the only thought of it that he has at all, is that he may make his life a love-offering for the healing of the world's wrong. I do not affirm the infallibility of this man. I only affirm that, being what he is, it is simply impossible for him to harm any human being, impossible for him to think of himself, impossible for him not to make any sacrifice of himself that love could suggest, in order to serve and bless any one. In the life of this man, for these last twelve years that he has been under the glare of publicity, and the subject of microscopic scrutiny and criticism from representatives of the inhuman system of which he has been the most fearless and uncompromising foe, there is not one act of his which was not prompted by a selfless love. And the one act for which he has been so ignorantly and universally condemned, while refusing to open his mouth in one word of self-defense, and which act brought upon him the supreme agony of his life, exhibited qualities of character which are nothing less than divine."

The storm of denunciation directed against Professor Herron's personality has naturally tended to almost entirely obscure the nature of that public work upon which he entered at the beginning of the year. He became associated in January with a "Social Apostolate" of young men who have pledged themselves to give their life and thought to the regeneration of society. Four clergymen joined him in this vow—J. Stitt Wilson, W. H. Wise, Benjamin F. Wilson, and William T. Brown—and also a young Chicago business man, Franklin H. Wentworth. Professor Herron inaugurated his "Social Crusade" in Chicago with a series of ten lectures in the Central Music Hall, while his young disciples spoke in various other parts of the country. He is now giving courses of lectures in New York and Brooklyn, and is also addressing meetings in New England under Social-Democratic auspices. The following extract from his lecture on "Socialism and Liberty" is printed in his organ, *The Social Crusader* (Chicago), and gives a partial exposition of his thought:

"There is but one problem underneath all the problems which beset us. It is the conflict between the self-governing idea of life and the capitalistic idea on which the present civilization is builded. The self-governing idea comes in with the Democratic-Socialist movement. . . . Socialism comes not as a remedy for the evils of existing society, but as a program of principles for a new society; or rather, let us say, as the first proposition for social order that has ever been presented to the world. Mankind has not yet had anything that can properly be called social order. Society has not yet been created. The materials for the building of a human world are here, but the creation remains to be undertaken. The task of creating a coherent and free society is the mightiest to which man has summoned himself, and it is the task which now presses urgently upon us. Socialism does not recognize as society anything that has hitherto come, but it sees in every preceding human stage a perparation for society. The Socialist is an evolutionist, but with this difference between himself and much that is called scientific evolution; namely, that the social will is henceforth to be the supreme factor in evolution. Hitherto, what we call society has been the evolution of blind forces which man did not understand and could not control. But we are reaching that moment when man will become the evolutor as well as the evolved; when man will become conscious of himself as the decretal and creative force in evolution. Man will henceforth take evolution in his own hands, and fashion creation according to his own will, and make out of society what he wants it to be. Henceforth the social will is to become the creator and master, which the winds and waves shall at last obey, and at whose word the strifes and storms of history shall be stilled, and give back their responsive peace to the masterful social will of love.

"Socialism, which aims at the common ownership of the means of life, is the only dynamic movement which is adequately preparing the way for the kingdom of heaven on earth, in which the soul of each man may find a complete, free, and joyous life."

---

## WHITE SUPREMACY IN ALABAMA.

AS the Montgomery (Ala.) *Advertiser* puts it, "the stalwart manhood of Alabama declares in favor of holding a constitutional convention," and "Democracy wins the day for a pure ballot and white supremacy." In other words, the voters of Alabama, on Tuesday of last week, favored by a majority of between 20,000 and 25,000 the proposition to hold a constitutional convention in Montgomery on the 21st of this month. The principal work of the convention will be the revision of the franchise law so as to bar the illiterates, or those who own no property, or both, from the ballot, but in such a way as to fulfil the pledge made by the last Democratic state convention in the following words: "We pledge our faith to the people of Alabama not to deprive any white man of the right to vote except for conviction of infamous crime." The State has about 1,000,000 white and about 800,000 colored inhabitants. We summarize as follows the comment of the Mobile (Ala.) *Register*:

"White supremacy is essential to Alabama's prosperity. It is an observed fact that negroes have not the gift of government. The white man has had to assume control even where, according to the principles of our Government, it would seem that the negro, being in the majority, should rule.

"How has it been accomplished? Simply by the white men denying to the negroes the right to interfere. We need not describe to the intelligent voters of this county what method has been followed. It has not been one that the conscience of good men could approve except on the ground that self-preservation is the highest law. Greatly has it been deplored that the whites have had to resort to measures that could not be commended in themselves, but justified only as necessary means to a good end. Now, those of our brothers of the black belt in this State appeal to us and to all good citizens in this State, to put an end to the necessity of the practises by which they have controlled elections in districts where the majority of the inhabitants are illiterate negroes.

"It is a plea that no reasonable man can resist. If we know the value of our civilization and the necessity of its maintenance in the face of the dark burden of ignorance that overshadows it, we must listen to the appeal and give our aid in this cause. It is a peaceful revolution, coming as the capstone of the physical revolution of twenty-seven years ago."

The Virginia constitutional convention will meet for a similar purpose in Richmond on June 12. "We of Tennessee," says the Memphis *Commercial-Appeal*, "would consider ourselves fortunate if we were as well on the way to having a new organic law

as Alabama; and tho our legislature in its folly has denied the people a chance to revise their constitution, we are glad to see that Alabama has secured what we have lost."

## EFFECT OF THE CUBAN COMMISSION'S VISIT.

IN spite of the evident opposition of the Cuban constitutional convention to the Platt amendment, and the report that public opinion in the island is strongly against it, the delegates who have been visiting Washington to induce our Government to change its mind appear, instead, to have undergone that mental process themselves, and to have been converted by the President and the Republican leaders into the belief that the best thing for Cuba to do is to accept the measure. The Washington correspondent of the New York *Evening Post* reports a prominent member of the Cabinet as saying: "We believe that the Cuban matter is pretty nearly settled, and that the commissioners will recommend, on their return home, the acceptance of the Platt amendment in its entirety." And the Washington correspondent of the New York *Tribune* reports:

DR. PEDRO LLORENTE. DR. DIEGO TAMAYO. DR. DOMINGO CAPOTE.
SEÑOR PEDRO ENTENZA. GEN. PEDRO BETANCOURT.

THE CUBAN DELEGATES.

"Whatever there was of the Cuban problem in a political sense has virtually been solved. The five commissioners representing the Constitutional Convention have practically signified their intention to return to Havana at the earliest possible date and earnestly recommend the acceptance of the Platt amendment defining the permanent relations that are to exist between the republic of Cuba and the United States. While no formal agreement to this effect has been announced or reached, yet it can be said on trustworthy authority that the Cuban visitors have unofficially indicated their acquiescence in the provisions of the Platt amendment."

Domingo Mendez Capote, president of the Cuban Constitutional Convention and a prominent member of the commission, indorses as "an excellent presentation of public opinion" in Cuba an article in *Collier's Weekly* signed by Juan Gualberto Gomez, the leader of the radical element in the convention. Gomez (not the insurgent general) declares that "the Platt amendment is regarded by Cubans as an attempt to place Cuba under the jurisdiction, sovereignty, and control of the United States," and he reports that there is an especially strong feeling against the provision in the Platt amendment giving the United States the right to intervene in Cuban affairs "for maintenance of a government adequate for the protection of life, property, and individual liberty." He says:

"To the Cuban mind it appears hard to reconcile this provision with the idea of a Cuban government. In fact, Cubans believe that if the United States is to decide when a Cuban government is or is not 'adequate,' if the United States is to have the power to send its troops against that government without consulting the people of Cuba, that the government of the island will then really be only in the hands of such persons as shall be selected by the American administration, the 'free people' of Cuba having absolutely no voice in the matter of choosing their own rulers and representatives. In other words, Cubans seem to feel that, should they accept this clause, their government would become null and void."

Gomez says further:

"Cubans are highly intelligent, and are using every available fact to show the world that they are in deadly earnest and intend neglecting nothing that will strengthen their case. One of the most telling points made is: the second paragraph of Section 4, Article 4, Constitution of the United States, provides that the federal Government shall not have the right to intervene in affairs of any State '*except when requested to do so*' by the legislative power or by its executive when the legislature can not convene. This with a mere State. Yet the right to intervene in Cuba, to control her treaty-making powers and financial arrangements, is demanded by Congress as a reward for having *declared*, on April 19, 1898, that 'Cuba is, and of right ought to be, free and independent.'

"To sum up: Cuban opinion, in a few words, is—the Platt amendment violates the Teller resolution and the Treaty of Paris because it demands jurisdiction, sovereignty, *and* control over Cuba, besides ordering Cubans to give up valuable territory in exchange for the independence promised. The hypothesis that it is necessary as a protection against foreign powers is not conceded, because the Monroe doctrine constitutes a sufficiently strong bulwark to keep out invaders. Finally, the Platt amendment can not be enforced because it is a contradiction of itself. Paragraph one declares that Cuba shall not yield territory, *for any purpose*, to ANY foreign power; yet paragraph seven demands

McKINLEY: "Let me give you a sample of my taffy to take home."
—*The St. Louis Republic.*

lands for coaling-stations for the United States. The Supreme Court of the United States declared that Cuba is foreign territory. Therefore, according to the highest tribunal in the great republic, the United States is one of the 'foreign powers' mentioned in the opening clause of the Platt 'rider.'"

The feeling in Cuba favorable to the amendment is well represented by *La Lucha* (Havana), which declares that "it can be said with certainty that the Platt law is to-day accepted not only by all the representative classes in Cuba, and by the conservative party, but also by an overwhelming majority of the radicals, only being rejected by a small number of Sansculottes." *La Lucha* not only favors the amendment, but argues for a still closer relation to this country. It says:

"With Porto Rico, the Philippines, and Hawaii all enjoying the enormous advantage in the American markets for their sugar and tobacco, and with the stimulus to production which that guaranty of a good market will mean for these islands, the same products from Cuba, unless they are similarly placed, will stand a poor chance. . . . . .

"The fact is that Cuba is completely and absolutely dependent on her powerful neighbor. It is useless to talk of the necessity that the States are in of taking Cuban sugar, as some of the delegates in the convention have been doing. The time will shortly come when the States will almost wholly be self-supplying, as far as sugar and tobacco are concerned.

"Cuba, however, may either become a prosperous country or a poverty-stricken islet.

"To become the former, she must by all the means in her power obtain the greatest advantage spossible for her productions, in order to be able to stand against a competition sure and strong which is likely to arise. However, if she kicks over the traces, there will be no favors granted, and with no favors Cuban prosperity becomes a mere shadow; without prosperity there will be no wealth, and without wealth and the stimulants to progress that it brings, retrogression and stagnation are assured. Cuba will lapse to semibarbarism."

## SOUTHERN PRESS ON THE McLAURIN MOVEMENT.

THE efforts of President McKinley and Senator McLaurin to start a "white men's Republican Party" in South Carolina (considered at some length in these columns last week) has not aroused much vigorous opposition in the Democratic papers of the South; a number of them, indeed, seem to approve the idea. General M. C. Butler, who preceded Senator Tillman in the United States Senate, declares that Senator McLaurin's course has his approval; Senator Tillman, on the other hand, has come out in strong opposition. As Senator McLaurin's term in the Senate has still two years to run, and as the Federal patronage of the State will probably be at his disposal, a formidable fight between the two Senators is expected. Two resolutions of censure for Senator McLaurin were introduced in the state legislature while he was supporting the Administration policies in the Senate, but both failed.

Senator McLaurin's contention is that expansion, a protective tariff, the gold standard, and shipping subsidies mean prosperity for the South, and he appeals to the Southern manufacturers and the men in their employ to support these doctrines. The Louisville *Courier-Journal* (Dem.) indorses his view and says that his contention sounds as if the Senator has been a studious reader of its columns. The Greenville (S. C.) *News* (Dem.) would also abandon "old hates and moth-eaten doctrines," and it thinks that the Senator's position "will make the young men of this State honor him, and their fathers with the interest of their sons at heart support him." The Richmond *Times* (Ind. Dem.) declares that there is a large element in the Democratic Party in the South who "are sick and tired of the party yoke," and it believes that "if they were left free to vote their sentiments, they would undoubtedly act with the Republican Party in national elections." The McLaurin movement, it goes on to say, "may be the beginning of a great political revolution in the South, may be the beginning of the breaking up of the solid South." The Norfolk *Virginian-Pilot* (Dem.), too, thinks that "if the organization of a Republican Party, on the lines indicated, is consummated, the outlook is for the most violent political upheaval that South Carolina has experienced since the overthrow of the carpet-bag régime." Says the Louisville *Evening Post* (Dem.):

"Senator McLaurin says just what thousands of people are thinking and saying all over the South. We want to identify ourselves with every forward movement of the nation, whether it be industrial, commercial, or military. The Democratic Party, as now organized, is a reactionary party; has no part in the present and no faith in the future. It is not the party of Jefferson, for it has repudiated or abandoned nearly everything for which Jefferson stood. It advocates every heresy Jefferson combated, and is now looking for a leader more extreme than Bryan and more intractable than Tillman. . . . Senator McLaurin shows that in the South, as here at home, the so-called Democracy is an obstacle to material and political progress, and this gives a double warrant for a vote against the organization."

"A change of some sort must come," declares the Macon (Ga.) *Telegraph* (Dem.); "the South is too intelligent to go on training forever after revolutionary enthusiasts of the far West." The Mobile *Register* (Dem.) protests against the South being "condemned to banishment forever" from the fruits of political victory by "the obstinacy of political leaders who live in a fog, indulge in foolish fancies regarding national finances, and are continually butting their heads against the substantial interests of the country." The Nashville *Banner* (Dem.) calls for a rehabilitation of the Democratic Party "which will sever it entirely from Populism and the fads and vagaries that have been catered to by the Bryan domination in its councils." The Jacksonville (Fla.) *Times-Union* (Dem.) thinks that the Southern Democrats have gained in local self-government as much as they have lost in national reverses, and it goes on to say:

"The South will not rashly risk what she has gained—she will not endanger home rule under any temptation that may be placed before her eyes. But she has heretofore taken her medicine with closed eyes—anything that was not Republican. But give her Republicanism that does not mean the rule of the ignorant and the triumph of the base, and she might be able again to vote as she thought. Prove that Republicanism is not the most dangerous of all public policies to her and she would not be compelled to maintain other errors only less fatal to the future she is steadily winning and means to have—make her safe, and she can listen to both sides—but not till then.

"She will not hate the Republicanism that forbears to ruin her—she may recognize some good in the policies that no longer attack her in the most vulnerable joints of her armor. Let the President proceed—he is three years behind time, but he is welcome to all he gets out of the experiment."

An adverse view is taken by the Charleston (S. C.) *News and Courier* (Dem.), which does not think that the prospect of building up a white Republican Party in the South is very encouraging, unless the defection among the white voters is far more serious than surface indications show. "The fact that the white Republican Party will have to depend in a large measure upon the black Republican Party," says *The News and Courier*, "does not promise well for its success in its first campaign, at least, and if the old Republican guard is to be thrown out, the chances are that the new lights will not have the solid support of the party as it is now organized, and without that there will not be much chance of the new organization winning anything more than the few offices which the administration at Washington has to bestow." The Atlanta *News* (Dem.) thinks that Senator McLaurin is the victim of a confusion of ideas. It says: "Democrats believe in expansion, but they do not believe in land-grab-

bing. They think it as bad to steal from a Filipino, or take his liberty and property by force, as it is to rob or plunder at home. Imperialism claims the virtues of expansion in the same way that the devil uses the livery of heaven to cloak his iniquity. It is an old game that should be exposed every time it is attempted, and it is sad to see a Southern Senator deceived thereby."

The New York *Age* (Afro-American) says:

"A great many Republican Presidents in the past, beginning with the miserable R. B. Hayes, have tried the white party scheme and come to grief. There is plenty of grief for all who shall try it in the future. If there is any disposition to prance out the scheme now prance it out. We are ready for it. If the black leaders in the South and the black voters in the North and West do not succeed in pumping the life out of it, then we are ignorant on the subject of political harikari. There is no room in the Republican Party for a white Republican Party as such."

## LENDING MONEY TO EUROPE.

THE loan of $300,000,000 which Sir Michael Hicks-Beach, Chancellor of the British Exchequer, is negotiating, and one-sixth of which, upon being negotiated in this country, was subscribed many times over, draws attention to what is regarded in many quarters as a coming change in the world's financial center. "It used to be that London was beyond question or dispute the financial capital of the world," remarks the Philadelphia *Inquirer*, "but that has ceased to be the fact." It continues:

"The time when London enjoyed a virtual monopoly of the business of financing governments in need of ready cash has passed away. The financial center is shifting or has already shifted from the Old World to the New; and while it may be disagreeable for Englishmen to have this circumstance brought home to them as at the present time, they may console themselves with the reflection that they are not debarred from participating in the benefits resulting from the new dispensation."

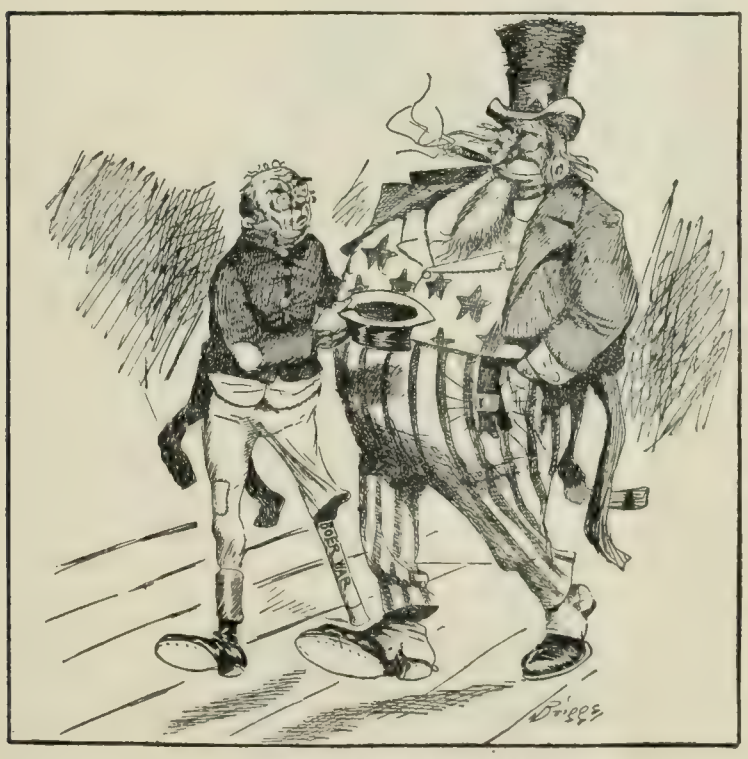
The New York *Journal of Commerce*, commenting in similar vein, observes that "an American subscription of $150,000,000 to the new British loan is by far the largest amount ever offered for investment in a foreign loan in this country," and regards the incident as one full of significance in its relation to the "widening financial horizon of the United States." It declares:

"Our people have not yet acquired a cosmopolitan range of investment, and are decidedly timid about placing their money in quarters where Frenchmen, Englishmen, and Germans have long been accustomed to invest freely. This is a fact of which the promoters of the construction, by American capital, of the Hankow-Canton Railroad were compelled to take cognizance, and which greatly facilitated the acquisition of the control of this promising enterprise by the so-called Belgian syndicate. An investment in British consols can hardly be said to be an evidence of growing boldness. It is rather a proof of the existence of large accumulations of capital that seek to be placed only where the risk is reduced to a minimum. The investment of any large amount of American capital abroad is, nevertheless, part of a process which this generation may see attain imposing proportions, and which will certainly not stop short at investments in the government bonds of Great Britain, Germany, or Russia. The gilt-edged securities of Europe will command a market with us just as our own become scarce or dear, and will attract the capital for which safety is reckoned the prime requisite. But the habit of foreign investment, once formed, will tend to familiarize our capitalists with many opportunities offered by the money markets of the world of which they are at present ignorant. It may also indirectly tend to the promotion of American export trade, since there is apt to be a close connection between the kind of enterprise that demands a considerable investment of capital and the sale of merchandise to the country in which the enterprise is located."

"KIPLING BE BLOWED!"

—*The Detroit News.*

The New York *Tribune* sounds a pessimistic note in considering the loan and the circumstances which made it necessary. "John Bull will pay the bill," it says; "there can be no question of the ability of the British nation to meet the financial cost of



ON THE WORLD'S HIGHWAY.

JOHN BULL: "Oh, sir, Hi was once 'appy and prosperous like you, sir. Would you be so kind——" —*The New York Journal.*

## SNAP-SHOTS OF JOHN BULL.

the war"; but "never from mine or veldt can arise the thousands of strong young lives that have been spent." The Indianapolis *News* takes a much more hopeful view of the situation. It says:

"In spite of the talk about 'the most disastrous budget' in the history of the country, the burden of taxation, the frightful cost of the war, and the ruin that threatened the nation, the Government finds no difficulty whatever in placing a loan of $300,000,000. Indeed, it is demonstrated that it could have borrowed twice as much money on the same terms.

"With their new taxes in operation and their loan all subscribed for, the English statesmen will, no doubt, take a more cheerful view of life. There are many difficulties yet to be overcome, and many problems to be solved, but Great Britain is not yet a 'dying nation.' She is probably as important a factor in the affairs of the world to-day as she ever was."

## THE WALL STREET BOOM.

WHAT the New York *Press* calls "the crazy keno game now going on in Wall Street" has led a number of papers to predict that a crash may soon be heard in that quarter. The Chicago *Record-Herald* remarks: "Wall Street breaks a record every day or two now, and is very likely to break a lot of other things some forenoon when they aren't looking for it." On several days in the last two weeks the number of shares sold in the stock market have exceeded 2,000,000, and last Monday they reached the enormous total of 2,600,000. The total for the previous week was 10,000,000. Prices have been rapidly advancing during this boom period, and, indeed, the advance has been going on for over four years. The average price of the twenty principal active railroad stocks has risen nearly two hundred per cent. since August, 1896. A drop in values is freely predicted as likely to come any day, but many papers agree with the Louisville *Courier-Journal* that "it need not alarm anybody outside of Wall Street." *The Courier-Journal* goes on to say:

"As a matter of fact, it can not reasonably be said that a 'bear panic' in stocks would lead to a return of hard times as we experienced in the dark days between 1893 and 1897. Such speculative excesses have certainly not been practised in legitimate trade. Intrinsically, business conditions were never better if so good. People are proportionately freer from debt than they have been since the war, and they have not only more real property, but vastly more money. From every part of the country comes the same story with the result that bank clearings were 76.6 per cent. larger for the week ended last Thursday than for the corresponding week in 1900, itself a most prosperous year. The interest rate is also very low and individual corporation credits were never so good. Banks and business men alike say that collections are made without effort, and the records of the county clerks all over the United States, particularly in the West and South, show such a lifting of mortgages as was never heard of before in this generation. The good times have started from the ground up. Still, prices are steady and there is no disposition on the part of the trade to put commodities unduly high as stocks have been.

"Under these circumstances and keeping in mind that active railroad building ceased when this was a nation of sixty millions whereas now we have eighty millions of prosperous people, the speculation in Wall Street is not so astonishing, tho it seems it has been carried too far. When such hard-headed business men as J. Pierpont Morgan and James J. Hill pay double the par value of the shares of the Burlington Railroad and feel sure they have a good bargain, it is natural that the 'lambs' should fall over themselves in an indiscriminate rush after other supposed good things. These 'lambs' are likely to be sheared very soon, but that is an old process and will not disturb the security of legitimate trade. Genuine panics are not started in Wall Street, but come when Wall Street recognizes the development of adverse conditions elsewhere."

## DO WOMEN WORK TOO HARD?

MR. C. B. MYER, a Chicago delegate to the Metal Polishers, Buffers, Platers, and Brass Workers' Association in Milwaukee, a few days ago, voiced a sentiment that is said to have met hearty approval in that gathering when he declared that "women have no business to do brass polishing," because "it is the most unhealthful business they could undertake." He went on to say: "In the Wolff Manufacturing Company we set about marrying them, and in the last year and a half we have made about seven matches. We are not trying to freeze them out of work, but simply to get them something better."

A similar sentiment is expressed by Mr. Henry T. Finck, journalist, sociologist, psychologist, and musical critic, in a vigorously written article in *The Independent* in which he asks: "Shall women be flowers or vegetables?" and he plainly regis-

CHANGE PARTNERS!

## CURRENT CARTOONS.

ters his own preference that they should be flowers. He recalls to mind the command, "Consider the lilies of the field, how they grow; they toil not, neither do they spin"; and asks: "If they did toil, would they be so beautiful?" Hard toil, Mr. Finck believes, robs woman of her best qualities, and he urges the young woman to remain in the home rather than to seek outside employment in the business world. Yet he observes regretfully that "the epidemic delusion that home is no place for a girl—a delusion as dangerous to the soul as the plague is to the body—seems to be gaining ground daily," and he goes on to say:

"An incalculable amount of harm is done by this foolish and criminal warfare on home life. Instead of being encouraged in the tendency to leave the refining atmosphere of home, girls should be taught that, except under the stress of poverty, it is selfish as well as suicidal on their part to go out and work. Selfish, because they take away the work which poor women and men absolutely need for their daily bread; suicidal, because by offering themselves so cheaply to employers they either drive out the men or, by lowering their wages from the family standard to the individual standard, make it impossible for them to marry; wherefore these same girls who had hoped, by thus going out to work, to increase their marriage chances, are left to die as old maids, or 'new women,' as they now prefer to call themselves. Had they remained at home and cultivated the graces and refined allurements of femininity, their chances for a good marriage and a happy life would have been much better. Men still prefer, and always will prefer, the home girl to any other kind. They want a girl who has not marred her beauty and ruined her health by needless work, or rubbed off the peach bloom of innocence by exposure to a rough world; a girl who has been trained by a sensible mother to understand and, if necessary, perform, all the various functions and details that make home a comfort and a joy."

Mr. Finck hastens to say that his remarks do not apply to "the *poor* girls and women, who *must* work," and he thinks that "everything should be done to provide labor opportunities for them," altho "they should not be allowed, as they are at present, to precipitate themselves blindly into nearly every kind of a job that men have heretofore performed in civilized countries." Women now perform about forty-five per cent., or nearly half, of our factory work, work that Mr. Finck believes has an evil effect upon their characters and their health; and he supports this belief by citing conditions in Belgium, Russia, France, England, Germany, and our own country, altho he thinks that the New World is better than the Old in these matters. "The number of girls who are compelled by poverty to leave home," declares Mr. Finck, "is much smaller than is commonly supposed," and he continues:

"Possibly the Rev. S. G. Smith, sociologist of the Minnesota State University, went too far when he said that 'for women to work is a sin,' and that 'the world would be better off if all women were turned out of their jobs to-morrow.' But certain it is that the wholesale employment of women in unhealthful work is an evil which calls for more and more stringent legislative interference. It is sapping the vitality of a large proportion of our women, and without healthy women there can be no healthy sons and daughters. Some employers, when asked why they engage girls, frankly confess that cheapness is the motive (the average earnings of American women workers are under $4.50 a week); others give various fanciful reasons; but that cheapness is the real reason is proved by the increasing tendency toward child labor, which is cheapest of all. There has been an enormous increase within the last decade in the employment of girls under eighteen; and this results in such pitiful spectacles as the recent strike in Paterson of seventy-five factory girls averaging only twelve years of age and compelled, for less than $3 a week, to do work which involves walking up and down a room more than twenty miles a day. The swollen feet, bent forms, and tired faces, prematurely aged, of these girls, who should be playing with their dolls or going to school, are a terrible indictment of a 'civilization' which permits such barbarous cruelty."

The time is coming, Mr. Finck believes, when women will not be encouraged, as now, to engage in these injurious occupations:

"Having once discovered the charm of the eternal womanly, men will never allow it to be taken away again, to please a lot of half-women who are clamoring for what they illogically call their 'rights.' Men will find a way of making these misguided persons understand that it is as unseemly for them to be—as many of them are now—butchers, hunters, carpenters, barbers, stump-speakers, iron and steel workers, miners, etc., as it would be for them to try to take the place of our soldiers, sailors, firemen, mail carriers, and policemen. All employments which make women bold, fierce, muscular, brawny in body or mind, will be more and more rigidly tabooed as unwomanly. Woman's strength lies in beauty and gentleness, not in muscle. In literature, journalism, art, science (especially electric); in education, charity work, dressmaking; in typewriting (where there is no moral risk), watchmaking, jewelers' work, flower raising or making, and a hundred other branches of work that require no muscular toil, women and girls have all the opportunities for earning a living they need. Let us by all means throw open to them all employments in which their health, their purity, and their womanliness do not suffer; but let this be regarded, not as a special privilege and an indication of social progress, but as a necessary evil, to be cured in as many cases as possible by marriage or some other way of bringing the workers back to their deserted homes."

## TOPICS IN BRIEF.

MR. BRYAN fears that the Democratic Party will be republicanized. Something on that order happened last November.—*The Baltimore American.*

Is Cuba a nation, a state, a territory, a republic, a colony, an annex, an ally, or a dependency? The Cubans would like to know.—*The Philadelphia Ledger.*

A FRENCH physician declares that the Chinese are a very nervous people. It is difficult to see how they could be otherwise at present.—*The Kansas City Journal.*

PERHAPS the object of the Cuban commission was to find out whether the resolutions of intervention and the Platt amendment were really passed by the same body.—*The Detroit News.*

"Do you know what the Golden Rule is?" asked the man who remonstrates. "Not exactly," answered the cold-blooded person, "but since they dragged it into Ohio politics I have a suspicion it is not what it used to be."—*The Washington Star.*

A DETROIT street-railway magnate has neglected to provide his street-cars with a certain safety appliance, and for this neglect is liable to imprisonment for 3,039 years. This seems like quite a period, but, of course, he could cut it down some by good behavior.—*The Cleveland Plain Dealer.*

THE announcement is made that Mexico has signed The Hague peace conference agreement. This does not mean, however, that Mexico must go to war. Most of the other signers are fighting, but the obligation imposed does not really require a state of belligerency.—*The Kansas City Journal.*

THAT was certainly a cheerful bit of optimism in the budget statement of Sir Michael Hicks-Beach, British Chancellor of the Exchequer, when he said: "The receipts from the death duties were £1,500,000 below those of the preceding year, but he had better expectations for next year."—*The Louisville Courier-Journal.*

A NEW YORK woman married recently a French count who turned out to be a horse doctor. It is not often, however, that these foreign matrimonial alliances turned out so well. This woman, for instance, might have married a horse doctor who turned out to be a French count.—*The Memphis Commercial-Appeal.*

SENATOR DEPEW'S opinion of the United States Senate is that it displays "an absence of jobbery, an unselfish devotion to the public service, a sincere and hopeful patriotism, and a broad, comprehensive and statesmanlike grasp of the necessities of the country and the possibilities of its development worthy of the best days of the republic." The history of the last river and harbor bill showed that conclusively.—*The Philadelphia Ledger.*

# LETTERS AND ART.

## "LITERARY RUBBISH" AND ITS PRESENT VOGUE.

MR. W. D. HOWELLS has so long occupied the position of a public literary censor in America that we have many times had occasion to quote his views of current tendencies. In "The Easy Chair" last month he brings up again the subject which is pressing upon the attention of all serious critics and lovers of genuine literary progress, as to what is the significance of the present cataract of "historical" and "romantic" literature, which finds a ready and profitable market in such vast quantities. He writes (*Harper's Monthly*, April):

"'Have you ever,' the Easy Chair asked, 'had your doubts whether a book was especially worth reading because its sale had reached a hundred thousand, or two, or even five hundred thousand?'

"The editor looked warily about the den, and seeing that he was quite alone with the Easy Chair, he confessed: 'Yes; I have already expressed grave doubts of that sort, but nobody else seems to have them, and as I do not like to be odd, I do not keep insisting upon mine.'

"'I am sure you are right,' said the Easy Chair. 'Perhaps other people have them, and if you insisted upon them, you would not find yourself so odd, after all. Is the fact that a book has not sold half a million copies proof that it is poor literature?'

"'I should be sorry to think so,' said the editor. 'I have written books, and I am afraid it would rule mine out, except in the very few cases where they have passed that figure.'

"'But would you like to have written the books that sell half a million? Candidly, now!'

"'Candidly, then, I wouldn't. But I would rather write them than read them; I think it would be easier. A certain kind of man would write one of the recent enormous successes, because, if he wished to write at all, he would have no choice but to write that kind of book. He would be made so, but no one could be imaginably made so that he must read such a book, in the sense that the author must write it.'

"'I don't know about that,' said the Easy Chair, musingly. 'The fact that there are two or three or ten or twenty men who must write trashy books possibly implies the fact that there are two or three or twenty millions who must read them. Have you any philosophy as to the vast popularity of the books that have been lately filling the world with the noise of their publicity? It used to be called advertising, but I rather like the Gallic neatness of the new word.'

"'No, unless it is the publicity that does it. Only, the publicity seems not to come first, always.'

"'It can't be the publicity that does it, then, tho the publicity helps. The thing seems largely meteorological. It is scarcely more an affair of volition than the weather. A certain atmospheric pressure in the material world causes it to rain water, and a certain atmospheric pressure in the literary world causes it to rain rubbish. We suppose that in both cases the rain comes from the clouds, from above, but in both cases it comes primarily from the ground, from below. What you want to do in order to account for the literary rubbish which now prevails is not to analyze the authors, who are the mere modes of its discharge, but to ascertain the condition of their readers, from whom they received it as an imperceptible exhalation, and who received it back from the authors in an appreciable form.'

"'Oh, it's all very well to say that,' the editor protested. 'But the causes are so recondite that no inquiry can reach them, and one conjecture would be as good as another. The phenomenon is not only extraordinary in quality, but in quantity. The rubbish is not only rubbish, but it is rubbish in vaster amount than ever before. It is as if the rainfall should have been all at once increased tenfold over the whole territory of the United States. The rubbish-fall in the last year of the nineteenth century was greater than ever was known in the history of literature before. How do you account for that?'

"'By a very simple and very obvious fact. An immeasurably greater area of humanity has been brought under cultivation or reclaimed from absolute illiteracy than ever before. In the material world the analogous sort of thing, the tilling of waste land, increases the rainfall, and in the mental world the upturning of waste mind increases the rubbish-fall, because in both cases the clouds receive a greater exhalation from the space below, and give it back proportionately.'"

Mr. Howells, however, is not ready to believe that there are either too many readers or too many writers. The present stage is not final:

"We must not think the lovers of a half-million-copy novel are recreant lovers of Hawthorne, or George Eliot, or Mr. Thomas Hardy. The most part of them never heard of those authors. To leave the meteorological figure we have been working up to this point, and try something arboricultural, we may liken our immeasurable mental level to the prairie country, which, when men begin to plant it with trees, they first plant with the coarse, rank cottonwood. After a generation or two of cottonwood, they can grow oaks and elms and maples on the prairie, but not at first. You may be sure that the plains in which the literary cottonwoods now flourish have never grown oaks or elms or maples. Up to the time the readers of the recent successes began to read them they had read dime novels and story-papers, or they went to the theaters. But the exhalation and precipitation of rubbish can not go on forever."

Similar views of present literary conditions are taken by other critics acquainted with the literature of other ages and nations. *The Criterion* (April) prints a symposium on one of the most successful and most advertised books of the past few months, the late Mr. Maurice Thompson's "Alice of Old Vincennes," giving the opinions of Mr. Rossiter Johnson, Mr. Duffield Osborne, and Prof. Edward Everett Hale, Jr. These well-known critics are united in the opinion that while Mr. Thompson had a true appreciation of good literature and had in his time done genuinely fine work, the present book is in nearly every way unworthy of him, a "pot-boiler" or "filler," thrown off to feed the insatiable appetite of the undiscriminating new public of fiction-devourers. Mr. Rossiter Johnson, notwithstanding the book's enormous sale, says that it is "very nearly worthless." Professor Hale speaks of its "lack of creative imagination" which "makes itself felt in incident and character throughout." Mr. Osborne confesses reluctantly that it is "never absorbing, never convincing, never satisfying," while the characters, altho "not exactly false or feeble," are "lit up by only transient gleams of life."

## TOLSTOY'S FORTHCOMING NOVEL.

IN spite of excommunication, the thunders of the church, and rumors of banishment, Count Tolstoy has been composedly preparing to enlighten the world with a new novel. The correspondent of the London *Daily News* has just telegraphed to his paper some particulars of this book, a portion of which has lately been read at a public gathering in Moscow in aid of a charity. The title is, "Who Is Right?" The plot, as given by *The Daily News* correspondent and quoted in *The Academy*, is as follows:

"Vladimir Ivanovitch Spessiwzeff, who is employed at the Ministry of Agriculture, has been spending some time abroad with his wife, Maria Nikolaievna, and his sixteen-year-old daughter Vera. In the autumn they return to Russia, and on the way to St. Petersburg visit a brother-in-law, Anatol Dimitrivitch Lischin, who is a district president in one of the governments which have greatly suffered from bad harvests. The first conversation among the relatives does not prove altogether agreeable. The liberalism of the sixties is touched upon superficially. Lischin feels insulted at the self-conscious, incautious tone of Spessiwzeff, and this meeting places their by no means friendly relations in a very glaring light. During this time a conversation is being carried on in the bedroom between the ladies, while in the nursery the eldest scion of the Lischin family is enchanted with his cousin Vera, a girl full of life, with sparkling eyes and beautiful teeth. The youngest boy, of six years, red-cheeked

and hearty, does not take part in the conversation. He is listening for the dinner bell, which will not ring. A neighbor, a prince, is expected for a shooting-party, which has been arranged for the morrow. Men and women cooks are doing their best to catch the fowls, a difficult piece of work, but they succeed at last. In the yard stands a peasant offering for sale a sheep, which he at last parts with for one ruble eighty copecks, and which is destined to appear at table. During dinner the prince appears, and every endeavor is made to be pleasant to him. The next morning they set off on slippery roads for the shooting. On the way a conversation springs up about the conditions under which the peasant population lives, about bad harvests, and the organization of relief. Vera, who is accustomed to having attention paid her on all sides, feels bored, the conversation does not interest her. Only when she hears that it is intended to organize help for the suffering peasantry, and that she can take part in it, does she become lively again. She finally receives permission to remain three weeks with the Lischins. The young and lively girl looks forward to her impending activity as to a *partie de plaisir*, and at the end of the three weeks, when her old nurse comes to fetch her, she will not return home at any price. In consequence, there is a scene at home between the parents, and the father tries to bring his influence to bear upon his daughter, but in vain. It appears that Vera's feelings and views—her whole nature, in short—have undergone a radical change. She refuses to leave people amongst whom she has an opportunity to work for the good of her neighbor, and where she can prove herself to be a useful member of human society. Moreover, she repudiates the idea of returning to surroundings where she would be condemned to idle inaction and a mere vegetative existence. This transformation is said to be painted in a masterly way by Count Tolstoy, especially from a psychological point of view."

## A SUCCESSOR OF AUBREY BEARDSLEY.

THE late Mr. Aubrey Beardsley was commonly regarded as the king of symbolists in art; and—chiefly in the London *Yellow Book*—his labyrinthine pencilings attained great vogue. In spite of his singularities, it is believed by many that he had genuine artistic genius of not a common order, and that had he lived he would have attained to a high place in art. A successor to his spirit of symbolical imagery has apparently been found in Mr. W. T. Horton, whose "Book of Images" has just appeared, with an introduction by Mr. W. B. Yeats, the Irish poet and exponent of the Celtic revival, itself a form of literary symbolism. A writer in the new literary supplement of the New York *Journal* (April 20) gives the following breezy account of this work:

"Twenty-three drawings are reproduced in the 'Book of Images,' and each of these drawings is a symbol of something. If you are a symbolist you will understand the drawings without explanation; if you are not, why, then all attempts to enlighten you would be futile. Unless you are one of the elect you can not possibly understand them, for 'symbolism,' as the introductory chapter states, 'says things which can not be said so perfectly in any other way.' 'It gives dumb things voices and bodiless things bodies.'

"Mr. Yeats, who writes the introduction, informs us that Mr. Horton, who is responsible for the drawings, 'has waking dreams and copies them in his drawings as if they were models posed for him by some unearthly master.' 'He tried at first,' we are told, 'to copy his models in color, and very literally; but soon found that you could only represent a world where nothing is still for a moment and where colors have odors and odors musical notes, by formal and conventional images, midway between the scenery and persons of common life and the geometrical emblems on medieval talismans.'

"Keeping this explanation in mind you are now prepared to look at the 'images.' The gem of the collection is 'The Path to the Moon,' and a very dizzy and devious path it is, as you see. I don't know what it means, but I do not care to go to the moon by that route. Jules Verne's method is more to my taste. 'The Wave' is another good one. There will be something doing when the wave breaks. Perhaps that is what the artist meant, but don't take my word for it. I am not initiated.

"Then there is 'The Gap,' a bottomless chasm, with a house on one side and a church on the other. Do the people in that house attend the church on the other side, and, if so, how do they get there? I give it up.

"There are twenty other drawings in the book, but I can't explain them, and Mr. Yeats won't, so what's the use?"

## BRANDER MATTHEWS' CRITICISM OF "CYRANO DE BERGERAC."

PROF. BRANDER MATTHEWS concludes his book, "French Dramatists," with two or three pages on Edmond Rostand's celebrated play, "Cyrano de Bergerac," and his opinion is that it is a play that lacks depth and breadth, is without ultimate sincerity—in short, nothing more than an old-fashioned piece with all the modern improvements. He says:

"The most popular play of the final decade of the century presents no problems whatsoever and avoids any criticism of life. Apparently its author has never heard of Ibsen and never seen any play by the younger Dumas. He has not taken his stand on firm reality, but has preferred to build an airy fantasy, as unsubstantial as it is charming. His aim has not been to enlighten, but merely to entertain; and he has accomplished his purpose superabundantly. Since 'Hernani,' no play has been so enthusiastically acclaimed at its first performance. . . . This play, which pleased many thousands of spectators, not only in France but also in Germany, in Italy, and in America, was joyfully hailed by certain Parisian critics as the harbinger of a new springtime for the French poetic drama. M. Rostand was welcomed as a reviver of the best traditions, and he was eulogized as one who —like Corneille with the 'Cid,' and like Hugo with 'Hernani'— had set a new model which later dramatists might vainly strive to surpass.

"It may be bad manners to look Pegasus straight in the mouth or to smile at the cooing murmurs of delight that run round the Porte Saint Martin at the exquisite delivery of a mellifluous couplet; and there is no disputing that 'Cyrano de Bergerac' is very clever and very adroit, that it has color and vivacity, that if it lacks passion it has at least sentiment, that if it wants real action it has abundant movement, and, above all, that it makes an extraordinarily wide appeal—to those who like lovemaking and romance, to those who relish easy wit and lively humor, and to

those who revel in combats and in the peril of life and death. But it can not fairly be called an epoch-making novelty. It is, instead, an old thing done in a new way. The plot is put together by a playwright who has absorbed every device of the elder Dumas, and the verse is written by a lyrist who has learned every trick of the Parnassians. It is, in short, an old-fashioned piece—but with all the modern improvements.

"An adverse critic might suggest that M. Rostand had used his story to display his verbal virtuosity. He has a very pretty lyric gift—always a rare endowment among the French. He can touch wit with sentiment, and he can thrust a hint of pathos into an extravagant simile. He combines clearness and elegance, and his verse is both facile and finished. The quality of his poetry is almost exactly that of the *vers de société*—the verse in lighter vein of Prior and Mr. Austin Dobson, of Locker and Dr. Holmes. M. Rostand is brilliant and buoyant as Praed is, for example; and Cyrano's description of a kiss may be compared curiously with the stanza in the 'Chaunt of the Brazen Head,' in which the lyrist liltingly tells us what he thinks of love.

" 'Cyrano de Bergerac,' for all its bravery of epithet and all its briskness of motion, is at bottom too slight a thing to serve as the cornerstone of a new school. It contains no promise of future development, nor do the author's other plays, less coruscating than 'Cyrano,' but possessing the same qualities. And even in 'Cyrano' itself there is no character of real originality or of genuine verity; it is peopled only by the masks of the stage. The play itself lacks depth and breadth; it is without ultimate sincerity; it has as its basis an unworthy trick, and it holds up before us as a hero whom we are to honor with our approval, and with whom we are expected to sympathize, a man engaged in deceiving a woman into a marriage certain to bring her misery so soon as she discovers, tho too late, the dulness of the man she has wedded. M. de Rostand's play is clean externally, but it is essentially immoral—in so far as it erects a false standard and parades a self-sacrifice which, to use Mr. Howells's apt phrase, is a 'secret shape of egotism.' "

## THE BEST FIFTY BOOKS OF 1900.

EACH year the New York State Library submits a list of five hundred books of the preceding year to various librarians and readers for a vote as to the best fifty new books for a village library. About two hundred persons express an opinion. The list so obtained, with additions and annotations by the State Library staff indicating the nature and value of each book, is printed each year in pamphlet form and serves as a valuable guide for public and private collectors. From the literary supplement of the New York *Times* (April 6) we take the following list of the fifty books commanding the largest vote:

| Rank. | | Votes. |
|---|---|---|
| 1. | Johnston, Mary—"To Have and to Hold" | 137 |
| 2. | Thompson, E. Seton—"Biography of a Grizzly" | 131 |
| 3. | Bacheller, I.—"Eben Holden" | 127 |
| 4. | Stedman, E. C., ed.—"An American Anthology, 1787-1899" | 126 |
| 5. | Thompson, Maurice—"Alice of Old Vincennes" | 121 |
| 6. | Ward, Mrs. M. A.—"Eleanor" | 108 |
| 7. | Allen, J. L.—"Reign of Law; A Tale of the Kentucky Hempfields" | 106 |
| 8. | Barrie, J. M.—"Tommy and Grizel" | 98 |
| 9. | Howells, W. D.—"Literary Friends and Acquaintances" | 97 |
| 10. | Crawford, F. M.—"In the Palace of the King" | 95 |
| 11. | Fiske, John—"Mississippi Valley in Civil War" | 89 |
| 12. | Tarkington, Booth—"Monsieur Beaucaire" | 87 |
| 13. | Burroughs, John—"Squirrels and Other Fur Bearers" | 85 |
| 14. | Wendell, Barrett—"Literary History of America" | 84 |
| 15. | Iles, George—"Flame, Electricity, and the Camera" | 78 |
| 16. | Keeler, H. L.—"Our Native Trees and How to Identify Them" | 76 |
| 17. | Earle, Mrs. A. M.—"Stage-Coach and Tavern Days" | 74 |
| 18. | Hewlett, M. H.—"Life and Death of Richard Yea-and-Nay" | 72 |
| 19. | Eggleston, Edward—"Transit of Civilization from England to America in the Seventeenth Century" | 64 |
| 20. | Scidmore, E. R.—"China the Long-Lived Empire" | 63 |
| 21. | Hillis, N. D.—"Influence of Christ in Modern Life" | 62 |
| 22. | Allen, A. V. G.—"Life and Letters of Phillips Brooks," 2 vols. | 61 |
| 23. | Brooks, E. S.—"Century Book of the American Colonies" | 60 |
| 24. | Morley, John—"Oliver Cromwell" | 59 |
| | Dunne, F. P. ("Martin Dooley" pseud.)—"Mr. Dooley's Philosophy" | 59 |
| | Grant, Robert—"Unleavened Bread" | 59 |
| 27. | Davis, R. H.—"With Both Armies in South Africa" | 58 |
| | Spofford, A. R.—"Book for All Readers" | 58 |
| 29. | Thompson, Mrs. G. G. Seton—"A Woman Tenderfoot" | 57 |
| 30. | Huxley, Leonard—"Life and Letters of Thomas Henry Huxley," by His Son, 2 vols. | 55 |
| 31. | Chapman, F. M.—"Bird Studies with a Camera" | 54 |
| 32. | Lang, Andrew, ed.—"Grey Fairy Book" | 52 |
| 33. | Mabie, H. W.—"William Shakespeare" | 50 |
| | Thompson, Maurice—"My Winter Garden" | 50 |
| 35. | Glasgow, E. A. G.—"Voice of the People" | 49 |
| | Williams, H. S.—"Story of Nineteenth-Century Science" | 49 |
| 37. | Byrn, E. W.—"Progress of Invention in the Nineteenth Century" | 48 |
| | McClure, A. K.—"Our Presidents and How We Make Them" | 48 |
| | Rostand, Edmund—"L'Aiglon; A Play in Six Acts" | 48 |
| 40. | Ely, R. T.—"Monopolies and Trusts" (Citizens' Library of Economics, Politics and Sociology) | 47 |
| 41. | Du Chaillu, P. B.—"The World of the Great Forest" | 45 |
| 42. | "April Baby's Book of Tunes, with the Story of How They Came to Be Written." By the Author of "Elizabeth and Her German Garden" | 44 |
| | Beard, D. C.—"Jack of All Trades" | 44 |
| | Harland, Henry ("Sidney Luska," pseud.)—"Cardinal's Snuff Box" | 44 |
| 45. | Carnegie, Andrew—"Gospel of Wealth, and Other Timely Essays" | 42 |
| | Riis, J. A.—"Ten Years' War" | 42 |
| 47. | Clemens, S. L.—"The Man that Corrupted Hadleyburg" | 41 |
| | Goss, C. F.—"Redemption of David Corson" | 41 |
| | Roosevelt, Theodore.—"The Strenuous Life" | 41 |
| | Slocum, Joshua—"Sailing Alone Around the World" | 41 |

Of these 50 books, 14 are classed as fiction, 7 as juvenile, 5 as sociology, 4 as natural science, 4 as biography, 3 as essays, etc., 3 as description and travel, 3 as American history, 2 as poetry, 1 as a book of reference, 1 as religion, 1 as useful arts, 1 as humor, and 1 as history of foreign countries.

## THE STATUS OF THE RUSSIAN PRESS.

AS a rule, the Russian newspapers refrain from discussing the severe restriction to which they are subjected by the censorship, and the reason is obvious. Thus, there has been nothing in the St. Petersburg papers concerning the students' revolt, the street demonstrations and collisions, and the revolutionary appeals. It is the practise of the Government to publish, weeks after events of this kind, an official version of what has occurred, and all the papers are required to reproduce this account, without additions save in the way of editorial comment of a "safe" kind.

But a significant exception has just been allowed. The *Novoye Vremya* has been celebrating its twenty-fifth anniversary under the present editor and publisher, Souvorin, and on this occasion it has received a marked expression of favor from the Government. Two "warnings" which had been hanging over its head for twenty years (and a third warning means suspension of the paper) were remitted and annuled by the Minister of Internal Affairs with the express sanction of the Czar. This is an unusual act of grace, showing that the policy and tendencies of the paper are approved by the Government, altho it has bitterly attacked the present French cabinet, is violently anti-semitic and anti-British, and is accused by Russian liberals of propagating hatred, jingoism, and racial antagonisms.

Yet, while thanking the Government, the *Novoye Vremya* makes a plea for a freer press, for a revision of the law to enable it to print the news and openly express its opinions. Part of this editorial is as follows:

"The 'warnings' have not restrained us in the promulgation of our sincere Russian convictions. We have not changed our beliefs in consequence of these 'warnings,' and we have gathered around the paper a public opinion which has steadily grown and supported it. But warnings compel one to fear every accident, every change of tendency in official spheres, and the danger is necessarily exaggerated, with demoralizing effects on the writer and his readers. . . . It is easy to be one's own censor, but far from easy to be a censor over other men's thoughts and words.

"We hope we are living at a time when the press, becoming more and more mature, shall be entirely emancipated from this antiquated censorship system. The Government is too strong and too resourceful to control the press by means of 'warnings.' We have enough experience now to permit the revision of the press laws and hasten reform by cooperation among all the government departments. It is not the press which has placed diffi-

culties in the path of the throne; it is not the press which has retarded national development. It has grown, and every period of its growth has been reflected in its character. But we think it has reached full maturity and is now capable of exercising all the rights of full citizenship. Indeed, it has acquired right to recognition of its services, for it has done something useful for the Government and the nation."

The *Novoye Vremya* gives interesting figures which throw light on the condition of the Russian daily press. It claims a circulation of 60,000 copies—something phenomenal for Russia. It employs in its editorial rooms 67 men, and its contributors last year numbered 832. It uses American printing-presses. It maintains a school of its own for printers, with a four-years' course, and teaches, besides type-setting, proof-reading, etc., Russian, German, and French, history, geography, and drawing. Its printers live in a cooperative establishment and have a hospital, savings-fund, and sick-and-accident fund, as well as a library.—*Translation made for* THE LITERARY DIGEST.

## MR. CHURTON COLLINS AND THE PRESENT STATE OF ENGLISH LITERATURE.

MR. JOHN CHURTON COLLINS, for many years the chief literary critic of the London *Saturday Review*, has long been known for his incisive and not infrequently fierce invectives on current literary themes. His reflections on the teaching of English literature as carried on by the system of "etymological grind" at Oxford, Cambridge, and the chief English schools, created something of an uproar in 1891. An even greater sensation has been made by his new book called "Ephemera Critica, or Plain Truths about Current Literature." *Literature* (London, March 16) gives the following quotations from Mr. Collins's preface as furnishing a sufficient indication of his general attitude to contemporary literature

"It is time for some one to speak out. When we compare the condition and prospects of Science in all its branches, its organization, its standards, its aims, its representatives with those of Literature, how deplorable and how humiliating is the contrast! In the one we see an ordered realm, in the other mere chaos. The one, serious, strenuous, progressive, is displaying an energy as wonderful in what it has accomplished as in what it promises to accomplish; the other, without soul, without conscience, without nerve, aimless, listless, and decadent, appears to be stagnating, almost entirely, into the monopoly of those who are bent on futilizing and degrading it."

"These essays are partly a protest and partly an experiment. As a protest they explain and, I hope, justify themselves; as an experiment they are an attempt to illustrate what we should be fortunate if we could see more frequently illustrated by abler hands. They are a series of studies in serious, patient, and absolutely impartial criticism, having for its object a comprehensive survey of the vices and defects, as well as of the merits, characteristic of current *belles-lettres*."

Mr. Collins points out that the spread of middle-class education in England, as in America, has very lately brought into existence an entirely new public for books, a public which can not at once be expected to develop literary taste and judgment. Hence the filling of libraries with inferior stuff, and the current twaddle about inferior stuff and about second, third, and fourth-rate writers, which we see even in our literary reviews, together with portraits and autographs of writers who under the more strenuous conditions of other days would never have been heard of outside their own counties. Mr. Collins ascribes the inferiority of current literature to two main evils: the prevalence of literary "log-rolling," and the indolence and mistaken methods of the universities.

Of course Mr. Collins meets many readers who take issue with him upon most or all of his judgments. The London *Daily News*, for instance, says:

"Mr. Churton Collins has every right to claim all the dignity of a fine scholar. But neither a scholar nor any one else has any right to be thoroughly bad-tempered in public. Mr. Collins's savage scorn for the 'average man' (a monster as mythical as the Minotaur) does not suit the dignity of a stern judge of letters. A furious judge is a contradiction in terms. Mr. Churton Collins is a complete 'laudator temporis acti,' and in his opening essay regrets the disappearance of a period (that of the seventeenth and eighteenth centuries) when literature was criticized by an intellectual aristocracy, when a writer had to choose 'between instant oblivion and satisfying a class which, composed of scholars, would have turned with contempt from writings unworthy of scholars.' Precisely. Being scholars, they turned with contempt from the noble poems of 'Chevy Chase' and 'Sir Patrick Spens,' so that in the very zenith of criticism, as Mr. Collins conceives it, there was only here and there a tattered black-letter copy of some fine old Scotch or English ballad, one verse of which had more honest Homeric fire than all the eighteenth-century epics that have ever been patronized by dukes and forgotten by men.

"'The spirit of tolerance and charity' in modern criticism and its extension until it becomes 'attenuated into the spirit of mere "laissez-faire"' is also an object of the critic's darkest scorn. In this, as in most of the views expressed in this able book, there is some truth. But after all there is much to be said against it. Good charity is certainly better than bad criticism; and bad criticism has been preeminently the characteristic of all the intellectual aristocracies (dear to Mr. Churton Collins) who have, by ignoring charity, offered a final judgment on art or literature. Charity might have kept Dr. Johnson from calling Gray a 'barren rascal,' and Byron from comparing Coleridge to a donkey. Charity might have prevented the French classical school (a thoroughly scholarly clique) from sneering at Shakespeare and excommunicating Victor Hugo. As a matter of fact, the cultured circles to whom Mr. Collins regretfully recurs are generally much better at the work of producing the art of the future than of judging that of the past. The scholars of the Renascence sneered at the old ballads for the same simple reason that they sneered at Gothic architecture—because they knew no better."

## NOTES.

MR. SIDNEY LEE has issued an appeal in *The Athenæum* to all owners of the First Folio of Shakespeare, inviting them to communicate with him, so that he may be able to make a complete census of the still extant copies, for the preface which he is to contribute to the new photographic facsimile of that book.

A NEW book on "Shakespeare in Music" by Louis C. Elson has just appeared. There is so much of music in Shakespeare that Dr. Johnson, when preparing his edition of Shakespeare, thought it necessary to apologize for the poet's love of that art. Among the topics discussed by Mr. Elson are the musical instruments referred to by Shakespeare, including recorders, fifes, consorts, viols, lutes, virginals, and bagpipes; the musical life of the period; and the dances, songs, and ballads.

CHAUTAUQUA has come to mean a Mecca for students, teachers, and all classes of people who desire to combine a pleasant summer outing with intellectual profit. Its nearness to the great Pan-American Exposition at Buffalo will doubtless prove an additional attraction this year. Lecture courses by members of the Exposition staff are to be given at Chautauqua, treating of the different departments of the Exposition and the underlying ideas in each. Special Spanish courses have also been arranged. Besides the usual opportunities for study in languages, science, history, and other branches, an arrangement has just been made by which the cooperation of the nature-study department of Cornell University has been secured, under the personal attention of a corps of instructors from that institution. Many other very attractive features have been added.

IN our issue of April 6 (page 412) we referred to the celebrated reviews directed against Keats and the so-called "Cockney school" in *Blackwood's Magazine* and *The Quarterly Review* as having been published in April and September, respectively. The correct dates, as given by Mr. Sidney Colvin in "The Dictionary of National Biography," are *Blackwood's*, August, 1818, and *The Quarterly*, April, 1818 (not published until September). It is worthy of note, as showing the persistency of "the literary myth" already referred to in the same article, that the Arnold collection, to be sold shortly in New York, contains a presentation copy of the "Poems" to John Byng Gattie, in which the latter wrote, many years later, the well-known lines of Shelley's "Adonais" narrating Keats's alleged death from sorrow at these two brutal reviews. Besides some very interesting letters to and from Keats, and the only complete holograph manuscript of a Keats poem in America, the same collection contains also the three rare first editions of Keats's poems published in his lifetime, together with a practically complete collection of editions and biographies since then. In view of the fact that American editors of Keats, including Mr. Scudder, have usually been compelled to search many libraries for this material, lovers of Keats would naturally desire that this collection might be preserved intact by some institution of learning.

# SCIENCE AND INVENTION.

## THE CHILD AS A THINKER.

ARE we doing an absurd thing when we try to teach our children to be logical? Are they not in many respects more logical than we? In other words, is not the logical faculty innate and not acquired? This is the point of view of G. E. Mudge, who writes to *Nature* (April 11), protesting against some of our modern educational methods and theories. Says Mr. Mudge:

"Are we not on the wrong track when we talk of 'making thinkers' or of 'training men to think'? Remembering the nature of the child, rather it seems to me that we should be nearer a successful issue if we turned our energies in the direction of retaining and developing the thinking powers it naturally possesses. Any one who chooses to observe the development of a child's mind will, if he does not suppress its natural bent, convince himself that a child from three to five years of age possesses thinking powers of greater capacity than we are in the habit of crediting to it. One of the external evidences of a thoughtful mind is the asking of questions which bear definite and logical relations to each other; and this is precisely what an average child of that age, when talking to a person in sympathy with it, is persistently doing. It is not content with a flimsy and evasive answer, and how strong is its intellectual craving is manifested by its evident disappointment or display of temper when its ignorant parents impatiently curb its curiosity. It is very seldom that one finds a mother who has endeavored to retain her child's thinking capacities. I was once present when the four-year-old little daughter of such a mother was making inquiries about the planet Venus, and after she had been informed that both Venus and the earth traveled round the sun and were illuminated by it, she put the query, 'Then if there were people on Venus our earth would look to them like Venus looks to us?' This question demonstrates that a child possesses thinking powers sufficiently vigorous to enable it to see the logical relationships of bodies to each other that would certainly do credit to many of its superiors in point of years. This is not an isolated instance, and my impression, derived from observation and from conversation with observant persons, is that the average child, if not suppressed, is capable of a quality of thinking that leads its elders, when they try to follow it, into an intellectual quagmire of inconsistency and absurdity from which they beat an inglorious retreat by angrily bidding it 'not to ask silly questions.' If they bid themselves not to give silly answers, the request would be just. Let me give an instance of the intellectual stagnation upon which the children who will become the nation's men are being reared. I once heard a child ask its mother, 'What makes the flowers grow?' Promptly came the answer, 'Jesus!' No wonder, when children's intellects are muddled with such unprovable assertions, that they cease to think. I recall my own younger days, and the questions I wanted answered: they were answered negatively as a rule, and those that were positively so never allowed me to reconcile them with the facts around me, and I have since learned that they were mostly perversions of the truth, designed to secure a theological end. Little wonder I ceased to think by the time I got to school, and it is a matter of surprise to me that the examination system which followed did not convert a state of abeyance into one of absolute destruction.

"There is no need to 'make' thinking men; they are born to us if we will but retain, develop, and strengthen the qualities that every healthy average child possesses. But to do this we want, above all else, thoughtful, intelligent, and well-informed women who, as mothers, will recognize their duties to the state and will endeavor to retain and train the natural qualities, physical and intellectual alike, of the children that are to become the nation's men and women. The old style of domestic wife and mother—an uninteresting, mechanical drudge or a gaudy doll—may have been good enough for our forefathers, but for us it means loss of national time and energy which, if utilized, can be converted into factors capable of retaining the supreme position that we are fast losing. Granting that the results of a mother's pernicious training can be remedied in later life, it is obviously waste of valuable energy, time, and money to organize an elaborate system of education to undo that which ought never to have been done. And, therefore, I urge that our national progress depends very largely upon 'the hand that rocks the cradle'; if it rocks that with an intelligent purpose, it will be well with our future men; if not, then England, like Tyre, Venice, and Rome, 'whose greatnesses it has inherited,' 'must be led, through prouder eminence, to less pitied destruction.'"

## TO GUIDE SHIPS IN FOG.

VARIOUS devices have been invented of late years for the purpose of aiding the mariner to locate his position in a fog. Signals have been given greater penetrating power, and new methods have been brought into use to some extent, such as wireless telegraphy, Professor Gray's plan for ringing bells under water, and the Hamilton-Foster fog-signal, which gives a distinctive blast according to the direction the fog-horn is pointed. All these need special appliances, and all are expensive. Only the last-mentioned assists the sailor in getting his bearings, which is the main thing he wants in order to keep out of danger. Says *The Scientific American* (March 30), in an article describing a newly invented device, Colonel D. P. Heap's topophone:

"The United States Government has established 393 fog-signals, 120 bell-buoys, 73 whistling-buoys, and 44 light-vessels with fog-signals on or near the shores of its navigable waters. Other nations have similarly guarded their coasts. Every vessel that floats is required by law to carry some kind of a fog signal. In addition, there are other sounds, such as echoes, breakers, etc. whose direction the mariner needs to know to prevent accident. The topophone has been devised to accomplish just this thing, and also to hear sounds at greater distances than are possible with the unassisted ear. With its use the mariner can determine the direction of any sound before it can be heard without the instrument. The topophone is simple in construction, light in weight, portable, can be used in any part of a vessel, and any one with normal hearing can soon become proficient in its use.

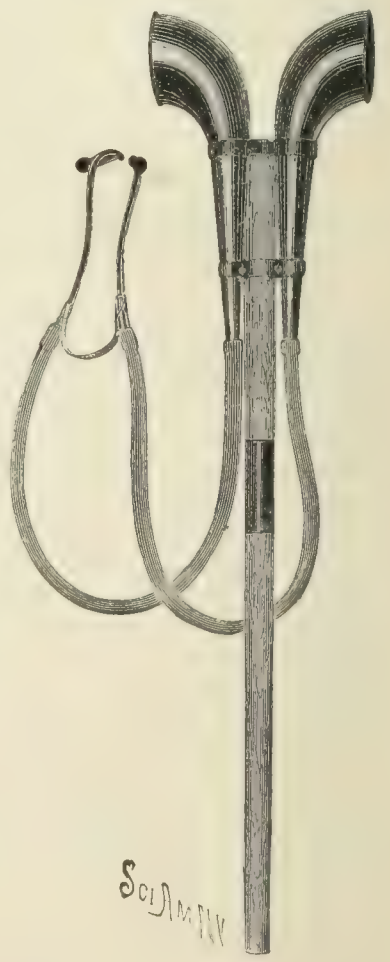

FIG. 1.—HEAP'S TOPOPHONE.

"It consists of two acoustic receivers or trumpets, pointing in opposite directions and supported on a vertical shaft—see Fig. 1. From the lower ends of the trumpets extend rubber tubes connected with the ears by specially constructed ear-pieces. The observer holds the shaft so that the instrument is above his head; if a sound is heard in either ear—the right ear, for example—it shows at once that the sound must be somewhere on his right-hand side. If he then turns to the right until the sound is heard in his left ear, it shows that he has passed the direction of the sound. If he then oscillates the trumpets so that the sound is heard alternately in each ear, the sound will be in a direction inside the angle of oscillation; this angle generally is about one point of the compass. The whole operation is simple, and the above operations take but a few seconds.

"As soon as the direction of the sound is ascertained, the observer can keep the topophone pointed in its direction, and, knowing the speed of the vessel and its course, the location of the sound can be quickly plotted accurately enough for all practical purposes."

## ELECTRICITY AND NERVE FORCE.

AFTER the discovery of the electric current, some physiologists sought to identify it with nerve-force, but without success. That the two are connected in many interesting ways, however, becomes continually apparent. M. August Charpentier has given special attention to this subject of late years. In a series of experiments begun in 1899, he has showed that electric excitation throws the nerve into a peculiar oscillatory state, propagated within the organ at a measurable speed, which is the same as that of the nerve-current itself. He was able to measure the frequency of these nervous oscillations and their wave-length. Finally, he announced that it was very probable that this physiological phenomenon was at the same time electrical. This he has just succeeded in demonstrating, and the fact is most interesting as showing that a purely electric wave may be so affected by the organic nature of a nerve, serving as a conductor, as to take on certain of the characteristics of nervous force. This is only one more instance showing that the boundary between the world of life and of so-called dead matter is very uncertain. We translate a few paragraphs from the *Revue Scientifique* descriptive of Charpentier's last investigation. Says the writer:

"His new researches show that a short electric excitation produces a double transmission on the part of the nerve: (1) One part is transmitted almost instantaneously as in an ordinary conductor; . . . (2) another part . . . is transmitted, still electrically, but with the very moderate speed of the nervous influx, say 20 to 30 meters [65 to 100 feet] a second. This second part of the excitation, evidently modified physiologically by the nerve, is still of electrical nature, for it may be conducted to a distance by a metal wire and there provoke in another animal, or in another part of the same animal, a muscular contraction through the intermediary of a motor nerve.

"This is not all: at the end of 1, 2, 3 . . . equal but small periods of time, following the original excitation, the same wire carries to the second nerve a second, a third, a fourth excitation. Consequently, not only has the excited nerve furnished to the metal wire direct electricity and also electricity as modified by the nerve, but this second portion has assumed an oscillatory character that was not possessed by the original excitation, and has caused an apparent repetition or periodic recurrence of this excitation."—*Translation made for* THE LITERARY DIGEST.

## ARTIFICIAL SEASONING OF WOOD.

TO give to green or fresh wood all the good qualities of old, well-seasoned timber has been the object of many experiments, some of which have been partly successful, so that the results are now being largely used. A process has recently been invented abroad in which electricity is used for the purpose mentioned, and which, it is claimed, answers all requirements. By means of this process all juice is driven out of the wood and its place is taken by an aseptic fluid, while the power of resistance and elasticity of the wood are so much increased as to answer all purposes of naturally seasoned timber. The *Kölnische Volkszeitung* describes the process as follows:

"The timber is placed in a large wooden water-tight vat which is insulated from the ground. The vat is partly filled with a dilute solution of ten per cent. of borax and five per cent. of resin. The lumber is deposited in this solution so that it is not fully covered and rests on a plate of lead, which is connected with the positive pole of an electric battery. Under the lead is placed an insulating sheet and under that a coil of steam-pipe.

"Upon the lumber are placed wooden vessels with porous bottoms, and upon these bottoms are also plates of lead, which are connected with the negative pole of the battery. The water in the vat is heated by the pipe-coil to 35° C. [95° F.]. Under the influence of the electric current the impregnating fluid is driven through the wood by means of electrocapillarity and presses all juices out of it.

"After a few hours the lumber is taken out of the vat and dried in the open air to allow the water it contains to evaporate. It is then steamed at a temperature of 40° C. [104° F.] and is then ready for use.

"The result of the process is explained as follows: The boracic acid settles in the tissues of the wood and the resin combines with the fiber, as in the gluing of paper. The consequence is a great capacity of resistance to decay. The durability, impermeability, hardness, texture, and grain of the wood are not changed. The ease of working is considerably increased, and the splint of some kinds of wood, for instance oak, is made as useful as the heart."—*Translation made for* THE LITERARY DIGEST.

## THE EXPLORATION OF INTERIOR AUSTRALIA.

AN ethnological expedition, organized by Prof. Baldwin Spencer, of Melbourne University, and Mr. F. J. Gillies, a South Australian scientist, has just left Adelaide, the metropolis of South Australia, with the view of spending several months among the various tribes of aborigines inhabiting central Australia, especially the portions remaining unexplored, and thus obtaining some definite knowledge of the manners and customs of a people whose numbers are steadily decreasing, and who, like the Tasmanian aborigines, are destined to become extinct within the next few generations. In default of monetary assistance from the various state governments, the whole of the expenses are being defrayed by Mr. David Syme, a wealthy Victorian newspaper proprietor, supplemented by private gifts of a cinematograph, for purpose of taking pictorial records of dances, corroboree, ceremonials, etc.; a first-class camera; and a fine phonograph, for the reproduction of native chaunts and dialects. The idea is to keep near the overland telegraph line running from Adelaide, in the south, to Port Darwin, on the Gulf of Carpentaria, in the north, making excursions east and west, according to circumstances, to fertile spots where the natives chiefly congregate. As the northern portion of the line is approached, the expedition will proceed eastward into northern Queensland, subsequently returning to the point of deviation, and passing westward into western Australia. The expedition is well provided with camels and provisions, and is expected back in Adelaide some time in April or May, 1902. Commenting on the departure of the little band of explorers, the Adelaide, Australia, *Advertiser* says:

"The significance of the task before Messrs. Spencer and Gillen can not be understood without reference to the controversy which for the past few years has stirred the scientific world to its depths on the question of the origin of religious belief. There are two schools of thought on the subject, one represented by Mr. Frazer, author of the well-known 'Golden Bough'; the other by Mr. Andrew Lang, the learned student of mythology. Mr. Frazer is a strenuous believer in a godless stage of human development, when mankind believed that by means of magic he could control the cosmic forces. Finding that magic failed to fulfil its purpose, mankind, it is suggested, sought to propitiate the powers who were then supposed to have the cosmic forces in their keeping. The next—and present—stage in human development is the discovery that by means of science these forces may in a great measure be directed without supernatural aid. This, in a word, according to Mr. Frazer and those who think with him, is the history of man's religious evolution. The 'noble savage' was more at the mercy of the forces of nature than he is now. It was natural that he should think them controllable, if not by himself, at all events by some superior power or powers. It was equally natural that when magic gave place to prayer the belief should prevail that the gods directing the course of nature were also capable of directing the course of human life. Man has now (Mr. Frazer continues) boxed the compass and returned to his starting-point, only instead of magic he resorts to science for the means of controlling the forces of nature. Mr. Lang, who has an interesting article on the subject in the February *Fortnightly Review*, wields the pen on behalf of orthodoxy. There is no evidence, he declares, that there ever was a godless stage in human development, and he denies Mr. Frazer's assertion that

in the Australian interior there are to this day men wholly given up to magic and wholly without religion. The evidence is conflicting enough. Such men are said to exist among the Arunta and other tribes of the parched and barren region which Messrs. Spencer and Gillen will shortly visit, and it may be the fortune of these gentlemen to set all doubts at rest. Is Mr. Curr right when he says that natives 'dress up Christian beliefs learned from the missionaries for the purpose of surprising and pleasing the whites'? Another authority, Mr. Howitt, declares that of Brewin, the Supreme Being of the Kurnai tribe, the natives know so little that some when questioned identified him with the devil, others with Jesus Christ. But Mr. Howitt, on initiation into the tribal mysteries—mysteries as sacred as those of Eleusis—was led to change his belief, and to adopt the view Mr. Lang very strongly holds, that the blacks in the interior have religious conceptions in some respects so lofty that it would be natural to explain them as the result of European influence, or as relics of a higher civilization in the past. . . . Huxley resolved theology among the Australian savages into a 'mere belief in the existence of powers and dispositions (usually malignant) of ghostlike entities, who may be propitiated or scared away. Lang admits the belief in spirits, but not the worship of them; nor will he admit with Mr. Robertson Smith that the element of worship comes into totemism or fetishism—the practise of symbolizing tribes by beasts, birds, plants, etc. The creatures or objects representing the totem are reverenced not because they impersonate any higher power, but because, like certain beasts in India, they are supposed to embody the souls of departed relatives or tribesmen. Mr. Lang is convinced that everything points to a belief in the existence of an All-knowing Being, whose abode is in the heavens, who is Maker and Lord of all things, and whose lessons, as the aboriginal saying is, 'soften the heart,' tho this Being may be known by different names in different portions of the continent. Mr. Howitt is of the same opinion, tho he will not allow that the Supreme Being is anything more than the spirit of the long defunct headman of a time when such headman ruled over large areas. The point, of course, is first to establish the belief itself, and this is not easy, because the blacks are secretive to a degree on the subject of the Supreme Being, whose name they will not allow to be spoken except in whispers. It will be interesting if the explorers can clear up the doubt as to whether worship in any form prevails among the tribesmen, and still more worship of a Being so refined as to be above the need of propitiation by the bloody and other offerings which savages in a far more advanced stage of development are in the habit of making to their gods. If, too, the object of worship is found to be identical with the Deity, whose existence Paley deduced from Design, the problem will present itself how the blacks came by a theology so far above the level of their material and intellectual culture."

---

**Drugs in the Treatment of Disease.**—In a discussion of the place of the general practitioner of medicine in this age of specialists, contributed to *The Review of Reviews* (April), Dr. Augustus Caillé takes occasion to condemn what he calls "the drugging habit," of which, he says, the ordinary "family doctor" is still guilty to a remarkable degree. Says Dr. Caillé:

"I know from personal observation that our cousins across the water do not prescribe or swallow one-fourth as much medicine as we do in our country. With but few exceptions, the entire vegetable and mineral kingdoms have given us little of specific value; but still, up to the present day, the bulk of our books on materia medica is made up of a description of many valueless drugs and preparations. Is it not to be deplored that valuable time should be wasted in our student days by cramming into our heads a lot of therapeutic ballast? If our professors of materia medica in the undergraduate colleges are reticent in advancing the truth, the whole truth, and nothing but the truth, then it is time for us to tell them that they are to a large degree responsible for the desire on the part of the many practitioners to prescribe frequently, and without good cause, an unnecessary quantity of useless drugs. Every few weeks new drugs and combinations of medicaments are forced upon physicians with the claim that they are specifics in the treatment of disease; and the physician, in his anxiety to alleviate his patient's sufferings, because the simpler and more reliable agents have failed him, is gulled into trying the newly extolled remedy, only to find that it is still less efficacious than the old one. The common-sense practitioner knows by experience that the constant, frequent prescribing of innumerable drugs only ends in detriment to his patients. A working knowledge of hygiene and dietetics, climato-, hydro-, and mechano-therapeutics, simple medication, and few drugs are the successful agents in internal medicine; and the sooner the physician will condense his pharmacopœia and materia medica to a vest-pocket edition, the more readily will his efforts meet with success in the practise of his profession, and the sooner will the 'Christian Science' delusion disappear."

---

## THE FATE OF STONEHENGE.

THE world-renowned prehistoric stone circle on Salisbury Plain, England, known as Stonehenge, is a present cause of anxiety to English antiquarians. Many of its huge monoliths are already prostrate, and the end of the nineteenth century has been signalized by the fall of others. Archeologists are seriously considering plans for setting up again the fallen stones and taking measures to prevent the fall of others. Such measures, they think, tho objectionable, are the only alternative to the ultimate destruction of the monument. From a description in *Man* (London), we quote the following:

FIG. 1.—PLAN OF STONEHENGE. A, STONE NOW FALLEN. BB, STONES WHICH FELL IN 1797.

"It is, perhaps, fortunate that these stones have fallen instead of the remaining stone of the central trilithon, the downfall of which has long been expected on account of its leaning position, an occurrence which, if not prevented, will cause much more damage than has been caused for centuries, and the practical question for archeologists is what is to be done to prevent it? Of course, no one advocates 'restoration' in the sense of adding new stones to supply the places of those which have disappeared; but, inasmuch as the exact original position of almost every existing stone is perfectly obvious, and inasmuch as exact surveys have been made and published both by Sir Henry James on behalf of the Ordnance Survey, and by Prof. Flinders Petrie, there should be no objection to setting the leaning stones upright, so as to prevent them falling and breaking themselves and others,

FIG. 2.—VIEW OF STONEHENGE FROM THE WEST. A, STONE NOW FALLEN. BB, STONES WHICH FELL IN 1797.

and to setting up those that are quite fallen, except those that are too much broken to be capable of being joined together. Such fragments should be left where they are, as also should any

the precise original position of which can not be ascertained. Next comes the question of keeping the stones in their position when they have been restored to it; and the best way to do this would be to dig out the whole interior down to the solid chalk, underpinning the stones while the work was going on, and to fill it up with concrete. In the digging out it might be expected that some relics would be found which might throw light on the date if not on the purpose of the monument; but the objection will no doubt be made that future generations might think that the concrete was part of the original work. This would be less likely to happen if the concrete were covered for its better preservation with half an inch of the best asphalt, such as is used in paving the London streets, under which boxes with documents might be buried for the benefit of any future excavators.

"If it were possible to keep things as they are, it might be preferable from an artistic point of view to do so; but it is not possible. If something be not done to prevent them, further falls will happen, and where will be the poetry in a shapeless heap of broken stones?

"It must, however, be remembered that Stonehenge, tho an object of national concern, is private property."

It is noted in *Nature* (London, April 11), that to protect the monument Sir Edmund Antrobus is prepared to erect around it, at his own cost, a wire fence fifteen hundred yards in total length.

## DO WE WANT TO RIDE FASTER?

SCHEMES for high-speed electric roads are cropping up on all sides. It seems to be taken for granted in all cases that to ride at 100 or 150 miles an hour would be easy and pleasant, and that a high-speed road would find plenty of patrons even at increased rates. In a discussion of these plans, with special reference to a recent German project which has received the aid of the Emperor and which seems likely to reach the stage of actual construction and trial, *The Railway and Engineering Review* (March 23) says:

"While experimentation along this line will doubtless develop much of interest, the utility of the attempt seems questionable. Given the requisite generating stations, it would not seem much of a problem to equip a single car that would be capable of attaining any specified speed. In getting the track into shape which would render such a speed permissible, however, a problem presents itself which is better realized by the steam-railroad man than by the electrician. There is no need of dilating on this point; the features of permanent way absolutely necessary to be regarded, before even an attempt at such a speed would be safe, are so many and costly that the projectors appear not to have given this phase of the subject much thought, else the limit of speed to be attained would not have been placed so high [155 miles an hour] before trial. Aside from the questions of practicability surrounding these excessive speeds, we very much doubt their popularity even if attainable on more than experimental runs, despite the clamor of the strenuous. There certainly could be no pleasure in riding in a car going at this speed—over any line that human hands could build. Some stretches of track on lines in this country are at times as near perfection as it is possible to bring them, and yet the discomfort attaching to a ride over these stretches at the speeds attainable with locomotives is marked. As a speed of 60 or 70 miles an hour is exceeded for any considerable distance the passenger is subjected to a strain that is most wearing, even tho the cause is not appreciated—while the percentage of fatalities which would accompany the wrecking of a train (or car) at twice this speed would deter aught but sensation-seekers."

**Absorption of Gold by Lead.**—That one solid metal may diffuse into another from surface-contact, just as if both were liquid, provided only that time enough is allowed for the action to take place, appears from the experiments of Professor Roberts-Austen, the English metallurgist. Every one knows the ease with which mercury will dissolve gold, and Professor Austen showed some time ago that lead has the same action when near its melting-point. Now he shows that when both metals are cold and solid the absorption or solution still takes place. Says *Der Stein der Weisen* (Vienna, April 15), in a note on the subject:

"He [Roberts-Austen] had already observed that, if a piece of gold is placed under a block of lead and both are heated to a degree not far removed from the melting-point of the lead, the gold diffuses into the lead. In this way, in the course of twenty-four hours he observed a noticeable admixture of gold in the lower part of the lead block. Afterward Austen left several lead cylinders on thin gold leaf for four years at a temperature of about 18° C. [64° F.]. At the expiration of this time the lead cylinders were examined, and it was found that the gold had penetrated quite deeply into the mass. It is noteworthy that at so low a temperature, that is far removed from the melting-point of the lead, diffusion of the gold should take place. Austen assumes that the gold is absorbed into the lead in some such fashion as water vapor is taken up by wood."—*Translation made for* THE LITERARY DIGEST.

**Report on American Silks.**—The report of M. Edouard Friedmann, Austrian representative on the silk jury at the Paris Exposition, is full of praise for American silks. He says, according to an extract given in *The Textile Record:*

"The exhibit of the United States was a great surprise to me, altho on account of the insufficient room allotted to them the number of exhibitors was small. In spite of this, the showing they made was remarkable, especially by reason of a very skilful display. The silk industry of the United States has in a very short time developed greatly in consequence of the high protective tariff and the wealth of the country. . . . The exhibit of rich dress silks, both plain and fancy, of brocades, chines, crêpes de chine, façonnes, and brochés, of tie silks, cachenez and ribbons in different styles, all of which were well made and in beautiful designs, is proof of the immense progress this country has made in manufacturing during the last decade. . . . The production of silks in the United States represents one-fifth of the world's output, and is greater than the amount of silks consumed in France, the country of riches and luxury. American-made looms, several of which were seen in operation, impressed visitors on account of the simplicity of their construction and their rapid motion."

## SCIENCE BREVITIES.

"ONE of the noteworthy features of recent development in New York City," says *The Electrical World and Engineer*, "has been the erection of homes and fine buildings where stables once stood. The change, for example, in such a street as West Forty-fourth, now full of beautiful clubs and hotels, is in reality extraordinary, but it is being duplicated elsewhere. The work which the trolley began in redeeming large areas of the city from horse occupation and rendering them available for human beings is now being carried forward and finished by the automobile. The new electric automobile stables in West Forty-ninth Street, occupying a whole block, have relieved the region of the horse taint and odor and dust, and have made it possible to put up handsome buildings on ground that once was hardly deemed fit for negroes."

COMPRESSED air recently prevented the suffocation of thirty-five men shut up in the New York Rapid Transit tunnel at 181st Street, by a dynamite explosion which wrecked the hoisting-gear in the shaft. "The shaft at this point," says *Engineering News*, "is 131 feet deep and the tunnel only extended about half a city block each way from the shaft. At noon, on March 21, about 50 pounds of dynamite exploded from some unknown cause in this short section of tunnel, and one of the hoisting-cages was wrecked and the other was so damaged that it would not work for some time. The thick fumes of the exploded dynamite were suffocating the thirty-five men then in the tunnel, and the prompt action of Engineer John G. Mullen, who at once turned on the air-compressors at full speed, alone saved them from death. The men lay for over half an hour face down in the tunnel and breathed the fresh air sent them by Engineer Mullen, while the damaged cage was being repaired. When the men were finally brought to the surface it was found that nearly all of them were burned about the face and hands, and three were bleeding profusely from lacerated wounds. Most of the clothing worn by these men was torn into shreds. The presence of mind and the quick action of Engineer Mullen alone saved the thirty-five men from death."

# THE RELIGIOUS WORLD.

## IS THE BELIEF IN HELL PASSING AWAY?

DEAN FARRAR and some other writers whom we have quoted from time to time believe that the Christian dogma of eternal punishment in hell is rapidly passing away from theology and popular faith, and that it will not much longer be preached. It is, however, preached in all its pristine clearness by a writer in *The Presbyterian Quarterly* (January), the Rev. R. A. Lapsley, of Greenville, Va. Under the caption "Turn or Burn!" he remarks that "the master move in that devilish strategy which accomplished the Fall was when Satan succeeded in casting a doubt on the certainty of future punishment; and since that woful hour, 'ye shall not surely die' has been the favorite tenet of all who are under the dominion of the god of this world." He continues:

"We may well suppose that the devil, working hand-in-hand with the bitter revolt of the carnal mind against this doctrine, would long ago have banished it from the faith of mankind, were it not for one thing; and that is, that there is no way to silence the unequivocal testimony of the Scriptures upon this subject. No man, for example, can read with unbiased mind the latter part of Luke 16, the parable of the rich man and Lazarus, without drawing two necessary inferences: first, that the souls of the ungodly do at their death pass into a state of penal suffering; second, that this state is without mitigation or end. And the authority of Jesus Christ, as a divine teacher, stands committed to these two points of doctrine. And this is only one of many similar passages, in which the dreadful character and endless duration of future punishment are explicitly stated.

"And not only is there this immovable foundation for this doctrine in the express language of God's Word, but it may be said, further, that the doctrine of the eternal punishment of the finally impenitent is so related to the whole fabric of Christianity that the entire Christian system stands or falls with it. The doom of him who dies in his sins is not simply the background of the Gospel, it is the very canvas on which the Gospel is set forth. Take away this truth, and the Gospel itself is gone. Examine in this light another familiar passage of Scripture, Luke xix. 10: 'The Son of Man is come to seek and to save that which was lost.' Come to save what? 'That which was lost.' How? To these questions there is no adequate answer but such as is seen in the lurid gleam of penal fires. There is no *modus deo vindice dignus*, apart from the wrath which is to come."

Not only is the doctrine of eternal punishment, says Mr. Lapsley, a necessary corollary of Christianity, but it is not contrary to justice:

"No stronger statement of this objection could be given than that framed by the high priest of American infidelity, the late R. G. Ingersoll. Mr. Ingersoll imagines a bird winging its way through illimitable space from this earth to the remotest fixed star, and bearing in its mouth one grain of sand. The bird comes back, after an almost immeasurable lapse of time, for another grain, and repeats his journey back and forth, until he has removed this solid earth, grain by grain—'And then,' says Mr. Ingersoll, with startling climax, 'it will not yet be daybreak in Hell!' We grant that the mind staggers under this tremendous conception, but that does not abate one particle of our confidence in its truth. We would solemnly match this awful thought with that which is its counterpart, the enormity, the immeasurable ill-desert, of sin." . . . . .

"In the Rev. W. Haslam's book, 'From Death into Life,' there is an account of a very striking dream, of a man who was subsequently converted under his ministry. The man said:

"'I dreamt that I was walking along a broad smooth road, where everything was lovely. The road was crowded, and the people all seemed as if they were out for a holiday. Seeing a workingman in a field close by, I called to him, and asked, "Where does this road lead?" He answered, "To hell, straight on; you can not miss!" "Hell!" I was surprised; "Hell," I said to myself. "This is very different from what I thought. Is the way to hell as pleasant as this? and are people so unconcerned about it?" I was amazed, yet I did not stop nor turn back, but went on and on, seemingly as pleased as the others were. However, it did not continue like this long, for soon I came to a rough post, where the atmosphere was thick and sulphury and it was almost dark. Seeing some people in the distance I went near to ask them the way out. They were busy with long rakes raking cinders about on the dry ground and would not answer my urgent inquiries. As I approached them, I saw that every now and then fire appeared from under the ground, over which they raked cinders to keep it out of sight. Just then the ground became so hot that I began to run, in my despair I knew not whither. As I passed along in haste, I came to cracks in the ground full of fire; I stepped over them one after another, and ran, ran on till I came to such a large chasm that I could not jump over it. I turned and went in another direction, leaping and running in a state of terror, till at last I came upon a glowing sheet of fire, into which I fell. Then I awoke.'

"The application of this is obvious. Many in our day and time are at this cruel business of raking cinders over the fire; few there are like faithful Richard Baxter, who was wont to compress the warnings of God's Word into one solemn, urgent appeal, saying, 'Sinner, turn or burn! turn or burn!'"

## THE RELIGION OF DEMOCRACY.

THE Rev. Mr. Charles Ferguson's new work, "The Religion of Democracy," has met with a somewhat remarkable degree of appreciation both from religious readers and critics, and it has even been said that, in the great religious problem, "since Emerson, no one has gone so straight to the point." A writer in *Current Literature* (March), in the course of a lengthy review of the volume, thus summarizes its more important features. He says:

THE REV. CHARLES FERGUSON.

"Negatively, nothing could exceed the vigor with which this priest of the church inveighs against the shortcomings of the institution which corporately represents the Christian belief to-day. The church as it stands to-day he holds to be not merely a cumberer of the ground, but an obstacle to faith and a preventer of goodness. Its smoking lamps make the darkness murky, and its weakness and incompetence grow to what is worse. It obscures the spiritual aim of democracy, reduces liberty to a sentiment, and fraternity to a mutual benefit. Its envious and paltry divisions thwart the hope of social fellowship, and outrage the idea of human unity which they pretend to teach. The church was the bearer of faith only so long as it remained inknit in the body and texture of the old secular society. When the church ceased to be coterminous with human society, it lost the one thing of value it possessed—originality and ingenuousness of faith, the faith of St. Francis Assisi and of the Maid of Orleans, precisely the most modern and democratic kind. Outside the Roman obedience, which may be considered the ritual of a cult, the shibboleth of a caste, or the philosophy of a school, the sects have been for four hundred years minimizing their professions until now they are incredible because they claim so little. Their demands upon the confidence of man have reached the most tenuous extreme. Their faith verges to infidelity. . . . . .

"All this, and more, Mr. Ferguson sees supplied in what he talks about as a democratic catholic church. It is idle disputing whether the creation of his fancy be a new thing or the old. He is talking of revolution and a new foundation; he may really

be preaching reform. For these notes of the catholic church of Mr. Ferguson's dream, what are they but the notes of the ancient and primitive church of the first Christian centuries?

"'The religious trusts are bankrupt, and the caste of goodness and truth is ripe for dissolution; but the church in its original charter rises to the emergency of the world. The societies founded in particularism, exclusion, and monopoly give place to a catholic church founded in the universal and the eternal, and in the essential and permanent characteristics of the human spirit. The churches of the past have been only types and symbols foreshadowing—sometimes in glorious and inspiring parable, sometimes in distorted and monstrous caricature—the church catholic and democratic which is to comprehend the design of the universal spiritual revolution and establish the people in the beginnings of liberty. It has taken nearly nineteen hundred years for a catholic church to become a possibility.

"'Catholicism is the taking in of the last man with confidence that for him, too, as well as for the rest, life has a meaning and is reasonable; it is the taking in of the whole cosmos with confidence that it is of one piece and hangs together to the last detail.'"

Three notes will characterize the great Catholic Democratic Church of the future, says Mr. Furguson. First, it will abandon the distinction of "sacred" from "secular." All life shall be held sacred, and the church "shall see in the problem of labor and bread the involute of every spiritual and eternal issue. The church shall engross itself in the materials, in the humanities, the courtesies, and the arts. It shall work a new orientation of the common law, shifting the legal point of view from property to persons, destroying the fetish of capital and denying the capitalist a hearing save as a member of the fraternity of work."

Secondly, says Mr. Ferguson, "the church will utterly shatter the caste of 'goodness,' and definitely abandon the attempt to mark a distinction between 'good' persons and the 'bad'":

"Its sacraments must be offered to all the humble and child-hearted without any kind of stipulation of conformity or faintest implication of special sanctity. The church will refuse to exercise what is called spiritual discipline, and it will jealously guard its officers from the imputation of being particularly pious.

"For to be particularly pious is not merely pharisaic, it is flat paganism; it savors of the siege of Troy and the platitudes of Greek philosophers; it is flying in the face of Christianity and making the clergy and all the communicants a jest. Its ideal goodness is ineffably good because, with unfaltering sweetness and strength, it confounds itself incontinently in the bad.

"The church will regard itself as constitutionally coterminous with secular society. The point is not that the church will strive to reach the very low and bad people—it has been trying to do that for a long time with curious and confused results; the point is that at last the dead-set to save souls will be abandoned; and instead of keeping up the haggard, weary chase, the church will simply assume both the pursuers and the pursued—regarding them all alike as equal constituents of the commonwealth.

"The religion of democracy takes in all the people without exception, not because it is indifferent to moral and spiritual distinctions, and not because it holds that men are naturally good or even that everybody is sure to be saved. It is not because it makes light of the eternal and tragic issue between Jerusalem and Babylon, but because it would give its whole soul to that issue, that it has written upon its doorposts and the footplace of its altar: 'Judge not,' 'Unto this last,' and 'He was made sin.'"

Thirdly, says the writer, the church will no longer attempt to impose creeds on men under the impression that it has an exclusive and final deposit of truth:

"The church will abandon the attempt to truss up and underpin the Truth, and will, on the contrary, repose in quiet strength upon those sills and girders of the universal frame which have been or hereafter shall be discovered. It will appear that the Truth is not a sacred deposit to be kept in a box under guard of priestly seneschals, but a living, tremendous Thing—able to take care of Itself as well as of all who will trust It. Such is obviously the case with the truth of physics; so it is also with the truth of metaphysics.

"If what is called a lie will wear as well as the truth in the long run, it can not be a lie. The truth at last must be proved in experience; there is after all no other credible proof. That an unbroken succession of mutes, dervishes, and fakirs—or of prebendaries, deans, and curates—have sworn to a thing for a thousand years is no proof."

---

## THE DOCTRINE OF REINCARNATION IN CHRISTIAN THEOLOGY.

DURING the past few years, the ancient doctrine of the preexistence and reincarnation of the human soul has been receiving a good deal of attention from those interested in occult and oriental philosophies. Aside from the Hindus, Chinese, and Japanese, and the European and American Theosophists and Vedantists, almost all of whom fully accept this doctrine, there is a disposition among Spiritualists and among the new metaphysical school of Mental Scientists to examine the relations which this belief may bear to their own faith. *Freedom*, edited by Mrs. Helen Wilmans, a leader of the Mental Science movement, has of late contained an extended series of articles on this theme, as has also *Light*, the organ of British Spiritualism. Among these thinkers, the tendency appears to be either to reject reincarnation or to limit its application far more than is done in the Pythagorean, Egyptian, Gnostic, Vedic, or Buddhist systems. In a recent number of *Light*, for instance, Dr. George Wyld, once president of the British section of the Theosophical Society, now a Spiritualist, disavows the belief in reincarnation, and asserts that "Jewish monotheism does not contain a trace of it," and that "Christ and His followers utterly ignore it, and no Christian mystic or saint has ever had any conception of it."

Another writer in the same journal, Princess Karadja, takes issue with this statement. After alluding to the well-known fact that the doctrine of Reincarnation was widely accepted among the Alexandrian Jews and even in Palestine for several hundred years before and after the birth of Jesus, and that there are many references to it in the Jewish "Talmud," she says (*Light*, March 16):

"Philo, the great Neo-Platonian philosopher in Alexandria, who lived at the same time as Christ, taught this doctrine in his work 'De Gigantibus.' In the Gospels we find several traces of it; for instance, Matt. xi. 13–15, Matt. xvi. 13, Matt. xvii. 10, Mark vi. 14–15, Mark viii. 28, Luke ix. 7–9. If the disciples had not believed in Reincarnation, they would not have asked Christ, 'Who has sinned—*this man* or his parents, that he should be *born* blind?' How could he have sinned before being born, unless he had had a previous existence? In his reply, Christ does not show that He finds the question preposterous, as He would certainly have done if His followers had been mistaken. In the first three hundred years of the Christian era, the doctrine of Reincarnation was almost universally recognized by the church. Such great men as Clemens, of Alexandria (216 A.C.), and Origenes (254) used all their eloquence in defending it. When Origenes was (by the disgraceful tactics of his enemies) declared to be a heretic, this doctrine was swept away, with many other truths that this noble heart had fought for. The condemnation of such a low creature as Bishop Theophilus is certainly not sufficient to crush forever an unpalatable truth. Cyril, one of the founders of Orthodoxy, was compelled to acknowledge that the ninth chapter of St. John can only be explained through the theory of preexistence.

"In the first Christian church the origin of the soul was explained in three different ways:

"(1) The Traducian theory (supported by Dr. Wyld) was started by Tertullian (220). The thought that the child's spirit is a product of the parents suited Augustine, who wished to establish the dogma of our from-Adam-inherited sinfulness; but it was condemned later on by Anselm of Canterbury and Thomas Aquinas, who pointed out that *spirit* can not be a product of *matter*, and that the life-principle emanates from God and is joined to the embryo at conception. This is (2) the Creatinian theory, which was generally acknowledged in the fifth century. Hieronymus (420) and Leo (461) declared that 'God manufac-

tures souls every day.' Tho there are a great many objections to this theory, it has reigned supreme since the utter extinction of the ancient Greek culture. (3) The theory of Preexistence is the only one which is in full harmony with the doctrines of St. John and St. Paul, as they are developed in the Gospel. Joannes Scotus Erigena (875) was the last of the brilliant defenders of this theory, which was gradually extinguished in the dark ages of clerical degeneration.

"For my own part, I firmly believe in Preexistence, as I think it impossible that a *just* God should not give all His children an *equal chance*. One child is intelligent, another is stupid; one is born among honorable parents, another in the dens of vice. Have these children an equal chance? Certainly not! If this short life would be the beginning of our race toward heaven, all those who are mentally, morally, and socially disinherited would have every right bitterly to complain; but if the more or less favorable circumstances of our birth are a result of our previous exertions, it is perfectly just and fair that the spirit who has struggled hard to perfect himself occupies a higher step on the ladder than the spirit who has neglected previous chances. I believe that through the law of affinity the spirit who is to be incarnated is attracted to its future parents (this can account for certain characteristics remaining in the same family). For me, this earth-life is just a class in a school; we enter and leave it through the gates of birth and death. I believe that those men who obstinately refuse to learn their lesson—which is to say, 'Thy will be done!'—will have to reenter the same class over and over again till they are fit for higher tuition in semi-material worlds, where the spirit clothes itself in a fitting garb by materialization and not by the unpleasant necessity of birth."

## NEW YORK'S CHINESE CHOIR.

ONE of the most unique of the many institutional features of St. Bartholomew's Church, New York, is the vested Chinese choir of men and boys. The choir forms a part of the Chinese Gild. The New York *Tribune* (March 17) says of this organization:

"At a meeting which took place in the Sunday-school rooms of St. George's Church, a Chinese tea merchant suggested that much good could be done and many worthy people could be assisted if the Christian Chinese of New York had a meeting-place. The subject received the consideration of Dr. David H. Greer, and not long after the scheme had been suggested a suite of rooms was rented for the Chinese Gild at No. 23 St. Mark's Place. There were two hundred members of the organization, only a few of whom were Christians. The organization had much to attract men to its headquarters, in the shape of gymnasium, school, dining-room, and lounging-room. The object of the gild was 'mutual benefit.' Chinese who were molested by their neighbors or by mischievous people came to the gild for protection; others who feared that tradesmen would get the better of them in business laid their woes before the gild, and the place became a sort of bureau of information and court of justice. Guy Mains, who was the originator of the gild; and who has been at its head ever since that time, took steps early in its history to make it a religious center also, and besides devoting time to helping his countrymen out of trouble he founded a Sunday school, which has made good progress.

ST. BARTHOLOMEW'S CHINESE CHOIR.

"The gild removed from its first home to the Chinese quarter in the sixth year of its existence, but remained there only a short time, and then, on the completion of St. Bartholomew's Parish House, took possession of the rooms which it now occupies. The membership now numbers about three hundred, of whom thirty are Christians. Sixteen of these are communicants of St. Bartholomew's Church. The Sunday-school services in the parish-house are attended by about one hundred persons every week, only one of whom is a woman.

"One of the features of the Chinese Sunday-school is the vested choir, the first of its kind ever organized in the United States. The members of the choir are uneducated in music, and can not read notes; but the hymns written in the Tonic Sol-Fa system in Chinese characters are read by them with ease, and are sung with good effect."

## THE DANCE AS A CHRISTIAN RITE.

IT is well known that the dance, like the drama, had its origin as a religious rite, and formed a part of Hebrew and other sacred ceremonies. But altho the sacred drama—partly derived, according to Dr. Paul Carus and other students of comparative religion, from the Eleusinian Mysteries of Greece—has survived in the passion plays of to-day and even in the Christian liturgy itself, the sacred dance seems to have almost disappeared in Christian ceremonial. Indeed, some Christian bodies even condemn dancing in their official book of discipline as a device of Antichrist. But in Spain, where so many distinctive customs are retained, the sacred Christian dance is still to be seen. Mr. Arthur Symons, the English poet and critic, thus writes in *Harper's Magazine* (March) of the annual religious dance in Seville:

"On the day of the feast of the Immaculate Conception, the 8th of December, I attended mass in the cathedral. The gold and silver plate had been laid out by the side of the altar, crimson drapings covered the walls; the priests wore their 'terno celeste,' blue and gold vestments; the Seises, who were to dance later on, were there in their blue and white costume of the time of Philip III.; the acolytes wore gilt miters [?], and carried silver-topped staves and blue canopies. There was a procession through the church, the archbishop and the alcalde walking in state, to the sound of sad voices and hautboys, and amidst clouds of rolling white incense, and between rows of women dressed in black, with black mantillas over their heads. The mass itself, with its elaborate ritual, was sung to the very Spanish music of Eslava; and the dean's sermon, with its flowery eloquence—flowers out of the Apocalypse and out of the fields of 'la Tierra de Maria Santisima'—was not less typically Spanish. At five o'clock I returned to the cathedral to see the dance of the Seises. There was but little light except about the altar, which blazed with candles. Suddenly a curtain was drawn aside, and the sixteen boys, in their blue and white costume, holding plumed hats in their hands, came forward and knelt before the altar. The priests, who had been chanting, came up from the choir; the boys rose, and formed in two eights, facing each other in front of the altar, and the priests knelt in a semicircle around them. Then an unseen orchestra

began to play, and the boys put on their hats, and began to sing the *coplas* in honor of the Virgin:

O mi, O mi amada
Inmaculada!
[O my loved One, Immaculate!]

as they sang, to a dance measure. After they had sung the *coplas* they began to dance, still singing. It was a kind of solemn minuet, the feet never taken from the ground, a minuet of delicate stepping and intricate movement, in which a central square would form, divide, a whole line passing through the opposite line, the outer ends then repeating one another's movements while the others formed and divided again in the middle. The first movement was very slow, the second faster, ending with a pirouette; then came two movements without singing, but with the accompaniments of castanets, the first movement again very slow, the second a quick rattle of the castanets, like the rolling of kettle-drums, but done without raising the hands above the level of the elbows. Then the whole thing was repeated from the beginning, the boys flourished off their hats, dropped on their knees before the altar, and went quickly out. A verse or two was chanted, the archbishop gave his benediction, and the ceremony was over."

## RELIGION IN FICTION.

AMONG Mr. Sheldon's many predecessors in the application of fiction to the service of religion, hardly any one received larger returns in fame and fortune than the late Miss Charlotte M. Yonge. A writer in the London *Spectator* (March 30) takes the ground that a novel gains rather than loses in popularity from a religious flavor, and that Miss Yonge's success is an instance of this fact:

THE LATE MISS CHARLOTTE M. YONGE.

"No book in the world except the Bible has ever had among English-speaking peoples the circulation of 'The Pilgrim's Progress,' which, besides being a work of genius and the best allegory ever written, is an evangelical novel. They forget that 'Cœlebs in Search of a Wife' was once in the library of every country house; that Lady Georgiana Fullerton's rather poor story, 'Ellen Middleton,' made on account of its religious tone a reputation which, in spite of her change of faith, lasted all her life; that scarcely any book has had the hold on the middle classes obtained by Miss Mulock's 'John Halifax,' which is intended to inculcate a creed almost identical with that of the Quakers; and that Mrs. Ward obtained very large sums from 'Robert Elsmere,' a book of which the very essence is its eloquent advocacy of Unitarianism touched and warmed by religious emotion. They forget that 'Salem Chapel' made Mrs. Oliphant, and that both in that book and its sequel, 'Phœbe Junior,' an admirable novel, the life-blood is the contrast drawn between the social effects of two ecclesiastical systems. They do not see that the enormous popularity of Mr. Barrie and 'Ian Maclaren,' that 'John Galt touched with the grace of God,' is first of all due to their marvelous portraiture of specially religious lives. Above all, they forget that 'Adam Bede' was in no way less admired because of the religiousness of its tone, and that of all French novels probably the one best known in England is 'Les Misérables,' in which Victor Hugo preached the doctrine of unselfishness elevated into a real 'religion' of controlling force over men. Many of these writers say such books are popular in spite of the religion in them, and laugh at Miss Yonge's goody-goodiness while acknowledging her really marvelous skill in the delineation of character. She possessed that skill, no doubt, even Sir Guy Morville being real, tho 'raised,' as every Sir Galahad must be; while in 'The Daisy Chain' there are seven or more girls, all brought up under similar circumstances and subjected to the same conditions, who are yet so separate and so finely drawn that if you met one of them you would be tempted to address her by name. . . . . .

"Will this tendency to tolerate, and even enjoy, religion in novels continue? We think it will, and even increase. No change in English life in the past fifty years strikes the writer more strongly than that in the attitude of the people of nearly all grades toward religion. That the community has become more deeply religious he will not affirm. But while an over-rich class has become drunken with the thirst for excitement, and theology has perhaps grown less definite, the purely secular tone which once was manifested by a large majority has almost disappeared. There is keen interest in the subject, even among disbelievers. The discussion, too often, no doubt, sterile, in millions of households never ends, and with it comes the desire to know what the religious-minded really think and do, and the knowledge is sought as often through fiction as any other source."

## THE POWER AND FUNCTION OF QUAKERISM.

IN a day when philosophical idealism—the belief that the inward idea or self constitutes the foundation and reality of all existence—is growing to such great proportions in the "New Thought," Mental Science, Christian Science, and other movements, many have marveled that the ancient and pure idealism of the Society of Friends should apparently be making little or no headway. The orthodox body of this faith, according to Dr. Carroll's latest returns, possesses only 92,468 members, and reports a gain of only 224 during the past year, which is far from the normal increase to be expected from births alone. The other three denominations of "Hicksite," "Wilburite," and "Primitive" Friends report no increase whatsoever. In England the same tendency toward an actual or relative decline is said to be present. The London *Spectator* (March 23) says of this remarkable people:

"Quakerism may almost be summed up in the belief, 'the kingdom of God is within you.' It is one of the great subjects of eternal wonder and dispute that a religion whose great idea was expressed by its founder in these mystic yet vital words should have—and that in a short time—allied itself with the powers of this world, of this secular order. Nothing is clearer than that Christ repudiated this world, this secular order, or than that He warned His disciples against its dread fascination. That disciple who leaned on the Master's breast, and who assimilated His ideas most closely, has devoted his chief Epistle to an elaboration of this doctrine, saying that love of the world is incompatible with love of the Father and the Son. . He has also in the Apocalypse triumphed in the overthrow of world-power in the shape of the Beast and the Woman drunken with the blood of the saints. What would he have said could he have seen in vision the alliance, within two short centuries, of the church cemented with the blood of confessors and martyrs and the very world-power whose destruction he foretold? We knew the arguments on either side of this controversy. Matthew Arnold has told us that the stream of pure Christianity would have dried up in Judean sands had it not merged in the great river of Roman and world activity. Another sect would have been added to those already existing, and that would have been all. But the great vital change in society, the social revolution needed, would not have been attained had it not been for the Decree of Milan. The present writer does not desire to pronounce on this great theme, as regards which mankind will always be divided; he must be content with saying that the price paid for the revolution was immense.

"Whatever view we may take of the necessity of the world-movement catching up in its swirl the stream of Christianity, we

can not ignore two great facts. In the first place, a kind of protest against the secularizing of Christianity must constantly be made; and second, the Quakers, in making that protest, are certainly nearer to the teaching of Christ than is the more conventional Christianity. Even Puritanism, itself a revolt from Anglican smooth uniformity and ultra-ceremonialism, soon was tempted to fall from its high estate, to be entangled in public intrigue, and to commit some of the very sins which it had laid at the door of Anglicanism. Then it was that the Society of Friends stood forward to witness for the simple Gospel in this land. We may admit extravagance and folly, if we like, but when all is said and done the services rendered by George Fox can not be overestimated. The idea of a simple Christ life, with its absolute fidelity, its bold demeanor in face of all the powers of the world, its yea being yea, its nay nay, its worship of the heart, its loyalty to divine command, is so complete that, in the present writer's opinion, it has presented to our people the highest ideal of religion which has been known since Wyclif. It would be too long a task to show also that, if we are to take up the New Testament without bias, we must admit that these Quaker ideals are nearer to the plain teaching of Christ than any other. . . . . .

"The dangers of such a noble creed are manifest, for it is, and will probably remain, a creed for the few. But to the mysticism of the Quaker faith is attached the ethics of practical Christianity. Never was there a creed which more fully combined the two elements of the religion of Christ. Faith without works is dead, urged the great practical apostle whose famous Epistle Luther called 'an Epistle of straw.' But a mere gospel of works will never satisfy the infinite needs of the soul. Quakerism understood in its best minds both doctrines, and so did not fall into barren quietism on the one hand or bustling philanthropy on the other. The greatest Quakers loved to commune in the stillness of the meeting-house, no one breaking the solemn silence unless called of the spirit to do so; but they also looked on the world and the dominion of darkness, and they determined to shed light on that darkness, not so much by preaching as by Christian practise. . . . . .

"We do not doubt the loveliness of many a saint, of many an obscure monk or priest, in the great guarded fold of the orthodox Christian church. But for fidelity and courage, as well as for inward light shining in a dark world, where will you find the superior of these saints of Quakerism? The Society of Friends may well be proud of its record, even tho it knows it is not likely to convert the wide world."

## RELIGIOUS NOTES.

THE Duke of Newcastle, who with Viscount Halifax is one of the chief lay leaders of the English High-Church party, has lately been traveling in this country to study religious conditions in the Protestant Episcopal Church. Churchmen in England, he says, know too little of what is being done by their fellow churchmen in America, and he hopes to bring the two nearer together. In an interview in Washington he is reported to have said that while, owing to the Pope's ruling on English orders, there is no prospect of a *rapprochement* between the Church of England and the Roman Catholic communion for a long time to come, he thinks there may be intercommunion within the next twenty years between the Church of England and the Orthodox Eastern Churches of Greece and Russia, which in doctrine, polity, and custom are already near together.

A NEW study of John Wyclif, especially emphasizing his anti-war views, has lately been made by Mr. Josiah W. Leeds. Half a millennium ago, the writer says, Wyclif's voice, as a Christian reformer, was raised against war with as much energy as are the voices of Tolstoy and Ernest Crosby in our day. "Lord," queries Wyclif, "what honor fall to a knight that he kills many men? The hangman killeth many more, and with a better title. Better it were for men to be butchers of beasts than butchers of their brethren!" Warring Christendom to-day, says Mr. Leeds, "greatly needs the affirmation of these too-much contemned truths," and he points out that this testimony of Wyclif against war has been almost wholly ignored by those who write of him.

APPARENTLY alone among the Protestant journals of America, *Unity* (Chicago, February 28) offers some severe reflections upon the new King of England. Reading a lesson also to our own "rulers," it says: "It is not only a discouraging but a sickening spectacle that Edward VII. is presenting to the world in his foolish 'revival' of medieval pomp and antique show, and the blazon effrontery to decency offered by English and American publishers in announcing a book on 'The Private Life of King Edward VII.' The less said about his private life the better, and the less millinery and brass-band foolishness that go with his coronation the less the indignity offered to the sensible citizens of England. The President of the United States . . . will do well to avoid rather than emulate the example of this degenerate son of a womanly queen."

## FOREIGN TOPICS.

### WHAT IS THE SIGNIFICANCE OF THE STUDENT RIOTS IN RUSSIA?

ARE the student riots in Russia accidental, or are they, as the American press would have us believe, symptomatic of a deep-seated disease in the empire of the Czar? The continental European journals generally do not regard the demonstrations in Moscow, St. Petersburg, and other Russian cities as at all serious, and believe that they indicate merely the necessity for reform in the method of governing universities in Russia. French papers blame the English press for exaggerating the disturbances. The *Temps* (Paris), which supports the alliance with Russia, manages to treat the subject so skilfully that, in a two-column article, it does not express even the shade of an opinion. The *Journal des Débats* (Paris) declares that the question is solely one of reorganizing the interior administration of the universities, and that it has no political significance whatever. It is a struggle for academic liberty, says this journal, such as is found in German universities, for the liberty of doc-

TOLSTOY'S EXCOMMUNICATION.

"Out with him! His cross is too big for the church!"
—*Jugend, Munich.*

trine and association which is enjoyed by professors and students in universities the world over—except in Russia. There is a good deal of the idealist about the Russian student, says the *Frankfurter Zeitung*, and the Government, in trying to treat him like a child, has done its best to foster a desire for martyrdom in him. It continues:

"The truth is that in Russia the Government has never realized that in the hands of the youth of the country lies the future of Russia, and this is particularly so of the youth of the universities. The statesmen of the present seem to have adopted the policy of the first Nicholas and to wish to treat them like soldiers. Any symptoms of discontent with the attitude of the Government, or what the bureaucrats take to be discontent, are punished by forcible enrolment in the army. It may be remarked that the Russian soldiers are far better treated than they were fifty years ago, and that, therefore, the punishment of compulsory service is not so severe as it was when Nicholas I. was Emperor. But the principle is the same—the Government thinks that intellectual movements can be stamped out by military discipline."

The *Independance Belge* (Brussels) publishes a despatch from St. Petersburg stating that General Dragomirów, commander in the Kieff district, has protested to the Czar against the army's being used as "a house of correction for fractious students." Military service, he is reported to have said, should never be made a penalty for insubordination. The *Independance Belge* also publishes a statement signed by forty-five well-known Russian authors and educators, recounting the facts connected with the riots and the violence of the Cossacks, and claiming that the protest, which has been sent to "every newspaper in Europe," has the indorsement of "all intellectual Russia."

A writer in the *Nation* (Berlin) reviews the history of Russian legislation affecting the universities for the past half-century, and declares that considerable progress in toleration has been made; but thinks that the Government might easily have granted the demands of the students in the present instance without at all compromising its authority. M. Plekhanoff, a leading Russian revolutionist, has declared (in an interview published in the *Secolo*, of Milan) that the student movement has the hearty support of the masses of the empire. In support of this statement he points out that the workmen of Moscow and St. Petersburg made common cause with the rioting students, and also that in the crowd which assaulted the Kasan cathedral in the latter city there were found merchants and persons of nearly every profession. The riots, he concludes, are the result of a well-prepared and well-managed propaganda which the revolutionists are carrying into every corner of Russia.

From reliable sources in Vienna (nothing on the subject is permitted by the censor to appear in the Russian papers) the correspondent of *The Times* (London) declares these riots to be the "first serious symptom of a far-reaching revolutionary agitation of which more will probably be heard hereafter." Commenting upon this report, *The St. James's Gazette* (London) remarks: "However improper it may be for foreigners to wish well to violent revolution in a friendly country, it would be impossible for Englishmen to withhold sympathy if there were the smallest prospect of 'revolutionary agitation' leading to any practical result in Russia."

The movement has the profoundest interest for Western nations, says *The Daily News* (London):

"It is the struggle between intelligence and force, and the best defenders of the present system can only say that Russia has too much need of force to cultivate intelligence. But why, then, have these universities? Surely it would be more honest of the Czar to suppress universities altogether than to use them as traps to catch these foolish young boys and girls who go by the name of students. The prisons of Russia are at present crowded with the flower of the Russian youth—the most eager and intelligent souls among all those multitudes. What their sufferings are we know from the appalling pages of Tolstoy's 'Resurrection,' and they are too horrible to dwell on. Russia stands poised between East and West, with neither the fixity of the one nor the freedom of the other, and these poor children are the victims of the struggle between these forces. The university is the meeting-point of these two tides of influence, and the young are just those who can not placidly accept the blank contradiction. Will no light ever break through these clouds?"

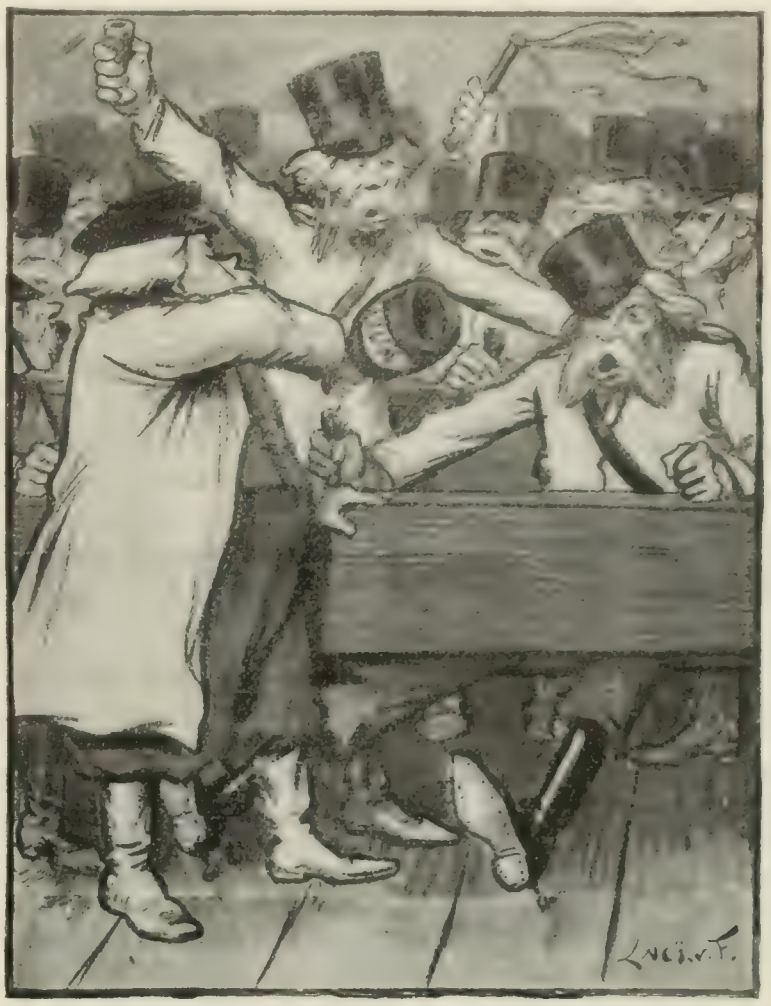
For every student murdered or sent into exile, says *The Guardian* (Manchester), ten revolutionists will rise up. "The Russian Government has not yet learned that a brutal persecution gives a moral lift to a revolutionary movement." These incidents, continues *The Guardian*, are significant of change:

"On the one hand there is a fresh growth of liberal opinion, very much in our English sense of the term liberal. The reign of terror in the late seventies and early eighties crushed liberalism, dividing the forces of the country into those of revolution, misnamed Nihilism, on the one side, and the reaction on the other. In the assassination of Alexander II. the revolution won a Pyrrhic victory which ended in its total discomfiture and left the reactionaries sole possessors of the field. Now, little by little the moderate liberalism of the educated classes has been reasserting itself, and it begins to-day to count as a force in Russia as it has not counted since the sixties. On the other hand, the growth of the towns and of urban industries has, as usual on the Continent, produced the development which we in England distinguish under many heads, but which are lumped together by continental police as Socialism. There have, for instance, been serious strikes which have not been without a measure of success. But in Russia, as elsewhere, middle-class Liberalism and working-class Socialism have not always understood one another, and it is noted as a peculiarity in the present disturbances that the two movements have for the moment been fused."

Russia is not in a wholesome condition, says *The Standard* (London), for it is certainly "a grave peril for any state when the bulk of those who have received an intellectual training are found to be hostile to their rulers." Referring to the excommunication of Count Tolstoy, *The Guardian* remarks:

"Morally the casting out of a man like Tolstoy can only damage the church which finds it impossible to keep such a man within its fold. The man himself it can not lower. It can not even elevate him. But it does confer on him a certain official recognition. It makes him a rallying-point for the enthusiasm of all who detest the hollowness of the existing order. At the same time it advertises the unchristian character of a professedly Christian hierarchy."

*The Saturday Review* (London), however, does not regard the excommunication as anything extraordinary. There is not a church established or non-established in Europe, it says, that



REOPENING OF THE UNIVERSITY OF ST. PETERSBURG.

COSSACK LEADER: "Comrades, the University is ours. Let us begin at once with the spiritual (spirituous) studies."

—*Humoristische Blatter, Vienna.*

would not have excommunicated him long ago, if it exercised any discipline at all over its members.

A Russian writer in *The International Monthly* (April) declares that the empire is now at one of its most crucial turning points. Russian thought has become stagnant and the people seem to be waiting they know not for what. Says this writer (J. Noviców, of Odessa):

"Just now Russia is hesitating between progress and reaction. The liberals have not to a marked degree the courage of their convictions, nor do the reactionaries dare engage in any too great violence. We live from day to day, and no one knows whither one is tending. It seems even as if people were delighted not to go anywhere. Some legislative measures of very slight importance have been enacted. But no one seems to have the courage to attack the great political problems, ripe for so many years. Life formulates its imperious demands, but the Government, in its inability to act, seems to wish to stop up its ears and close its eyes. Russia continues to linger along in superannuated and nearly vanished institutions, hardly worthy of the eighteenth century, and continues to be an archaic state. The breath of no powerful and generous idea seems to animate this country. Not a single man, no great character, no conspicuous personality,

appears to captivate the crowd and to vibrate in the hearts. The novel is reduced to a superficial impressionism, which paints daily life exactly as it is, without in the least attempting to interpret it. It would seem as if the novelists are chiefly ambitious to reduce themselves to the level of photographic machines, and to carefully avoid all traces of an independent thought.

"At this present moment, Russian society seems to be without aspiration, and with no ideal of any kind. There is not a single great question about which intellectual war is waged. The most sacred principles count but skeptics and unbelievers. It would seem as if the chosen few of Russian society (among whom, in other times, such powerful currents of thought have been produced) had lost the faculty of feeling the beating of their own heart. An atmosphere, dull and gray, pervades the whole. There is absolute stagnation."—*Translations made for* THE LITERARY DIGEST.

## OUR TARIFF DIFFERENCE WITH RUSSIA AGAIN.

THE decision of the board of general appraisers of our State Department, to the effect that the course of the Russian Government, in remitting the taxes upon Russian sugar whenever it is exported, is really in the nature of the payment of a bounty; and that, therefore, Secretary Gage was justified in applying to the Russian product the law imposing a duty on bounty-paid sugar entering this country, prompts *The Saturday Review* (London) to remark that, altho America is well advanced in the commercial race, "there are others," and it would be well for us not to forget the fact. After this oracular observation it proceeds to quote the remark of Baron Heyking, Russian consul to London, made recently, to the effect that "free-trade countries are offered excellent prospects by one tariff war already broken out between the United States and Russia, and another apparently impending between Russia and Germany." The whole trouble between the United States and Russia, in the opinion of *The Standard* (London), never very friendly to this country, was "made in Germany." Its explanation is as follows:

"Russia has a separate and somewhat aggravated contention with Germany with regard to the formulation of the new commercial treaty between the two countries. The German Agrarian party is fighting hard in order to protect and foster home agriculture, to have the duties raised against Russian cereal imports, and more especially against Russian rye, of which Germany has for many years past been an increasingly large consumer. On the other hand, Germany is afraid to concede the demands of the Agrarians, for fear Russia should raise the duties all round on the immense quantities of industrial products of all descriptions which Germany exports to Russia. Nettled by the difficulty in which Russia has thus placed Germany, it is asserted that the Berlin Government instigated the Washington Cabinet to the course it has adopted with regard to Russian sugar imports."

The *Novoye Vremya* (St. Petersburg) has been advocating a trade alliance with the United States, and expresses great disappointment at the turn things have taken. Speaking of the German agrarian demands for higher duties on American and Russian grain, it says:

"Perhaps these developments will, in a measure, prepare the American politicians for the question we have often discussed—namely, the desirability of an agreement with Russia in regard to grain exports. The community of interest between the two great agricultural countries is so obvious that only the undue self-confidence of our transatlantic friends—competitors in their ability to hold the European markets—blinds them to the situation."

Russia is quite able to take care of herself, declares the *Vestnik Finanssów* (*Finance Messenger*, St. Petersburg), the official organ of the Ministry of Finance. It continues:

"Whoever loudly proclaims the intention to restrict or discourage the importation of Russian agricultural products must of course remember that, annulling one part of the commercial treaty, he undermines all the remaining parts. However we may prize our commercial treaties with other nations, and our peaceable and amicable relations, if we are threatened with curtailment of our foreign trade in Russia's fundamental products (agricultural ones), we are bound to find a corresponding and countervailing measure. The foreign government may expect to encounter a rival fully armed and equal to the contest. The Government is not disturbed by the agitation abroad, and, ready to render tit for tat, reprisal for reprisal, it is quietly preparing for negotiations toward renewing the commercial treaties (expiring in 1903) on the basis of mutual advantage."—*Translations made for* THE LITERARY DIGEST.

## FURTHER EUROPEAN COMMENT ON THE NICARAGUA CANAL.

THE official statement of Lord Lansdowne, British Foreign Secretary, indicating, in detail, the position of his Government in regard to the Nicaragua Canal, has called forth in the European press renewed comment, of a character similar to that already made. Criticism of the American Senate occupies most of the attention of the English journals, while satisfaction with the assumed setback to an Anglo-American alliance and fear of the commercial supremacy of the United States in South America continue to agitate the press of the Continent. "Were we dealing with any other treaty-making authority than the Senate as it is to-day or perhaps any other President than Mr. McKinley, we might hope for a sensible adjustment of two or three difficulties," says the usually anti-American *Saturday Review* (London). As things are, it despairs. Monroeism "is being converted from a justifiable refusal to allow the imposition of reactionary doctrines on the races of the New World into a theory for manipulating their destiny to suit American interests." The United States has developed vast ambitions both as to empire and trade, and Europe can not afford to allow us to acquire artificial advantages in defiance of our pledges. The opening of the canal would certainly lead to a great expansion of American trade at the expense of British. . . . It would bring Japan, North China, Australasia, and part of Malaysia nearer to the Atlantic cities than they now are to England. It will, on that account and because it will bring the western coast of America many thousands of miles nearer to the eastern, immensely stimulate the ship-building trade of the United States and develop its naval power.

*The Guardian* (Manchester) wonders whether the American Senate, "which never misses an opportunity of mangling a treaty," does so with a view to showing its power, or merely out of "general perversity." *The Daily News* (London) declares that the Senate "placed itself out of court by the want of urbanity in its methods," and doubts the possibility of any agreement with a body "characterized principally by a medley of state interests and a dominating prejudice against England." *The Scotsman* (Edinburgh) declares that the most striking feature of the whole business is the evidence it affords of the belief, not only among uninformed American politicians, but even among the heads of the Government, that by merely formulating their demands they may get all they desire while giving nothing in return. The action of the Senate, it concludes, "involves a deliberate breach of good faith and a callous disregard for international comity."

The *Journal des Débats* (Paris) admits that the British Government had a very difficult task before it and could scarcely have acted differently, as the *amour propre* of the empire had been wounded and the "national exuberance of the Americans really needed a check"; but what, it asks, has now become of the much-vaunted Anglo-Saxon alliance? The *Neue Preussische Zeitung* (Berlin) sees danger to European trade in South America, but hopes the Latin-American republics will not submit to the arrogance of the United States. It says:

"It can scarcely be assumed that the great South American

states, whose full development is only a question of time, will remain quiet in the face of the so-called protectorate in war and actual industrial monopoly in peace at which the American union aims; and in their defense they deserve the full support of all the European states. The matter resolves itself into the following: Are they to strike their flag to the influence of North America and give over to the Yankees without a struggle the commercial dominion of the Southern Continent and the Central American countries, or are they to stand up and fight? The trade of Central America is now divided among Great Britain, the United States, Germany, and France. With the hegemony of the North American union, which is what must result from the monopolization of the Nicaragua Canal, will come the 'squeezing out' of the trade of other nations, which would be thus placed at an unfair advantage in the commercial race."

A writer in *España Moderna* (Madrid) argues that the Monroe doctrine is really the entering wedge of complete conquest by the United States, and he calls upon the Latin-American republics to "send forth a ringing protest against the domination" of North America.—*Translations made for* THE LITERARY DIGEST.

## WILL AUSTRIA REALLY BREAK UP?

WHILE the British, French, and German press generally comment upon the prospective break-up of Austria-Hungary, looking upon such a result as merely a question of time, journals within the Dual Monarchy itself are vigorous in their denials that disintegration is "imminent," and declare that the empire does not depend on the good will or forbearance of her neighbors for existence, and that her internal troubles, though acute, do not seriously affect her position in the world nor threaten her national existence. Their argument is well presented by the *Pester Lloyd* (Budapest), Count Goluchowski's Hungarian organ (published in German). It would be foolish to deny, admits this journal, in the face of facts patent to all the world, that in Austria all healthy public life is being destroyed by the perpetual quarrels of the Nationalists. It continues:

"A weak and despicable policy, pursued by successive governments, which has been adhered to with tenacity worthy of a better object, has finally resulted in the complete abdication alike of the Germans and the Slavs from the state as a whole. In the furious fights which the Germans and the Czechs have urged with one another, all the hopes of a future union of the two races have been abandoned. And yet it is the simple truth that in the face of any danger which might threaten us from without, the consciousness of the historical union of the peoples, and of the insoluble bond which has always existed in weal or wo between the nations and the dynasty would at once assert itself and prove that our union, as an entity in the history of Europe, is dearer to us than the prejudices, religious or nationalist, held by us as clans and parties within the empire."

The attitude of the Czechs, it continues, proves the existence of this feeling. While formerly looking openly to Russia to deliver them from Teutonic bondage, they are now "never tired of reasserting their passionate devotion, an exclusive devotion particular to themselves, to Austria their Fatherland." This change of rôle, says the *Pester Lloyd*, is due to the fact that the Czechs now realize that their own existence is involved in the maintenance of the empire. (For the attitude of the Czechs as outlined in a recent speech by Dr. Kramarz, one of their leaders, see THE LITERARY DIGEST, April 20.)

The Germans who are boldly calling for help from without, continues this Budapest journal, are merely those "parti-colored and double-tongued animals which no serious man takes seriously." No one would base a prophecy on the "vaticinations of these windbags, blown with insolence and wine."

A united and allied Austria-Hungary, we are told in conclusion, supports and strengthens the German empire, and no disintegrating force may be looked for from Berlin. On the other hand, "Austria incorporated with Germany would mean a preponderance of Catholicism over Protestantism, a paralysis of the Protestant empire, and, with the addition of the Slav element, it would mean a perpetual rankling sore, not an increase of strength." Moreover, it is the opinion of the *Pester Lloyd* that any attempt to conquer or divide an empire of such "organized polity and strong national feelings" would result in a general European war.—*Translations made for* THE LITERARY DIGEST.

## BRITISH ARMY REORGANIZATION SCHEMES.

VON MOLTKE is said to have declared that England never had a real army, and, from the nature of things, England never can have one. Conscription is impossible in England, said the German general, and volunteers, while they may be good defenders, never make good regulars. Yet the parliamentary debate and the newspaper discussion over the new army reorganization scheme in England deal principally with this idea of conscription, which, tho it is not advocated, yet, according to *The St. James's Gazette* (London), underlies, as a necessary foundation, all the recommendations of Mr. Brodrick's scheme. The reorganization plan is comprehensive and exhaustive. In brief it is as follows:

The War Office asks for a grand total of 680,000 men, regulars, reserves, militia, yeomanry, and volunteers. Of this force, 260,000 are to constitute a field army; 196,000 are to be composed of volunteers specially trained for home garrisons; 100,000 are to form the defense of London; there is to be a general staff of 4,000; leaving 120,000 men to compensate for the number of the sick and of the raw recruits. One half of the field army is to be composed of regulars. The home army is to be divided into six army corps, with headquarters respectively at Aldershot, Salisbury, Colchester, York, Edinburgh, and in Ireland, each corps to be under the command of that officer who would lead it in war, who will have his staff complete, and will be responsible for much of the administration. The mobilization, stores, transports, etc., of each are to be kept in the district, so that these separate units will be ready to take the field complete. The army corps commands are to be for three years only, and proof of efficiency will be required before they are renewed. The first three are to be available for immediate service abroad, and all will be provided with a complete quota of mounted troops and artillery. In the second three corps will be included a certain number of picked volunteer battalions, which will be required to undergo a special course of training, and will receive during the period pay at the rate of 11*s.* 6*d* (about $2.80) per day for officers, and 5*s.* ($1.25) per day for men. Behind these will stand the bulk of the volunteers, whose efficiency will be increased by a longer sojourn in camp and a larger number of precedent drills, and the Imperial Yeomanry, increased to 35,000 men, who are to be equipped with rifle and bayonet, to receive pay during training at 5*s.* a day, and a grant of £5 ($25) to every man who provides his own horse.

In the section devoted to recommendations for increasing the efficiency of the army, it is admitted that more artillery of a modern type is needed and that the medical and transport services are greatly in need of reform. The training of the troops is to be remodeled in view of recent experience. Barrack-yard drill is to count for less, and development of individual intelligence for more. The six army corps are to have their own barracks and their own maneuvring grounds, as well as their own staffs. Opportunities will thus be given for improving the training not only of the men, but also of the officers. No officer is to command in peace unless certified by the military authorities as fit to command in war. Every care is to be taken to stimulate professional studies.

The whole scheme, says *The Times* (London) is excellent. "It might be a little more definite, and it is obvious that everything depends upon the infusion of a new spirit into the heads of the military organization, and upon the continuous selection by them without fear or favor of the best and most capable officers for every post that falls vacant; . . . but, on the whole, the plan has been carefully and discriminatingly worked out." Mr. Brod-

rick has done well, says *The Outlook* (London), but there are many obstacles in his way. "The most formidable is in the *vis inertiæ*, in the paralyzing lack of initiation and energy which characterizes high political circles in England at the present time. There is a dread of great schemes, a fear of change, a lack of constructive genius."

*The St. James's Gazette* points out that conscription may be a necessity in the near future, as even the newest scheme does not offer sufficient attractions to men to enlist.

The time has come for England to have a businesslike, professional army, thinks *The Saturday Review* (London). It adds:

"There is a tradition and feeling throughout the great body of our officers which despises knowledge and method, which places sport above science, and games before professional zeal. The surest road to advancement has hitherto not usually lain so much through knowledge of professional matters as through social success. So long as officers have the suspicion that among many high in the military hierarchy the man who studies, instead of being in favor, is less a *persona grata* than the boon companion of the race-course and cricket-field, so long shall we 'muddle through it somehow,' as Lord Rosebery said we would."

An anonymous "open letter" to Lord Salisbury, under the title "The Defense of the Empire," appears in *The Contemporary Review* (London, April) in which the writer criticizes the speech in which the reorganization scheme is set forth, as follows: "This so-called 'statement,' which was meant to indicate the basis of a grand national military reform policy, is as vaguely worded as the prospectus of a mining company. Instead of laying down, in firm and unmistakable language, an intelligible, clear, and business-like statement, we are given 'intentions,' 'proposals,' and 'wishes,' which may or may not be executed, according to the momentary requirements of party politics."

What is wanted, concludes this writer, is the dismissal of the incapables by hundreds and the imprisonment of the corrupt by dozens. "What is wanted is an iron will and an iron hand—merciless exposure and merciless punishment."

The German press has very little to say on the subject. *The Post*, the *Boersen Courier*, and the *Neuesten Nachrichten* (Berlin) agree that England must accept the bitter medicine of conscription if she is to have adequate military defense for her vast domain. The *Kreuz-Zeitung* (Berlin) is a little skeptical of the success of the new plan. If it is carried out, however, says this journal, "England gains in value as an ally." The *Strassburger Post* believes that England, notwithstanding her reverses, comes out of the Boer campaign stronger than she went in. Says the *Post*: "At present Great Britain is going through a great military development of which the Boers are incapable, as they have exhausted their strength. . . . England may now achieve a great deal, if she is moderate."

Considerable comment on the plan appears in the French papers, but no danger to France is apprehended. The *Temps* (Paris) explains that France has now fewer points of disagreement with Great Britain than any other nation. "We have cut out," it says, "within the last twenty years our share of colonial empire; we shall have enough to do with governing it. We can, therefore, watch England's military development without too much anxiety." As to the plan itself, the *Temps* does not believe the requisite number of men can be obtained without conscription. If carried through, however, says this Paris journal, the reform "will probably modify many an international problem." The industrial revolution in the United States, the sharp competition of Germany, and the "irresistible, if slow, expansion of Russia across Asia," it continues, will force England to maintain a great army "for her very life's sake." The *Éclair* (Paris) asserts that the whole scheme is "a mockery and Mr. Brodrick knows it." The British Government dares not propose conscription, but it is gradually preparing the public for it. "England will have to choose between compulsory military service and the abandonment of her imperialist policy."—*Translations made for* THE LITERARY DIGEST.

## CORRESPONDENTS' CORNER.

### The Use of the Individual Communion-Cup.

*Editor of* THE LITERARY DIGEST.—Referring to the articles, "Bacteriology and Religious Rites" in THE DIGEST of January 26, 1901, in which the London *Lancet* is quoted as favoring more general ecclestiastical sanitation than now prevails in connection with holy-water receptacles in Roman Catholic churches and communion-cups in Protestant churches, I may be permitted to call attention to a few additional facts of recent interest, perhaps, which my position as one of the earliest to agitate for the adoption of individual communion-cups, on sanitary grounds, has facilitated in obtaining.

(1) There are now approximately 950 churches, representing nearly 500,000 communicants, using individual communion-cups.

(2) About seventy per cent. of these churches are of the Baptist, Congregational, and Presbyterian denominations, and nearly equally distributed among them; the precentage of those using the individual cups to those not using them being obviously greatest among the Congregationalist.

(3) The Methodist Episcopal, Reformed, Lutheran, and Christian (Disciples) churches follow in order and in nearly equal proportion.

(4) There are a few Protestant Episcopal, Universalist, Swedenborgian, and other scattered denominations using the individual cups.

(5) There are twice as many churches with the cups now as in 1898, thus showing a steady and more rapid increase than for the four years preceding the latter date—the inception of the movement being in 1894.

(6) By far the largest proportion of the churches with individual cups in use are in New York and Pennsylvania, and in New England States. However, the States of the middle West, as Ohio, Indiana, Wisconsin and Iowa, are rapidly increasing in the number of these churches. Colorado and California have many in the list.

(7) There are several churches in Canada, Australia, the British West Indies, and New Zealand, as well as in England, that have adopted the individual cups. Even Mexico, the Sandwich Islands, and Japan are represented.

From the tenor of previous editorial utterance in *The Lancet* which I have noted, it does not seem likely that the Church of England authorities will, on account of the ritual, sanction the use of individual communion-cups; but recommend rather the revival of the custom of *intinction*, or of dipping the bread into the wine by each communicant. This would be, of course, a distinct sanitary improvement, altho a practise bound to meet with objection on traditional or ceremonial grounds in most of the other denominations.

The earlier objection to individual cups by *The Lancet*, namely, their impracticability, was based upon a misapprehension of their use here in America, as pointed out by me in a letter published in its columns recently.

PHILADELPHIA.

### An Optical Delusion and Its Explanation.

*Editor of* THE LITERARY DIGEST.—In your issue of February 23 mention is made of a "new and curious optical illusion." The illusion in question (the shadowy appearance of the intersections of white bands laid upon a black surface) is, and has been for some time, part of the stock in trade of the laboratory student of optics. Several of its variations were published by Prof. W. Prever in *The American Journal of Psychology*, October, 1897, and Preyer's diagrams were made some years before this. The illusion is also to be found in popular sets such as Milton Bradley's 'Pseudoptics,' compiled by Professor Muensterberg.

It may be worth adding that the explanation does not depend upon the hazy nature of indirect vision, as the writer quoted implies, but upon the well-known principle of simultaneous contrast. The blackness of the squares causes the immediately adjoining portions of the white bands to appear very white; consequently, the middle of the white bands is relatively grayish, and the square at the intersection of *two* of them becomes, accordingly, distinctly gray. If the figure be constructed on a larger scale than in your illustration, these facts wil' be at once obvious.

CORNELL UNIVERSITY, ITHACA, N. Y.

### Buddhists and Religious Freedom.

*Editor of* THE LITERARY DIGEST.—Apropros of the recent articles in your paper concerning "New Missionary Plans of Buddhism," and the letter sent to representatives of foreign missionary societies, I would say that the Buddhists in Japan are doing the very thing they censure Christians for doing. They present their best side, but recently have been going from house to house telling people not to buy portions of the New Testament which missionaries and other Christians are selling. Recently it has come to my knowledge that in one viliage, at least, they refused burial, in the temple grounds, to Christians. The matter was brought to the notice of the police, who reprimanded the priests, saying the constitution of Japan grants religious freedom. It is hardly fair to criticize Christianity while doing what its opponents condemn.

PHILADELPHIA.

## CURRENT POETRY.

### Fiona Macleod, a Poet of Womanhood.

Selections from the poetry of Fiona Macleod, a Scotch poet and novelist, were published in a recent number of *The Bibelot*. In a prefatory note, the editor writes:

"Here is a verse which 'speaks to the heart because it came from the heart.' . . . . Consider the concluding rune—'The Rune of the Passion of Women.' The words of this unrimed poem—a magnificent vindication of *vers libre* in itself—are words of fire and tears. Herein the soul is stripped as bare as the erst-while beautiful body was stripped bare to the anguished eyes of her whom Villon limned for all time—The Fair Helmmaker grown old."

From "The Rune of the Passion of Women," we quote the following:

. . . Bitter, alas, the sorrow of lonely women,
When no man by the ingle sits, and in the cradle
No little flower-like faces flush with slumber:
Bitter the loss of these, the lonely silence,
The void bed, the hearthside void,
The void heart, and only the grave not void:
But bitterer, oh, more bitter still, the longing
Of women who have known no love at all, who never,
Never, never, have grown hot and cold with rapture
Neath the lips or 'neath the clasp of longing,
Who have never opened eyes of heaven to man's devotion,
Who have never heard a husband whisper "wife,"
Who have lost their youth, their dreams, their fairness
In a vain upgrowing to a light that comes not.
Bitter these: but bitterer than either,
O most bitter for the heart of woman
To have loved and been loved with passion,
To have known the height and depth, the vision
Of triple-flaming love—and in the heart-self
Sung a song of deathless love, immortal,
Sunrise-haired, and starry-eyed, and wondrous:
To have felt the brain sustain the mighty
Weight and reach of thought unspanned and spanless,
To have felt the soul grow large and noble,
To have felt the spirit dauntless, eager, swift in hope and daring,
To have felt the body grow in fairness,
All the glory and beauty of the body
Thrill with joy of living, feel the bosom
Rise and fall with sudden tides of passion,
Feel the lift of soul to soul, and know the rapture
Of the rising triumph of the ultimate dream
Beyond the pale place of defeated dreams:
To know all this, to feel all this, to be a woman
Crowned with the double crown of lily and rose
And have the morning star to rule the golden hours
And have the evening star thro' hours of dream,
To live, to do, to act, to dream, to hope,
To be perfect woman with the full
Sweet, wondrous, and consummate joy
Of womanhood fulfilled to all desire—
And then . . . . oh then, to know the waning of the vision,
To go through days and nights of starless longing,
Through nights and days of gloom and bitter sorrow:
To see the fairness of the body passing,
To see the beauty wither, the sweet color
Fade, the coming of the wintry lines
Upon pale faces chilled with idle loving,
The slow subsidence of the tides of living.
To feel all this, and know the desolate sorrow
Of the pale place of all defeated dreams,
And to cry out with aching lips, and vainly;
And to cry out with aching hearts, and vainly;

**For Sick Headache**

**Take Horsford's Acid Phosphate.**

Dr. H. J. Wells, Nashville, Tenn., says: "It acts like a charm in all cases of sick headache and nervous debility." Gives quiet sleep.

**THE SANITARY STILL**

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. **HON. W. L. CHAMBERS,** Ex Chief Justice of Samoa, writes: "I have been using one of your Sanitary Stills in my family for some time, and beg to say we are highly pleased with it. The water obtained from it is palatable and pure, and I take pleasure in recommending the Sanitary Still as all you claim for it." The Sanitary Still used in the **WHITE HOUSE.** Highest award at Paris Exposition. DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

**Cuprigraph Co., 68 N. Green St., Chicago.**

And to cry out with aching brain, and vainly;
And to cry out with aching soul, and vainly;
To cry, cry, cry with passionate heartbreak, sobbing,
To the dim wondrous shape of Love Retreating—
To grope blindly for the warm hand, for the swift touch,
To seek blindly for the starry lamps of passion,
To crave blindly for the dear words of longing!
To go forth cold, and drear, and lonely, O so lonely,
With the heart-cry even as the crying,
The lamentable crying on the hills
When lambless ewes go desolately astray—
Yea, to go forth discrowned at last, who have worn
The flower-sweet lovely crown of rapturous love:
To know the eves have lost their starry wonder;
To know the hair no more a fragrant dusk is
Wherein to whisper secrets of deep longing.
To know the breasts shall henceforth be no haven
For the dear weary head that loved to lie there—
To go, to know, and yet to live and suffer,
To be as use and wont demand, to fly no signal
That the soul founders in a sea of sorrow,
But to be "true," "a woman," "patient," "tender."
"Divinely acquiescent," all-forbearing,
To laugh, and smile, to comfort, to sustain,
To do all this—oh, this is bitterest,
Oh, this the heaviest cross, oh this the tree
Whereon the woman hath her crucifixion.

---

### The Summoner.

By CLINTON SCOLLARD.

'Twas this morning when the winds were rocking
Larch and linden with a rhythmic swing,
That the crested woodpecker came knocking
For admission at the door of Spring.

"Open! open!" seemed he to be saying;
"For the portal has been shut too long;
We are grown impatient for the Maying,
And the sweet processional of song!

"For the buoyant outring of brook-laughter;
For the meadows goldening to smiles;
For the soft green on the woodland rafter,
And the bloom-burst down the forest aisles!"

Still I saw about me glow and glisten
Ancient Winter's white environing,
As I leaned in eagerness to listen
To the sibyl answer of the Spring.

Then, responsive to the bird's insistence,
From the margin of some cloistral shore
Came a murmur up the hollow distance,
"On the morrow will I ope the door!"

Hail, thou summoner of the azure weather,
Herald of Spring's portal backward thrown!
With another sunrise we together
Once again shall win unto our own!

—In *Frank Leslie's Popular Monthly* (April).

## MORE OR LESS PUNGENT.

**Resisting.** — PATERFAMILIAS: "Tommy, stop pulling that poor cat's tail."

TOMMY: "I'm not pulling it, pa. I'm only holding on to it. The cat's pulling it."—*Tit-Bits.*

**Celestial Costumes.** – HUSBAND: "I wonder what we shall wear in heaven."

WIFE: "Well, if you get there, John, I imagine most of us will wear surprised looks." -*Smart Set.*

**Admiration.** — "Mean ter say she's a white gal?" "In course she is." "Golly! I reckon no cullud gal cud look as much like a white gal as dat gal looks like a cullud gal."—*Puck.*

**Personal.**—The young man, leading a dog by a string, lounged up to the ticket-office of a railway station and inquired: "Must I—aw—take a ticket for a puppy?" "No; you can travel as an ordinary passenger," was the reply.—*Tit-Bits.*

**Very Plausible.**—JED: "Cholly has just returned from a hunting trip. He says he shot the biggest bear on record."

NED: "That might be so. If it hadn't been a big one he would never have hit it."—*Smart Set.*

**Consolation.**—MR. FONDPAR: "Ask the doctor to come to my house immediately. My wife doesn't quite like the baby's looks."

NORAH: "He's out, sure, but don't yez worry—the homeliest babies sometimes grow up quite good-looking."—*Brooklyn Life.*

**The Right Side.**—"I wouldn't fight, my good men," said the peacemaker. "But he called me a thief, sir," exclaimed one of the combatants. "And he called me a lazy loafer," cried the other. "Well," said the peacemaker serenely, "I wouldn't fight over a difference of opinion; you may both be right."—*Tit-Bits.*

**Opposites.**—FIRST LADY PASSENGER: "If that window isn't opened this minute I know I shall die."

SECOND DITTO: "Who opened that window? If it is not shut, I shall die, I'm sure."

PHILOSOPHICAL GENTLEMAN: "Conductor, please keep that window open till one of these ladies dies, then shut it and give the other an opportunity to quit this vale of tears."—*Boston Transcript.*

**Might Have Been Worse.**—MA: "Gracious! What's the matter with the baby?"

PA: "Oh, he bumped his head against one of the pedals of the piano."

MA: "Poor little dear! Perhaps he's seriously hurt."

PA: "Nonsense! It was the soft pedal he struck."—*Philadelphia Press.*

**Not His Business to Inquire.**—"Uncle," said the dusty pilgrim, "how far is it to Sagetown?" "'Bout a mile and a half," replied the farmer. "Can I ride with you?" "Sartin. Climb in." At the end of three-quarters of an hour the dusty pilgrim began to be uneasy. "Uncle," he asked. "how far are we from Sagetown now?" "'Bout four mile and a half." "Great grief! Why didn't you tell me we were going away from Sagetown?" "Why didn't you tell me you wanted to go thar?"—*Chicago Tribune.*

**Modern Education.**—A school teacher in Sheffield received the following from a complaining parent a few weeks ago: "Sir,—Will you please for the future give my boy sum easier somes to do at nites. This is what he brought hoam to or three nites back: 'If fore gallins of bere will fill thirty-to pint bottles, how meny pint and a half bottles will nine-gallins fill?' Well, we tried, and could make nothing of it at all; and my boy cried and sed he didn't dare go back in the morning without doin' it. So I had to go an buy a nine-gallin cask of bere, which I could ill afford to do, and then we went and borrowed a lot of wine and brandy bottles, besides a few we had by us. Well,

---

**Improved Proverbs.**—

Quacks are stubborn things.
It's a wise girl who knows her own mind.
Society's the mother of convention.
Home was not built in a day.
Modesty is the best policy.
Circumstances alter faces.
A rolling gait gathers no remorse.
All's not old that titters.
Let us eat, drink, and be married, for to-morrow we dye.
Charity uncovers a multitude of sins.

—CAROLINE WELLS, in *The Smart Set.*

## Current Events.

### Foreign.

CHINA.

April 23.—Many requests are made by Chinese to Mr. Rockhill and General Chaffee that American troops should not be withdrawn; an imperial decree appoints a number of Chinese officials to report on the question of reforms.

April 25.—The Chinese army under General Liu withdraws behind the great wall on the approach of the German and French expedition from Pao-Ting-Fu; it is reported that Russia will advance China money to pay the indemnities to the powers; taking Manchuria as her guarantee.

April 26.—The Empress-Dowager of China will be relieved of her public functions by the newly created board of national administration; a force of Chinese regulars reappears in the area held by the international forces.

April 27.—Count von Waldersee reports that the German force attacked the Chinese near Hai-Shan-Kwan, and drove them into Shan-Se province with heavy losses.

April 28.—Count von Waldersee transmits news to Berlin of the defeat of General Liu by the Germans under General Ketteler near the Great Wall; eight highwaymen are executed within the American district of Peking, after being sentenced under Chinese law.

SOUTH AFRICA.

April 22.—General Kitchener reports continued successes on the British side in South Africa, a Boer commandant, with his force, being among the recent surrenders; Albert Cartright, a Cape Town editor, is sentenced to a year's imprisonment for attacking Kitchener.

April 26.—General Kitchener reports more serious losses inflicted upon scattered Boer commandos in South Africa, many surrendering to the British.

OTHER FOREIGN NEWS.

April 22.—Queen Wilhelmina of Holland refuses to pay the debts of the Prince Consort, and is angry at the threats of the creditors to negotiate the Prince's paper on the Amsterdam Bourse.

April 23.—The British budget excites much hostile criticism, but Sir Michael Hicks-Beach refuses to make any changes in his recommendations; the income tax resolution is adopted by a large majority in the House of Commons.

Turbulent scenes occur in the Reichsrath at Vienna.

M. Delcassé, the French Foreign Minister, confers the Grand Cordon of the Legion of Honor on Count Lamsdorff at St. Petersburg.

April 24.—A consolidation of transportation routes in Canada, including the Canadian Pacific and Grand Trunk railways, is reported at Montreal.

**SENT FREE AND PREPAID.**

H. H. BALLARD, 327, Pittsfield, Mass.

A despatch from Rome says that Monsignor Falconio will succeed Cardinal Martinelli as papal delegate to the United States and that Monsignor Zaleski, papal delegate to the West Indies. will succeed Monsignor Falconio as papal delegate to Canada.

Emperor William accompanies the Crown Prince of Germany to Bonn, where the latter matriculated.

April 25.—One hundred and fifty people are killed and wounded as the result of the explosion of chemicals in the Griesheim Electro-Chemical Works In Germany.

A financial panic is prevailing in Japan, more than twenty banks closing at Osaka and elsewhere.

Admiral Remey in the flag-ship *Brooklyn* arrives at Sydney, N. S. W.

April 26.—Negotiations are in progress between Great Britain, Canada, and Newfoundland in regard to the ratification of the Blaine-Bond convention desired by Newfoundland.

April 28.—The coal-miners throughout France are voting on the question of a general strike, in support of the strikers at Montceaules Mines.

Mexican troops capture the capital and practically end the rebellion of the Maya Indians in southern Mexico.

### Domestic.

DOMESTIC NEWS.

April 22.—Floods, due to continued rain, cause alarm in the Middle West.

The New York City charter revision bill passes both houses over Mayor Van Wyck's veto, and is signed by Governor Odell.

Senator McLaurin, of South Carolina, talks of the political situation in the South and a "white man's Republican party."

Fifty million dollars worth of the new British war loan are subscribed for in New York.

April 23.—Minister Loomis of Venezuela has a conference in Washington with Secretary Hay, and it is announced that the minister's course is fully approved by the State Department.

Rev. Dr. Newell Dwight Hillis, of Brooklyn, in refusing to speak at the "Get Together Club" with Prof. George D. Herron, of Iowa, bitterly attacks the latter, describing him as a "monster," or a "coward," on account of the divorce proceedings brought against him by his wife.

April 24.—The Cuban Commissioners arrive in Washington, with Gen. Leonard Wood.

Lord Pauncefote and Secretary Hay confer at the State Department regarding the isthmian canal question.

April 25.—The Cuban Commissioners are received by the President, and a dinner in their honor is given at the White House; Secretary Root makes it plain that no modification of the Platt amendment can be looked for.

Minister Conger arrives in San Francisco from China on the steamship *Nippon Maru*; he makes a statement vindicating the conduct of the missionaries in China.

The "Citizens' Union" of New York elects a city committee, drafts a platform for the coming municipal campaign, and elects a committee of one hundred to carry on the work of the campaign.

Rev. Dr. Josiah Strong, in refusing to speak with Professor Herron, says that the latter's martial conduct has been "despicable beyond the powers of my vocabulary to express."

April 26.—It is reported at Washington that the Cuban Commissioners will, on their return to Havana, recommend acceptance of the Platt amendment.

The Administration learns the views of Sena-

**PIANO Do You Want a Genuine Bargain in a Piano?**

We have hundreds of Upright Pianos returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our saleswrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Upright as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment, $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. **Every piano warranted exactly as represented. LYON & HEALY, 46 Adams St., Chicago.**

**KITCHEN EXPENSES**

**Reduced By Ready Cooked Grape-Nuts.**

"Modern food saves gas bills (cooking,) labor, and doctor's bills, and the food I refer to is Grape Nuts," says a Chicago woman.

"We have used Grape-Nuts over a year. I weighed, when I began using it, about 100 pounds, but have gained 22 pounds since. I have recovered entirely from dyspepsia since using this delicious food. My husband and children enjoy Grape-Nuts as much as I do, and they have all been decidedly benefited by its use.

My baby is very much healthier than my other two children were at his age. I attribute the difference to the use I have made of Grape-Nuts Food.

Of course it is a great advantage to have a food that is already cooked and sure to be in good condition. This is not always true of many cereals." Mrs. George S. Foster, 1025 Wabansia Ave., Chicago, Ill.

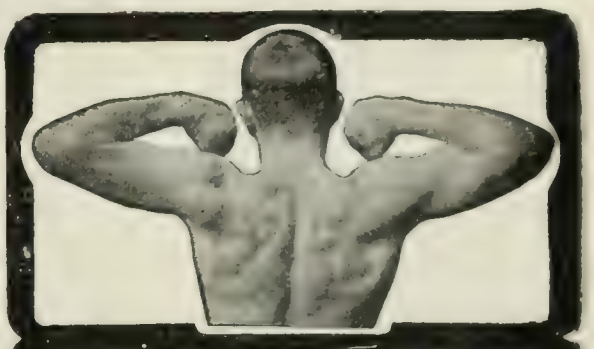
COLUMBIA SALES DEPT.
Hartford, Conn.



**Scientific Physical Culture**
**Successfully Taught by Mail**

Very few persons know what it means to feel good all the time—to be **strong** and to **feel** your strength. Exercise—intelligent, scientific, persistent—will accomplish it.

**The Stone System** requires only a few minutes a day, in your own room, before retiring, with no apparatus whatever. Your **individual** condition carefully considered, and mild, medium, or vigorous exercise prescribed exactly as your particular requirements and mode of living demand. Intelligent exercise will cure or prevent most of the ills to which the flesh is heir.

**Mr. Frederick W. Stone,** Director of Athletics of **The Stone School of Scientific Physical Culture,** has been director of Athletics of Columbia College. The Knickerbocker Athletic Association, and is at present acting in that capacity with the Chicago Athletic Association. At the rather advanced age of 50 years, he is still very nearly a physically perfect man. He established the World's record for 100 yards sprint (9 4-5 seconds). He has been before the public 30 years as an athlete, and trainer of athletes, and is admittedly capable of teaching physical culture intelligently and scientifically. Our aim is to create a perfect development, greater strength and better health, rather than to produce professional strong men. Does not overtax the heart. Both sexes, all ages—from 15 to 85—are alike benefited.

**Illustrated descriptive booklet and measurement blank sent FREE.**

**The Stone School of Scientific Physical Culture,**

232 to 236 Fifth Ave., CHICAGO, ILL.

## Bright's Disease and Diabetes

are almost always the cause for refusing Life Insurance to men who imagined that they were absolutely sound. Most men thus refused think that they are doomed, but if they will read our book of testimonials they will find letters from men of high business and social standing who, after being rejected, placed themselves in the care of Dr. Tompkins and to-day carry policies in the leading Life Insurance Companies.

**NOTE** If you or any of your friends suffer, or think they suffer, from either of these diseases, send us your name and address, and we will forward instructions and make the necessary analysis absolutely free of charge.

We will gladly send you our book on request. It contains valuable information on these diseases; also, the names of hundreds of prominent persons who have been CURED by our treatment.

# The Literary Digest

VOL. XXII., NO. 19 NEW YORK, MAY 11, 1901. WHOLE NUMBER, 577

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### FILIPINO LEADERS GIVING UP.

ACCORDING to the news reports, only two insurgent bands are now left in the field in the Philippines—a large band led by Cailles and a small one led by Lucban. Lucban's force is not very dangerous, and it is expected that General MacArthur will bend his energies to hunting down Cailles, an outlaw who has violated the laws of war so flagrantly that he will be executed if caught. It is believed that Cailles knows the fate in store for him, and that he will die with his boots on rather than surrender. This simplifying of the Philippine military situation has been brought about recently by an almost wholesale surrender of Filipino generals. Delgado, Sandico, Alejandrino, Tinio, Padre Aglipay, Baldomero Aguinaldo, and Pedro Aguinaldo are the names of the principal leaders who have surrendered in the last two or three weeks. General Malvar has not surrendered, but his force has been broken up and put out of the reckoning.

Brigadier-General Bell, who reached Washington last week direct from the Philippines, says in a newspaper interview that "one-sixth of the natives of Luzon have either been killed or have died of fever in the last two years." Altho "the loss of life by killing alone has been very great," he adds, "I think that not one man has been slain except where his death served the legitimate purposes of war." The American forces have lost 1,216 by deaths from wounds and accidents, and 2,337 by deaths from disease, and 2,652 have been wounded. The St. Louis *Globe-Democrat* (Rep.) considers this "an extraordinarily small score" in view of the fact that we sent 100,000 men across the Pacific and have kept them fighting for nearly three years in a tropical climate.

The New York *Times* (Ind.) says:

"The news from Manila makes it increasingly evident that the capture of Aguinaldo, followed, so to speak, by his surrender and his voluntary adhesion to the American cause, meant and marked the collapse of all organized resistance in Luzon. Every day's despatches assure us more fully of that. It is a great result. It shows that we have achieved in three years more than Spain achieved in three hundred. For it is at least doubtful whether the Spanish authority has in our generation been so extensively acknowledged in Luzon as the American authority is now. . . .

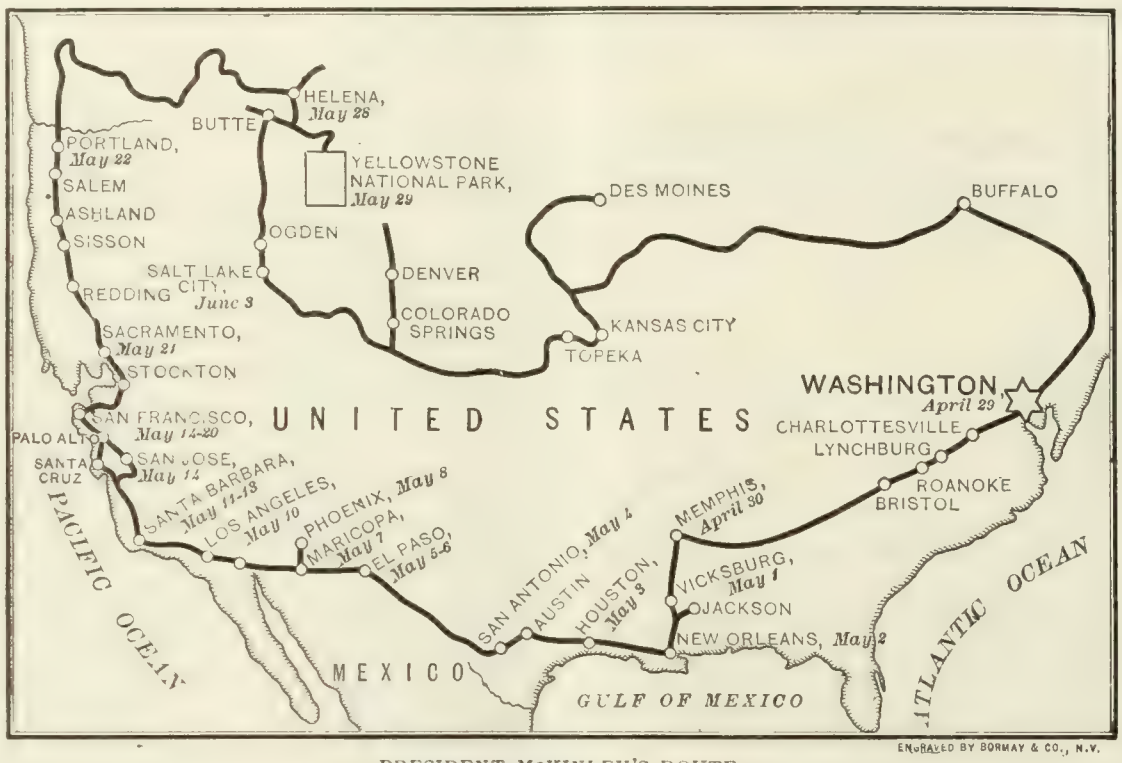
"Our work of conciliation is yet to come. It is different from the work we have thus far had to do and have done. It means consulting the native ways of thinking, in some cases humoring them, in all knowing what they are, even if it seems wise to defy them. That requirement involves a knowledge of the Filipinos which few Americans now possess, and which it is important that all Americans engaged in the administration of the islands shall acquire. It involves, for one thing, a knowledge of the Spanish language. It involves, for another, a knowledge of Spanish law, since 'justice according to law,' in the mind of a Filipino, is justice according to the civil law, and does not otherwise seem justice at all. The gradual supersedure of the army by the civil service should be so gradual as to secure a specially trained class of civil servants, as we have had the good fortune to possess a specially trained class of military servants. It is to be supposed that the members of the Philippine commission have already and seriously considered these requirements, and have devised some method of fulfilling them."

### THE PRESIDENT IN THE SOUTH.

A JOURNEY of fifteen thousand miles by the President and his companions, extending to twenty-five States and lasting six weeks, is a program that has fixed the attention of the whole nation, and called out a great deal of comment. The papers consider particularly noteworthy the applause that has greeted the President's remarks on expansion in a section—the South—that voted solidly against that policy in the last election. The main theme of the President's speeches in the Southern States has been the expansion of our territory and our trade, and our successful invasion of foreign markets. Last week he spoke especially of the importance of the "open door" in China to the United States, "a country that produces three-fourths of all the cotton that is produced in the world." At Corinth, Miss., he said: "We can now supply our own markets. We have reached that point in our industrial development, and in order to secure sale for our surplus products we must open up new avenues for our surplus. I am sure that in that sentiment there will be no division North or South." At Roanoke, Va., he said: "We are not only expanding our markets, but we are expanding our territory. The policy of the United States has always been to keep what it originally started with and hold all it honorably gets. We refused to divide our original possessions, and we will be the last to desert our new possessions." Both these sentiments, expressed in nearly all the speeches of the trip, have been roundly cheered. In the first, some papers think they perceive that the President is abandoning the extreme protectionist view; in the applause for the second some think that the people of the South show their approval of the Republican expansion policy. "The election contest being over," remarks the Chicago *Tribune* (Rep.), "the Southern people are ready to admit now that they believe in expansion." The Springfield *Republican* (Ind.) says: "This is the supreme hour in McKinley's career." Says the Baltimore *American* (Rep.):

"A section from which not one electoral vote was cast in approval of this policy, but which has more to gain from it than any other section, was a fitting place for the President to begin to unfold his plans. All the South is prosperous under Republican administration, and the President can point the people of

the South to their own record of completed work, accomplished results, and prosperous progress as irrefutable evidence of the wisdom and soundness of the course he advocates. With the evidence all about it, with the persuasive eloquence of the President's words in its ears, the great Southland can not deny that its support of Bryan and anti-expansion in the election last fall was foolish and ill-advised. As soon as a confession of this kind is made the ground will have been prepared to receive the seeds of Republicanism which President McKinley is sowing as he journeys. Too many messages of this kind can not be carried to the people of the South, and, judging by the demonstrations of approval that have greeted them, it will be strange if the President's words do not assist in the political revolution brewing in the Southern States."



PRESIDENT McKINLEY'S ROUTE.

A number of the Southern papers have warm words for the visiting Chief Magistrate. The Atlanta *News* (Dem.), for example, says: "There has been much criticism of the President's course in certain matters, but he is generally and deservedly taken at his true worth by men of all parties, who recognize in him a patriot who, despite the limitations of his environment, and some of his policies which many deplore, is yet a high type of American manhood earnestly desirous of advancing the general good." The Washington *Times* (Dem.) and the Louisville *Post* (Dem.) also express themselves in similar vein; but the St. Louis *Republic* (Dem.) warns the Republican press against believing that this marks "the beginning of a stampede of the South to Republicanism," and adds: "The Southern people will honor the President because he is the President, not because they have abandoned their Democracy for Republicanism. Mr. McKinley will have a good time in the South—which is much more than can be said for the Republican candidate for President in 1904." The Columbia (S. C.) *State* (Dem.) says:

"William Jennings Bryan might tell William McKinley a helpful lesson. He might warn him that popular applause and the bravos of the multitudes are not to be depended on. He might name towns through which McKinley is now passing in mighty triumph that a few months ago gave Bryan the same sort of an ovation. Bryan knows how changeable is popular favor, and McKinley will know some day. They all find it out, soon or late—politicians and heroes. . . . . .

"McKinley is now at the zenith of his glory. It is an undeserved glory, to be sure, but that is a mere detail. He commands his party and the other party, he lords it over former friend and erstwhile foe, he patronizes the plain people and cajoles the high and mighty. The masses are his to praise him and the classes are his to serve. The public supplies the applause—a deliciously intoxicating beverage—and the men behind the scenes furnish the palace cars and the servants. Thus equipped—with a royal train, lacking not one thing to make luxury superlative, and fawning populace to salute and cheer—thus equipped, what more can one want? A crown? Did Cæsar need a crown?

"But this will pass. It is only a dream. We can not believe the American people will long tolerate, much less adore, a man of the McKinley stamp—a time-server, a trafficker in politics, a trader in principles, a violator of sacred pledges. Why rehash it all? The public knows but does not fully understand. Some day it will, and then, perhaps repudiated and scorned, the memories of a triumphal tour will be bitter-sweet to one who cries: 'Where is it now, the glory and the dream?'"

THE PRESIDENT: "How tame the wild animals are around here!"
ARIZONA PETE: "Oh, they know you ain't Teddy."
—*The St. Louis Republic.*

The Hartford *Times* (Ind. Dem.) quotes the President's words on expansion and observes:

"This is as grand and as indefinite as anything we have had from him on any former occasion. . . . Nobody is discussing now the question whether we shall keep our 'possessions' or not. What the tobacco-growers of Connecticut want to know is whether the Philippines are going to be held as a colony or a territory of the United States. Are they to be a part of the United States, or are we in the business of holding the Filipinos as our subjects? It is worth while following all that the President may have to say on this tour, for he may attempt to disclose some features of his plan (of course he must have a plan) of 'keeping' and yet not really annexing the Philippines."

---

**The Dog Pest in Tennessee.**—A plethora of dogs running wild and inflicting damage on live stock and all kinds of property is responsible for a condition of affairs in Tennessee that is certainly unique. The state legislature a few days ago passed a law which makes it "unlawful for any person to allow a dog belonging to him . . . to go upon the premises of another, or upon a public road or street." This act, however, does not apply to "a dog on a hunt or a chase," nor to "a dog guarding or driving stock," nor to "a dog upon which its owner has paid to the county trustee or treasurer $1 and taken a receipt therefor, spe-

cifically describing the dog upon which payment is made." Any person violating this law is liable to a fine of not less than $2 nor more than $50. "The annals of fearful and wonderful legislation would be searched in vain," remarks the Memphis *Commercial Appeal*, "for a parallel to this cheerful piece of tomfoolery." "It will be observed," it continues, "that when a dog can show a receipt, it can go upon the premises of another and upon public roads just as freely as it does now. When a dog has been properly described, it will of course refrain from doing anything objectionable!" The Charleston *News and Courier* declares:

"The effective and needed 'dog law' for every State is one that will not fail to induce the owners of dogs to keep their pet nuisances on their own premises, and will as certainly insure the death of the animal if it is allowed to go abroad without a responsible attendant. Add a stiff penalty for any and all damages done by the straying and preying beasts, and taxes and tags may be dispensed with."

## TEXAS AND THE STANDARD OIL COMPANY.

RECENT discoveries of petroleum in Texas, in large quantities, have aroused wide interest and are responsible for something approaching a whirlwind of excitement and speculation within that State. "There is abundant evidence that this wealth in oil is practically inexhaustible," remarks the St. Louis *Post-Dispatch*, "and investors who temper their daring with caution are likely to reap a rich reward." "The new industrial awakening in this great State," responds the Houston *Post*, in enthusiastic vein, "has a solid foundation and has come to stay. It means progress, prosperity, and vast wealth. It means that Texas does not intend longer to sleep upon her matchless resources!" Says the New York *Evening Post*:

"Texas is now enjoying a season of remarkable prosperity, due not to her oil-wells, but to fine crops and good prices for her wheat, corn, cotton, and cattle. She has 'money to burn,' and she is putting it into oil speculation with a recklessness and abandon quite mournful to contemplate. Barbers and bootblacks, printers and reporters, cooks and chambermaids, salesmen, railroad hands, small tradesmen, and others, mostly in the humbler stations of life, are investing their savings in so-called oil companies, where the chances are forty to one that they will never again see a dollar of the money so expended."

There is curiosity as to the effect these new oil discoveries will have on the methods and business of the Standard Oil Company, and the report last week that this trust had bought up the wharves, railroad terminals, and shipping facilities at Port Arthur, the natural shipping port of the Beaumont oil-field, is the subject of considerable comment. It is believed that the intention of the company is to "bottle-up" the oil product, unless its owners pay such tribute for its transportation as may seem good to the company. The suggestion is even hazarded that the Standard Oil Company intends to buy up all the wells not yet

—*The Detroit Tribune.*

secured (it already has a large part of the oil territory in Texas), and thus further intrench its enormous economic power. Says *The Rocky Mountain News* (Denver):

"That it will exercise its power is not open to a moment's doubt. Its whole history is marked by the wrecks of rival enterprises, by outrage, wrong, and oppression. The markets for the output of the new fields will, therefore, be local or limited, unless means can be found to break the hold that the Standard has on the railroads. Unless the products of an oil-field can be distributed, it is as valueless as a coal-mine a thousand miles from a human habitation. Here is a question for Congress to tackle, as it involves a matter of interstate traffic. It presents fairly and squarely the startling question: Does the Standard Oil rule this country?"

The New Orleans *Picayune* thinks that, if the published story of the purchases in Port Arthur be true, "the remedy will be a pipe line to New Orleans." "This oil yield will make vast business for New Orleans," it observes. The New Orleans *Times-Democrat* is inclined to doubt the truth of the reports, but declares that, even if the expected developments take place, "it would not be beyond the power of Louisiana, surely, to pass an enactment which would as effectually put an estoppel on the

trade-restraining movements of the trust in this State as the anti-trust legislation of Texas has done there."

## OUR CONSULS AND OUR TRADE.

THE original object of diplomatic and consular service, it is said, was to spy out the points where military forces could most easily enter a foreign country. While that purpose may still characterize the service of some countries, to some degree, the change of international rivalry from arms to commerce has worked a similar change in the consular service, and the American consul abroad now spies out the places where American bicycles, typewriters, steel rails, butter, shoes, apples and meat, rather than American troops, can be introduced. Dr. Vosberg Rekow, a high German official, in a recent book upon commercial treaties, speaks of the American consular officers in Europe as "inspectors of our exports and vigilant sentinels who spy out every trade opening or advantage and promptly report it." He goes on to say:

AND THERE'S MORE TO COME.
—*The Philadelphia North American.*

"The Americans have acted judiciously in establishing a system which is of the greatest advantage to themselves, but costly and inconvenient to their competitors. In all countries with which it has trade relations, the United States has stationed consuls and consular agents. Every shipment of goods to a United States port must pass through the hands of these officials, and the amount, value, place of origin, market price ruling in the country of production, method of production, etc., are noted. The consuls thus dive deeply into the economic condition of their districts and obtain information the result of which is discernible in the steadily increasing exportations of their home country."

Mr. Frederic Emory, chief of the Bureau of Foreign Commerce of our Department of State, who quotes Dr. Vosberg-Rekow's plaint in an article in *The World's Work* for May, says that the British Government, too, has had its attention called by some of the British chambers of commerce to the fact that the American consul is doing a great deal more for the extension of trade than the British consuls are doing; so that we can congratulate ourselves, apparently, that our machinery for stimulating foreign trade is not behind that of the other two most active commercial countries in the world—Great Britain and Germany. The Department of State asks our consular representatives to report frequently upon trade conditions and openings in the countries where they are stationed, and publishes the reports in a little daily that is sent to all the newspapers and manufacturers who are interested. One New York firm reports that the perusal of this little daily has resulted in nearly doubling their foreign trade, and other firms tell of like results in less degree.

The service is not faultless, however. Mr. Emory admits that the short tenure of office, depending often on the changes of party politics at home, hurts the service; but the spoils system method of choosing the officers is, he believes, not so bad as painted. He says:

"It is very doubtful whether the consular service would have accomplished the commercial work of the past few years which it has accomplished had it been composed of mere *literati*. A large percentage of such a force might have consumed valuable time that has been expended in practical work for the every-day use of our manufacturers and exporters, in studying subjects of real utility and interest only to themselves or to a comparatively narrow circle of congenial spirits, or in perfecting themselves in social accomplishments. As cases in point, the fact may be mentioned, in no spirit of harshness, that two of our most accomplished literary men who held important consular posts some years ago were among the most difficult to extract commercial information from, and yet they have figured in the magazines as authoritative purveyors of advice as to how the consular service should be reformed in order to make it a satisfactory instrument of trade!

"The truth is that the politician who is appointed to a consular post is usually something besides a mere party worker. As a rule, he is a newspaper man, a merchant, a manufacturer (even if it be only in a small way), who is more or less in touch with business affairs, and there are but few who rely upon politics exclusively as a means of support. And it must be admitted that even with the handicap of the 'spoils' instinct, he sometimes does better work for our business men than would a carefully trained noophyte who has never rubbed about in practical life."

## OPENING OF THE PAN-AMERICAN EXPOSITION AT BUFFALO.

"HERALDED by the booming of a national salute, announced by the flight of thousands of carrier pigeons, and made vocal by the music of the great military bands, the gates of the 'Rainbow City,' known to the world as the Pan-American Exposition, were thrown open to the public to-day." So runs the fervid description of the Buffalo *News* of May 1. "The promise that the Pan-American would be the electrical marvel of the opening century has been kept," continues the same writer, "and last night, as the mighty energy of Niagara Falls burned on tower and cornice, spire and dome, in a dream of splendor, it needed no stretch of the imagination to feel that the spirit of the new century has touched the earth just here and was giving to mortals a forecast of the marvels to come in the next hundred years of American progress."

Writing of the spectacular side of the Exposition, Mary Bronson Hartt declares that it is "consistent and harmonious throughout," and, above all things, it is new—"mint new." "The architecture is new, the color is new, the landscape gardening is new, the fountains are new, the court effects are new, the electrical effects are new." She continues (in *The Independent*):

"Esthetically speaking, the distinct original note sounded by the Exposition is that of color. The buildings are delicately tinted in the open wall spaces, while in archways, vestibules and window-soffits, and under the wide tiled eaves, brilliant color is lavishly used. Nowhere else in the world, I think, has exterior wall tinting been attempted upon so heroic a scale. One might, perhaps, fancy that so free a use of vivid color would produce an effect both garish and tawdry. But the whole color scheme is in the hands of an artist, Mr. C. Y. Turner, of New York, who regards the Exposition grounds much as he would a gigantic canvas upon which he is to produce a picture rich but harmonious, a perfect whole. Taking into account the natural setting of sky, turf, and water, he has worked out a nicely graduated color plan which includes even the curious buildings on the Midway. No reporter's 'word-painting' can reproduce the effect. It is necessary to judge of the daring experiment with one's own eyes.

"It is very much so with the sculpture, used so freely about the grounds, with the landscape effects, the elaborate fountains, and even with the marvelous electric illumination—they must be seen, for they can not be described. Just a word, tho, about the character of the illumination. Arc lights are to be banished from the grounds, as too glaring and too unbecomingly blue; and instead thousands of incandescent lamps will flood the Exposition with mellow light. Then the exterior of the buildings will be lighted in an entirely novel way. Instead of flashing forth at

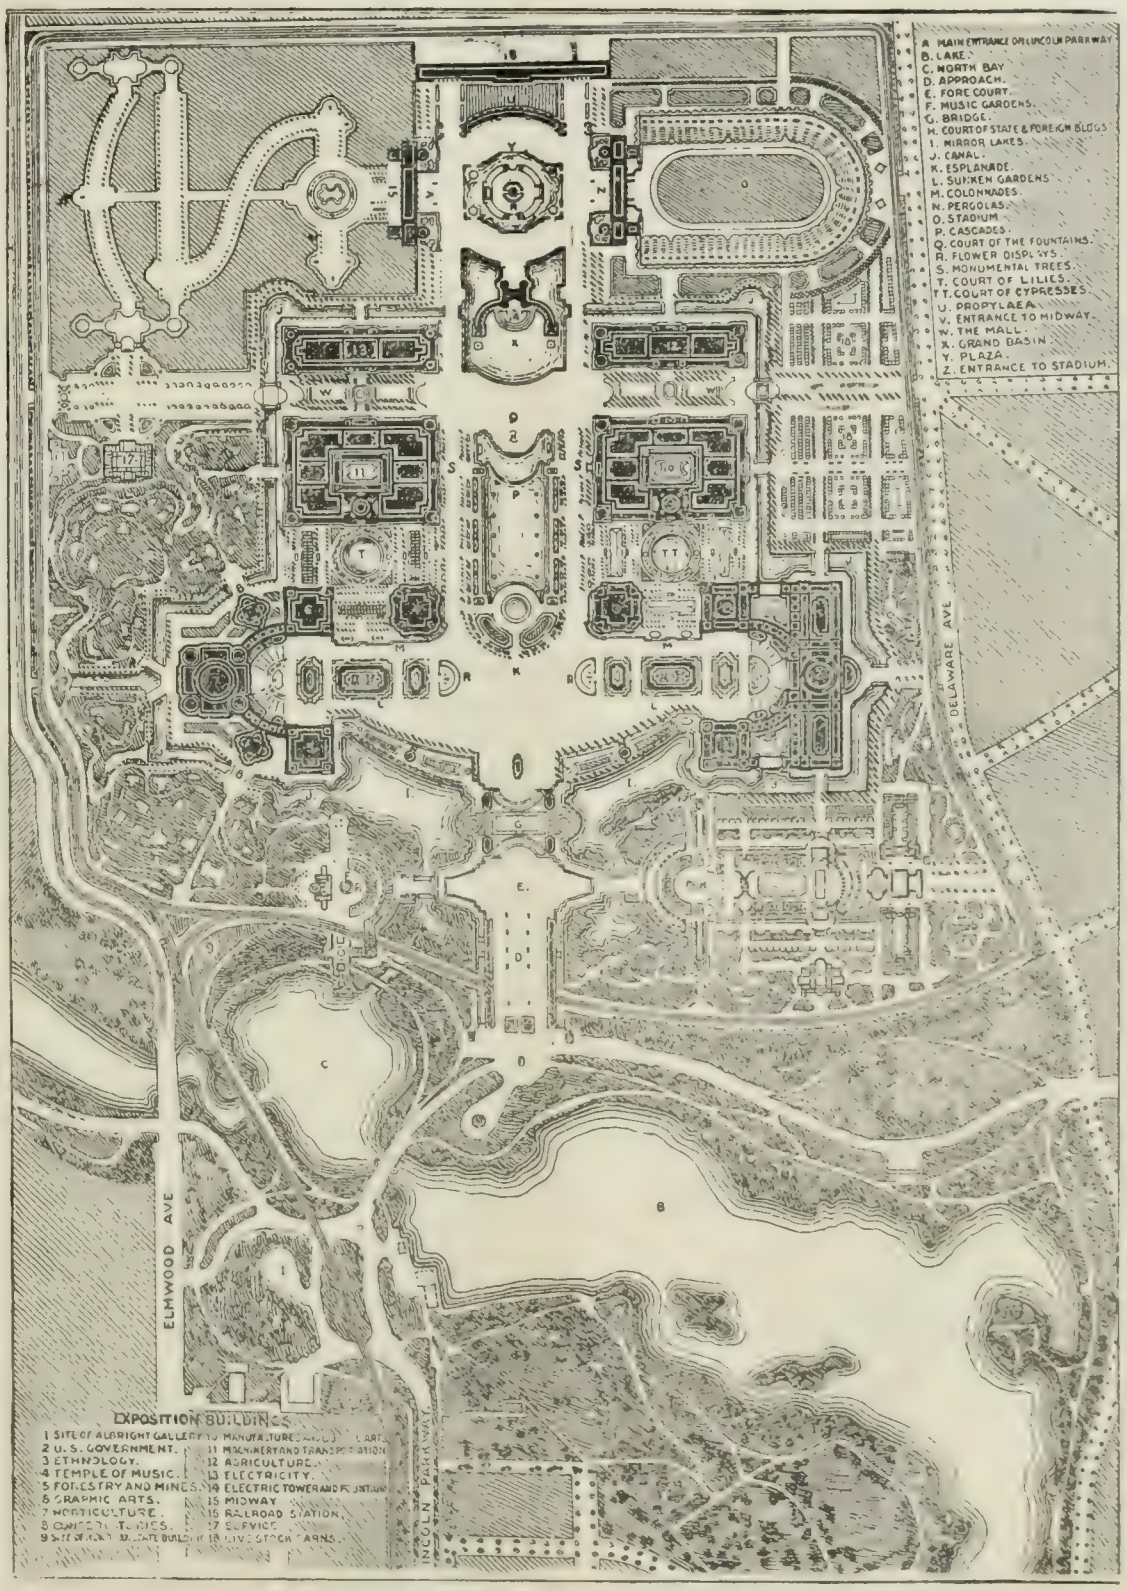
## MAKERS OF THE EXPOSITION.

nightfall into sudden brilliancy, gemming tower and dome with a fine fringe of stars, the light will rise like the tide, mysteriously, from a faint glow as the sun sets, to the splendor of the sun itself when once the sky is wholly dark. Then, when every tiniest bulb of light, hidden in archway, window, and under broad eaves, glows with its full effectual fire, the whole marvel of the lovely tinted architecture will stand out bathed in soft radiance against the summer night like an enchanted city. Of course, the climax of the night will be the Electric Tower, gemmed from base to tip with incandescent lights, the great geyser fountain gushing from a niche set seventy feet up in the shaft, and tumbling in broken cascades of colored light into a basin which the light of thousands of floating lamps will make glow like a pool of liquid fire."

It is along the lines of mechanics and industry, however, that the Exposition will be chiefly remarkable and of most lasting



GROUND-PLAN OF THE EXPOSITION.

benefit, for it gives the first opportunity to the American continent to get a complete view of its own industrial achievements. Says Mrs. Hartt:

"The Pan-American will illustrate recent scientific achievements of immense importance; the amazing advance in wireless telegraphy, the manufacture of liquid air, the surgical use of *x*-rays, the rise of the new illuminator, acetylene gas (which will have a building to itself), and the developments in electrometallurgy and electrochemistry, what might be termed 'electrocosmogony,' reproducing as they do by mechanical means the age-long processes by which the world was made. Maps and models will illustrate the canal schemes just now so much in the public thought, and the practical efficiency of the harnessing of Niagara will be demonstrated by the great service plant employed in stepping down electricity from the Falls to a potential suitable for transmission about the grounds. . . .

"But the most novel

of all the exhibits will be the elaborate ones from our reluctant dependencies in the Pacific and the Caribbean Sea. Collections made by the national Government at immense expense will do all that collections can to introduce to us our brothers of the Philippine, Hawaiian, West Indian, and Samoan islands. Their homes, their methods of warfare, their picturesque costumes and customs, and their wonderful natural resources will all be elaborately displayed."

While the exhibits are necessarily confined for the most part to the products of this continent, there are features which make the Exposition appear almost as universal as the Chicago World's Fair. "Here are Mexican, African, Eskimo, Hawaiian, German, Japanese, and Filipino villages," says the writer, "all as genuine and complete as care could make them, Beautiful Orient—a magnified Cairo Street—Venice in America, an Indian Congress of real blanket Indians from the far West; a whole handful of clever illusions like the House Upside Down and the Trip to the Moon; and a variety of queer locomotory sensations, such as the Aëro-Cycle and the shooting Scenic Railway. "It is too late in the day," she concludes, "to discuss the 'to be, or not to be' of expositions. The American people have contracted the exposition habit."

## A FLOATING EXPOSITION.

OUR foreign trade has been helped so much by expositions set up in the United States and visited by strangers from the ends of the earth that some may wonder that it has but just occurred to the Yankee mind to set up an exposition on shipboard and carrry it to the doors of the people who buy. The merchants of Hamburg, Germany, have had such an exposition afloat for two years, and, according to the *Moniteur Officiel du Commerce* (Paris), it has been an astonishing success. It has cost about $100,000, and has brought in about $5,236,000 worth of trade. Mr. O. P. Austin, chief of the United States Treasury Bureau of Statistics, has suggested in *The National Geographic Magazine* (February) that American merchants put a similar exposition afloat, and a Washington despatch to the New York *Journal of Commerce* reports that a "floating exhibition to visit the cities bordering upon the Gulf of Mexico and Caribbean Sea has been organized at Buffalo and will be made ready during the summer and leave in the autumn of the present year for that field, and a number of other enterprises of this character have been suggested."

The plan of the chief of the Treasury Bureau of Statistics is outlined and commented upon as follows by the Boston *Journal*:

"Mr. Austin, who has been an industrious student of commerce, believes that if we should send out a fleet of steamers loaded with American goods—one with breadstuffs, another with textiles, another with agricultural implements and vehicles, another with manufactures of iron and steel, another with household conveniences, and another with Yankee notions—it would be a mighty effective advertisement of the cheap and excellent products of our farms and factories. Mr. Austin would have, too, a corps of experts sent along with this floating exposition to gather samples of the goods now being sold in these foreign countries, the prices obtained, the length of credit given, the banking and exchange facilities, and other essential information calculated to assist us in lines of trade where there is now no foreign market whatsoever. . . . . .

"The idea is a unique one, it must be acknowledged. The United States has never done anything of this kind before. But there is a very persuasive argument for some such enterprise in the fact that the imports of Asia, Oceanica, Africa, and the South American countries amount to more than $2,000,000,000 every year, and that only about $200,000,000, or ten per cent. of their purchases, comes from the United States, altho most of the goods which they consume are goods which we produce very cheaply and are eager to sell—breadstuffs, provisions, cotton cloth, kerosene oil, machinery, and miscellaneous manufactures. . . . . .

"But it may be insisted that very much better and more effective even than this plan of a floating exposition would be the enactment of systematic legislation for the upbuilding of an American merchant marine. The ships launched and sailed under such a policy would be a floating exposition of American goods not this year only, but next year, and many years to come, and they would go freighted with American products not to Asia and Oceanica and Africa and South America only, but all over the world wherever there was the slightest chance for American trade to gain a foothold."

## IS THE DECLARATION OF INDEPENDENCE WORN OUT?

IT is nothing new for the "anti-imperialist" papers to raise the outcry that the McKinley Administration is violating the Declaration of Independence by its policy in Cuba and the Philippines; and the outcry usually ends in a demand that the Government return to the traditions of the fathers. It is something new, however, to hear that the Declaration is contrary to the history and spirit of our Government and the welfare of the world, and that it should be disavowed as a guiding principle. "Notwithstanding its frequent and perfunctory avowals to the contrary," maintains Leon C. Prince, of Dickinson College, in *The Arena*, "the United States has persistently refused, wherever its own interests have so dictated, to be governed in its conduct by that instrument whose maxims it pretends to accept as its God-given and infallible guide," and he thinks that it would be the part of honesty and candor to discard it. In denying the ballot to women, to men under twenty-one, and to all persons in the Territories, we violate the doctrine of "government of the people, by the people, and for the people"; in every acquisition of new territory we have disregarded the principle that "Government rests upon the consent of the governed"; and in the American Civil War, the right of revolution, a right glorified and upheld throughout the Declaration, was stamped out with sword and fire. Our very form of government, declares Mr. Prince, is imperial, for "there is no monarch in Europe, with the exception of the Sultan of Turkey and the Czar of Russia, who possesses independent powers of so dictatorial a type as the President of the United States, and none to whom the title of *imperator* may be more logically and truthfully applied."

Coming to present-day affairs, Mr. Prince thinks that "the preeminent significance of the Spanish-American war lies in the fact that it has uncovered the essential humbug of the Declaration of Independence and demonstrated to the rest of the world the pretense and insincerity of our devotion to the doctrines therein set forth." We went into the war with Spain, he says, professedly to free Cuba—"we emerge with new and valuable possessions in two hemispheres, and the incorporation of Cuba itself with our system is a foregone conclusion of no distant date."

Far from criticizing the Government for this disregard of the Declaration, Mr. Prince criticizes the Declaration itself. He calls it "a few glittering phrases of French sophistry and exploded sham borrowed from the agitators and pamphleteers of the Revolutionary period, and which never have and never can become a serious part of any system of political truth," and says:

"The main trouble with the Anglo-Saxon in both branches of the family is that he constantly professes to act on higher principles than those that govern the policy of other nations. He is too fond of praying upon the housetops and in the public streets. Hence, when, in the pursuit of common ends or ambitions, he resorts to the usual methods of attainment, he is apt to be met with the not unreasonable charge of hypocrisy. This characteristic has distinguished the foreign policy of England to an almost nauseating degree, and is undoubtedly the secret of her unpopularity among the European powers. . . . . .

"We are engaged in building an empire; that is to say, a great nation, which is to incorporate other peoples and extend its laws

and government to remote corners of the earth. This will necessitate the employment of methods distinctly hostile to the ideals of the Declaration of Independence. The extinguishment of petty states means the abrogation of the doctrine of self-government, but it should occasion no regret. It is not the course of empire in conflict with the God-ordained principles of justice; it is presumptuous fallacy disputing the right of way with progress and necessity. The subjugation of small, independent states and their assimilation by the great powers will remove the most fruitful cause of international jealousy and discontent; and it is the only proposition that offers any assurance of the ultimate fulfilment of the world's dream of universal peace."

## JAPAN OUTSTRIPPING AMERICA IN EASTERN TRADE.

THE apprehension of the European nations over America's rapid strides toward commercial supremacy is a striking feature of newspaper comment the world over at the present time. The London *Telegraph*, for example, commenting upon J. P. Morgan's purchase of the Leyland line of steamers, says: "America has superseded our agriculture, beaten our coal output, left us far behind in the production of iron and steel, and has passed us at last in the total volume of exports. She has only commenced her final onslaught on our carrying trade, and with these beginnings we may wonder, if such things are done in the green tree, what will be done in the dry." And the London *Statist* says: "If these vast plans for controlling the production of the United States and the means of transport to the markets of the world can be consummated and effectively carried out, the United States will become the most powerful and most wealthy country in the world."

But while the British are undergoing this wholesome self-flagellation, Mr. Alexander Hume Ford, in *The Iron Age* (New York), calls attention to the fact that in the vast new market in the far East, America herself is being outdistanced by Japan. Mr. Ford, who lived in Japan several years and is familiar with the conditions of which he speaks, says:

"The opening days of the new century disclose the startling fact that it is no longer England, but Japan, threatening American commercial supremacy in China and the far East. This little island nation which we opened up to the commerce of the world but a few years ago is not only underselling our manufactured articles in the markets of Asia, but is actually passing us by, with every indication that another decade will see her supreme mistress of the Pacific, unless America awakes to the importance of the trade she seems about to lose and takes some steps toward retaining the hold she has lately gained in the markets of the far East."

This throws some light on the springs of Russo-Japanese enmity. To quote again:

"It is to maintain her commercial hold upon China that Japan opposes every territorial move of Russia in the far East, and keeps her army and navy always in fighting order, for the success of the 'open-door' policy, which we have advocated so warmly, is of even more vital importance at present to Japan than it is to America. We may, for some time yet, live upon our surplus fat. Japan has none to spare; her 44,000,000 people already overcrowd the little islands, whose total area does not equal that of California, and but one-twelfth of this is fit for cultivation. So that Japan can continue her prosperity only by becoming a manufacturing nation and finding an outlet not only for her commodities, but also for her surplus population, which is increasing at the rate of 400,000 a year. The little nation, cramped for breathing space, already fears stagnation and commercial death if her opportunities are circumscribed, hence it is that she is ready to fly at the throat of Russia and exhaust her entire strength, if necessary, in an attempt to throttle the Russian bear before it can squeeze to death the Chinese dragon."

The Great Northern Railroad is projecting a great Pacific steamship line that will be an immense help to American trade in that quarter of the globe. Four huge steamers of 28,000 tons each, or almost twice the capacity of the largest steamships now entering the port of New York, are under construction, and to supply them with freight "hundreds of the largest steel freight-cars ever constructed are being built so as to adequately equip the Great Northern Railroad for the change of conditions, and enable it to reduce freight rates to the Orient to just one-half what they are at present." "It will take 20 miles of such cars as I have described," adds Mr. Ford, "to carry a full load for one of the new boats, which are to be placed in commission perhaps before the end of the first year of the twentieth century, in readiness to compete with Japan for the carrying trade between the termini of our transcontinental lines ending at Puget Sound and the Transsiberian Railway system terminating at Vladivostok." But, he goes on to say:

"In her merchant marine Japan excels Russia, as well as the United States, possessing in the Nipon Yusen Kaisha one of the greatest steamship lines in the world. This company, purely a Japanese enterprise, is the pride of the nation. It maintains a regular line to our Pacific coast, another to London, one to the coast of Peru, others to Australia, India, the Philippines, and Siberia, to say nothing of the coasting service, the steamers of which penetrate to every Chinese port, making the fleet of the Chinese-Eastern Railway seem insignificant in comparison, threatening to drive it and the ships of all other nations out of those waters; yet this is but one of the numerous Japanese steamship lines encouraged by the Government, every boat of which is but an auxiliary cruiser of the navy.

"While in Nagasaki recently I visited the dockyards located there. Several fine ocean steamers as beautiful in design as any of our Atlantic greyhounds were in course of construction, besides many smaller steamers and numerous torpedo-boats and launches for service on the rivers of China, which Japan had recently succeeded in having opened up to international commerce. A Scotch-American was superintendent of the dockyard, but all other employees were Japanese subjects. The completeness of Japanese shipyards may be understood when it is stated that of the twelve 6,000-ton boats being built for the Nippon Yusen Kaisha line, none are to make a less speed than 14 miles an hour, and the eight destined for the San Francisco and Seattle lines, of this and the Toyo Kisen Kaisha, are to record a sustained speed of 17 miles an hour. . . . . .

"It is Japan that is now suffering from industrial and financial depression; who knows when our turn may come? When it does, it must surely prove the opportunity of our recuperative rival in the far East. It will pay our people to study the conditions of trade in Asia now and watch our opportunities to secure a foothold in advance, or at least abreast, of our rivals, instead of waiting until they have closed ranks ahead of us and shut our products out of the greatest prospective market of the world."

## LETTERS AND ART.

### THE ITCH FOR NOVELTY IN LITERATURE.

IN every branch of science and philosophy the search for something "new" and "original" appears to be one of the chief characteristics of the day, and the fever for novelty is perhaps even still more pronounced in the literary world. A recent writer, Mr. Albert Schinz, of Bryn Mawr College, calls this tendency "the most salient feature of contemporary literature." He is of the opinion that to find anything really new is impossible, yet something "striking" and "original" is demanded by the public. Between this demand and this limitation the author of to-day is hard-driven, says Mr. Schinz, and his struggle to please the public under these difficult conditions has given current literature its most characteristic tone. Writing in *The Forum* (April) he says:

"The circumstances under which the authors write to-day are very different from what they once were. The knowledge that the reading public acquires is much greater than it formerly was. The women of the middle classes of to-day know more than was known to the grand ladies of the eighteenth century, whose celebrated *salons* had such a profound influence upon the ideas and events of the civilized world. Also the means of making knowledge known are far greater than in the past—not only through books, but through magazines and newspapers. Consequently, even tho the actual knowledge possessed by the masses may not have become deeper, it is yet considerable enough for them to decline to accept something appearing novel, but which is not so, as willingly as they did formerly, when their only intellectual nourishment consisted of the events of every-day life and the catechism. Finally, there is science in general, the science of professional scholars, which has become greatly enriched by the researches made within the last decades. The professional men constantly publish the results of their investigations. Their avidity in making inquiries concerning the origin of ideas expressed by modern authors has already been mentioned. And, besides, they are continually narrowing the field of action to the newcomer through the old books they are editing, thus placing before the reader the celebrated men of past centuries. Thus, day by day the task of laying hands on some idea that does not seem trite to the reader becomes harder.

"Under these circumstances, what could be done by our poets and prose writers? They were obliged to develop other ideas than those which naturally interest every human being, which obtrude upon every thinker, and which had already been treated over and over again by well-known authors. Next, they had to treat their subjects in a way to make them appear more striking and important than they actually were, *i.e.*, in an extraordinary, abnormal fashion. Eccentricity in all respects became their watchword. Not that they chose it: they were forced to accept it if they wished to write anything that might be considered worthy of attracting the attention of a surfeited public.

"Take, for example, the Symbolists, in France, who have been so frequently an object of mockery, even to the most serious people. Among them we may find some clowns, perhaps; but a great many of them are serious and sincere, even when their zeal leads them on to the ridiculous. Their great mistake, after all, is that having fully realized the circumstances which they have had to face, they have acted accordingly. They have clutched the last straw that was left to them by a century which seems to have seen everything and known everything; and their principle, in a few words, is about this: 'Until now we have walked on our feet; let us then try to walk on our heads.' (Huysmans has boldly entitled one of his most suggestive works 'À Rebours' [Upside Down].) 'Until now things have been done in one way; let us try the opposite way. Let us do the contrary of everything that constitutes the basis of life's work; for this, at all events, will not be commonplace—we shall certainly find new emotions, new pleasures, new art. Until now we have prayed because we have been pious, because we have believed in God; let us then go to church not because we have religious faith, but in order to gain for ourselves an artificial excitement of our religious nature. On the whole, let us look for everything that is artificial, abnormal, and morbid, and proclaim it; and let us submit the results to our readers.'

"Max Nordau made a reputation for himself by treating these authors as degenerates, and by giving a pathological reason for everything that is out of the common in their works. I do not wish to deny the existence of a pathological element in many a modern literary and artistic production. I even positively believe that there is such. But this pathological element accounts for exceptional cases only; it is not the rule. The mere fact that Nordau puts all these authors in the same class, from the Preraphaelites down to Nietzsche and the Symbolists, makes us feel suspicious. It involuntarily reminds one of the sally of Montesquieu: 'Of course . . . they lock up a few fools in a house, in order to convince the world that those who are outside are not crazy.'"

### OPERATIC PLANS FOR NEXT YEAR.

ACCORDING to a statement given out lately through the New York *Herald* (April 19), and said to be authoritative, the grand opera season for the coming year is to be characterized by several new features. Instead of the usual sixteen or eighteen weeks at the Metropolitan Opera-House in New York, there are to be but ten weeks. Several changes are reported among the artists, and an attempt may be made to limit the increasing demands of singers for enormous salaries. *The Herald* says:

"It has been decided, likewise, that the season shall be in no wise a 'cheap' one, but that the standard of this and the preceding winters under the Grau régime shall be fully maintained. It is not true, as reported in some quarters, that the Wagnerian operas are to be cut out and Wagnerian singers not engaged, or the usual proportion of Wagner performances lessened. The directors are well aware that the public, accustomed to the present wide variety and high standard, would turn their back on any scheme less excellent, and also that Mr. Grau himself would decline to direct so fruitless a task as attempting to run second-class performances at the Metropolitan. There is neither profit nor glory in such an undertaking, they all agree.

"One point on which the directors are united is that the constantly increasing salary demands of the artists is a grave danger that threatens the future of opera in America. Salaries that would have been thought outrageously high even three years ago have in some cases doubled and trebled, and there seems to be no limit that will satisfy some of the singers. It only remains to be settled at what point the directors will refuse to indorse re-engagements. Mr. Grau is free to make all engagements, but some directors have intimated that a halt should be called and unreasonable salaries must meet with non-approval.

"Engagements for next winter are as follows:

"Mme. Calve, Mme. Gadski, Mme. Suzanne Adams, Mme. Schumann-Heink, Mme. Louise Homer, Miss Carrie Bridewell, and Fräulein Fritz Scheff. Assurances are received that Mme. Emma Eames will return here, tho no engagement is yet actually signed.

"Mme. Nordica no doubt will be willing to resume her place in the New York company, and the directors believe that Fräulein Ternina and Mme. Sembrich will not be averse to singing here next season. No engagement, however, is yet definitely made with them. As to Mme. Melba, she has planned to go to Australia next winter, but next winter is a long way off yet, and who knows what slip 'twixt to-day and the trip may occur? Mlle. Bréval's return is not yet decided upon, tho she has been greatly pleased with her first American tour.

"M. Saleza, M. Salignac, and Herr Dippel have been engaged. M. Jean de Reszke will not return next winter. This seems settled, tho he has been known to change his mind. His absence will be greatly regretted. Tho a successful season has been given in his absence, it is hoped that his present 'No' may be modified. At present, however, he is counted as off the list. M. Van Dyck is anxious to return and will probably be here, and Signor Tamagno or Señor Alvarez is also expected.

"Signors Campanari and Scotti are reengaged. Mr. Bispham, it is said, desires to resume permanent connection with the Grau company, and will doubtless be on the roster, while Herr Van Rooy will be here if his terms, greatly raised since his American

success, come down to the figures the Metropolitan is willing to pay. M. Edouard de Reszke's return is still 'in the air.'

"M. Bars, Herr Muhlmann, MM. Journet, Blas, and Gilbert are engaged, as are M. Declery, a new barytone, and Signor Perelio, an Italian basso.

"The tour will open at Albany early in October, one performance, and will include the following cities, the numbers indicating the days in each place:

"Albany, 1; Montreal, 4; Louisville, 2; Memphis, 2; Nashville, 2; Toronto, 3; Detroit, 3; Atlanta, 2; New Orleans, 5; Houston, 2; Dallas, 2; Denver, 4; Omaha, 2; Kansas City, 2; St. Louis, 2; Los Angeles, 2; Cleveland, 2; Buffalo, 2; Rochester, 2; New York, 10 weeks, December 23 to March 1; Boston, 2 weeks; Cincinnati, 6; Chicago, 12; Pittsburg, 6; Washington, 3; Baltimore, 3; New York, farewell performance in April.

"Philadelphia will have opera during the New York season, as has been the custom in the past."

## THE "DEGENERACY" OF CONTEMPORARY ACTORS.

WE have heard much in recent years about "the degeneracy of the stage"; but, for the most part, the modern critic has directed his attack against the playwright or the manager rather than the actor. A well-known British dramatic critic, Mr. Allan Laidlaw, now turns his battery on the players themselves. "Nothing," he says, "has struck me more forcibly on our English stage than the rapid degeneration of our actors, and I use the term advisedly, both in the physical and mental sense." Not only are actors with striking physique and voice becoming rarer, he adds, but so also are actors who can conceive a part in a bold and vigorous spirit. In *The Westminster Review* (April) he continues:

"Nothing [better] proves how much morbidity has caught hold of our present generation of actors than the charm they seem to find in taking the gloomiest view of every character they enact. Everything is pitched in the minor key. I have seen a well-known and popular artist playing Captain Absolute and Charles Surface as if these rollicking heroes had been educated by a process of persistent pessimism. Much of the tameness of all our theatrical performances is undoubtedly due to this vein of depression which enters into everything. It is only in the variety theaters that one finds any sense of the affirmation of life. But it is not only an absence of joyousness which one finds in modern acting, but an absence of strength and an almost entire elimination of real passion, unless it be in the depiction of something malign, sinister, horrible, such as Coupeau in 'Drink,' Jagon in 'The Grip of Iron,' or the two fighting harlots in 'Woman and Wine.' Music-drama is tainted also in the same way; our singers have succumbed to what Nietzsche, in his indictment of Wagner, aptly describes as *Senta*—sentimentality, the constant assertion of abnegation, self-sacrifice, altruism, as opposed to healthy egoism and individualism.

"The philosophic case against pronounced altruism is that it can not be sincere; insincerity and vulgarity are the defects of most of our present-time art. Morbidness in actual life, or in art, is always insincere, unless the motivation of morbid acts or expressions proceed from an unhealthy, depressed, diseased organism. Most of our modern acting is insincere, hence it is tame and fails to convince or move the spectator. Of course all art is *seeming*, but it need not be *false* seeming. The essence of all classic art is that it is verisimilitude to ascending life, not verisimilitude to debasement and decay; hence the vitalizing effect of classic art as compared to the deadening, indeed maddening, effect of much so-called realistic art of to-day. Nietzsche's wonderful parallel between the music-dramas of Wagner and Bizet's opera 'Carmen' is a real instance of the blight that rests upon modern stage art, and he rightly lays the blame upon the morbid egoism of the actor. He speaks of Wagner as the actor-musician. Adopting a parallel comparison for drama, not to overweight the argument, I will compare such a play as 'The Lady of Lyons' with 'The Second Mrs. Tanqueray.' However bombastic Claude Melnotte may be in his language, there is nothing morbid in his character. He fights his difficulties, he does not shirk suffering, he redeems his own errors, conquers the love of a woman who scorns him, and gains for himself a name and position that none can take from him. In 'The Second Mrs. Tanqueray' we have a woman who has every chance given her to amend her life and assert the character she undoubtedly possesses, and yet who weakly submits to circumstances, frets, pules, and rages, and finally goes down in weak suicide in obedience to a sham morality. Now the actors of thirty years ago who played Claude Melnotte rendered the character heroically, accepting the strong side of his nature; but modern actors who attempt this rôle make him a maudlin, posturing, self-centered dreamer who bewails his fate before he seeks to rectify it. The last vigorous actor I remember was John Clayton. I saw him play De Mauprat in 'Richelieu' with Phelps, Charles Rennell, Herbert Standing, George Barratt, Rose Leclercq, and Louisa Gourlay. What a performance that was, how stirring and bracing—chivalrous in bearing, ringing in voice, strong in action! And Phelps as Richelieu, what a strong complex performance! every aspect of the many-sided cardinal carefully delineated—not special stress laid upon the bitter, sarcastic side of his character, or upon his senile weaknesses. Phelps was an actor who tried to get all he could out of his author, who grappled with every difficulty in a part and conquered it. Such acting is interesting, it fills the scene; costumes and scenery are but a background. In the present-day theater we get only luxury and enervation. If the theater is ever to regain the ground won from it by the music-hall, our actors must quickly get rid of this drawling, languid method, and the hopeless, gloomy pessimism which hangs like a pall over them. William Terriss seems to have been the last of our 'bracing' actors. What we require now is a few young artists who can infuse vitality and passion into some of the leading characters of our standard drama, and so prove that acting is an affirmation of the joy of life, *not* the morbid insistence on phases of temperament typical of decadent nature."

## THE "RUBÁIYÁT" IN FRENCH.

A LITERARY novelty which has lately attracted the book-lover is "Le Rubáiyát de Omar Khayyám de Naishápúr," translated from FitzGerald's version by two young French men of letters, MM. Charles Sibleigh and Léon Gobeille, as a memorial of Mlle. Beatrice Sylvie, a remarkable young student of Persian, who died by her own hand last year in Paris. A writer in *The Critic* (April) says of it:

"The familiar quatrains of the 'Rubáiyát' have become so generally considered as a sort of short-cut to culture that, outside of its beauty, this first French translation of FitzGerald's poem must appeal to the scholar as well as to the casual reader and collector. And how happily has Mr. Sibleigh caught the true spirit of the work! How happy the manner in which he puts life itself into the companionship of those two with the 'crust of bread' and the 'jug of wine':

Un livre de poésie sous les branches, une cruche de vin, une croûte de pain, et toi près de moi, chantant dans le désert . . . O, le désert serait le paradis pour moi!

And again, in the last quatrain:

Et quand à son instar, O Sáki, tu passeras parmi les hôtes parsemés sur l'herbe comme des étoiles, et dans ta joyeuse course tu viendras à l'endroit où autrefois j'en étais un retourne un verre vide.

"It seems almost as tho 'retourne un verre vide' means the turning of the hour-glass of the span of life. As the hour-glass is supposed to have been first known in Persia about the tenth century, it would not be unreasonable to gather this interpretation, and to assume that Omar, in those final lines, vaguely retracts all that he had formerly given utterance to concerning the ennui of life and the joys of wine-drinking, and begs, at the conclusion of his song, that the glass might be turned—that his life might once again be lived over. If we dare accept this view it changes the whole meaning of the poem, and makes 'ducks and drakes' of some fine old philosophizing.

"Mr. Sibleigh seems to have worked out, at least to his own satisfaction, some reason for this inference. He changes Omar, the hopeless pessimist, looking forward to the dissolution of this life with keen desire, into quite a different being; one who craves just as keenly a new lease on existence, longing to have 'le verre

vide' turned again that he might be given another chance to find greater beauties in life and make it well worth the living. . . . .

"To the student it will become a valuable text-book of the French tongue, if ever it is more widely distributed. At present it can reach but the very aristocracy of book collectors, and serves as the herald of the epitaph which shall one day be written in praise of the scholarship and achievements of Charles Sibleigh, and as a splendid tribute to the memory of Beatrice Sylvie."

---

## HOW TO KNOW SHAKESPEARE THE MAN.

WHETHER we can really know anything of Shakespeare's personality has long been a subject of contention. A class of writers like Mr. Sidney Lee, whose "Life of Shakespeare," in spite of its omnipresent dogmatism, is regarded as the most authoritative of recent biographies of the poet, maintain that we can not know the personality of the author of "Hamlet." A directly opposite view is taken by Professor Brandes, who tries to show that a certain spiritual history indicated in the plays may be more or less correlated with incidents in Shakespeare's outward personal history. In an exceptionally strong article in *The National Review* (April), Mr. Leslie Stephen steers a somewhat middle course. He does not assert that we can take "Mr. W. H." or "the dark lady" of the Sonnets literally, but makes the broad claim that the power of a literary artist to conceive and depict certain qualities of human nature shows that within his own personality, and necessarily seen to some extent in his outward life, were the aptitudes and qualities that enabled him to respond to them. He says:

"I confess that to me one main interest in reading is always the communion with the author. 'Paradise Lost' gives me the sense of intercourse with Milton, and the Waverley Novels bring me a greeting from Scott. Every man, I fancy, is unconsciously his own Boswell, and, however 'objective' or dramatic he professes to be, really betrays his own secrets. Browning is one of the authorities against me. If Shakespeare, he says, really unlocked his heart in the Sonnets, why 'the less Shakespeare he.' Browning declines for his part to follow the example, and fancies that he has preserved his privacy. Yet we must, I think, agree with a critic who emphatically declares that a main characteristic of Browning's own poetry is that it brings us into contact with the real 'self of the author.' Self-revelation is not the less clear because involuntary or quite incidental to the main purpose of a book. I may read Gibbon simply to learn facts; but I enjoy his literary merits because I recognize my friend of the autobiography who 'sighed as a lover and obeyed as a son.' I may study Darwin's 'Origin of Species' to clear my views upon natural selection; but as a book it interests me even through the defects of style by the occult personal charm of the candid, sagacious, patient seeker for truth. In pure literature the case is, of course, plainer, and I will not count up instances because, in truth, I can hardly think of a clear exception. Whenever we know a man adequately we perceive that, tho different aspects of his character may be made prominent in his life and his works, the same qualities are revealed in both, and we can not describe the literary without indicating the personal charm. . . . . .

"The most demonstrable, tho it may not be the highest merit of Shakespeare's plays is, I suppose, the extraordinary variety of vivid and original types of character. The mind which could create a Hamlet, and a Falstaff, and an Iago, and a Mercutio, and a Caliban, a Cleopatra, and a Lady Macbeth, and a Perdita, must undoubtedly have been capable of an astonishing variety of moods and sympathies. That certainly gives a presumption that the creator must have been himself too complex to be easily described. The difficulty, again, is increased by the other most familiar commonplace about Shakespeare, the entire absence of deliberate didacticism. . . . My inference then would be, not that Shakespeare can not be known, but that a knowledge of Shakespeare must be attained through a less obvious process. His character, we must suppose, was highly complex, and we are without the direct and unequivocal clues which enable us to feel ourselves personally acquainted with such men as Dante or Milton, to say nothing of Wordsworth or Byron. . . . One remark will be granted. A dramatist is no more able than anybody else to bestow upon his characters talents which he does not himself possess. If—as critics are agreed—Shakespeare's creatures show humor, Shakespeare must have had a sense of humor himself. When Mercutio indulges in the wonderful tirade upon Queen Mab, and Jacques moralizes in the forest, we learn that their creator had certain powers of mind just as clearly as if we were reading a report of one of the wit-combats at the 'Mermaid.' . . . . . .

"When we agree that Shakespeare's mind was vivid and subtle, that he shows a unique power of blending the tragic and the comic, we already have some indications of character; and incidentally we catch revelations of more specific peculiarities. Part of my late reading was a charming book in which Mr. Justice Madden sets forth Shakespeare's accurate knowledge of field sports. It seems to prove conclusively a proposition against which there can certainly be no presumption. We may be quite confident that he could thoroughly enjoy a day's coursing on the Cotswold Hills, and we know by the most undeniable proof that his sense of humor was tickled by the oddities of his fellow sportsmen, the Shallows and Slenders. It is at least equally clear that he had the keenest enjoyment of charms of the surrounding scenery. He could not have written 'Midsummer Night's Dream' or 'As You Like It' if the poetry of the English greenwood had not entered into his soul. The single phrase about the daffodils—so often quoted for its magical power—is proof enough, if there were no other, of a nature exquisitely sensitive to the beauties of flowers and of springtime. It wants, again, no such confirmation as Fuller's familiar anecdote to convince us that Shakespeare could enjoy convivial meetings at taverns, that he could listen to, and probably join in, a catch by Sir Toby Belch, or make Lord Southampton laugh as heartily as Prince Hal laughed at the jests of Falstaff. Shakespeare, again, as this suggests, was certainly not a Puritan. That may be inferred by judicious critics from particular phrases or from the relations of Puritans to players in general. But without such reasoning we may go further and say that the very conception of a Puritan Shakespeare involves a contradiction in terms. He represents, of course, in the fullest degree, the type which is just the antithesis of Puritanism; the large and tolerant acceptance of human nature which was intolerable to the rigid and strait-laced fanatics."

As to the much-disputed question of Shakespeare's religion, Mr. Stephen believes that from his plays it is impossible to determine whether he was Anglican or Roman Catholic; but, he says, this is of little or no consequence, for a man's real religion is not to be defined by the formula which he accepts, largely "a matter of accident and circumstance, not of character":

"We may, I think, be pretty certain that Shakespeare's religion, whatever may have been its external form, included a profound sense of the mystery of the world and of the pettiness of the little lives that are rounded by a sleep; a conviction that we are such stuff as dreams are made of, and a constant sense, such as is impressed in the most powerful sonnets, that our best life is an infinitesimal moment in the vast 'abysm' of eternity. Shakespeare, we know, read Montaigne; and if, like Montaigne, he accepted the creed in which he was brought up, he would have sympathized in Montaigne's skeptical and humorous view of theological controversialists playing their fantastic tricks of logic before high heaven."

Then, too, just as from the poems of Byron and Burns, without any knowledge of their lives, we should be justified in inferring that they were men of strong passions—whether or not circumstances permitted these poets to give them outward expression—so we may infer that the author of "Romeo and Juliet" was capable of Romeo's passion of love. As for his politics, Mr. Stephen is unwilling, in spite of Shakespeare's undeniable admiration of Coriolanus and his no less evident dislike of mobs, to admit that he was a political aristocrat. But Mr. Stephen nevertheless admits that he was clearly "an intellectual aristocrat."

Mr. Stephen pays tribute to the great service which nineteenth-century scholarship has performed in establishing with a close

approximation to certainty the order in which Shakespeare's plays were written, thus furnishing us with a priceless key to the development of his mind and art. Through the researches of Delius, Halliwell-Phillips, Furnival, Furniss, and a multitude of other investigators, we now have the familiar division of his artistic life into the four periods: the first period, "In the Workshop," from about 1589 to 1594, when he was beginning as an adapter of other men's works, in "King Henry VI.," and writing his first light comedies of "Love's Labor's Lost" and "The Two Gentlemen of Verona"; his second period, "In the World," from about 1595 to 1600, when he had become master of his art in "The Merchant of Venice" and the great Lancastrian histories of "Richard II.," "Henry IV.," and "Henry V."; his third period, "De Profundis," or as Dr. Furnival calls it, "Out of the Depths," from about 1601 to 1608, when in "Hamlet," "Othello," "Lear," and "Timon" he was sounding with the plummet of mental doubt and torture the deepest mysteries of human existence; and his fourth period, "On the Heights," from about 1609 until his retirement from dramatic writing, when the serene romances of reconciliation and returning faith—"Cymbeline," "The Winter's Tale," and "The Tempest"—were written.

## GREAT PROFITS OF NOVEL-WRITERS.

THE phenomenal sales attained by a number of novels during the past year are a subject of general comment in book circles. It is stated that one book has attained a sale of 500,000 copies, and that four others have had an aggregate sale of nearly 1,000,000 copies, while several others have reached a sale of about 200,000 each. The estimated product of fiction for the year is about 2,000,000 volumes. The expert statistician, according to Frederick Stanford, reckons five readers to each book sold, and he proceeds (in *The Evening Post*, New York, March 23) to multiply the 2,000,000 by five, and to announce the result as 10,000,000 novel-readers, or "one-eighth of the entire population of the United States." This is startling, but a little reflection shows that it is correct only on the assumption that each one of the 2,000,000 novels is read by five persons who have not read any other novel during the year. If but 200,000 persons buy ten novels each in the course of the year, that accounts for a sale of 2,000,000 volumes, and counting five readers to each purchaser gives us not 10,000,000 but 1,000,000 readers, or about one-eightieth of the population.

Never before in the history of the world, it is thought, have such great financial temptations been held out to authors, particularly in fiction. Mr. Stanford gives the following facts concerning novelists and their profits:

"The profits which the authors have received from these sales, taken collectively, it is believed by those who know pretty well what they affirm, have amounted to not less than $288,500. Individually, the authors' profits on the five novels that have led all the others in sales will stand at present about as follows: $75,000, $45,000, $39,000, $34,000, and $30,000. Four of these novels have been dramatized, and are now presented on the stage. With one exception, the publishers are not in a position to state definitely what additional royalty the authors receive for the right of dramatization. It is said that two authors sold the right for a stipulated amount. The lowest royalty considered for a success is usually five per cent. of the gross receipts of every performance. Those, therefore, whose good fortune has been associated with the three plays which have enjoyed continuous success since the early autumn, and often drawn audiences paying eight and nine thousand dollars a week, will have received between four and five hundred dollars every seven days from the theatrical manager. Old Dr. Johnson's notion that Thrale's brewery afforded 'the potentiality of growing rich beyond the dream of avarice' may be suggested in comparison with the idea of wealth aroused by the contemplation of the new novelist's revenues. And it should be added that two of these novels were published serially, for which separate payment was received before they were brought out in book form.

"The author and the publisher of the novel that has met with such unexampled favor are at the present time enjoying the most agreeable frame of mind. About eighteen years ago the late Joseph Harper wrote to James G. Blaine, who was then writing his 'Twenty Years in Congress,' that to the historian the publisher came to the door and took off his hat. All that is changed now. The historian will be detained cooling himself in the anteroom, while the publisher holds his hat in his hand and awaits the arrival of the novelist, especially the historical novelist. The profit on that kind of fiction has been so much of a genuine surprise that the majority of the publishers are eagerly watching for every book in manuscript offered, with the hope that it may be a novel of one sort or another, and give some promise of proving a prize-winner. If the author of 'David Harum' were alive, he could command a very large amount in advance for another book. The others who followed with success in the wake of that novel are already counting substantial returns from their next productions. Should the next offerings prove much less attractive, it is believed, even in that event, that the financial return will be at the lowest one-fourth of the first harvest. These new authors, therefore—quite unknown to the public until recently—will have acquired in money what the majority of those who toil in one occupation or another might be glad to consider independent fortunes."

## WHICH IS THE GREATEST OF MUSICAL COMPOSITIONS?

AN enterprising English journalist, Mr. Frederick Dolman, has lately made an attempt to discover what is the consensus of expert musical opinion as to the greatest achievement in music, and with this end in view he has obtained opinions from some of the most distinguished composers and interpreters of music. Among these are M. Jean de Reszke, Sir Alexander MacKenzie, Madame Albani, Dr. Frederic H. Cowen, Sir Hubert Parry, Sir Walter Parratt, Mr. Ben Davies, and Miss Clara Butt.

The opinion of Sir Walter Parratt, the organist of St. George's Chapel Royal, Windsor, is given and commented on as follows (*The Strand*, April):

"'In varying moods I should give you different answers. Beethoven's C-minor Symphony, Bach's B-minor Mass, Brahms's "Schieksalied," even a far-off Palestrina would each at the psychological moment stir me most deeply.' The 'far-off Palestrina,' it may be added, lived through the greater part of the sixteenth century and is sometimes referred to as 'Princeps Musicæ'; whilst the three works specially mentioned by Sir Walter were written at long intervals from each other during the past two centuries. Bach's Mass in B-minor dates from about 1734, but with the rest of this master's work had to wait many years before its genius was appreciated. Brahms's 'Schieksalied' was composed some years before his death in 1894."

M. Jean de Reszke states that his favorite composition is the prelude of "Parsifal," one of the latest of Wagner's scores. Wagner and Beethoven appeal with equal strength to Sir Alexander MacKenzie, who since the death of Sir Arthur Sullivan is commonly regarded as the first of living English composers. He says:

"The first three movements of Beethoven's Ninth Symphony have always appeared to me to be the highest achievement in purely instrumental music. In answering your question, however, I find it difficult to ignore opera, and in this art Wagner's 'Meistersinger' holds the first place in my estimation."

Madame Albani agrees with several other artists in choosing a song from "The Messiah"—"I Know that My Redeemer Liveth"—as "the most musicianly, melodious, and expressive."

MR. DUFFIELD OSBORNE, the well-known New York writer, is said to have anticipated, in a magazine article written over a year ago, the capture of Aguinaldo, which he there described in imagination, but with almost all the details of the actual event.

# SCIENCE AND INVENTION.

## HOW NATURE MAY MAKE MISTAKES.

WE hear a good deal about the curative powers of nature and the desirability of leaving nature to herself as much as possible. This is all very well when nature is working under her own conditions; but when these have been interfered with at the start, she may misinterpret her own messages and make a mistake. This is illustrated in a striking article by Dr. Louis Robinson in *The North American Review* (April), entitled "A Curious Human Document." The "document" in question is the common—the altogether too common—corn or bunion, and Dr. Robinson shows that its growth is due to just such a misinterpretation by nature. He says:

"If we would understand how this odd perversion has been brought about, we must, firstly, bear in mind that the period during which man, by completely encasing his feet in hard boots, has become a sort of *amateur ungulate*, is very short indeed compared with the immeasurable epoch during which he wore no foot-covering at all. In those ancient days, also, when every man was a hunter who had to pursue game afoot—and was in danger of starvation if he did not succeed—pedestrianism was of much greater importance in the economy of life than it is now. Secondly, we must remember that little or no change has taken place in man's physical framework since those remote times when he was an absolute savage. Thirdly, nature's methods of meeting physical emergencies, as applied to man, are appropriate, not to his recent and as yet brief environment of civilization (and boots), but to the state of universal bootlessness which prevailed throughout the long stone ages."

Nature meets friction on the skin, Dr. Robinson reminds us, by a growth of horny cells at the threatened spot, forming a callosity that protects the skin from harm. This is especially true of the foot, which in primitive times was exposed to this kind of injury more than any other part of the body. Says the author:

"As long as man ran barefoot, all went extremely well. If one part of the foot, owing to some personal peculiarity of gait or habit, wore away faster than the rest, and was in danger of becoming abraded, that fact alone caused small *papillæ*, filled with active blood-vessels and nerves, to spring up at the threatened spot, so that horny cells were produced in great abundance. Hence, any primitive savage who habitually rubbed one part of his foot in climbing to his rock shelter, was protected from consequent disablement; and if, through some change in his habits, another part became chafed more than the rest, the new need was met in a precisely similar fashion. No accumulation of this thickened cuticle took place at such a spot, because it was rasped away by the wear and tear of locomotion just as rapidly as it was formed.

"Now, let us see what takes place under modern conditions. . . . Under the stimulus of undue local pressure caused by an ill-fitting shoe, certain nerves (forming the intelligence department of the disturbed region) become excited, and send an alarming report to headquarters. . . . From the spot 'where the shoe pinches,' a message is despatched along the conducting nerves to the central bureau: 'Much friction here. Send help at once or skin will be abraded.'

"There is no delay in responding to this appeal. . . . A rapid accumulation of the cuticle takes place over the spot 'where the shoe pinches'; and this being artificially protected from attrition from without, continues to thicken until it causes a severe aggravation of the pressure upon the tender parts below. The nerves in the advanced *papillæ* become acutely aware that matters are going from bad to worse, and send agonized appeals for further relief to headquarters. Our central repair department, still taking it for granted that the chief thing it fears—namely, abrasion of the surface—is taking place in spite of all that has been done, redoubles its former efforts. Fresh supplies are hurried to the front, and the local authorities are instructed to increase the pile of horny cells, at the spot where the pressure is greatest, by every means permitted by the laws of nature.

"As a result, the thickened cuticle over each new *papilla*, instead of being rasped away, as in the case of the barefoot savage, is at first heaped up upon the surface like one of the horny cones covering a dog's paw. But, being unable to get any further in an outward direction, on account of the unyielding boot, it presses inward upon the tender and vascular tissues of the *papilla* itself, and at length penetrates them in the form of an inverted cone of corneous matter. . . . . .

"We may see from this that it will not do blindly to 'trust to nature,' in medical and surgical emergencies, until we have succeeded in convincing nature as to the existence and worth of the appliances of modern civilization. In the case in point, I fear there is no prospect whatever of her changing her methods, unless, during the course of many hundred generations, those with corns should be steadily eliminated as 'unfit'; so that, at length, the whole surviving population can wear ill-fitting footgear with impunity."

## TOTAL ECLIPSES AND THE EARTH'S MAGNETISM.

THAT there is a close connection between the sun and the earth's magnetic condition most scientific men are reasonably certain, altho they can not tell exactly the nature nor the mechanism of such a connection. That the relation is a close one is demonstrated anew by the magnetic observations made during the last total solar eclipse by Dr. L. A. Bauer, of the United States Coast Survey, and described by him in *Terrestrial Magnetism and Atmospheric Electricity*. From an editorial notice of this article in *The Electrical World and Engineer* (April 6) we quote the following paragraphs:

"On plotting the observations it was observed that there was a depression in temperature at each station accompanying the eclipse, but lagging somewhat behind it in time. This local fall of air temperature was, of course, to have been expected. Accompanying the temperature variation, however, it was found that there was at each station a small magnetic disturbance occurring not at the same moment of standard time, but associated at each station with the time of maximum obscuration of the sun's disk by the moon. The duration of the magnetic disturbance was apparently about the same as that of the eclipse, or about two and one-half hours. . . . The analysis of the disturbance seemed to show that the disturbing causes were external and not internal to the earth's crust, or were such as might be due to magnetic forces residing in the atmosphere; and the presumption seems to be that the origin of the disturbance was owing to the abstraction of the sun's rays from the atmosphere by the moon. The effect upon the needles of the observers seems in each case to have been such as might have been produced by a long, thin, straight, weak bar-magnet approximately coincident with the axis of the moon's shadow, and moving along with that axis over the surface of the earth, the lower end of this imaginary moving magnet being a south-seeking pole, or attracting the north-seeking pole to the observer's needles. It is stated that traces of this feeble magnetic disturbance accompanying the eclipse were felt as far from the line of totality as Toronto, Canada."

The variations were very small—too small, indeed, to be recorded on any but the very sensitive magnetometers used by the government observers. Dr. Bauer believes that in order to show variations of the order here considered, the ordinary recording magnetometers ought to be more sensitive and register over a wider scale. Says the writer of the editorial already quoted:

"If the observations here considered had been made by standard magnetometers, instead of having been made by indicating instruments of considerable sensibility and recorded by skilled observers, the results here in question would have probably escaped observation. It is to be hoped that the next total solar eclipse which makes itself visible in the United States will be followed with many more magnetic instruments and observers than that of May 28, 1900. Fortunately, such observations do not entirely depend on fine weather for their conduction. If it is really true that the solar eclipse is accompanied by a feeble local magnetic disturbance of the earth, the fact is of great im-

portance is throwing light upon the nature of the earth's magnetism. Assuming that Professor Bauer is right in his conclusions—and they certainly seem to be supported by many individual observations—then the general conclusion is suggested that the daily variation of the earth's magnetism is due to the effect of the sun's rays upon the atmosphere. This, indeed, has been the most recently prevailing theory; in fact, if the sun's rays incident upon the northern hemisphere seem to repel the north poles of suspended needles, as in the daily variation, then a shadow cone in these rays should appear to attract the said north poles as in these observations."

## WHY ARE WE GAINING INDUSTRIAL VICTORIES?

THE world seems to have made up its mind that we are successfully wresting the scepter of industrial supremacy from the British grasp. It has given up discussing the fact, and is now busily asking "why," apparently as a preparation for entering the struggle with us on our own ground. Various are the reasons that are put forward. Our high protective tariff; our systems of industrial education; our scientific methods of organization; the great use that we make of automatic machinery with the resulting increase of product per man—all these have been given credit for our progress. Probably the most interesting reason is given by a recent correspondent of *Engineering* (London), who says that we Yankees are so lazy that we are driven to the invention of cute devices for saving ourselves exertion. He says:

"It seems to me that there is one trait that is generally overlooked by strangers; and, indeed, not always recognized even here at home. A man will come and speak of some way he wishes to do the work, or some little appliance he would like to have made, or some change in the casting, that certain operations can be shortened or eliminated.

"Why does he do this?

"Does he expect more pay? He is now getting as much as the shop ever pays.

"Does he expect to get a patent on the appliance? He is surrounded on every hand by them, and not a patent in the lot.

"Does he expect to shorten his day? He has his full hours to work the same as his fellows, and will have.

"Does he expect to be able to take it easy by the change? Not a bit of it, as the reason he gives for the change is increased production or better work.

"He isn't working piecework to get the increase.

"To think he would do this without any reason would be absurd.

"In some ways he is the laziest man in the world. His dislike to doing anything that don't accomplish something is intense.

"He wants every exertion to result in usefulness in some direction.

"To put it in another way, he wants the efficiency of his efforts to be as near 100 as possible. If dollars come from this, well and good; but after all that is not the mainspring.

"Put him at work where he has no chance to think and he loses his strap, and you will find that increase of wages will not keep it there.

"He will give up an easy job for a harder one for the sake of getting where he can plan and improve, and will forget how hard he is working in his pleasure in doing the work with less exertion than formerly it was done.

"Mechanically, he despises his fellow workman who frets and fumes and tugs and strains to do what a little thought and ingenuity would do in a much better way.

"A gentleman who had come in contact with a very competent mechanic for years expressed the opinion that he was the laziest man he had ever known; that he was so lazy, and hated to work so bad, that when there was anything to be done he would think of some little scheme to do it better and quicker than the ordinary way, so as to be able to do it without work, and would hustle around lively, making the scheme do the work as he planned it should.

"The opinion is a common one, even with those jobs that are hard work, that some men would be better mechanics if they had less muscle, and so had to think more to be able to do the work.

"The joy that an astronomer feels in discovering a comet, that a scientist feels in demonstrating the truth of a new theory, that an explorer feels in laying open the mysteries of a new country, that a chemist feels in producing hitherto impossible compounds; this joy is also felt by the true mechanic when he improves the efficiency of his efforts, and, unless recognized in his make-up, he is a puzzle.

"That following this feeling generally brings the money too is fortunate for the world at large, as they are the largest gainers by it, in material things, and surely no one should blame the Yankee who so arranged that he got as many dollars for as little effort as possible, as that is surely just in line with his usual work of high efficiency."

After a discussion of several of the recent English works in which this subject is handled, Prof. R. H. Thurston comes to the following conclusion, which he states in *Science* (New York, April 19):

"One can hardly fail to come to the conclusion that, while it is true that the American producer just now bursting into the field of foreign consumption with his cheap but well-made 'interchangeable' wares, owes his seemingly meteoric success to applied science and in large part, in these later years, to the introduction into his manufacturing and transportation organizations of scientifically trained men, and while it is unquestionably the fact that Great Britain is suffering from neglect of science, and from the barbarous spirit and ignorance of her trades-unions, the real, the fundamental, element of difference probably lies behind all this. The ultimate cause of these developments of the United States which have so astonished the world is that perfect freedom, political and conventional, that freedom of the individual to mark out his own life and strive for his own highest goals, unhampered by governmental dictation or by bonds of caste, which has given the American citizen hope, ambition, purpose, and effective energy. It is this which gave him invention, power of achievement, his patent laws, his legislation in behalf of essential industries, even his alert mind and his patriotism and love of country. It is this which has given us our common schools, which has promoted the organization of schools of the arts and trades and productive professions and the whole system of technical education and of industrially applied science. This has given our capitalists a new use for accumulated wealth in the endowment of schools of science and the promotion of education generally, has induced the adoption of organized industrial systems on such an enormous scale, and has permitted the introduction of labor-assisting machinery without serious opposition on the part of those certain to be ultimately most benefited by the resultant increase of wages and decreased costs of product. Great Britain is still under the enslaving influences, in large degree, of convention and caste, and it is mainly this which lies at the bottom of her slow progress in the adoption of modern scientific methods, of improved systems, and of extensive and intensive technical education."

**Speed Records on the Ocean.**—The following brief statistical review of ocean speed records for the various classes of ships is compiled by *Uberall*, the organ of the German Maritime Association: "The *Deutschland*, of the Hamburg-American line, is now the swiftest commercial vessel. She made the trip from New York to Plymouth (2,982 marine miles) in five days seven hours in September, 1900, which corresponds to an average speed of 23.36 knots.

"This speed is surpassed only by torpedo-boats. In 1870 the record was held by the *Miranda*, with a speed of 16.2 knots; in 1892 a torpedo-boat built in the Schichau works made 27.4 knots, and later this was surpassed by the English torpedo-boats and destroyers, with speeds of 31 knots. These were in turn beaten in 1897 by the *Turbinia*, another English torpedo-boat, driven by a steam-turbine and making 32.76 knots.

"In 1898 the Schichau works won back the record with torpedo-boats built for China, whose speed was 35.2 knots with a displacement of 280 tons. This record was not beaten until last summer, when the English torpedo-destroyer *Viper* made 36.8 knots at its trials. . . . A similar boat, the *Cobra*, built at Elswick, has made 35.89 knots. . . . . .

"Cruisers built specially to pursue trading-ships in time of war are also very swift. The first of this type were the American ships *Columbia* and *Minneapolis*, which at their trials made 23 knots, but which, on returning from the naval review at Kiel, were able to cross the Atlantic only at the average speed of 18.5 knots. The last French protected cruisers *Guicheu* and *Chateaurenault*, whose engines are of 25,400 horse-power, are the swiftest and also the largest ships of war; they have made 23.5 knots. In England the armored cruisers of the *Drake* class should also make 23 knots.

"The speed of armored vessels has also increased. In the first ships of this class we were content with a speed of 9 to 10 knots, and the *Lepanto* and *Italia*, built by Italy in 1880, made a great step forward with their 18 knots, a speed that has been since equaled by other nations, and which has even been exceeded in England by the armor-clads of the *Formidable* class (19 knots) and in Italy by those of the *Benedetto Brin* class, which should make 24 knots. In France the highest speed remains at 18 knots, but this speed has been made by all the armored vessels built since 1893."—*Translation made for* THE LITERARY DIGEST.

## DISCOVERY OF THE PROTOZOON OF CANCER.

AN announcement is made by Dr. Harvey R. Gaylord that he has succeeded in isolating and culturing the parasite of cancer; that he has produced the disease in animals by inoculation with the parasite; and that he has proven the parasite of cancer to be a protozoon.

Dr. Gaylord is the director of the New York State Pathological Laboratory at Buffalo, which has concentrated its entire attention for three years on an investigation into the nature and causes of cancer; and as the work of the laboratory has profited by suggestions from several very eminent medical scientists in this country and Europe, it is believed by physicians who have reviewed Dr. Gaylord's announcement (in *The American Journal of the Medical Sciences*, May) that great importance may be attached to the results therein set forth.

Dr. Gaylord's article, which is quite technical, extends over nearly forty pages and is copiously illustrated. On the basis of the observations made, he says, he is prepared to state that all the organs, including the blood taken from all regions of all patients dying of cancer, including sarcoma and epithelioma, contain large numbers of the organisms.

Following the same lines, he and his associates have likewise observed in all cases of carcinoma and sarcoma thus far examined in which cachexia was well marked, that the organisms, especially the younger forms, can be detected in the peripheral blood.

The time of the appearance of these organisms, and the utilization of the fact as a means of diagnosis, now form the subject of research in the laboratory. At the present stage of the discovery, however, the hopes of those afflicted with cancer are darkened rather than lightened, since it appears that even the surgeon's knife can not bring lasting relief. However wide and deep it may cut, it can not reach the whole circulatory system, and altho the central mass of organisms may be removed, many will remain and the relief given will be temporary.

Of even greater interest than the fact that he has isolated the germ of cancer is the identifying by Dr. Gaylord of the protozoon with bodies long observed, but supposed to be the products of degeneration, and which have for this reason been passed over in the exhaustive researches of the bacteriologists. Now that Dr. Gaylord seems to have proven that these are living parasites, an enormous amount of very close attention will at once be given them. Bacteriologists have proven, to their own satisfaction at least, that bacteria, or vegetable organisms, are the cause of tuberculosis, the plague, influenza, diphtheria, Asiatic cholera, leprosy, pneumonia, typhoid fever, and lockjaw, and they are confident that yellow fever is in the same category. But they have been thus far baffled in attempts to discover the nature of the parasites supposed to be the cause of such important maladies as cancer, measles, smallpox, syphilis, rheumatic fever, hydrophobia, and scarlet fever. The antitoxin used to prevent smallpox is secured by purely empirical means, and comparatively little is known of its nature. Dr. Gaylord, however, declares that he has already proven a close relation between his cancer germ and the vaccine organism, and that they are of the same group. The hope is entertained, therefore, that researches into the nature of these so-called "products of degeneration," hitherto passed over by microscopists, may soon bring to the world news of relief not only from cancer, but from a long list of other serious diseases.

## THE NUMERICAL VALUE OF A MAN.

A NOVEL method of expressing a person's physical strength, by means of a number derived from comparison of the height, the chest-measure, and the weight, has been invented in France by M. Pignet, who describes it in the *Archives Médicales d'Angers*. M. Pignet takes the difference between the height and the sum of the chest-measure and weight as his standard, measurements being made in centimeters and kilograms. Thus, if a man has a chest-measure of 80 centimeters [31 inches], weighs 60 kilograms [132 pounds], and is 1.60 meters [5 feet 3 inches] high, the number representing his strength would be 160— (80 + 60), or 20. A man whose chest-measure was 75 centimeters [29 inches] and whose height was 1.70 meters [5 feet 7 inches], his weight being the same as the other, would be represented by 170— (75 + 60), or 35. This formula is somewhat confusing at first sight, as with the same height, increase of weight and chest-measure would lessen the number representing strength; but the vigor of the man, we are told, is supposed to be inversely proportionate to his standard number, and the author is convinced from a study of conscripts in the French army that his method furnishes a very exact objective measure of physical aptitude. He gives the following table:

| NUMERICAL VALUE. | CONSTITUTION. |
|---|---|
| Less than 10 | Very strong. |
| 11 to 15 | Strong. |
| 16 to 20 | Good. |
| 21 to 25 | Average. |
| 26 to 30 | Weak. |
| 31 to 35 | Very weak.' |
| Above 35 | Feeble. |

Commenting on this in the *Revue d'Hygiène*, M. Valin remarks that it should be said that when the numerical value exceeds 35, the person is completely unfit for military service. For instance, a man who only measures 76 centimeters [30 inches] around the chest and is 1.60 meters high [5 feet 3 inches] and who weighs but 50 kilograms [110 pounds], giving him a numerical value of 34, is really not physically fit. Men of 20 years whose numerical value is zero are rarely found. From the author's standpoint these would of course be physically perfect. Such a man, for instance, would be one whose chest measure was 90 [35½ inches], weight 80 kilograms [176 pounds] and height 1.70 [5 feet 7 inches]. Says *Cosmos* (April 13), in a note on M. Pignet's article:

"Experience shows that the thoracic measurement plays the preponderant rôle among the three numbers that make up the 'numerical value.' A small chest-measurement always means a small numerical value, and inversely. The weight has not nearly so much importance.

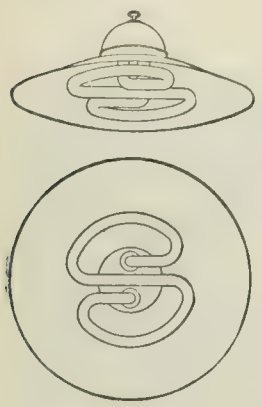
"A prolonged study of the five hundred and ten men observed by M. Pignet has also brought out the fact that a person is more subject to disease, and spends a greater number of days in the hospital, as his numerical value is weaker.

"These observations confirm the investigations already published by M. Vallin on methods of measuring the physical value

of conscripts (*Mémoires de Médecine Militaire*, November and December, 1876); and altho the so-called 'numerical value' is entirely conventional and represents a negative value, it enables those who understand it to comprehend at once the bodily fitness of a conscript or a soldier. M. Pignet's memoir deserves to attract attention."—*Translations made for* THE LITERARY DIGEST.

## ELECTRIC LIGHTING BY INCANDESCENT VAPOR.

FOR several years past we have noted in this department the work of various experimenters in the direction of producing cold light—that is to say, of transforming electricity into light without excessive waste of the energy as radiated heat. In lamps that use the ordinary carbon filament, to attain a large proportion of visible radiation, the filament must be raised to a temperature so high that it will last only a very brief time. Attempts have been made to replace the carbon filament with other things. The most successful of these, that of Dr. Nernst, which has recently been described in these columns, consists in the use of refractory oxids like those of the Welsbach mantle. Even in these lamps, however, a large proportion of the radiated energy is in the shape of heat, and undoubtedly the highest efficiency can never be attained with high-temperature sources of light. There has accordingly been much experimenting with vacuum-tubes and the like as sources of "cold light"; but none of the inventors has yet devised a commercially successful system. One that may become so, according to accounts in the technical papers, is that of Peter Cooper Hewitt, of New York. Says *The Electrical Review* (April 27):



SPIRAL LAMP.

"After much experiment along other lines, Mr. Hewitt hit upon the simple expedient of using a metallic vapor enclosed in a glass tube as his conductor. . . . His discoveries in this direction are of deep interest and at the same time rather calculated to astonish those who have not closely followed recent investigation as to the nature of attenuated gases and of electrical phenomena taking place in them. The results he has attained, while by no means commercially perfect, are certainly highly interesting and such as to arouse strong hopes for the ultimate perfection of an exceedingly efficient system of lighting along these lines. At present the lamps of this system, while giving forth powerful and steady light, are handicapped by the peculiarly disagreeable color of the light emitted. It does not seem difficult to correct this defect. Certainly the effort is worth making, for the efficiency already attained is nearly ten times as high as that of the ordinary carbon-filament incandescent lamp, and with this is coupled great certainty and steadiness of working.

"It is too early yet to indulge in any speculations as to the industrial outcome of the interesting researches which Mr. Hewitt has conducted, but they certainly merit careful attention, and the beauty and brilliance of the phenomena, together with the simplicity of the apparatus and methods employed, make them of peculiar interest at this time."

One of the shapes of lamp used by the inventor (who is a son of ex-Mayor Abram S. Hewitt) is shown in the accompanying diagrams from the paper already quoted.

**The Trouble with Dirigible Torpedoes.** — Some writers and inventors have asserted that wireless telegraphy would solve the problem of the dirigible torpedo. They assume that the trouble with such torpedoes has been that they are handicapped by the conducting wire that connects them with the shore, and that when this is done away with they can be steered easily. We are told by *The Electrical World and Engineer*, however, that this is not the trouble; the real difficulty is that the operator on shore can not see the torpedo that he is steering when it gets far away from him, and wireless control will not help this. Says the writer: "The difficulty with such torpedoes lies not in the motive power or mechanism, nor with the need for paying out cable, at least for steering purposes, but in the practical work of the operator. Long before the end of the reel has been reached steering becomes exceedingly difficult on account of the practical impossibility of locating the torpedo itself. Unless the portion of the apparatus which protrudes from the water is not outrageously conspicuous, it becomes very hard to locate accurately from a point near the level of the water before it has gone half a mile, even with a glass. Perhaps the markers can be seen in the chop by persistent attention, but the chance of alining them and locating them with reference to the mark is very small. At a mile the task is nearly impossible, and in the experiments carried out by the United States Corps of Engineers, such torpedoes have repeatedly run ashore or turned completely around, owing to no failure of the mechanism, but solely to the inability of the operator to see what he was doing."

**Sensitiveness of Plants to Poisons.**—The sensitiveness of a seed sprouting in water to extremely minute traces of copper in the water was noted some time ago in these columns, in connection with experiments on the supposed toxic qualities of distilled water. It will be remembered that one experimenter believed that he had proved that distilled water was injurious to seeds, whereas the real injury was done by a small copper wire used in the experiment. More recently M. Raulin has found that mushrooms are very sensitive to poisons, and on March 11 M. Henri Coupin reported to the Paris Academy of Sciences, according to the *Revue Scientifique*, some interesting investigations on the susceptibility of the higher vegetables to very minute doses of poisonous substances. Says that paper: "He took young plants of Bordeaux wheat, and was able to prove . . . that the higher plants, as well as (and often more than) the lower fungi, enable us to detect the presence of toxic substances, such as silver, mercury, copper, or cadmium, in doses which chemical analysis is powerless to detect."—*Translation made for* THE LITERARY DIGEST.

**Longevity in Spain.**—If we may credit a recent revision of the electoral lists in Spain, says the *Revue Scientifique*, the Asturias must be one of the regions of the world where man has the best chance of living to old age (doubtless owing to the proverbial Spanish sobriety). Five electoral districts have each one centenarian; two have two apiece, and besides this we find three electors of 101, 103, and 104 years at Salas; three of 101, 105, and 106 at Caugas de Tineo; two of 101 and 102 at Baol; one of 107 at Franeo; two of 105 and 107 at Valdes; two of 102 and 104 at Petona; and Panes has three electors of 103, 105, and 107 years respectively. In one province there is a total of twenty-eight centenarians in a population of 600,000 persons. This is a large proportion, if it is correct. We should, of course, know what the value of the report is and what guaranties of authenticity were required of the twenty-eight old men provided they did not produce the records of their births. Of course this proportion is not impossible, but we should have very convincing proofs of its correctness."—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

"THE population of Italy has practically doubled in the last twenty-years, a rate of increase that surpasses that of all nations of Europe and even the United States," says *The National Geographic Magazine* (April). "This, too, notwithstanding the burdens of excessive taxation, that would tend to diminish the birth-rate. The last census was taken twenty years ago, in 1881, and showed a population of 21,000,000. According to the census taken early this year the population now numbers 35,000,000. It is safe to estimate the number of emigrants during the twenty years as at least 5,000,000, so that the increase by birth has been about 20,000,000. It has taken the United States thirty years, aided by 12,000,000 immigrants, to double its numbers."

PHYSIQUE AND MENTAL ACTIVITY.—About eight years ago Dr. W. T. Porter, by comparing the weights of school children with their class standing, showed that the duller children were on the average smaller in size for their age than the bright ones. "More recently," says *Modern Medicine*, "Dr. H G. Beyer, of the United States navy, has made a similar investigation with results strongly confirmatory of Dr. Porter's conclusions. This view is at variance with notions which have been expressed by some other observers, but on the whole agrees with the conclusions reached by common experience. A man possessed of a large, strong body ought on the average to be able to do more mental work, as well as physical work, and of a better quality. But it is not always the biggest man who is the strongest physically, and it is especially noticeable that men of smaller size often show greater endurance than do large men. In a twenty-five mile running race held last April, in Massachusetts, ending in Boston, only one of the men who finished weighed more than one hundred pounds at the start. The light-weight men were the winners."

# THE RELIGIOUS WORLD.

## THE DOCTRINE OF CONDITIONAL IMMORTALITY.

THE doctrine that the soul's continued life after death is not a natural gift to all men, but is conditional upon proper use of this life, has been held almost or quite from the first ages of Christianity. Dr. Frederic Henry Hedge, who has written upon this theme, was able to find in the New Testament only two passages that express or imply the natural immortality of man. Professor Toy has gone even farther, and appears to believe that we can find this doctrine nowhere in the Old or New Testament; for, like all Protestants, he does not accept as true Scripture the Alexandrian canon containing the Book of Wisdom, which says that "God has created man to be immortal, and hath made him the image of His own eternity."

A new presentation of this doctrine of Athanasius and other early Christian Fathers has just been made by Dr. S. D. McConnell, rector of Holy Trinity Church, Brooklyn, under the title "The Evolution of Immortality." In the New York *Tribune* (April 27) Dr. John White Chadwick, pastor of the Second Unitarian Church of Brooklyn, says of it:

"While Dr. McConnell's pages abound in chapter-mottoes and quotations favorable to his conception, it is strange that somehow he has forgotten or overlooked Matthew Arnold's sonnet, 'Immortality,' which is quite the noblest expression of the idea of ethical immortality of which I am aware, and I can not deny myself the pleasure of introducing it into this notice:

> Foiled by our fellow men, depressed, out-worn,
> We leave the brutal world to take its way,
> And, Patience! in another life, we say,
> The world shall be thrust down, and we upborne!
> And will not, then, the immortal armies scorn
> The world's poor, routed leavings; or will they,
> Who failed under the heat of this life's day,
> Support the fervors of the heavenly morn?
> No, no! the energy of life may be
> Kept on after the grave, but not begun;
> And he who flagged not in the earthly strife,
> From strength to strength advancing, only he,
> His soul well knit, and all his battles won,
> Mounts, and that hardly, to eternal life.

"Dr. McConnell's book attains to a peculiar interest in the alliance which he makes with the scientific on the basis of an ethereal substance pervading all matter and all space. It is of this ethereal substance that he believes the immortal organism to be made, and, seeking for confirmation of his view, he pounces upon his own wherever he finds it—in spiritism, in hypnotism, in the Röntgen rays, and in the resurrection of Jesus from the dead. My impression is that he is somewhat more daring than scientific in his confidence as to the nature and possibilities of the ether. Moreover, he seems much less scientific in dealing with the resurrection of Jesus than in the earlier chapters of his book. But the weakest link in his whole chain is that which is made to bear the greatest weight. What he attempts is to convince us that a sufficient amount of goodness may build up in man an ethereal body which will survive the shock of death. But, granted the ethereal body, we have not a particle of evidence that a good life has any constitutive power with this body or upon it. The resurrection of Jesus is not an exception, because the ethico-ethereal doctrine must first be established before it can be applied to that resurrection. We are moving in a vicious circle when we use it both as an illustration of a known principle and as an argument for that principle.

"Dr. McConnell is too honest to conceal the difficulties that inhere in the doctrine of which he is enamored. One of these is that it seems to wipe the little children out, and Dr. McConnell's disclaimer is so faint that it does not encourage us. It also wipes out the people who have never had a chance. Another is that, at one point, it requires a mystical expansion of the historical Jesus into a Christ who was before all worlds, at which point Dr. McConnell forgets all his science and becomes wildly theological. There is another difficulty which he does not meet, or even name. If immortality is a reward of merit, where shall the line be drawn, like that which divides water from ice on the one hand and from steam on the other? How many degrees above zero must a man be morally to achieve immortality? A modest man would hesitate to draw the line so low as to include himself. But Dr. McConnell is confident that he presents a great ethical motive. The dread of annihilation will, he thinks, hold the wretch in order as the fear of hell did not. It depends upon the kind of hell. The most of us would infinitely prefer annihilation to the hell of Jonathan Edwards's Enfield sermon. Nor do I see that the terror of annihilation is more ethical than the fear of hell. The woman who met St. Ivo (in the Chronicles of St. Louis) should have had another vase for the destruction of this also, so that men might serve God without hope or fear—even of annihilation—and for love only."

## MARK TWAIN AND THE MISSIONARIES.

THE controversy which has been waged during the past three months between Mark Twain and the Christian missionaries over the alleged misdoings of some of the latter in China suggests to many the battle between the lion and the whale. The parties to the conflict live for the most part in different elements and have considerable difficulty in getting to close quarters. The battle has covered too much ground for us to do more than give a view of the field here and there. Mark Twain opened his attack with a charge all along the line in *The North American Review* (February), in an article called "To the Person Sitting in Darkness." Part of this consisted of an arraignment of civilization in Christian countries, especially in New York, with the aim of showing that the worst features of pagan civilization can be found at our very doors after nineteen centuries of Christian domination. The writer then quoted a despatch from China in the New York *Sun*, italicizing portions of it, as follows:

THE REV. DR. AMENT.

"The Rev. Mr. Ament, of the American Board of Foreign Missions, has returned from a trip which he made for the purpose of collecting indemnities for damages done by Boxers. *Everywhere he went he compelled the Chinese to pay.* He says that all his native Christians are now provided for. He had 700 of them under his charge, and 300 were killed. He has *collected 300 taels for each* of these murders, and has *compelled full payment for all the property belonging to Christians* that was destroyed. He also assessed *fines* amounting to THIRTEEN TIMES the amount of the indemnity. *This money will be used for the propagation of the Gospel.*

"Mr. Ament declares that the compensation he has collected is *moderate*, when compared with the amount secured by the Catholics, who demand, in addition to money, *head for head.* They collected 500 taels for each murder of a Catholic. In the Wenchiu country, 680 Catholics were killed, and for this the European Catholics here demand 750,000 strings of cash and 680 *heads.*

"In the course of a conversation, Mr. Ament referred to the attitude of the missionaries toward the Chinese. He said:

"'I deny emphatically that the missionaries are *vindictive*, that they *generally* looted, or that they have done anything *since* the siege that *the circumstances demand.* I criticize the Americans. *The soft hand of the Americans is not as good as*

*the mailed fist of the Germans.* If you deal with the Chinese with a soft hand they will take advantage of it.'

"The statement that the French Government will return the loot taken by the French soldiers is the source of the greatest amusement here. The French soldiers were more systematic looters than the Germans, and it is a fact that to-day *Catholic Christians*, carrying French flags and armed with modern guns, are looting villages in the province of Chihli."

Upon this Mark Twain comments as follows:

"By happy luck, we get all these glad tidings on Christmas Eve—just in time to enable us to celebrate the day with proper gaiety and enthusiasm. Our spirits soar, and we find we can even make jokes: Taels I win, Heads you lose.

"Our Reverend Ament is the right man in the right place. What we want of our missionaries out there is, not that they shall merely represent in their acts and persons the grace and gentleness and charity and loving-kindness of our religion, but that they shall also represent the American spirit. The oldest Americans are the Pawnees. . . . . .

"Our Reverend Ament is justifiably jealous of those enterprising Catholics who not only get big money for each lost convert, but get 'head for head' besides. But he should soothe himself with the reflection that the entirety of their exactions are for their own pockets, whereas he, less selfishly, devotes only 300 taels per head to that service, and gives the whole vast thirteen repetitions of the property indemnity to the service of propagating the Gospel. His magnanimity has won him the approval of his nation, and will get him a monument. Let him be content with these rewards. We all hold him dear for manfully defending his fellow missionaries from exaggerated charges which were beginning to distress us, but which his testimony has so considerably modified that we can now contemplate them without noticeable pain. For now we know that, even before the siege, the missionaries were not 'generally' out looting, and that, 'since the siege' they have acted quite handsomely, except when 'circumstances' crowded them. I am arranging for the monument. Subscriptions for it can be sent to the American Board; designs for it can be sent to me. Designs must allegorically set forth the Thirteen Reduplications of the Indemnity, and the Object for which they were exacted; as Ornaments, the designs must exhibit 680 Heads, so disposed as to give a pleasing and pretty effect; for the Catholics have done nicely, and are entitled to notice in the monument. Mottoes may be suggested, if any shall be discovered that will satisfactorily cover the ground. . . .

"Shall we go on conferring our civilization upon the peoples that sit in darkness, or shall we give those poor things a rest? Shall we bang right ahead in our old-time, loud, pious way, and commit the new century to the game; or shall we sober up and sit down and think it over first? Would it not be prudent to get our civilization-tools together, and see how much stock is left on hand in the way of Glass Beads and Theology, and Maxim Guns and Hymn Books, and Trade-Gin and Torches of Progress and Enlightenment (patent adjustable ones, good to fire villages with, upon occasion), and balance the books, and arrive at the profit and loss, so that we may intelligently decide whether to continue the business or sell out the property and start a new Civilization Scheme on the proceeds?"

These statements brought out soon after a long letter to Mark Twain by the Rev. Judson Smith, of Boston, secretary of the American Board of Missions, in which he said in part (New York *Tribune*, February 15):

"Dr. Ament has been a missionary for twenty-three years and my correspondent above sixteen years, and I have heard from him frequently during these last months since he escaped from the siege in Peking. The last letter from Dr. Ament was written on November 13, and gives a full account of the events to which presumably *The Sun's* despatch refers. This letter was given to the Associated Press soon after its arrival, on January 7. In it he says:

"'I have been in Cho-Chow. This time I proposed to settle affairs without the aid of soldiers or legations. The visit was a complete success. Every one of our dispossessed church-members in that region has been reinstated and a money compensation made for his losses. This has been done by appealing to the sense of justice among the villagers, where our people lived and where they were respected by all decent people. The villagers were extremely grateful because I brought no foreign soldiers, and were glad to settle on the terms proposed. After our conditions were known, many villagers came of their own accord and brought their money with them.'

"Nothing is said of securing 'thirteen times' the amount of the losses. There is not a word about using this indemnity 'for the propagation of the Gospel.' The whole procedure is in accordance with a custom among the Chinese of holding a village responsible for wrongs suffered in that village, and especially making the head men of the village accountable for wrongs committed there. Not a cash has gone to Dr. Ament or his associates, or for mission purposes of any kind; all has been used for the relief of those hundreds of refugees whom the Boxers and their fellow villagers dispossessed of home and property in the wild fury of last June, who shared the siege in Peking with the legations and the missionaries, and won Mr. Conger's unstinted praise, and who, homeless and helpless, are dependent on the missionaries for food, raiment, shelter, and all things. This is Dr. Ament's own explanation, and you will note that it lacks all those features on which your arraignment rests. We give unhesitating credence to Dr. Ament's narrative; we find it confirmed by what his associates write; we have not one intimation from authoritative sources that it is not true."

On the strength of these statements, Dr. Smith and many religious and secular journals called upon Mark Twain to retract his allegations and "apologize." In *The North American Review* (April), however, he refuses to take back what he has said and returns to the charge. He says in part:

"In a brief reply to Dr. Smith's open letter to me, I said this in *The Tribune*. I am italicizing several words for a purpose:

"'Whenever he (Dr. Smith) can produce from the Rev. Mr. Ament an assertion that *The Sun's* character-blasting despatch was not authorized *by him*, and whenever Dr. Smith can buttress Mr. Ament's disclaimer with a confession from *Mr. Chamberlain*, the head of the Laffan News Service in China, that that despatch was a false invention *and unauthorized*, the case against Mr. Ament will fall at once to the ground.'

"Brief cablegrams, referred to above, which passed between Dr. Smith and Dr. Ament, and were published on February 20:

"'Ament, Peking: Reported December 24 your collecting thirteen times actual losses; using for propagating the Gospel. Are these statements true? Cable specific answer. SMITH.'

"'Statement untrue. Collected 1-3 for church expenses, additional actual damages; now supporting widows and orphans. Publication thirteen times blunder cable. All collections received approval Chinese officials, who are urging further settlements same line. AMENT.'

"Only two questions are asked; 'specific' answers required; no perilous wanderings among the other details of the unhappy despatch desired.

"What was the 'one-third extra'? Money due? No. Was it a theft, then? Putting aside the 'one-third extra,' what was the *remainder* of the exacted indemnity, if collected from persons not *known* to owe it, and without Christian and civilized forms of procedure? Was *it* theft, was it robbery? In America it would be that; in Christian Europe it would be that. I have great confidence in Dr. Smith's judgment concerning this detail, and he calls it 'theft and extortion'—even in China; for he was talking about the 'thirteen times' at the time that he gave it that strong name. It is his idea that, when you make guilty and innocent villagers pay the appraised damages, and then make them pay thirteen times that, besides, the *thirteen* stand for 'theft and extortion.' Then what does *one-third* extra stand for? Will he give that one-third a name? Is it modified theft and extortion? Is that it? The girl who was rebuked for having borne an illegitimate child excused herself by saying, 'But it is such a *little* one.' . . . . . .

"Is there no way, then, to justify these thefts and extortions and make them clean and fair and honorable? Yes, there is. It can be done; it has been done; it continues to be done—by revising the Ten Commandments and bringing them down to date: for use in pagan lands. For example:

"*Thou shalt not steal*—except when it is the custom of the country.

"This way out is recognized and *approved* by all the best authorities, including the Board. I will cite witnesses.

"*The newspaper cutting, above:* 'Dr. Ament declares that

all the collections which he made were approved by the *Chinese* officials.' The editor is satisfied.

"*Dr. Ament's cable to Dr. Smith:* 'All collections received approval *Chinese* officials.' Dr. Ament is satisfied.

"*Letters from eight clergymen*—all to the same effect: Dr. Ament merely did as the *Chinese* do. So they are satisfied.

"*Mr. Ward, of The Independent.*

"*The Rev. Dr. Washington Gladden.*

"I have mislaid the letters of these gentlemen and can not quote their words, but they are of the satisfied."

Various views are taken of the controversy. The Protestant Church papers, which are, as we have before pointed out, almost unanimous in support of the "expansion" policy, defend Mr. Ament and the missionaries, and, like many of the secular "expansion" papers, refer to Mark Twain as now having "no ground to stand upon" and his argument as a "weak dodging of the question." Zion's *Herald*, for instance, says:

"Poor Twain is certainly running tailings. Having hastened to slander Dr. Ament on the basis of a hearsay which afterward

CAN THE MISSIONARY REACH THIS OLD SAVAGE?
—*The Minneapolis Journal.*

proved false, he now seeks to crawl out of a manly apology on a pettifogging quibble. The original charge was that Dr. Ament had assessed damages on the Chinese thirteenfold for their plunder and massacre of missionaries and native Christians. This was based on a clerical error by which 1-3 was taken for 13. Dr. Ament calculated the damages on a moderate scale of value, and added one-third. This sum was paid, and used to feed and clothe the starving and naked victims of the Boxer outrages. We venture to think that not one manly man between the seas, or beyond them, who is not under the necessity of writing an article or making a 'point,' will find any fault with this.' But Twain thinks that that extra third is just as bad as thirteen. It is a sin to steal a pin. No account is to be taken of the distress, the terror, the life-long horror of the victims and their friends. These things don't count when Twain is auditing the bill for damages—at so much a page for the magazine. And the decent world wonders."

The Philadelphia *Press* speaks in like fashion:

"This kind of an argument takes care of itself. By Mark Twain's logic, indubitable damages inflicted by known villages, for which these villages were responsible and would have paid by Chinese practise, can not be collected by Christian missionaries and converts because the villagers who inflicted the damage have laws and a government so poor that wrong will be done in collecting the damages.

"This is neither Christianity nor common sense, neither law nor morality. Indemnities collected by the law and practise of the country in which the damages were done, on a plan which meets the approval of its authorities, are just."

Mr. Edwin H. Conger, Minister to China, who has just returned from the Orient, also defends the missionaries, taking a very different view of them and of the foreign troops from that already given by Sir Robert Hart in *The Fortnightly Review* (THE LITERARY DIGEST, February 9, page 168) and from the late German Minister to Peking in *The Independent* (THE LITERARY DIGEST, April 6, page 419), who strongly recommends that for the peace of the country all missionaries in the future be restricted to the treaty ports. In a Victoria (B. C.) despatch of April 23 Mr. Conger says:

"There were really no acts on the part of the missionaries that were not entirely justified, when the circumstances are known. The missionaries did not loot. The missionaries there found 20,000 destitute men and women on their hands. There was no government, no organized authority. There were the houses of men who had been firing on the foreign quarter, directing the attack, leaders of the Boxers; their property had been abandoned as a result of a state of war, and was taken in order to succor hundreds of suffering and destitute Chinese, whose lives the original owners had been laboring to destroy. The winter was coming on and measures of some kind were imperative, and the appropriation of the property for the ends in view was unquestionably justified. That briefly was the situation. I am prepared to justify the conduct of the American missionaries before the siege and after the siege."

On the other hand, many secular journals, including the Boston *Transcript*, the Hartford *Courant*, the Springfield *Republican*, the Detroit *Journal*, and the New York *Sun*—all of them, except the third, "expansionist" papers—either take strong ground against Mr. Ament and the missionaries, or believe that their case is anything but a strong one. *The Sun*, in particular, has devoted a large amount of space to the topic. A lengthy analysis of Dr. Ament's defense occurs in its issue of March 30. It says in part:

"We fear that there is something yet to be cleared up concerning the methods and details of the systematic exaction of indemnity. Meanwhile, Dr. Ament's statement establishes the fact of that systematic collection of indemnity by a self-constituted court of equity or claims commission consisting of the missionaries themselves, responsible to no lawful authority and acting under no legal warrant. The interference was not even in behalf of American citizens. It was between Chinese and Chinese. There is nothing in our treaties with China conferring upon the missionaries the functions they admit having exercised in this respect.

"Secondly, as to the infliction on the villagers of an additional penalty, over and above the indemnity assessed, to go into the mission funds. This extra fine of thirty-three and one-third per cent. is distinctly admitted by Dr. Ament:

"'In general the process has been as follows: To *demand* the rebuilding of houses, or an equivalent in money; to *demand* payment for tools and grains carried off, or for animals stolen; in case the head of a family has been murdered, or one who was the provider, the sum of 500 taels is *demanded* for the support of the survivor.

"'In most cases, a sum equal to about one-third of the above mentioned indemnity was *demanded for the church*, which sum was used more or less entirely to provide for the present needs of distressed people. If money was left over, it was made a fund for the support of widows and orphans who have no other visible means of support.'

"No comment is needed here. However satisfactory to the Rev. Dr. Ament's conscience was the motive of his demands upon the villages, the collection of the indemnity and the collection of the additional exaction for the mission funds was conceived and carried out in the spirit of lynch law; and in many, if not most cases, the penalty imposed by the Rev. Dr. Ament must have fallen not upon the persons guilty of the original outrage, but upon those innocent of participation in it.

"As to the general attitude of the Rev. Dr. Ament toward the Chinese who have not accepted the Gospel he went forth to preach, his statement is illuminating. There is not one word from beginning to end that is in sympathy with the spirit of brotherhood and mercy and forgiveness which is so large a part

of the religion Christ taught to mankind. The reverend doctor is a missionary of the church militant. He is a practical man. He believes in making examples of the wicked. In questions of punishment for crimes committed against the native Christians, he seems at every point disposed to demand an eye for an eye and a tooth for a tooth."

*The Sun* further says that "the association of Christian missionaries for the collection of pecuniary indemnity . . . without warrant of civilized law and in defiance of the spirit and precepts of Christianity" is so radically opposed to the religious conception that "enthusiasm for Christian missions has been chilled by it as never before in their history." The Boston *Transcript* says that "if there is the slightest danger that the Chinese people in and about Peking will associate motives of revenge and extortion with the actions of those who stand as the representatives of Christianity, it would be better for the boards to undo at once what has been done and disavow to the Chinese people, at the earliest possible moment, all approval of the questionable acts."

The Detroit *Journal* says: "Surely the missionary was under peculiar and pressing obligations to set an example for native and foreigner which should be not only above criticism, but above suspicion. It is not necessary to occupy a too high moral standard to reach the conclusion that the example set was not above criticism—and a pity 'tis 'tis true."

*The Ave Maria* (Roman Catholic) commenting on *The Sun's* "vigorous and pretty thorough analysis" of Dr. Ament's statement, remarks:

"The result can scarcely be gratifying to the gentlemen [of the American Board] in Boston. The American missionary in question is convicted of having conducted himself rather in the retaliatory spirit of the Old Law than in accordance with the gentle teachings of the Gospel he was presumed to preach; and his statement—which the secretary styled 'frank, manly, comprehensive, and satisfactory'—proves to be in more than one respect the reverse of what is implied in these several epithets."

In another issue we hope to give further particulars of the controversy, which is continued by Dr. Judson Smith in *The North American Review* (May), and by *The Sun*, which criticizes his statements in a series of recent articles.

## THE APPROACHING PRESBYTERIAN ASSEMBLY AND CREED REVISION.

THE most important subject to be discussed at the General Assembly of the Presbyterian Church, which opens in Philadelphia on May 16, is the question of revision of the Westminster Confession of Faith. Whether or not this great historic document, which has been the official creedal statement of the Calvinistic churches since the seventeenth century, is to be so modified or reinterpreted as to soften its apparent teachings in regard to the fate of non-elect infants, the condemnation of the heathen, and other applications of the doctrine of predestination, is still uncertain and will be decided at the forthcoming session of the General Assembly. In its report, the committee on revision of the creed appointed by the General Assembly of last year is unanimous in thinking that some change is necessary. It finds, from the answers sent by the presbyteries to the committee, that the church desires some creedal change, and that it is "the mind of the church that the confession shall be interpreted throughout in harmony with the teaching of Scripture, that God is not willing that any one should perish; nor is it the decree of God, but the wickedness of their own hearts which shuts some men out from the salvation freely and lovingly offered in Christ Jesus to all sinners." The report proceeds as follows:

"In view of these facts we recommend that a committee, as provided by the form of government, chapter xxxiii., section 3, be appointed by this assembly.

"We recommend that this committee be instructed to prepare a brief summary of the reformed faith, bearing the same relation to the Confession which the Shorter Catechism bears to the Larger Catechism and formed on the general model of the consensus creed prepared for the Assembly of 1892, or the Article of Faith of the Presbyterian Church of England, both of which documents are appended to the committee's report and submitted to the Assembly, to be referred to the committee that may be appointed.

"This summary is not to be a substitute for the Confession and is not to affect the terms of subscription, but to vindicate and clear the doctrines of the church from all false aspersions and misconceptions; to give a better understanding of what is most surely believed among us, and is in no sense to impair, but rather to manifest and maintain the integrity of the reformed faith.

"We further recommend that this committee be instructed to prepare amendments of chapter iii., chapter x., section 3, and chapter xiv., section 7; chapter xxii., section 3, and chapter xxv., section 6, of our Confession of Faith either by modification of the text or by declaratory statement, so as more clearly to express the mind of the church, with additional statements concerning the love of God for all men, missions, and Holy Spirit, it being understood that the revision shall in no way impair the integrity of the system of doctrine set forth in our Confession and taught in the Holy Scripture."

## SOME CONSERVATIVE VIEWS OF "THE ENCYCLOPEDIA BIBLICA."

WE lately gave several opinions by clerics and laymen concerning "The Encyclopedia Biblica," now being issued under the editorship of the Rev. Dr. T. K. Cheyne, Canon of Rochester and professor of the Interpretation of Scripture in the University of Oxford (THE LITERARY DIGEST, March 23, page 352). Not all orthodox critics oppose this work, notwithstanding the fact that it represents in the main the most extreme school of modern higher criticism. The New York *Churchman*, for instance, altho differing from its views and methods in many particulars, speaks of its writers as "distinguished churchmen" who, it has no hesitation in believing, "are as sound in faith as they are bold in scholarship," and thinks that it is "a source of congratulation that an encyclopedia of such fearless and acute criticism should be issued under the editorship of a churchman [an Episcopalian]." It still finds "permanent and undissolved" in the "crucible fire of the critical furnace" some historical elements of Christianity for faith to discern.

A far different view is taken by other organs of the same church. In England several Anglican journals, including the cautious and middle-of-the-road *Guardian*, and the Free-Church *British Weekly*, strongly condemn what they deem the destructive radicalism of Dr. Cheyne, and go so far as to suggest his trial for heresy. A decade or so ago it was pointed out as a phenomenon of profound significance that in the leading cyclopedia of the Anglo-Saxon race—"The Encyclopedia Britannica"—the article on the "Gospels," altho written by a clergyman of the Church of England, and maintaining an attitude of apparent reverence to Christ, was so radical as practically to destroy (if its conclusions are adopted) any logical basis for belief in a special Christian revelation, and that according to the conclusions reached by this Christian minister after a lifetime of study, no one has any positive knowledge when, where, or by whom the Gospel narratives were written, only that they are a patchwork of various anonymous scribes, of credulous and uncritical minds. The same attitude toward these Christian documents as was taken in the "Britannica" is adopted in this latest work of Christian scholarship. That the work is in the highest degree destructive of all the historic Christian foundations is the view not only of *The Guardian* and *The British Weekly*, but of an American Episcopal journal, *The Church Standard* (Philadelphia, April 20). It says:

"We agree with the opinion of these two journals that Dr.

Cheyne's 'Encyclopedia' is, and is intended to be, a powerful agent in the propagation of unbelief. We find ourselves perfectly unable to understand how the editor of such a work can profess to believe in the Christian religion otherwise than with the sarcastic smile with which the later Roman augurs used to inspect the sacred chickens. At the same time, we suspect that a presentment and trial of Dr. Cheyne would do no good whatever. No man who is not morally and intellectually stone-blind can fail to see the inconsistency of Dr. Cheyne's public teachings with his position as a professor of the interpretation of Holy Scripture in the Church of England. That inconsistency is as offensive to the moral sense as it is unintelligible to the unsophisticated intellect; and any man who is openly involved in it is *ipso facto* condemned by the public opinion of honest and sincere men. We greatly doubt, nevertheless, whether Dr. Cheyne could be convicted of heresy on the mere ground of the editorship of this volume. He professes to give various views of the topics treated in its pages; and even if all the views which he presents on any subject, however vital, should be discovered to be fatally defective as statements of Christian truth, it would be very difficult for any court to convict him of heresy on account of what *he has not said*. On the other hand, if the handling of any subject is so destructive as frankly to deny some fundamental Christian verity, it would be equally difficult to convict the editor of responsibility for an opinion which *he only reports*, but for which he does not expressly make himself responsible."

## "ZOISM": ANOTHER NEW CREED FROM CHICAGO.

CHICAGO, which, tho the youngest of great cities, has already been the birthplace or chief home of a considerable number of new religions, among the more interesting being Dr. Dowie's "Christian Catholic Church" and "Koreshanity," has of late years given birth to another religion called "Zoism," or "the higher development of magnetic healing, by which the life energy of the universe is transferred by the healer to the patient." This higher magnetic healing, it is asserted, has nothing in common with mental suggestion, thought-transference, or hypnotism. Hypnotism and its kindred sciences, it is explained, are "of the brain, and theoretical"; while Zoism, on the contrary, is "of the spirit, and practical." From *Light* (March 23), the London exponent of Spiritualism, we take the following summary of the new faith and its methods:

"The force used by the Zoist is 'Zone' (from *Zoö*, Greek for 'life'). It is a universal, all-pervading, creative, intelligent 'principle,' blending with earth, air, water, fire, electricity, and thought. It is 'the intelligence which creates'; 'the all-pervading Spirit of God'; the 'spirit of life.' 'Zone is the thought of God. It is the love which has created, and must evermore create.' Evil is ephemeral, but Zone, 'which is God's essence,' is eternal. Zone enables thought to act at a distance by blending with it. The perversely evil soul will lose its Zone at death, and have no longer a conscious existence. Mind is the soul of man, Zone his spirit. Zone is a 'practical God,' a universal, intelligent force, of which man can make use. So-called miracles are manifestations of Zone. 'God is health.' 'In a minor degree, every man is a god,' because he creates. 'Zone is the formative force, or spiritual intelligence, which shapes the building of plastic material into determinate forms.'

"It is evident that Zoism is a blend of the theories of Mesmer (not of his practises) with those of the Christian Scientists and of the occultists. It postulates, like Mesmer, a universal intelligent force, 'fluid,' or principle; it pronounces as the essence of everything to be love or good, like the Christian Scientist; and like the occultist, it proclaims the inherent power of man to arouse in himself and in others the divine-natural creative (or curative) force. The Zoist does not use the 'passes,' but cures by a kind of 'laying on of hands,' by which means Zone is communicated to the patient. He depends for his curative or other power upon the supply of Zone he draws from the atmosphere (the ether) and from food. The process by which he gets his supply of Zone is deep, slow breathing, which enables him after a while to go for days without eating, and makes him disease-proof, besides endowing him with a supply of Zone to give to others; at least, so he claims.

"In practice, the Zoist is a strict vegetarian. Tea, coffee, and cocoa he ranks with alcohol, strychnin, and cocain. He has no appointed meal-times, but eats when he is hungry. 'If he is hungry all day long, he may eat all day long.' That sounds rather gluttonous, but he eats only uncooked food, and as 'raw oatmeal is the ideal food,' he is not very likely to 'eat all day long.' The Zoist believe in 'immortality in the flesh,' altho, at present, habit and heredity prevent its attainment. He thinks that so long as the process of repair is efficiently kept up, a man need not die. What happens when he is run over and cut to pieces by a train is not stated. Immortality after death the Zoist believes to be conditional—the reward of the virtuous."

## THE DISCIPLES OF CHRIST AND THE TRUSTWORTHINESS OF CHURCH STATISTICS.

IN our issue of April 20 (page 480), we quoted some remarks of the Chicago *Interior* (Presb.) reflecting upon the carelessness with which many denominational records of membership are kept, and in particular upon the alleged looseness of method adopted by the Disciples of Christ. In reply, the St. Louis *Christian-Evangelist* (April 25), a leading organ of the Disciples, characterizes *The Interior's* statements as "bitter and unjust," and worthy of "the narrowest backwoods journal." Quoting the excerpt in THE LITERARY DIGEST from *The Interior*, it says:

"There are several clear and distinct violations of the command, 'Thou shalt not bear false witness against thy neighbor,' in the foregoing screed, among which we mention the following:

"1. The implied statement that the Disciples 'keep no official records of membership.' Each congregation keeps its roll of members in charge of a church clerk and subject to revision from time to time by the official board.

"2. 'Their growth is largely made up by defections from other denominations.' This is absolutely false. Not ten per cent. of our increase, we venture to say, come from other bodies. This charge smacks of the politician's cry before the election: 'We've got the enemy now, *if they don't buy us!*'

"3. 'There are without any central, official body,' etc. They have no 'central, official body' to try heretics, as 'our friends of the body which calls itself' Presbyterians have, but they do have a general Christian Missionary Society, under whose supervision statistics are collected and to which annual reports are submitted.

"4. The statement from the 'venerated leader,' if ever made, was a broad jest and was never intended to be taken seriously. We challenge *The Interior* to test the truth of this by giving name of the party, that his testimony may be taken.

"It *is* strange how slowly *some* religious people, especially religious editors, 'come to the conviction that it is as much a duty to tell the truth' about their religious neighbors as about anything else.

"The claim of 74 per cent. gain in ten years is 'absurdity' to *The Interior*. But it has been more than twice that per cent. in St. Louis, where we happen to know the facts personally. We do not affirm the infallibility of our statistics. What we do claim is that an honest effort is made to get at the facts, and that they are probably as accurate as the average church statistics. The comment of *The Interior* reveals an animus that is not numbered among the Christian graces. As it favors revision, it should revise its statement at once."

THE old question as to whether this country is a "Christian nation" has not been allowed to disappear wholly from view, tho at present those who oppose placing any explicit declaration on the subject in the federal Constitution point scornfully to the recent doings of the so-called "Christian powers" in China, all of which, except the United States, profess a nominal allegiance to Christ in their political constitution. In reply to a letter of inquiry, Mr. Moncure D. Conway, the well-known writer on religion, quotes from the treaty with the Mediterranean Mussulman nations, sent to the Senate by President Washington, and ratified by that body. The opening paragraph is as follows (*Evening Post*, March 30):

"As the Government of the United States of America is not in any sense founded on the Christian religion—as it has in itself no character of enmity against the laws, religion, or tranquillity of Mussulmans—and as the said States have never entered into any war or act of hostility against any Mohammedan nation, it is declared by the parties that no pretext arising from religious opinions shall ever produce an interruption of the harmony existing between the two countries."

# FOREIGN TOPICS.

## FAR EASTERN COMMENT ON RUSSIA, JAPAN, AND KOREA.

THE press of the Far East continues to devote its attention almost exclusively to the occupation of Manchuria by Russia and the latter's alleged designs on Korea. The journals of Japan and China, published in English and generally under English auspices, discuss the matter with more freedom than is shown even by the press of Great Britain and the Continent.

Russia may promise all she pleases, says *The Japan Weekly Gazette* (Yokohama), but we have never thought she would loose her grip of Manchuria, despite her protests to the contrary. She is committed to a progressive policy there by much the same considerations that make England remain in Egypt, as she does under Conservative and Liberal ministers alike, tho the latter, by all rules of logic, ought to withdraw. *The Chronicle* (Kobe), also refers to English occupation of Egypt and says:

"It may be that the Russian Government is quite guileless in the matter, and really thinks that its occupation of Manchuria is merely temporary. History, however, shows us that the best of

CONCERT OF THE POWERS IN CHINA.
—*Simplicissimus.*

intentions often get placed in the background, and that a nation starting to do one thing is frequently led into doing something else, which, if not at complete variance with the original intention, is at least not a direct consequence of it."

*The Herald*, also of Kobe, is very bitter in its denunciation of Russia's course in Manchuria. The Muscovite empire, it says, has unquestionably stretched the meaning of the term diplomacy so that it covers, with a thin guise of decency, these dishonorable and lying proceedings. It continues:

"The result is not alone an offense to the morals of civilization and a wound to the interests of those injured by it, it is a lowering of those honorable standards by the maintenance of which the wheels of society run smoothly; by which mutual relations in international comity are sustained, so that the nations descend not to the level of brigands and thieves and live amid an anarchy of morals. . . . We make not the least doubt that the success of Russian knavery, all other considerations aside, must to a degree unsettle and disturb belief in and reliance upon the principles of honor and fair-dealing among the rulers and peoples of some contemporary powers."

The native journal, the *Asahi*, of Osaka, believes that Russia, "despite all her solemn agreements and promises, will continue her designs on Manchuria under pretension, and finally annex it to her domain after some years, for this is the true nature of Muscovite ambition." *The Japan Weekly Mail* (Yokohama) characterizes Russia's course as "a series of openly unscrupulous efforts to satisfy a colossal ambition," and adds:

"England has hitherto been the only effective obstacle to Russia's onward movement in Central and Eastern Asia. The hand

MAINTAINING HIS EQUILIBRIUM.

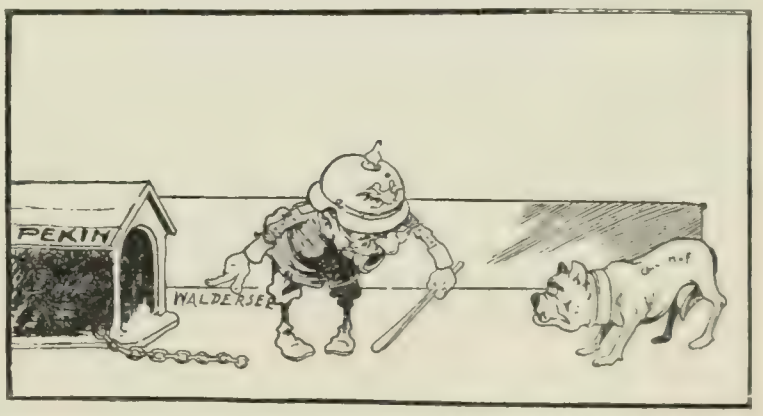
CHINESE EMPEROR: "Oh, do let me go? You're pulling me to pieces between you."

THE POWERS: "Don't be afraid. We're only maintaining your equilibrium." —*Westminster Gazette.*

that is now temporarily paralyzed is England's, and Russia's immediate haste to help herself to the good things thus left unprotected is almost comical. It is no longer a question of surmise or suspicion."

Arguing on the same lines, *The Celestial Empire* (Shanghai), declares, in an editorial entitled "Russia, Limited," that "Russian expansion has at last "run up against formidable barriers." *The Celestial Empire* continues:

"Hitherto growth on her part has been more of the overlapping envelopment of an amœba than of the calculated grasping of a vertebrate. Territories that adjoined hers have been absorbed rather than seized, and there was no chance of the cessation of the process until the Muscovite organism should find itself side by side with another at once vigorous, powerful, and resentful of absorption. On almost all sides this has now become the case. Russian progress in Europe has, at any rate for the time being, been absolutely checked. In Asia she is still face to face with Turkey, but not with Turkey alone. There is now a stiffening of the Mohammedan backbone by support from Berlin. The German has cast his eyes upon Asia Minor. In it he has seen a field for enterprise in various ways, for railways, for commerce, and



WALDERSEE INVITES THE CHINESE COURT TO RETURN TO PEKING
—*Nebelspalter, Zurich.*

even for colonization. How much this is resented by Russia we know full well."

It is generally recognized in the Far East that Japan's interest in the settlement of the Manchurian question entitles her, as an alternative to direct interference with the Russian absorption of Manchuria, to compensating territorial advantages. Japan, says *The Herald* (Kobe), must have Korea and a slice of territory around Amoy. But Japan must hasten, for the Russian

bear has already laid his paw on Korea. Russia has an interest in the Hermit Kingdom, at Masampo. A writer in this journal, who has lived in Korea for many years, sounds a note of warning, and recounts the Russian advance as follows:

"There is not a shadow of a doubt that Russia has designs on Korea, and in her own special way of hoodwinking the nation she is every day becoming stronger in Korea. Russia ten years ago was almost unknown in Korean politics. She was hardly known to have a ship or a soldier except by rumor. Of late she has been more and more in evidence. Her war-ships are thick upon the seas. Her ministers are engaged in a perpetual game of diplomatic skill at court, and she makes her power felt in the administration of the country. All this is no secret to some other powers, and Russia has not been alone in playing this game; she has, indeed, perhaps played the game with greater scruple than some others. Koreans who have crossed the northern border-line are well treated and are contented. Russia means to establish strongholds in several parts of the country, and no stronger place will she have than in Seoul [the capital] itself. Masampo is Russian, and for Russia only. It is a fine port and she means it to be her base of operations for the future."

The *Jiji Shimpo*, the native journal of Tokyo, declares that Russia obtained Masampo by purchase from the Korean Government with the condition that it should never be used for military purposes; but, continues the *Jiji*, she has violated this condition:

"Sentries are placed on the boundary of the Russian land and nobody is admitted within it; all the Russian vessels that come into the port are boarded by naval or military officers; and Russian war-ships which frequently visit the port have been carrying on a survey of Chinhai Bay. The extensive buildings which are now in course of construction at Masampo by Russia are alleged to be intended for hospitals, but the intentions of Russia are open to question, because those who are to be admitted to the hospitals must be military or naval men. In short, the Japanese do not regard the doings of Russia at Masampo in the light of ordinary events, and there is nothing to disabuse these suspicions."

The Kobe *Herald* points out that Russia's attempt to swallow Manchuria "enforces a somewhat significant fact in relation to modern types of government—the power of autocracies to realize ambitions of territorial aggrandizement with much greater facility than constitutional governments." It says further on this point:

"In a contest of territorial aggrandizement or even of necessary expansion it is the autocrat and not the constitutional ruler who wins. Territorially considered, France was greatest when her government was most autocratic; so was old Rome. Russia to-day is the crudest autocracy of the time. Under that autocracy she has advanced—again from the territorial point of view—more rapidly than perhaps any sovereignty in history, Great Britain not excepted. And in these present days we are seeing how wonderfully efficient her autocratic polity is for the purposes of expansion. The British Government dallies till it receives the prompting of the British electorate. America does nothing because its ponderous people care only for trade and the 'open door,' and even the German Emperor has a Reichstag to consult before he can have the ships and the men which are the instruments of territorial aggrandizement. And the while Lamsdorff of St. Petersburg makes an empire with his pen."

---

**Suspension of the Pro-British French Paper.**—"A loss for enlightenment, a loss for sincerity, a loss for all those who applaud the defense of truth," is the way *The Times* (London) refers to the suspension of the *Siècle* (Paris). This journal was one of the two which espoused the cause of Dreyfus and has been the only continental newspaper to support Great Britain in the South African war. A year or more ago the publisher organized a stock company and the stock was exploited mainly in the British press, the fact of the paper's friendship for things British being made much of. "We believe M. Guyot (the editor) judged wrongly," says *The Guardian* (Manchester, "Radical), but we are convinced that his judgment was an honest one, and that being so, we can not but praise the courage with which he persisted in saying what he believed to be true in the face of a French public opinion strongly convinced that he was wrong." No matter how he came to his decision, continues *The Guardian*, "unremittingly to express the conviction—mistaken, as we think it—in a French daily journal during the last two years was an act of independence and courage which we do not think that any one who cares for the success of democratic politics ought to undervalue." *The Daily News* (London, Liberal) refers to the suspension of the *Siècle* under the heading, "The Death of a Shoeblack," and says: "Englishmen are not in any need of shoeblacks, and the attempts of M. Yves Guyot to perform that function for the race in general, and Mr. Chamberlain in particular, has been throughout highly distressing and ignominious to all right-thinking men. We are thoroughly glad to see that it has come to an end."

---

## ITALY AND THE TRIPLE ALLIANCE.

ITALY has for the last month or so occupied a position very near the center of the European stage. Is she about to leave the Triple Alliance and to become a third member in the alliance between France and Russia? Several incidents that

THE UNCOMFORTABLE POSITION OF KINGLY AUTHORITY IN GERMANY.
—*Kladderadatsch.*

seem to indicate such an intention have been the subject of a great deal of comment in the European press. The visit of the Italian fleet, under command of the Duke of Genoa, to Toulon, to pay its respects to President Loubet, of France, while a Russian squadron "happened" to be in the same harbor; the visit of the German Crown Prince to Vienna; the "friendly meeting" between the German Chancellor von Bülow and the Italian Premier; and the journey of M. Delcassé, French Minister of Foreign Affairs, to St. Petersburg—all have lent color to the persistent rumor that Italy, having found her alliance with Germany and Austria less advantageous than she had expected, will make a continuation of it conditional upon certain commercial advantages which she hopes to embody in treaties with her partners.

The treaties which she seeks thus to change expire almost simultaneously with the Dreibund itself—in May, 1903. As a year's notice of withdrawal or disagreement is required, next year will see the readjustment of Italy's foreign policy, if there is to be a readjustment.

The French papers rejoice over the *rapprochement* of France and Italy, as the two nations have been quite estranged ever since 1883, when Italy joined the Triple Alliance. The *Temps* (Paris) declares that there is in this *rapprochement* no cause for jealousy on the part of the other powers. If a similar understanding could be brought about between France and England, says the *Temps*, it would be an excellent thing:

"Bismarck tried to isolate France. He pushed her on in Tunis in order to awaken the enmity of Italy. He pushed England into Egypt to destroy even the possibility of an *entente cordiale* with us [the French]. For nearly thirty years Europe moved around these two points fixed by the powerful German states-

KING EDWARD AND HIS NEW SERVING-MAIDEN.

"If your majesty will only hire me, I promise to serve you well, and not speak unless spoken to."

"Well, my dear, you please me. I will engage you as a maid."

—*Humoristische Blätter.*

man. Now the evolution of general politics has brought forward new necessities. The equilibrium of international forces can not forever rest on the same bases."

France, concludes the *Temps*, does not wish to "coax" Italy out of the Triple Alliance, nor herself to leave the Russian alliance:

"Present alliances are perfectly consistent with the wants of the new situation, provided the letter of these alliances is interpreted in a reasonable, conciliatory spirit. The friendship between France and Italy threatens no one. Europe will hail with satisfaction an act of wisdom and conciliation. Public opinion in the two countries will gladly ratify an exchange of courtesies which will henceforth frustrate the efforts of the mischief-makers."

The *Matin* (Paris) declares that the meeting of the French and Italian fleets has "changed nothing at all." Italy will remain faithful to the Triple Alliance, and will try to obtain commercial concessions from Germany and Austria by feigning to approach France. Says the *Matin* further:

"Italy is the little fish which profits by the rivalry of the big ones. She finds her safety in that rivalry. Observe that her unity has issued out of the struggles of France, first with Austria and next with Germany. The present balance of power in Europe constitutes the safety of Italy, who would feel herself in danger were this to be disturbed."

The *Journal des Débats* (Paris) says that the friendship of France is good for Italy as the friendship of Italy is good for France. Then, referring to the presence of a Spanish man-of-war at the Toulon festivities, and also to the charge that France has been scheming to restore the temporal power of the Pope in Italy, the *Débats* says:

"Let us cease talking of the Mediterranean as a French or an Italian lake, and accustom ourselves to considering it as a Latin lake, which it should really be. . . . Thus, the Mediterranean question not being calculated to pit France against Italy, we can discover nothing which might give umbrage to the Italians, for we will not insult them by imagining them capable of still believing in the machinations of the republic in favor of the temporal power. Convinced that they understand this situation, we turn to the future with much confidence, even should the government of Rome think proper to maintain the ties connecting Italy with the central powers."

The *Éclair* (Paris) says: "To-day there is only the question of friendship without an alliance; but when the time comes for the Emperor William to realize his plan for the dismemberment of Austria-Hungary and he wants to annex that part of the Tyrol to the South of Trieste, then will Italy be on our side."

The Italian papers are very guarded in their references to the renewal of the Triple Alliance. The *Perseveranza* (Rome) declares that Italy is amply able to take care of her own affairs and really does not care for advice from outside. What Italy will do after May, 1903 [when the alliance must be renewed or dissolved], says this paper, "neither the foreign journalists nor their inspired correspondents can tell us; let them rest assured that she will be guided by her own interests—naturally, her commercial and social interests as well as her political ones." The *Tribuna* (Rome), Premier Zanardelli's organ, says that the *rapprochement* between France and Italy has no ulterior significance. The two nations have been drawn together—that is all. The *Osservatore Romano*, the organ of the Vatican, declares that France and Italy are bound together by many ties, and it rejoices in doing honor to the President of the republic.

The German papers profess to see nothing in the Toulon festivities more than international courtesy, and deny that Count Bülow's conference with the Italian premier had any political significance. The press of Berlin generally express the utmost good will to Italy, but warn her that the "isolation she would have forced upon her by withdrawing from the Dreibund, even with the Franco-Russian alliance to fall back upon, would be very expensive and dangerous to her." The *Vossische Zeitung* (Berlin) declares that "such displays are necessary from time to time to satisfy French vanity." They are the most innocent safety-valve for the "most restless, most conceited, most ambitious, and most foolhardy nation—a nation which is, nevertheless, now satisfied with the rôle of a Russian sentinel."

The *Neue Freie Presse* (Vienna) says: "Friendly visits between powers which belong to different groups can be exchanged without affecting thereby the great international constellations. . . . The festivities at Toulon will arouse in Vienna and Berlin no feelings but those of satisfaction at the gradual disappearance of an antagonism of feeling, if not of interests. Italy abides in the Triple Alliance, and does not think of sacrificing her adherence to it to her improved relations with France." The *Pester-Lloyd* (Budapest), Count Goluchowski's Hungarian organ (published in German), hails the event as a "new success won by the Central European policy of peace." The leading Hungarian journal, the *Budapesti-Hirlap*, declares, however, that the alliance between Austria-Hungary, Germany, and Italy has "always been a hot-house plant of the most artificial growth." While Hungary is grateful to Italy and Germany for several acts of international courtesy, the alliance has been of no economic advantage to the Hungarians. Because of the ties which bind her to Germany and Italy, Hungary has lost her market in France and has been compelled to favor Italian products. The *Handelsblad* (Amsterdam) sees in the Franco-Italian *rapprochement* improved prospects of general European peace. The *Aftonbladet* (Stockholm) believes that an actual alliance is being arranged between the two nations. The *Novoye Vremya* (St. Petersburg) remarks that the time is past when Italian statesmen blindly obeyed all orders that came from Berlin, and insists that Italy can not be equally the friend of France and of Germany. The *Epoca* (Madrid) sees a possible alliance of all the Latin nations in the harmony and unanimity with wh-

French, Italian, and Spanish naval officers fraternized at Toulon.

The tone of the English comment is fairly well represented by the following from *The St. James's Gazette* (London):

"We may welcome with the whole world the signs of international friendliness which these proceedings afford. The prolonged misunderstanding between France and Italy has been as unfortunate as unnecessary, and it becomes not any nation which has the cause of peace at heart to look with jealous eyes on the renewal of an ancient friendship. If Italy is now willing to forgive past injuries and to remember only past benefits, it lies not in the mouth of any foreigner to cavil. The political arrangements which control the affairs of Europe are no more jeopardized by the cultivation of friendliness between the two great Latin powers than they are by the strenuous efforts always made by Germany to live on good terms with Russia."

The usefulness of Italy, concludes *The Gazette*, turns on the friendship of England.—*Translations made for* THE LITERARY DIGEST.

## VENEZUELA AND OUR FOREIGN CRITICS.

THE European press are watching developments in Venezuela very closely. The British journals can not forget Mr. Cleveland's famous message in 1895. Until the issue of Mr. Kruger's ultimatum, recent years, says *The Saturday Review* (London), have not seen "so wanton a provocation to war as the issue of Mr. Cleveland's insolent message regarding a private dispute between Venezuela and ourselves." This journal continues:

"We have little sympathy with the Venezuelan Government as such, but we have the deepest with any attempt to arrest the wholesale application of the Monroe doctrine that is practised by the United States. It menaces the legitimate development of European countries and, we have reason to know, excites the gravest apprehension for the future in the governing circles of Germany. In any case the irony of political nemesis has rarely been more delightfully apparent than in the present condition of affairs, and we await its development with no less amusement than interest."

We continentals, says the *Journal des Débats* (Paris), referring to Mr. Cleveland's recent speech in Princeton, in the course of which he defended his Venezuelan message, can not help rejoicing at any disillusioning of England as to the much-dreamed of Anglo-American alliance. Whatever effect Mr. Cleveland's message had on the United States or Great Britain or Anglo-American relations in general, says *The Daily Star* (Montreal), there is no doubt that it was a good thing for Canada:

"It crystallized Canadian national sentiment and forever stilled the voices of those pessimists who pretended that Canada had no future except as part of the United States. President Cleveland gave the Canadian people an opportunity to show their spirit, and then, even more than in connection with the South African war, Canada showed its determination to stand by the empire in time of trouble. The Venezuelan dispute was not Canada's quarrel. The settlement of the boundary question was not a matter that affected this country in any way; yet if Britain had refused to yield to the demands of the United States, and war had been declared, Canada would have had to bear the brunt of it. The United States navy was not strong enough to oppose the British navy, and it is doubtful if any American warship could have reached Venezuela. The only way in which the Americans could have had any hope of success in the war would have been by invading Canada.

"But not a voice was raised in Canada in favor of Britain yielding to the United States. At public meetings throughout the country from the Atlantic to the Pacific, when any reference was made to the matter, the audiences showed unmistakably that they were unanimously opposed to any back-down on the part of the British Government. The incident did not end in war, but it settled the destiny of Canada."—*Translation made for* THE LITERARY DIGEST.

## EUROPEAN COMMENT ON AGUINALDO'S MANIFESTO.

THE press of Europe continues to condemn the method by which Aguinaldo was captured. Very few leaders of important movements, remarks the *Frankfurter Zeitung*, have been captured so many times as Aguinaldo and De Wet. Indeed, even now we are almost inclined to be skeptical as to his taking. But he was taken "on the American plan"; and "that means hypocrisy." The Yankees, concludes this journal, despite the fallen leader's specious pronunciamento, have still the hearts and good will of the islanders to win. Germans, says the *Kreuz-Zeitung* (Berlin), have but little to choose between the war waged by the Americans on the Filipinos and the campaign of England against the Boers, altho they have a little more interest in the latter outrage. The Filipinos, this Berlin journal continues, have very little of the snap and vigor shown by the Boers. There are, no doubt, brave men among them; but one would never believe it from the pusillanimous tone of Aguinaldo's proclamation. The *Kreuz-Zeitung* believes that the islanders will very soon learn, if they have not learned already, just what American promises are good for, and will see their dream of liberty "to have been merely a bubble." The *Independance Belge* (Brussels) believes that the Filipinos will continue to hold out, even tho their leader is captured.

Never was a picturesque career "more effectively obliterated," says *The Daily Witness* (Montreal), than has been the "heroic resistance of Aguinaldo and his compatriots to a foreign invasion, by the proclamation issued by that leader." The *Witness* is inclined to believe that Aguinaldo never wrote the manifesto, but that it was "concocted as a trap for the rest of the Filipinos," the captured leader being forced to sign it. Aguinaldo, says this Canadian journal, admits that he has been deserted by most of his people, and that he himself looks upon the whole matter as a bad job. It concludes as follows:

"But this sudden access of worship of the banner which but now was the emblem of foreign invasion and tyranny, to escape which he had sacrificed the peace of his country for years and the lives of countless brave men, which had been confided without reserve to his own wisdom and loyalty to independence, will leave the impression that he is either an unmitigated sneak, willing at any cost to buy his life from his captors, or that his reverses have unhinged his judgment. It may be, and no doubt is, the highest and best future possible to the Philippine Islands to come under 'the glorious sovereign banner of the United States.' Those who have already 'united around it' were possibly after all the truest patriots. But for Aguinaldo, writing from an American guard-room, to declare this with no word of defense of his own mistaken course, is either a monstrous capitulation or a monstrous aberration."—*Translations made for* THE LITERARY DIGEST.

**China's Temporary Capital.**—The city of Si-Ngan-Fu, in the valley of the Wei-ho, where the imperial Chinese court is temporarily installed, is a great grain and commercial center of the empire, and is thus described by a writer in the *Magasin Pittoresque* (Paris, April):

"Besides being in communication with the principal commercial and industrial centers of the empire, Si-Ngan-Fu occupies a most favorable position at the foot of the Tsing-lin mountains. This situation renders it inaccessible to foreign armies, and on this account it has been chosen more than once as an imperial residence. Few Europeans have visited it, and the information we have concerning it is somewhat vague. Its population is variously estimated at from five hundred thousand to a million. Unlike most Chinese cities, Si-Ngan-Fu is very closely built and contains neither squares nor public gardens. The Catholic mission counts about twenty thousand converts in this region. M. Michielis, who visited the city in 1879, reported that great deference was paid him by the crowds which followed him in his walks through the streets of the capital. The educated classes seem to predominate in this city, which contains the richest museum for the history of China in the country, the celebrated Pei-lin, or Forest of Inscriptions."—*Translation made for* THE LITERARY DIGEST.

## CURRENT POETRY.

### Force and Freedom.

By WILLIAM WATSON.

Armed to o'erthrow, impatient to enchain,
Making the year all winter, how shall ye
Persuade the destined bondsman he is free,
Or with a signal build the summer again?
Oh, ye can hold the rivulets of the plain
A little while from nuptials with the sea,
But the fierce mountain-stream of Liberty
Not edicts and not hosts may long restrain.
For this is of the heights and of the deeps,
Born of the heights and in the deeps conceived:
This, 'mid the lofty places of the mind
Gushing pellucid, vehemently upheaved,
Heart's tears and heart's blood hallow, as it sweeps
Invincibly on, co-during with mankind.

—In London *Daily News.*

### The Swallow.

By JOHN BURROUGHS.

At play in April skies that spread
Their azure depths above my head
As onward to the woods I sped,
I heard the swallow twitter;
O skater in the fields of air
On steely wings that sweep and dare,
To gain these scenes thy only care,
Nor fear the winds are bitter.

Ah, well I know thy deep-dyed vest,
Thy burnished wing, thy feathered nest.
Thy lyric flight at love's behest,
And all thy ways so airy;
Thou art a nursling of the air,
No earthly food makes up thy fare
But soaring things both frail and rare,—
Fit diet of a fairy.

—In May *Harper's Magazine.*

### The Dandelion.

By EDWIN L. SABIN.

Brave little blossom, in the meadow-land
How like a soldier stanch you take your stand;
Bearing your oriflamme through storm and sun
From early spring until the summer's done.
Neighbors may change—the violet give way
To buds which, likewise, soon must have their day,
And when these, too, adorn the earth no more,
Behold, you greet us at our very door.

Freely the gold within your heart is spent,
Freely your sunshine to the mead is lent,
Freely your face smiles upward to the sky,
While, quite unheeding, hundreds pass you by.
And yet I venture, if amid our world
Each year an instant, only, you unfurled,
We all would cry, on seeing you displayed:
"Oh, what a beauteous dainty God hath made!"

—In May *Chautauquan.*

### Brotherhood.

By E. S. MARTIN.

That plenty but reproaches me
Which leaves my brother bare,
Not wholly glad my heart can be
While his is bowed with care.
If I go free, and sound and stout
While his poor fetters clank,
Unsated still, I still cry out,
And plead with Whom I thank.

Almighty: Thou who Father be
Of him, of me, of all,
Draw us together, him and me,
That whichsoever fall,
The other's hand may fail him not—
The other's strength decline
No task of succor that his lot
May claim from son of Thine.

I would be fed. I would be clad.
I would be housed and dry.
But if so be my heart be sad—
What benefit have I?

# Good Stories of American Politics.

The first of a series of stories intended to show that public-spirited and courageous young men may interest themselves to good purpose in political affairs will be published in

# THE YOUTH'S COMPANION

## For May Sixteenth.

This will be a Pan-American Exposition Number, the cover decoration being a fine representation of the Electric Tower at the Exposition. Following are the principal features of this issue:

**A CLOG IN THE MACHINE,** By H. S. Canfield.
The "ring" offered to "make" a young lawyer, but he thought of a better plan. A strong and significant story.

**THE BUFFALO EXPOSITION,** By E. W. Frentz.

**MRS. WILLIAMS'S WILD RIDE,** By Clarice Irene Clinghan.

**GLADYS,** By Frances Bent Dillingham.

**UNEXPECTED SPORT, Part I.,** By C. A. Stephens.

All in addition to the Weekly Health Article, Notes on Current Events and Nature and Science. This and the issues of May 23d and 30th will be sent to any address for 10 cents.

**THE YOUTH'S COMPANION, BOSTON, MASS.**

Mention THE LITERARY DIGEST.

# Tolstoi
By ALICE B. STOCKHAM, M. D.

A fascinating sketch of Tolstoi, his family and home life, with vivid pictures of personal experiences in Russia. Vital points of his great works on religion and art are presented with new interest.

Bookseller, Newsdealer & Sta.: "Dr. Stockham's work is a fascinating account of her visit to the famous Russian."

Cape May Wave: "Dr. Stockham's brilliant work is entitled to an honored place in the literary world."

Health: "Dr. Stockham has written some useful and brilliant books, but TOLSTOI is a new departure and she is to be complimented on a most artistic pen picture of an illustrious man."

Elbert Hubbard: "TOLSTOI is fine; so unpretentious, and yet so full of feeling that it comes very close to being Art."

Rochester Herald: "Whether you belong to the TOLSTOI cult or not you cannot put down the work with a line unread."

Illustrated. Bound in Art Vellum. Prepaid $1.00.

STOCKHAM PUB. CO., 56 Fifth Ave., Chicago, Ill.

# How Do You Spend Your Life?

Sleeping
21 years 9½ months.

Labor
16 years 8 months.

*We have cushioned 25 000 churches. Send for our book, "Church Cushions."*

Best he whose shoulders best endure
The load that brings relief,
And best shall he his joy secure
Who shares that joy with grief.

—In May *Scribner's*.

### The Loss of the First-Born.

By MABEL THORNTON WHITMORE.

I sat and watched the barber's shears
Go snipping through my baby's curls.
And while I looked, swift sped the years.
As when a passing zephyr whirls
The pink-veined apple-blooms away,
Leaving exposed the budding fruit,
So tiny, yet a promise mute
Of harvest ripe some autumn day—
So, as the clustering ringlets fall,
My baby blossom droops and dies—
A sleek-haired laddie, grave and tall,
Kisses the tears from mother's eyes.

—In the *New Lippincott* (May).

## MORE OR LESS PUNGENT.

**In Paris.**—"How do you know she is an Americaff?" "I heard her talking French." *Life*

**The Announcement.**—A cross old bachelor suggests that births should be announced under the head of "new music."—*Tit-Bits.*

**In London.**—GUARD: "Are you first-class?"
TURNIPPE: "Aye, lad! gradely — thankee—gradely—how's yersel'?"—*Tit-Bits.*

**Chainless.**—"Why didn't yer swipe dat feller's chainless bicycle yer went after last night?" "Well, I found out dere was a chainless dorg in de yard." *Milwaukee Journal.*

**On Board Ship.**—"Can I bring you up some luncheon, sir?" "What! Lunch already? Why, it doesn't seem more than fifteen minutes since breakfast came up!"—*Life.*

**A Fall.**—FRED: "I had a fall last night which rendered me unconscious for several hours."
ED: "You don't mean it? Where did you fall?"
FRED: "I fell asleep."—*Tit-Bits.*

**Mourning.**—SHOP-WALKER: "Mourning? Certainly, sir. What relation to the deceased?"
CUSTOMER: "Son-in-law."
SHOP-WALKER: "Ah! Mitigated grief department. This way, please!" *Moonshine.*

**Easily Fixed.**—"A man named John Jones," said the country editor's assistant, "writes to us to stop his paper, but he doesn't give his address." "Well," replied the editor, "drop him a postal and tell him we can't stop his paper unless he gives us his address." *Philadelphia Press.*

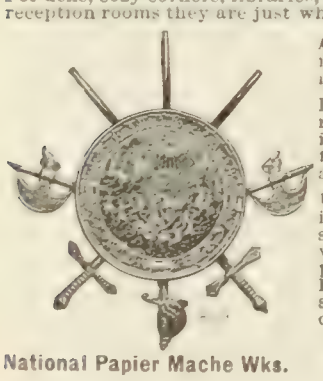
**His Answer.**—IRISH TRAMP: "Good-mornin', sor. If ye plaze, how far is it to Phaynixville?"
COUNTRYMAN: "It's a good way. Who do you want to see there?"
IRISH TRAMP: "Sure, an' mesilf I want to see there. Good-mornin', sor."—*New Lippincott.*

**The Speakers.**—At a hotel in a busy quarter of Paris the following notice appears: "Ici on parle Anglais, Espagnol, Italien, Allemand," etc. An Englishman recently entered the house and asked, in British French, for the interpreter. The waiter replied that there was not one. "Who then," the Britisher asked, "speaks all these languages?" The waiter, with an innocent smile, replied, "The customers!"—*Tit-Bits.*

**The Same Here.**—The Lebanon Valley Railroad gives employment to a great many Pennsyl-

## Decorate your Home

These Papier Mache art reproductions are not made by any other firm in the United States, yet they are remarkably low in price, light in weight and more durable than similar pieces made of plaster or iron. A pin or tack will hold them in place. Papier Mache takes a more natural finish, and unlike plaster or iron does not peel, chip or break. For dens, cozy corners, libraries, halls, lodge rooms and reception rooms they are just what you want.



Armor, 819 26x36in., finish antique or bright iron. Wt. 4 lbs. Ex. pd. $7

For other designs of Armor, Indian Heads, Nubian Masks, etc., priced from 50c to $20 see our ads. in other magazines.

If your dealer has none in stock send us his name, state your wants and we will see that you are supplied. Write for "Artistic Decorations," a booklet sent free—shows many other pieces.

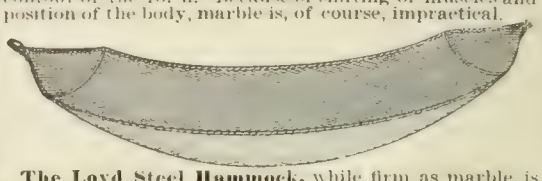
**THE NATIONAL CLOAK CO., 119 & 121 West 23d St., New York.**

THE
## LOYD PERPETUAL STEEL HAMMOCK

**Rope hammocks come and go, but the Loyd comes and stays.**

The most comfortable and healthful couch conceivable would be one of marble, if the marble was carved so that it would exactly fit the contour of the form. Because of shifting of muscles and position of the body, marble is, of course, impractical.



**The Loyd Steel Hammock,** while firm as marble, is soft as a woman's hand. It is instantly quick and live in response to pressure and honestly supports every portion of the anatomy instead of distorting the natural position of the body as rope hammocks do. **The Loyd** is the only cool hammock. It is galvanized and will not rust. Rope hammocks fade and get mouldy they are unclean, unattractive, and notoriously uncomfortable and unsafe. **The Loyd** remains bright, clean, sanitary and safe for a lifetime, a veritable "Silver Web of Luxury." Length, 10 ft.; price, $3.75, express prepaid. Many people secure two. Address, **LLOYD MANUFACTURING CO., 1612 Central Ave., Minneapolis, Minn.**

If afflicted with sore eyes, use **Thompson's Eye Water**

## SENT FREE AND PREPAID

vania Dutch as train hands. A passenger conductor instructed a new and inexperienced brakeman that when a stop was made at a station he must call out from his end of the train, for the information of travelers, the same name that he—the conductor—did at the other. In due time a stopping-place was reached. The conductor shouted—"Reading!" "Same at dis end!" yelled the brakeman.—*New Lippincott.*

---

**Two Series of Remarkable Numbers.**—Prof. Asaph Hall has recently drawn attention to the following series of numbers:

$1 \times 9 + 2 = 11$
$12 \times 9 + 3 = 111$
$123 \times 9 + 4 = 1111$
$1234 \times 9 + 5 = 11111$
$12345 \times 9 + 6 = 111111$
$123456 \times 9 + 7 = 1111111$
$1234567 \times 9 + 8 = 11111111$
$12345678 \times 9 + 9 = 111111111$

---

$1 \times 8 + 1 = 9$
$12 \times 8 + 2 = 98$
$123 \times 8 + 3 = 987$
$1234 \times 8 + 4 = 9876$
$12345 \times 8 + 5 = 98765$
$123456 \times 8 + 6 = 987654$
$1234567 \times 8 + 7 = 9876543$
$12345678 \times 8 + 8 = 98765432$
$123456789 \times 8 + 9 = 987654321$

—*The Equitable Record.*

---

**The Animals' Fair.**—

'Twas long ago, they say, in the Land of Far-Away,
The beasties clubbed together and they held a big bazar;
Not an animal was slighted, every single one invited,
And they all appeared delighted as they came from near and far.

The Bear brushed his hair and dressed himself with care,
With the Lynx and two Minks he started to the fair;
The Tapir cut a caper as he read his morning paper,
And learned about the great bazar and all the wonders there.

The chattering Chinchilla trotted in with the Gorilla,
Much elated, so they stated, by the prospect of the fun;
While the Yak, dressed in black, came riding in a hack,
And the Buffalo would scuffle, oh,—because he couldn't run.

The Donkey told the Monkey that he had forgot his trunk key,
So an Ox took the box, and put it in the way
Of a passing Hippopotamus, who angrily said, "What a muss!"
As he trod upon the baggage and observed the disarray.

A graceful little Antelope bought a delicious cantaloup,
And at table with a Sable sat primly down to eat;
While a frisky young Hyena coyly gave a philopena
To an Ibex who made shy becks at her from across the street.

A Bison was a-pricin' a tea-chest of young hyson,
So cheap, said the Sheep, that it nearly made her weep;
The lazy Armadillo brought a satin sofa-pillow,
Then found a cozy, dozy place and laid him down to sleep.

An inhuman old Ichneumon sang a serenade by Schumann,
The Giraffe gave a laugh and began to cheer and chaff;
A laughing Jaguar said, "My, what a wag you are!"
And the Camel got his camera and took a photograph.

Like one's purse, a

**Folding Pocket KODAK**

may be carried in the hand without inconvenience, and being covered with fine seal grain leather it is dainty and inconspicuous.

Being made of Aluminum they are strong and light. Having superb lenses and accurate shutters they are capable of the best photographic work.

**$10.00 to $17.50.**

The Baboon and the Loon and the rollicking Raccoon
Fed an Otter with a blotter, tho it wasn't good to eat;
The Bunny thought 'twas funny all his money went for honey,
But a Rabbit has a habit of liking what is sweet.

The Ape left her cape out on the fire-escape,
The Jerboa lost her boa, which caused her much distress;
But the fair was well attended and the money well expended,
And financially and socially it was a great success.

—CAROLYN WELLS, in *The Youth's Companion.*

## Current Events.

### Foreign.

CHINA.

April 30.—The German troops retire from the Great Wall, and hostilities cease for the time being; the generals at Peking agree to the ministers' proposals regarding garrisons in China.

May 1.—The ministers at Peking fix the sum total of the indemnity to be paid to the powers by China at $263,000,000; the foreign generals announce their belief that 12,500 men, with the international fleets at Taku and Shanghai will be sufficient to compel China to pay the indemnity.

May 4.—German soldiers at Tien-Tsin fire on a British tug, wounding two of the crew; the members of the Pei-Ho River improvement commission are appointed.

May 5.—The American cavalry and artillery leave Peking and begin their march to Tong-Ku, at the mouth of the Pei-Ho River; the Russian troops in Manchuria are reported to have fought twenty engagements and to have annihilated two bands of Chinese.

SOUTH AFRICA.

May 4.—General Kitchener reports the killing and capturing of more Boers, and the capture of large supplies of ammunition and stock.

May 5.—A British patrol, under Colonel Dennison, is captured by Boers in South Africa.

OTHER FOREIGN NEWS.

April 29.—General Kitchener reports successful British operations against the Boers in South Africa; one of the Bermuda Islands is being prepared for the reception of seventeen hundred Boer prisoners.

It is announced in London that J. P. Morgan & Co. have purchased the Leyland Line of British steamers.

A bread riot breaks out at Lemberg, Galicia, and the troops are called out.

May 1.—May Day passes off quietly throughout the countries of Europe; great Socialist demonstrations are held in the principal cities

Venezuela has given the State Department a satisfactory explanation of the recent treatment of United States Consular Agent Baiz; the asphalt controversy is also assuming a more satisfactory phase.

May 2.—A spirited debate takes place in the House of Commons on the proposed coal tax, Sir William Vernon-Harcourt assailing, and Sir Michael Hicks-Beach defending, the plans outlined in the budget.

The Royal Academy opens in London, the feature of the exhibition being J. S. Sargent's portraits.

May 3.—Dr. von Miquel, the Prussian Minister of Finance, is requested to resign; other changes in the Cabinet are probable.

May 4.—The "Mad Mullah," with a large force, threatens to raid Berbera, in East Africa.

Italy rejects an appeal from Turkey to assist in preventing the settlement of foreign Jews in the last-named country.

Wholesale arrests are made in Russia, as the authorities fear a popular uprising.

May 5.—The British consul at Panama describes

For Sleeplessness
Take Horsford's Acid Phosphate.
Dr. PATRICK BOOTH, Oxford, N. C., says: "It acts admirably in insomnia, especially of old people and convalescents."

## Domestic.

DOMESTIC NEWS.

April 29.—President McKinley starts from Washington on his trip to the Pacific coast.

The United States Supreme Court decides that "calls" are an agreement of sale, and therefore taxable under the war revenue law.

Losses amounting to $250,000 are caused by fire in Pittsburg; five miners are killed by an explosion in Indian Territory.

April 30.—The President and his party arrive at Memphis, Tenn., and are welcomed by state and city officials; he makes brief speeches at various stopping-places in Alabama and Mississippi.

Vice-President Roosevelt, Senator Hoar, and others speak at the annual dinner of the Home Market Club in Boston.

May 1.—President McKinley arrives in New Orleans, and is accorded a most enthusiastic reception.

Minister Conger returns to Iowa, and is greeted at Council Bluffs with speeches of welcome.

The Pan-American Exposition is opened, with brief exercises, at Buffalo.

May 2.—The President and his party spend the day sight-seeing in New Orleans, and start for Houston, Tex.

Morris K. Jesup is elected to the presidency of the New York Chamber of Commerce at its one hundred and thirty-third annual meeting.

A monument to Henry B. Hyde, the founder of the Equitable Life Assurance Society, is unveiled in New York, Senator Depew making an eulogistic address.

May 3.—The President reaches Houston and Austin, Tex., making brief speeches at both places.

Fire causes great destruction in Jacksonville, Fla., six business blocks, three hotels, and a theater being swept away, the damage is estimated at $15,000,000.

May 4.—It is found that one hundred and forty-eight blocks were laid waste by the flames in Jacksonville, Fla.; great distress prevails and a call is made for tents.

President McKinley is received with enthusiasm at San Antonio, Texas, and continues his journey across the State to El Paso.

Excitement runs high on the New York Stock Exchange; an unprecedented amount of business has been transacted during recent days.

The Secretary of War decides to reduce the army in the Philippines to 40,000 men.

AMERICAN DEPENDENCIES.

April 30.—*Philippines:* General Tinio, the Filipino leader in Luzon, surrenders; several other prominent Filipinos yield to American troops.

May 2.—The trials in connection with the commissary scandal in Manila are in progress, the case of Capt. J. C. Reed being first prosecuted.

May 3.—Civil government is established in Manila; municipal rule will probably be carried on by appointed officials.

May 5.—*Cuba:* The Cuban Commission returns home to Havana, and their report is awaited with much interest.

**FIFTH AVENUE SCHOOL OF PHYSICAL CULTURE,**
**Dept. M, 114 Fifth Avenue, New York.**

kin Syracuse, N. Y.; W. M. J., New Plymouth, O., L. A. Gouldie, Brooklyn; F. L. Hitchcock, Scranton, Pa.; W. Hyde, Brooklyn; J. H. Louden, Bloomington, Ind.; Dr. A. H. Brown, Hamilton, O.

Comments: "Fine example of this rather unsatisfactory theme"—H. W. B.; "A little gem"—M. M.; "Skilfully constructed"—A K.; "As nearly perfect as a 2-er can be. I don't know wherein it would fail to take the maximum in marks"—W. R. C.; "The beauty of this problem is in the clever manner it avoids dual solutions and dual mates"—A. H. G.; "The best 2-er I have seen"—O. C. B.; "Elegant"—T. and McM.; "Worth par in any market"—C. E. L.; "Great economy"—H. M. C.; "A marvel of constructive skill"—J. H. S.; "Very fine"—G. P.

All sorts of keys have been received. The problem has been called a "fake"; it was "solved at sight"; "very easy"; and one of our esteemed solvers went so far as to say: "I utterly fail to see the greatness of this problem. The difficulty may consist in endeavoring to find a more intricate solution." We think it would be more satisfactory to those who didn't get it, for them to find Black's replies to the various suggested moves, than if we gave them. We assure you, however, that the only move forcing mate in two is R—Kt 6.

We are convinced that 552 is unsound. Having tried to find the corrected position, and failed, we must ask you to pass it.

THE ECCENTRIC PROBLEM.

In publishing this problem we questioned its legitimacy; for the trick is to prevent Black from Castling. Hence, R x B will not do. The key-move is B—Q Kt 8.

Solved by M.W. H., I. W. B., C. R. O., H. W. B., M. M., A K., Dr J. H.S., Dr. A. H. B.; C. N. Hartt, Brooklyn, N. Y.

Mr. Barry writes: "Highly ingenious illustration of the Castling trick, and novel, since it is in the form of a defense."

In addition to those reported, Dr. A. H. B. got 549 and 549; D. Schandi, Corning, Ark., 547 and 548; D. G. Harris, Memphis, Tenn., and M. Chamberlin, Cody, Wyo., 549 and 550.

### Lasker Visits the United States.

The Champion of the World, the great Lasker, arrived in New York City on April 24, to the great delight of thousands of persons interested in Chess.

Lasker was born at Berlinchen, province of Brandenburg, Prussia, on December 24, 1868 When a boy of twelve he learned the game of Chess from his brother Dr. Berthold Lasker, who is now considered a very strong amateur player and analyst. Eventually, when a student at Berlin, he accepted an invitation from the Crystal Palace management in London to give public exhibitions at that place for some time. After that he became a professional player in London. In 1897, however, he left Chess for a time and resumed his mathematical studies at Heidelberg, where he finally received the degree of doctor of mathematics. His record is as follows:

He won the Haupt tourney at Breslau in 1889. receiving the title of a German Master. He won the quintangular masters' tourney at London in 1892, a national masters' tourney at London in the same year, and the year following he won the so-called impromptu international tourney in this city, establishing at the same time a world's record by winning all his games, thirteen in number. At Hastings, in 1895, he was third prize winner, and in 1896 he won the famous quadrangular tourney at St. Petersburg. He also won the first prize of the international tournaments of Nuremberg, London, and Paris. The Champion, in his many matches for the championship of the world, has beaten Bardeleben, Bird, Miniati,

# VANILLA CRYSTAL COMPANY

INCORPORATED UNDER THE LAWS OF NEW YORK.

## CAPITAL, $500,000

DIVIDED INTO 50,000 SHARES OF $10 EACH.

BOARD OF DIRECTORS:

CHARLES H. RAYMOND, President Manhattan Oil Co., 51 Front Street, New York.
CORNELIUS MORRISON, Creighton, Morrison & Meehan, 87 Wall Street, New York.
CHARLES WAKE, Manager Equitable Life Assurance Society, 120 Broadway, New York.
EDWARD L. LEWIS, Woodrow & Lewis, 94 Pearl Street, New York.
JOSEPH C. BUTLER, President of Joseph C. Butler Co., 101 Beekman Street, New York.
MARIO LIEBMAN, Mario Liebman & Co., 21 Whitehall Street, New York.

THE VANILLA CRYSTAL CO. having acquired the exclusive processes for making BUTLER'S VANILLA CRYSTALS, together with all the trade marks, copyrights and the goodwill, and, in addition, a plant for manufacture, having a capacity of 3,000 cases per week offers to the public a limited amount of its

## FULL-PAID NON-ASSESSABLE STOCK at $6 a Share. Par Value $10.00.

All stock shares equally in the profits, there being no preferred shares, and no bonds. All moneys derived from the sale of stock, except such reasonable amount as may be deducted for commissions on receiving subscriptions, will be devoted to the manufacture, advertising, and sale of VANILLA CRYSTALS.

NOT ONE DOLLAR WILL GO TO THE PROMOTERS OF THE COMPANY.

The demand for a vanilla flavoring is universal. The daily consumption in the 15,000,000 households, restaurants and hotels in this country is of such enormous quantity that the supply never equals the demand.

VANILLA CRYSTALS have received the endorsement of the U. S. Food Commission at Paris Exposition, and are approved by leading chemists.

There is no doubt that the chance to subscribe for this stock at 60c. on the dollar offers an unparalleled opportunity to secure a permanent and secure investment, which will realize enormous profits.

There is not a flavoring extract manufacturing concern in the world but that is highly prosperous, and making large amounts of money.

THE VANILLA CRYSTAL CO. is no experiment, organized to exploit an unknown product, but starts with a business already assured, the capital to be secured through this stock subscription to be utilized in extending the business.

**Subscriptions payable twenty per cent. at time of subscription: forty per cent. in thirty days, and the remaining forty per cent. sixty days from date of subscription. The right is reserved to reject any application or to award a smaller amount than applied for.**

Subscriptions to this stock may be made with **SIMMONS & SLADE, Bankers, 66 Broadway, New York,** who will forward subscription blanks upon application and issue temporary receipts, which will be exchangeable for stock certificate upon receipt of balance of subscription.

**GENERAL OFFICES: 101 BEEKMAN STREET, NEW YORK.**

**FACTORY AND LABORATORY, 281 PEARL STREET, NEW YORK.**

Everything first-class. Write at once for particulars. E. S. MARVIN, Supt. R, 253 Broadway, New York, N. Y.

# BRAIN FOOD

## Is of Little Benefit Unless it is Digested.

Nearly everyone will admit that as a nation we eat too much meat and too little of vegetables and the grains.

For business men, office men and clerks, and in fact everyone engaged in sedentary or indoor occupations, grains, milk and vegetables are much more healthful.

Only men engaged in a severe outdoor manual labor can live on a heavy meat diet and continue in health.

As a general rule, meat once a day is sufficient for all classes of men, women and children, and grains, fruit and vegetables should constitute the bulk of food eaten.

But many of the most nutritious foods are difficult of digestion and it is of no use to advise brain workers to eat largely of grains and vegetables where the digestion is too weak to assimilate them properly.

It is always best to get the best results from our food, that some simple and harmless digestive should be taken after meals to assist the relaxed digestive organs, and several years' experience have proven Stuart's Dyspepsia Tablets to be a very safe, pleasant and effective digestive and a remedy which may be taken daily with the best results.

Stuart's Dyspepsia Tablets can hardly be called a patent medicine, as they do not act on the bowels nor any particular organ but only on the food eaten. They supply what weak stomachs lack, pepsin diastase and by stimulating the gastric glands increase the natural secretion of hydrochloric acid.

People who make a daily practice of taking one or two of Stuart's Dyspepsia Tablets after each meal are sure to have perfect digestion which means perfect health.

There is no danger of forming an injurious habit as the tablets contain absolutely nothing but natural digestives; cocaine, morphine and similar drugs have no place in a stomach medicine and Stuart's Dyspepsia Tablets are certainly the best known and most popular of all stomach remedies.

Ask your druggist for a fifty cent package of Stuart's Dyspepsia Tablets and after a week's use note the improvement in health, appetite and nervous energy.

# Bright's Disease and Diabetes

Most people who have been informed that they suffer from either of these diseases, which although frequently confused are absolutely distinct, give up all hope.

This is a great mistake and an investigation of our treatment will convince. The great danger lies in delay.

**NOTE** If you or any of your friends suffer, or think they suffer, from either of these diseases, send us your name and address, and we will forward instructions and make the necessary analysis absolutely free of charge.

We will gladly send you our book on request. It contains valuable information on these diseases; also, the names of hundreds of prominent persons who have been cured by our treatment

**TOMPKINS-CORBIN CO., 1300 B'dway, N. Y.**

# A Syringe

Such as physicians use is now offered direct. It consists of two nickel cylinders, with air pumps between to create compressed air in one cylinder and vacuum suction in other. Open valve and compressed air forces liquid from one cylinder in six streams through top of nozzle. Send to-day for our booklet. Sent free on request.

*Notes by Reichelm in The Times, Philadelphia.*

(White 5): Newman offers the gambit adopted by Lasker against Pillsbury, but Jacobs also knows the trap.

(Black 5): P x P would give White too strong a development.

(Black 23): The play is now leaving its perfunctory moorings, and Jacobs is starting some plans, but against an adversary wittier than himself.

(Black 33): Black very hopeful here. He threatens B x Q Kt P.

(Black 41): This is the move that Newman was waiting for. The Englishman sees just deep enough to get himself into a muddle.

(Black 43): Evidently with the idea that he was getting a blue dog for a brass monkey. A Pawn, however, goes up the flume.

(Black 49): Of course, Jacobs didn't intend it that way; but this move was well liked by Newman, as it brings his win home at once.

(Black 50): If R x Kt ch; K—K 3, and the jig's up.

(Black 51): If K x Kt, then R—Q 6 ch, etc.

(White 52): This wins, as now, on R x Kt ch, R—Q 3 forces the exchange of Rooks.

*From The Standard, London.*

Mr. Jacobs, who is quite familiar with this opening, having played it frequently, was expected to to obtain a more favorable result. He would have had a good game had he not omitted 9.., P—Q 4 at once. He played the Q P one move later, but White had developed his K B in the mean time, which made a considerable difference. He might, however, have drawn the game had he not overlooked the loss of a Pawn in playing 42.., R—Q 3 instead of Kt—K 2. Afterward the game was over.

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### THE PRESIDENT'S TRIP AND A THIRD TERM.

THE welcome that President McKinley is receiving in his tour of the country has started a rumor that he has in mind a third term in the Presidential chair; and while such an idea is pretty generally credited to the minds of imaginative newspaper writers rather than to the mind of the President, the Boston *Herald* (Ind.) remarks that our country has in the last four years seen greater changes than the reversal of the third-term antipathy, and it asks seriously if a longer tenure of the Presidential office would not provide a better government for such a nation as ours has grown to be. It says:

"Four years ago ours was a different form of government from what it now is. It was then a republic of States, to which were added territories in preparation to become States. There was not a foot of it included in any other category. Since then it has been made, in effect, a republic of States owning provinces which stand toward it in the relation of dependencies. They do not share in that privilege of self-government, present or prospective, which was accorded to all the nation as it was earlier constituted. This nation is still, and it is intended to continue to be, the United States of America. Very few advocate making it the United States of America and Asia. We hold the Philippine Islands as of us, but never to become part of us, as was all that existed in the nation before the Spanish war changed its character.

"To hesitate about agreeing to a third term in the Presidency, as doing violence to the national traditions of the people, while accepting this vastly more important change, is to strain at a small point while accepting a large one. Let it here be noted that we are not arguing for this change in the Presidency. We are simply looking at facts as they are, accepting them in their natural relations and considering what may logically grow out of them. The nation is not as it was when it was composed only of contiguous territories, and based on an agreement that there should be equality beween the peoples that inhabit them. It extends now seven thousand miles away into another continent: it is not to allow the people there over whom it holds sovereignty representation in its home government: they are to be controlled by the home government as it is administered by Congress and by the President. The President is to be the executive officer in this. He is to select its governors, its judges, its commissioners of customs, all its more important officials. It is not a logical operation of this system to make frequent changes in the occupant of an office that has such extraordinary powers. Enlightened students of government would not have framed our present system of government as it is now in operation as one best adapted to working that feature in its operation. They would have said that the term of the President should either have been longer or it should be open to greater extension. It is entirely natural that this latter should be made to apply, if not to the term of President McKinley, to that of his successors."

The New York *Journal* (Dem.) says:

"The danger is not that a President elected for a third time may usurp a throne. That is not the way republics are broken down. The danger is that apathy, indolence, a reluctance to disturb existing conditions, may gradually reduce elections to a form.

"At present, for instance, the great financial interests of the country are perfectly satisfied with President McKinley. He suits them exactly. Anybody else, even one of their own men, would be an experiment, and might turn out as badly as Odell did for Platt; but McKinley they know. Can anybody doubt that if it were not for the anti-third-term tradition they would reelect Mr. McKinley in 1904, and again and again as long as he lived? And what would become of the spirit of republican government by that time? Would not the eternal vigilance that is the price of liberty be absolutely extinct?

"Perhaps when the railroad and industrial combinations have been completed these questions may be brought to the test of practical experiment."

A number of papers refer to the failure of the movement to give President Grant a third term, and argue that it would be even less likely to succeed in the present instance. The Philadelphia *Ledger* (Ind. Rep.), for example, says:

"The Grant movement in 1880 was conducted by masterly political management. The candidate was the most distinguished American then living. Notwithstanding the popular admiration and affection felt for him and the general desire to confer signal honors upon him, the Republican Party declined to nominate him for a third term after he had been out of office one term. The force of the unwritten law prohibiting a third term was never subjected to a severer test, notwithstanding the other elements of opposition to him in the convention. The balloting left the law with greater binding force. His candidacy had been excluded by the same law four years before, when it was proposed that he should immediately succeed himself at the close of his second term. In December, 1875, the movement was halted by the passage of this resolution in Congress:

"'Resolved, That, in the opinion of this House, the precedent established by Washington and other Presidents, in retiring from the Presidential office after their second term, has become, by universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions.'

"This resolution was passed by the overwhelming majority of 234 to 18. All the Democrats voted for it, and the votes of 70 of the 88 Republicans voting were recorded in the affirmative. This was the attitude of the country then, and such is its attitude now. There is not the slightest evidence that President McKinley desires to abrogate the unwritten law, or that he would encourage any movement of indiscreet superserviceable friends to set it aside."

## REPUBLICAN VICTORY IN BALTIMORE.

THE sweeping Republican victory at the recent municipal election in Baltimore, resulting in the carrying of eighteen out of the twenty-four wards of the city, is regarded almost without exception as a rebuke to the political tactics of ex-Senator Gorman. The belief is also generally expressed that the new election law, imposing an educational qualification, which was pushed through the Maryland leigslature at a special session called for the purpose two months ago, has had an influence directly contrary to that which Senator Gorman is supposed to have had in mind.

Speaking of the difficulties encountered by voters because of the law, the Baltimore correspondent of the New York *Times* (Ind. Dem.) writes:

"Hundreds of illiterates, both white and colored, did not attempt to vote. Those negroes who had been taught the difference in the appearance of the words 'Democrat' and 'Republican' generally voted all right, but even some of these got badly mixed. In one precinct alone five negroes, when told they could receive no assistance in marking the ballot, left the booth, saying they would rather not vote at all than make a mistake.

"In the principal colored ward, where two negroes were running against one white man and one negro, one a regular Republican and the other independent, many of the negro voters were completely at sea. They were supplied by the regular Republicans with a rule made of paper, supposed to be the exact length of the ballot, on which spaces were marked indicating the regular Republican candidate. Various other devices were used to enable the man who could not read to mark his ballot correctly, but as a rule they were not very successful. Several Germans who can not read English intelligently became angry when they learned that in marking the first name on the ballot they had voted for a Democrat instead of a Republican.

"As there were only the names of councilmanic candidates on the ballot it was comparatively simple, as compared with what it will be in the fall election, when there will be numerous offices and candidates of three or four parties on the ballot."

Nevertheless, the Democratic majority in Baltimore of 8,633 two years ago was transformed into a Republican majority of 2,250. The Republicans elected eighteen out of twenty-four members of the first branch of the City Council, and all four of the nine members of the second branch that were voted on at this time. The vote was light, hardly more than fifty per cent. of the total registered vote being cast. "The figures of the election," remarks the Baltimore *American* (Ind.), "show that the new election law encouraged independent voting; the aggregate shows that the law operated against a full vote. This is to be regretted, and is the strongest argument in favor of its repeal at the earliest possible moment." The same paper adds that the election results "tell in terms too plain to be misunderstood that the voters are dissatisfied with the ways of the Democratic Party; that they do not propose to permit the city to return to the control of men who never held power except to abuse it; that they will not tolerate such outbursts of radical partizanship as characterized the work of the extra session and the conduct of the Democratic Party." The Baltimore *Herald* (Ind.) and *News* (Ind.) take the same view, and both hope that the State election in November will repeat the verdict of last week. Even the Baltimore *Sun* (Ind.), which has strong Democratic leanings, declares that the new ballot law "worked satisfactorily." The Boston *Transcript* (Ind. Rep.) makes the following comment on the election:

"When Gorman's bill was made law, there were not wanting shrewd men in Maryland who said that by exposing the illiteracy of thousands of white men it would, in offending their race pride, do Mr. Gorman infinitely more harm than good. Thus far the results appear to justify this conclusion. The white illiterates do not take so kindly as the colored illiterates to schooling. The white illiterates are very reluctant to accept instruction, and the Democratic efforts to induce them to go to school have almost come to a standstill. A white Democrat does not like to make his illiteracy conspicuous to his neighbors. His personal and his racial pride are offended alike by the mere suggestion that he learn his letters in order to be able to cope with 'niggers.'

"How wide this illiterate white element is will be readily realized from the fact that in nine wards of Baltimore it has been found that the white illiteracy exceeds the black, the aggregate being 2,106 white illiterates and 802 black illiterates. A careful canvass gives the total illiterates of all Baltimore, 6,137 colored

INCIDENTS OF THE PRESIDENT'S TRIP.

and 4,020 whites. Probably the Republicans are not making wholly satisfactory progress in overcoming the white illiteracy within their own party, but then they have comparatively few white voters who can not read and write. The negroes, on the other hand, are eager to learn. If it is asked why Gorman made the mistake of raising the illiteracy question, the answer must be that he was so perfectly satisfied of his ascendancy over the Maryland Democracy and of his ability to maintain it that he thought he could afford to disregard the sensibilities of the Democrats who were unable to read and write. Gorman is still a power and he will struggle hard to continue to be one, but like many ex-bosses he does not realize how times have changed since his bosship was undisputed."

## AMERICAN TRADE AND THE BRITISH COAL TAX.

THE principal address at the annual meeting of the Iron and Steel Institute in London last week was made by William Garrett, of Cleveland, Ohio, who prefaced his remarks by declaring that Great Britain's supremacy in the iron and steel trade, so long held, is now lost. He said, in part:

"Your falling behind is partly due to the fact that up to the present you have had no competition. I may be wrong, but I venture to assert that during the past ten years all the British iron and steel manufacturers together did not spend as much money in improvements as the Carnegies did in two years. Is your ingenuity and energy exhausted—you, who, at one time, were the greatest manufacturers in the world? I can not believe it. In order to show you how far you are behind in the output of wire rods, four of the best rod-mills in Great Britain during January did not produce as many rods as one of the wire rod-mills in the United States. Is there no remedy? And will Great Britain, the mother of that business, who taught the world how to make wire, give it up?"

Andrew Carnegie followed with some remarks along the same lines. "You must look at home," he said, "and develop the material you have. . . . Seek ye first the United Kingdom, and the markets of the world will be added unto you."

That Great Britain herself appreciates the truth of these American criticisms is apparent from the tone of recent comment in English trade journals and daily papers. The New York *Tribune* calls attention to a project which shows more than ordinary willingness on the part of British employers and workmen to profit by the best features in American industrial methods. It says:

"Louis Cassier, editor of a technical magazine which is well known on both sides of the Atlantic, announces a unique enterprise. Fifteen or twenty workmen, selected from as many different establishments and representing a variety of industries in Great Britain, are soon to be sent to the United States in a body to study the ways of their Yankee cousins. A month or more will be devoted to the task, and during that time the deputation will visit the principal manufacturing centers of the country. Each man is to be designated by the concern which employs him, but he is to be chosen from a number that have been nominated by their fellows. Employers and trades-unions will cooperate in meeting the expense of the undertaking. Thomas Westgarth, managing director of what are said to be the largest works in the world for the production of marine engines, originated this idea, and it will be carried into execution by Mr. Cassier. . .

"The experiment is well worth trying, from the British manufacturer's point of view. Moreover, the scheme is a handsome tribute to the character and efficiency of the American workman which the latter will be quick to appreciate. It will stimulate him to persist in a policy which commands the admiration and anxiety of his industrial competitors in the Old World."

The British coal tax of one shilling a ton, which was included in the last budget and aroused such violent opposition from the British coal interests, is being widely discussed in its relation to English and American trade rivalry. The Philadelphia *Press* goes so far as to state that this tax will prove a "fatal blow to English trade supremacy." "Already American coal has a large sale in territory that was formerly supplied entirely from British mines, even in British possessions," remarks the Atlanta *Journal*; "the export tax will give American coal a still greater advantage and will certainly increase its sale in neutral markets." The English and Scotch coal-owners complain bitterly over what they term the injustice and inequality of the provisions of the new tax. "Well has it been said that the tax is not upon coal, but upon the export trade in coal," declares the Glasgow correspondent of the New York *Iron Age*, who points out that the burden of taxation will fall on the districts producing for export, while two-thirds of the coal produced in Great Britain will escape it. He continues:

"The impost may not be large enough to cut off foreign orders very materially at present, but what effect there is in reducing exports will be felt chiefly in Scotland. Those who support the tax do so because they think it will be paid either by the foreign consumer or by the coal-owners. But it will fall upon neither.

PIERPONT I. TO EDWARD VII.: "How much will you take for it, Tummy?" —*The Philadelphia North American.*

The foreigner will not pay it, because he has many sources of supply open to him, if not for the exact coal he would like to have (as, for instance, for the Welsh steam), at least for fuel that will serve his purpose at a price. He will not pay more than its market value for the superiority of British coal over other coal; and, moreover, the imposition of this shilling duty will be taken by coal producers in other countries merely as a first instalment of what Great Britain may do to raise money to conserve her own resources, and production will be stimulated everywhere. The coal-owner will not pay it if the foreigner refuses. He will make a special price for export—as, for instance, tub-makers do—and in the reduced average this will make in his sales he will adjust wages on a lower basis. Thus in effect the duty will be paid by the wage-earner and the home consumer, which is certainly not what the Chancellor of the Exchequer intended."

Sir Michael Hicks-Beach, in replying to his critics in Parliament recently, said that the coal export trade could bear the tax very well, and that the English coal was of such excellent quality that it was safe from competition. He declared that the net profit of the British coal-owners in 1900 was £29,000,000 on a capital of £110,000,000. Referring to the danger of American competition, he said:

"Last year the price of our coal at the port of export rose very much higher than the price of coal in the United States. In spite of that our coal export was 38,000,000 tons. The United States

exported a little over 16,000,000. If the United States could not compete when the price of our coal was very high, it would be impossible for them to compete when the price of our coal is low."

## FINANCIAL MAGNATES FOR AND AGAINST TRUSTS.

AN uncommonly interesting discussion of the good and bad effects of industrial consolidations on the capitalist, the workingman, and the general public appears in the current number of *The North American Review* from the pens of six leaders in the world of industry and finance. Russell Sage, the well-known operator in railroad and other securities, leads off with an argument against consolidations, and the cudgels are taken up in defense of the trusts by James J. Hill, president of the Great Northern Railway, and an active factor in recent railroad combinations; Charles M. Schwab, president of the new gigantic steel trust; Charles R. Flint, treasurer of the rubber trust; F. B. Thurber, president of the United States Export Association; and James Logan, general manager of the envelope trust.

Mr. Sage believes that in the consolidation movement we have entered on business methods that "may lead us to the brink of disaster, if, indeed, they do not land us over the brink." He says:

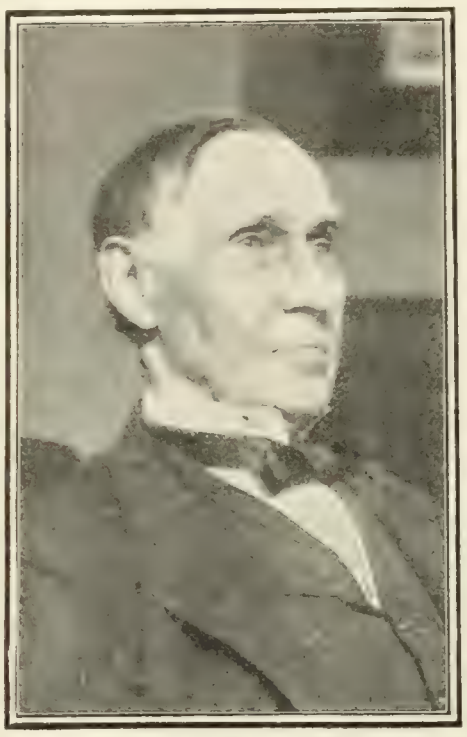
"To me, there seems to be something very much like sleight-of-hand in the way in which industries are doubling up in value, as at the touch of the magician's wand. Here we have a factory—a good, conservative, productive investment—which may be turning out anything from toys to locomotives. It falls into the hands of the consolidators, and, whereas it was worth $50,000 yesterday, to-day it is worth $150,000—at least on paper. Stocks are issued; bonds are put out; and loans are solicited, with these stocks as security. The man who owned the factory could probably not have borrowed over $10,000 on it. Now, however, when the $50,000 plant is changed into a stock issue of $150,000, bankers and financiers are asked to advance $60,000 or $70,000 on what is practically the same property, and many of them, from all accounts, make the advance.

"Under these circumstances, a 'squeeze' seems to me inevitable. . . . . .

"In fact, we have gotten away entirely from the old idea of making the money of the country the basis of our trading. Instead, there is thrown into the business world, to be used as a trading medium, millions upon millions of new stocks, the real value of which is yet to be determined. As soon as this is thoroughly realized, we may look for trouble, pending a readjustment. This can be predicted with perfect safety."

RUSSELL SAGE: "I predict a smash-up!"
—*The Chicago Record-Herald.*

President Hill, however, thinks that this point "has not all the force that might appear from the bald statement of the facts as Mr. Sage puts it." He goes on: "A property is not necessarily worth only what it represents in the way of real estate, building, and plant. It is worth rather what it represents in earning capacity; and if, under a combination, its earning capacity is trebled, because of the economy of production, it is not unreasonable to say that its value has been trebled, even tho nothing tangible has been added to its material assets." And further, "against the alleged injury that is intangible," continues Mr. Hill, "can easily be put the benefit that can be shown by figures



RUSSELL SAGE.

JAMES J. HILL.

—benefit to the workingman, benefit to the consumer, benefit to the capitalist. Wages are higher, prices are lower, investments are safer, more productive and more certain of return." This assertion made by President Hill is reiterated and dwelt upon at some length by President Schwab of the steel trust, whose entire article, indeed, is one of the strongest that has yet appeared in defense of the consolidation idea.

Mr. Schwab bases his argument on the trade axiom that "the larger the output, the smaller, relatively, is the cost of production," and he says that it "is the recognition of this principle that has brought about the era of business consolidation now in full swing in the United States." A concern employing 100,000 men can be handled as easily to-day as one employing 100 fifty years ago, and the cost of production is greatly decreased. He cites as an example the Metropolitan Street Railway Company in New York City, made by consolidating eighteen distinct lines, each supporting a full complement of officers. In the consolidation, Mr. H. H. Vreeland was made president and the superfluous officers dispensed with. Mr. Schwab describes this as "the cutting-off of a lot of dead wood," and he declares that "the benefit that has accrued from it is immeasurable." To enumerate: "The community has better service than it could have looked for in fifty years under the old scheme. The stockholders have more certain and growing returns, for the business of the old companies has been trebled by the new, thanks to the improved service. The number of workingmen employed in the service has been increased fivefold and their wages have been increased from twenty-five to one hundred per cent. All this has come about because the roads under combined management could avail themselves of expert services the employment of which, under separate management, was out of the question." And in manufacturing, a further saving is affected by the lopping off of the middle-man, "who, at every step between production and consumption, was wont to take a big slice

of profit, adding so much to the ultimate cost without adding anything to the value."

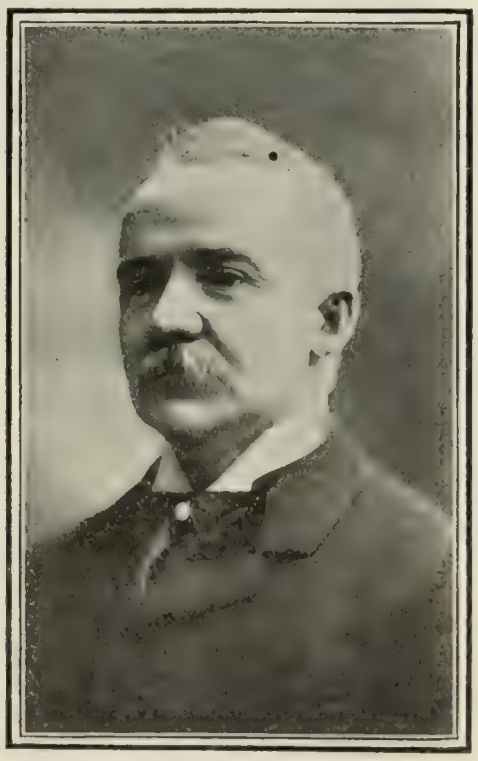
The popular idea that the main object of the consolidations is to increase prices, Mr. Schwab disputes. "Here and there," he says, a "combination may have been effected with the idea of increasing the cost to the buyer; but wherever this has been the case, the combination has failed"; and, he adds, it was "bound to fail," because "any industry that is important enough to warrant combination is important enough to attract capital in competition, if it endeavors unfairly to increase the price of its production." The Standard Oil Company itself "was never at any stage able to effect a monopoly," and "it has to-day, and always has had, a very considerable competition. It made hundreds of millions of dollars for its chief stockholders, not because it increased the price of oil, but because it lowered it. That was the only reason why it continued to exist and to flourish, to meet all competition and to overcome it. It gave the consumer more for his money than he had ever received before; and, therefore, the consumer made the company great and prosperous."

The belief that the trust is a danger to the State, and that it does not give the young man a chance, Mr. Schwab handles as follows:

"That there is danger to the State in the combination is a preposterous idea. On the contrary, the well-managed combination is a distinct gain to the State. Any one who doubts this need only consult the foreign newspapers. Everywhere he will find a cry of industrial alarm leveled, not at the individual American manufacturer, but at the American nation. This is because the combination has done for the American state what the individual was never able to do—put it in industrial control of the world. A system that in a few years can do this ought certainly to be encouraged, and as it benefits the state it necessarily benefits the individuals who make up the state.

"The capitalist and the laborer are equal sharers in the advantages the new scheme offers. Capital finds itself more amply protected, and labor finds an easier route to a partnership with capital. To the workingman, the combination offers the most feasible scheme of industrial cooperation ever presented. Without waiting for any one's invitation, he may

F. B. THURBER.



JAMES LOGAN.

secure a partnership in the combination for which he works by investing his savings in the open market in the stock of the concern. . . . . .

"Under the old individual business scheme, the skilled worker had only limited opportunity for increased pay, and practically no opportunity for a partnership participation. Business enterprises, with a few notable exceptions, were held as close family corporations. Outsiders were rarely admitted. No matter how expert these outsiders were, they were held all their lives on a salary. The concerns where this rule did not apply expanded much more rapidly than their competitors, but the example so set was apparently not sufficiently attractive to induce its general application. It remained for the system of combination to

CHARLES M. SCHWAB.

CHARLES R. FLINT.

make the scheme general, and to open up for young men of brains opportunities that heretofore have been closed to them. Instead, therefore, of restricting the opportunities for the mass of men, as the political agitators and others tell us is the case, the era of combination has very materially enlarged these opportunities."

A new argument for the industrial combination Mr. Schwab brings forward in the following paragraph:

"One of the greatest advantages that will come of the concentration of industries is the development that it will bring to our latent resources. Under the expensive system of individual control, much of our natural wealth remained unavailable, and would have so remained for a long time to come. Where each step in the process of production had to yield a distinct profit to a certain class of men, the margin was not sufficiently large to warrant the exploitation of many fields rich with raw material. A concern that produces its own raw materials, and works them up through the various processes until it delivers the manufacured product in the domestic or foreign market, can work on a narrower margin all around, and yet do full justice to its stockholders and employees."

Mr. Flint, of the rubber trust, meets with figures Mr. Sage's warning that the industrial consolidations are overcapitalized. He refers Mr. Sage to a list of forty-seven of the most prominent trusts, and says:

"He will find that the industrials, almost without exception, are worth a great deal more, judged by their earning capacity, than they are selling for in the open market. Some of these industrials are earning over 25 per cent. a year on their market values, and the average for the entire forty-seven is 13.6 per cent. How does this compare with Manhattan Elevated, which Mr. Sage would, no doubt, tell everybody is a good investment? Manhattan Elevated earns 4 per cent. Even more astonishing than the earnings on the market value are the earnings on the par value. A very popular impression exists that industrials are composed principally of water. The best answer to this is, that the forty-seven companies included in the appended table show an average earning rate of 7.44 per cent. on their total capitalization at par. . . . . .

"Taking thirty-seven railways, including the best properties in the market, they show an average rate of earnings on their market value of 4.85 per cent., and on their par of total capitalization of 4.85 per cent. On the face of it, this would show a very substantial situation so far as the railroads are concerned, placing them as a whole almost on a level with government bonds."

Mr. Flint also points out that "over-production, which is one of the most prolific sources of panic, can be largely prevented under the present system, and that without throwing any great body of workingmen out of employment"; and he relates the interesting fact that during the depression of 1893 to 1897 the factories of his corporation were kept running and their help was regularly employed during all that period, and at the same time the stockholders received a fair return on their investments. He believes that the tendency is toward high wages, and adds: "The records will show that where combinations have been effected strikes decrease. It is one of the great sources of satisfaction to me that none of the industrial combinations with which I have ever been connected has had a strike."

THE OLD FABLE OF THE FROG WHO TRIED TO BE AS BIG AS THE OX STILL HOLDS GOOD.

—*The Chicago Daily News.*

The articles by Mr. Thurber and Mr. Logan are somewhat inconsonant, the former attempting to prove that the combinations have reduced prices, and the latter telling why they have raised prices. Mr. Thurber's tables show that a considerable reduction in railroad rates has taken place in the last thirty years; but they also show that the price for illuminating oil is as high as it was fourteen years ago, and that the price of sugar is higher than it has been since 1890. The New York *Journal of Commerce* says: "Mr. Thurber's attempt to show that the trusts already existing have tended to the reduction of prices is infelicitous, the oft-cited case of the Standard Oil Company being one of pure assumption, that of the American Sugar Refining Company being absolutely illusory, and that of the International Paper Company being contradicted by the very figures given to establish the proposition."

Mr. Logan dwells at considerable length upon the "ignorant, cut-throat competition" which sometimes keeps prices actually below cost of production, thus ruining its own business and the business of everybody else. These reckless and shortsighted manufacturers, says Mr. Logan, "usually pay the lowest wages," and it is usually their factories which are closed when the trust is formed, for they are found to be run without system, and "had the consolidation not been brought about, failure would have been the next step"; so that "the final result has simply been anticipated a little, and not a great while either." With these competitors out of the way, prices are then raised to a rational level.

According to the Philadelphia *Ledger*, the report is confirmed by the officials of the steel trust that "the net earnings of the big corporation for the month of March, over and above the interest on the underlying bonds, amounted to $9,270,000, or at the rate of $111,240,000 a year."

## THE WALL-STREET SMASH.

THE causes and effects of the financial tempest that shook Wall Street last week are the subject of a good deal of moralizing in the newspapers. The prevailing view seems to be that the rapid and for the most part steady rise in prices of the last four years has been due to a feeling that the consolidation movement in the United States has enhanced the value of industrial and railroad properties to a point even far above the prices that have been prevailing. The trouble began when two groups of railroad magnates collided—one controlling the Great Northern and the Northern Pacific roads, and led by J. J. Hill and J. P. Morgan & Company; the other controlling the Union Pacific, and led by E. H. Harriman, George Gould, and Kuhn, Loeb & Co. The bone of contention was the Burlington road, which lies in the Union Pacific territory and which the Northern Pacific tried to buy. The Union Pacific magnates made a flank movement by attempting to buy up a majority of the shares of the Northern Pacific road itself. This sent up the price of Northern Pacific to a point which speculators thought unwarranted, and they "went short" on the stock, that is, sold it at a high price for future delivery, expecting to be able to buy at a lower price before the time for delivery. But the struggle between the two groups of magnates for possession of the stock continued, and the "shorts" found themselves unable to secure the stock necessary to carry out their contracts. Their desperate efforts to do so sent the market price still higher, until Northern Pacific, which had been selling at the beginning of the week at about $128, actually went up to $1,000 on Thursday. It transpired that the two groups of magnates had in stock and in contracts for the delivery of stock 78,000 shares more than were in existence, each group appearing to have a majority of the stock and control of the road.

Either as a result of the desperate plight of the "shorts" or, as is charged, of an organized movement of the bears, rendered practicable by the general excitement and the tightening of the money market, prices in the rest of the market broke wildly, many stocks falling $30 a share in a few minutes, and one or two falling nearly twice that far. The losses of speculators who were caught in the downward rush are estimated as high as $500,000,000, but the quick partial recovery saved many from permanent disaster.

The spasm, while it lasted, was the most severe in the history of Wall Street. In all probability it would have been much worse had it not been for an injunction granted to Henry L. Scheuerman and Herbert R. Limburger, two of the "shorts," by Justice Gildersleeve of the State Supreme Court, restraining the Union Pacific and Northern Pacific magnates from insisting on the delivery of the Northern Pacific stock for which they had bargained. The injunction was granted on the ground that the buyers knew when the contracts were made that the shares were not to be had, and the contracts were therefore known to be impossible of fulfilment, and were void. The injunction was not actually served, but the knowledge that it had been issued brought about a settlement with the "shorts" on a basis of $150 a share. Another

movement that helped to stay the panic was the formation by a number of banks of a loan fund of $20,000,000. The rate of money had gone up as high as sixty per cent. when this action was taken, and it soon brought the rate down to six per cent.

What some consider the two most remarkable and encouraging features of the panic were seen in the fact that every bank and every member of the Stock Exchange weathered the financial tornado successfully, and in the further fact that on Friday, the day after the panic, prices again rose to the remarkably high level that the newspapers had considered so dangerous and unwarranted a few days before. Which group of magnates won the fight for the control of the Northern Pacific road remains to be seen. The general impression is that the Hill-Morgan group kept their control of the road.

Some of Thursday's losses and the subsequent recoveries are given as follows in the New York *Journal of Commerce:*

| | Loss. | Recovery. |
|---|---|---|
| Amalgamated Copper | 26 | 27½ |
| American Tobacco | 21 | 23 |
| Atchison | 35¼ | 31¼ |
| Chicago, Milwaukee & St. Paul | 31 | 24½ |
| Chicago, Rock Island & Pacific | 33 | 27 |
| Consolidated Gas | 15 | 24½ |
| Delaware & Hudson | 60 | 55 |
| General Electric | 20 | 20 |
| Louisville & Nashville | 26¼ | 25½ |
| Manhattan | 27 | 32½ |
| Missouri Pacific | 21 | 26 |
| United States Steel | 22¾ | 21 |
| United States Steel, Preferred | 28 | 25 |

The New York *Tribune* declares that "it may be said without fear of contradiction that the actual cash losses reached a total never before equaled in the history of Wall Street," and the New York *Evening Post* says further that the entire course of events in the stock market since the beginning of the year "has been without precedent in this country or any other." *Bradstreet's* avers that the Northern Pacific corner "will doubtless pass into financial history as the most remarkable performance of its kind ever seen," but it believes that the break in prices is "without any relation to the material prosperity of the country." The New York *Press*, however, expresses a different opinion:

"A vast sum of the country's working capital has been diverted from its proper uses to stock-gambling for months past. How far this has gone we shall not know even when the returns come in of country bankers going to Alaska and country merchants into bankruptcy. Throughout the whole land thousands of men will be crippled financially and psychologically, even where they do not come to ruin, as a result of this great debauch. Thus just so much of our national energy is lost. And he is a shallow observer who has not realized in such losses one of the causes of our periodical terms of long-continued and absolute prostration. Sprees like this one—now, we hope, ending—undermine the system of each American generation and leave it an easy prey to ills which in its normal state it would with ease repel."

As to the speculators, big and little, who have been hit by the crash, the New York *Evening Post*, quoted above, remarks: "We see no reason to regret either that the one set of people has had its audacious self-confidence impaired by this stinging blow, or that the other has been taught the lesson of stock-jobbing crazes by the only means which will ever teach it." And the Philadelphia *North American* says: "Those who went into the crazy market to guess what the manipulators would do were gamblers. Those who knew what moves would be made and profited by their knowledge were robbers. Neither gamblers nor robbers are promoters of prosperity or useful members of society."

The granting of an injunction to save the "shorts" is without precedent, and some are inclined to criticize both the court and the broker who appealed to it. The New York *Tribune*, for example, says:

"This Northern Pacific order looks like the attempt of a stock gambler to play the 'baby act.' He knew, and the public knew, that there was a 'corner.' Rival interests were fighting for the control of the road. Each was buying all the stock it could. It is difficult to see how a broker acting for either one of these interests could know that delivery was impossible, for neither he nor his principals held all the stock. He was working hard to get more than half, had no means of knowing what his rival had, and was apparently entitled to suppose that anybody offering to sell stock in the face of these notorious conditions had it or had means of securing it. As a matter of fact, others who sold stock 'short' did secure it, in spite of the allegation that the buying brokers' clients had all the stock. It came from strong boxes in every direction. Some was sent here on a special train, some was on its way from Europe. How could the buyer know that this particular offer was not some of this? . . . . . .

"It happens that an injunction issued against great financial houses rather falls in with the tendency of Populistic prejudice. Suppose, however, that one of these great houses were to get an order against speculators who were popularly supposed to stand for the people against trusts and monopolies, would there not go up from one end of this country to another an outcry that the Wall Street money sharks were using the courts for their speculative purposes? The technical case made out for this particular order is not fully known to the public, and the right purpose directing its issue is beyond question, but in view of all the circumstances of the Northern Pacific 'corner,' and the use made of it as a club for easy settlement, the wisdom of such interference is much to be doubted."

# LETTERS AND ART.

## THE CULT OF THE HISTORICAL ROMANCE.

ALTHO some writers have prophesied that the "historical romance" has already seen its best days and will soon be on the wane, this view does not seem to be upheld by recent developments. Among these is the announcement that, on account of advance orders, it has been found necessary to print a first edition of 100,000 copies of a new historical novel, "The Helmet of Navarre," relating to French history, and written by a young lady, Miss Bertha Runkle, hardly out of her teens, who is said never to have been in France.

A keen observer of current movements, Prof. Richard Burton, of the University of Minnesota, calls attention to the "pendulum movement" of the novel during the past hundred years. During the whole of the eighteenth century realism predominated—broad and even coarse in Defoe, Smollett, Fielding, and Sterne, delicate and carefully wrought-out in Richardson, and, with the opening of the new century, even more refined in the works of Jane Austen. With Scott began the triumph of romanticism, which before his time had indeed been existent, but had been largely overshadowed by the great realistic masterpieces of the Georgian era. By 1850, however, this romantic impulse had again "become a thing obsolete and only sporadically cultivated," and at that date Dickens and Thackeray had returned to the methods of Richardson and Fielding—the novel of contemporary manners and types. Once more this insistence on analysis and detail has resulted in a reaction, and romance has come in. Says Professor Burton (in *The Criterion*, May):

"The romantic revival of the past decade draws attention to the inevitable swing-back of the pendulum, a movement away from the realistic and toward the romantic, and freshly emphasizing for the scholar the laws by which fiction in its historic growth shifts from one to the other of these two main purposes. Keeping to the figure of the pendulum, we might say that the arc described has for its two limits realism, the desire for truth, and romanticism, the desire for poetry. Quite as truly as in the physical world, a swing one way implies a swing the other, and corresponding to the central pull of gravity is that same instinct of normal human nature, drawing the novel back to a middle point of art. Thus, in a sense, scientific laws of ebb and flow control the changes in this typical modern literary form. And hence the present marked popularity of romantic narrative is a phase which one with his eye on the evolution of fiction since Scott could have predicated with little trouble.

"Our opinion of the momentary cult of the romance will be modified in the first place by our attitude toward the romantic as a method, and last by our estimate of the quality of the work at present being done under that banner-cry. As to the former, it seems fair to say that if by romance we mean the truthful handling of the more exceptional and noble incidents and characters in life, in such wise as not to imply that they are more frequent in occurrence than in reality they are, the romantic is a welcome visitor. Certainly it is inspiring to meet people in fiction who exemplify the finer traits of humanity, and to be introduced to situations which stir the soul out of the walking trance of everyday existence. Nor is there any harm in it, along with the good, unless life and the folks thereof are treated with a certain sickly pseudo-idealism which makes the world an impossible phantasmagoria, and its men and women to appear like the philosopher's trees walking. To condemn that sort of fictional narcotic is not to condemn the true romance: *ab abusu ad usum non valet consequentia.* The critic may well cry up the nobler order of romance which includes the right kind of realism, because it tells the truth about the most interesting and uplifting aspects of human life, while it does not fall into the error of putting too much stress upon the lower stages of the slow, painful process by which man mounts to higher things. . . . . .

"Now one may admire the historical romance as a general proposition, and yet deprecate the tendency to laud romance for romance's sake, for this last attitude brings about the circulation of much that is mediocre, if not worthless; it holds back the true development of fictional art; it tends to a partizan patronage of the part rather than the whole; and, as already hinted, it is very likely to precipitate a reactionary devotion to the narrow realism from which there would seem to be a happy escape. One's very dislike of this stupid, vulgar abuse of fiction inclines one to cry a halt on the present uncritical deification of the so-called romantic. Nor, frankly, does the romance give the full picture. To lay the scenes of a novel in older times is no warrant that it will be either artistic or readable.

"From the very nature of the historical romance the danger of missing the right method is peculiarly strong. An effective romance must possess, over and above its verisimilitude, the reproduction of bygone speech, manners, and character types, those elemental human qualities which shall make it interesting, expressive. This quality it is which gives Scott earlier and Sienkiewicz later a claim upon the world of readers, critical and general. To secure this result has, I say, difficulties exceptional and only to be overcome by a life-work. To appeal through piquancy of costuming or the unhackneyed nature of the situations is legitimate enough; but this is subordinate to that essential humanity in a romance which forces the thoughtful to call it finely representative."

Let us by all means have romance of the larger, truer sort, remarks the writer; but let us refuse to read "history-fiction that is neither sound history nor good fiction, and let us not neglect the admirable work in sane realism now being steadily done in America and elsewhere." Otherwise, he adds, through our undiscriminating partiality for one literary method we shall cause a counter-movement to the pseudo-realistic school, in which the chief characteristics are "petty particularity," "dreary poverty of action," and "waspish interpretation of life."

## TOLSTOY AS SEEN BY A SCHOLAR AND DIPLOMAT.

ONE of the most suggestive of the many recent articles on Count Leo Tolstoy is from the pen of Dr. Andrew D. White, American ambassador at Berlin. The opinions of Dr. White concerning Tolstoy are exceptionally discriminating, and carry unusual weight because of the unique standing of the writer in the varied fields of diplomacy, scholarship, and religious discussion. Besides thrice holding the highest diplomatic position in St. Petersburg and Berlin, and other important positions such as member of the Venezuelan commission under President Cleveland, Dr. White was a founder and the first president of Cornell University, and is the author of the well-known "History of the Warfare of Science with Theology in Christendom." Of his first meeting with Tolstoy, he says (in *McClure's Magazine*, April):

"On the evening of my arrival I went with my secretary to his weekly reception. As we entered his house, on the outskirts of the city, two servants in evening-dress came forward, removed our fur coats, and opened the doors into the reception-room of the master. Then came a great surprise. His living-room seemed the cabin of a Russian peasant. It was wainscoted almost rudely, furnished very simply, and there came forward to meet us a tall, gaunt Russian, unmistakably born to command, yet clad as a peasant, his hair thrown back over his ears on either side, his blouse kept in place by a leathern girdle, his high jackboots completing the costume. This was Tolstoy.

"Nothing could be more kindly than his greeting. While his dress was that of a peasant, his bearing was the very opposite; for instead of the depressed, demure, hangdog expression of the average muzhik, his manner, tho cordial, was dignified and impressive. Having given us a hearty welcome, he made us acquainted with various other guests. It was a singular assemblage: there were foreigners in evening-dress, Moscow professors in any dress they liked, and a certain number of youths, evidently disciples, who, tho clearly not of the peasant class, wore the peasant costume. I observed them with much interest, but certainly as long as they were under the spell of the master they

communicated nothing worth preserving; they seemed to have 'the contortions of the Sibyl without the inspiration.'

"I naturally asked to be presented to the lady of the house, and the Count escorted me through a series of rooms to a salon furnished much like any handsome apartment in Paris or St. Petersburg, where I found the Countess, who, with other ladies, all in full evening-dress, received us cordially. This sudden transition from the peasant cabin of the master to the sumptuous rooms of the mistress was startling: it seemed like scene-shifting at a theater. After some friendly talk, all returned to the rooms of the master of the house, where tea was served at a long table from the bubbling brazen urn—the samovar; and tho there were some twenty or thirty guests, nothing could be more informal. All was simple, kindly, and unrestrained. . . . . .

"On leaving him, both he and the Countess invited me to meet them the next day at the Tretiakof Museum of Russian pictures, and accordingly, on the following afternoon, I met them at that greatest of all galleries devoted purely to Russian art. They were accompanied by several friends, among them a little knot of disciples—young men clad in simple peasant costume like that worn by the master. It was evident that he was an acknowledged lion at the old Russian capital, for as he led me about to see the pictures he liked best he was followed and stared at by many. His discussions of these pictures interested me greatly. His ideas came out in various striking utterances, but the limits of this article forbid my repeating them.

"Our next walk was taken across the River Moskwa on the ice, to and through the Kremlin, and as we walked the conversation fell upon literature. As to French literature, he thought Maupassant the man of the greatest talent, by far, in these days, but said that he was depraved and centered all fiction in women. For Balzac he evidently preserved admiration, but cared little apparently for Daudet, Zola, and their compeers.

"As to American literature, he said that Turgeneff had once told him that there was nothing in it worth reading—nothing new or original; that it was simply a copy of English literature. To this I replied that such criticism seemed to me very shallow; that American literature was, of course, largely a growth out of the parent stock of English literature, and must mainly be judged as such; that to ask in the highest American literature something absolutely different from English literature in general was like looking for oranges upon an apple-tree; that there had come new varieties in this growth, many of them original, and some of them beautiful; but that there was the same sap, the same current, running through it all; and I cited the treatment of women in all Anglo-Saxon literature, whether on one side of the Atlantic or on the other, from Chaucer to Mark Twain, as compared with the treatment of her by French writers from Rabelais to Zola. To this he answered that in his opinion the strength of American literature arose from the inherent Anglo-Saxon religious sentiment. He expressed a liking for Emerson, Hawthorne, and Whittier, but he seemed to have read at random, not knowing at all some of the best things. He spoke with admiration of Theodore Parker's writings, and seemed interested in my reminiscences of him and of his acquaintance with Russian affairs. He also revered and admired the character and work of William Lloyd Garrison. He had read Longfellow somewhat, but was evidently uncertain regarding Lowell—confusing him apparently with some other author. Of contemporary writers he knew some of Howells's novels, and liked them, but said: 'Literature in the United States at present seems to be in the lowest trough of the sea between high waves.' He dwelt on the flippant tone of American newspapers, and told me of an interviewer who came to him in behalf of an American journal, and wanted simply to know at what time he went to bed and rose, what he ate, and the like. He thought that people who cared to read such trivialities must be very feeble-minded, but he said that the European press is, on the whole, just as futile. On my attempting to draw from him some statement as to what part of American literature pleased him most, he said that he had read some publications of the New York and Brooklyn Ethical Culture [Society], and that he knew and liked the writings of Felix Adler. I then asked who in the whole range of American literature he thought the foremost. To this he made an answer which amazed me, as it would have astonished my countrymen. Indeed, did the eternal salvation of all our seventy millions depend upon some of them guessing the person he named, we should all go to perdition together. That greatest of American writers was—Adin Ballou! Evidently some of the philanthropic writings of that excellent Massachusetts clergyman and religious communist had jumped with his humor.

"Incidentally I expressed wonder that he had not traveled more. He then spoke with some disapprobation of travel. He had lived abroad for a time, he said, and in St. Petersburg a few years, but the rest of his life had been mainly spent in Moscow and the interior of Russia. The more we walked together the more it became clear that his last statement explains some of his main defects. Of all distinguished men that I have ever met, Tolstoy seems to me most in need of that enlargement of view and healthful modification of opinion which come from observing men, and comparing opinions in different lands and under different conditions. This need has been all the greater because in Russia there is no opportunity to discuss really important questions. Among the whole hundred and twenty millions of people there is no public body in which the discussion of large public questions is allowed; the press affords no real opportunity for discussion; indeed, it is more than doubtful whether such discussions would be allowed to any effective extent in correspondence or at one's own fireside. . . . . .

"Like so many other men of genius in Russia, then—and Russia is fertile in such—he has had little opportunity to take part in any real discussion of leading topics, and the result is that his opinions have been developed without modification by any rational interchange of thought with other men. Under such circumstances, any man, no matter how noble or gifted, having given birth to striking ideas, coddles and pets them until they become the full-grown, spoiled children of his brain. He can see neither spot nor blemish in them, and he at last virtually believes himself infallible. This characteristic I found in several other Russians of marked ability. Each had developed his theories for himself until he had become infatuated with them, and despised everything differing from them. This is a main cause why sundry ghastly creeds, doctrines, and sects, religious, social, political, and philanthropic, have been developed in Russia. One of these religious creeds favors the murder of new-born children in order to save their souls; another enjoins the most horrible bodily mutilation for a similar purpose; others, still, would plunge the world in flames and blood for the difference of a phrase in a creed, or a vowel in a name, or a finger more or less in making the sign of the cross, or this garment in a ritual, or that gesture in a ceremony."

Yet, notwithstanding Tolstoy's limitations, Dr. White believes him to be not only "one of the most sincere and devoted men alive," but also "a man of great genius and at the same time of very deep sympathy with his fellow creatures." Indeed, Dr. White deems his theories of art and literature, despite their faults, more profound than any put forth in the past century:

"There is in them, toward the current cant regarding art and literature, a sound, sturdy, hearty contempt which braces and strengthens one who reads or listens to him. It does one good to hear his quiet sarcasms against the whole *fin-de-siècle* business—the 'impressionism,' the 'sensationalism,' the vague futilities of every sort; the 'great poets,' wallowing in Parisian mud; the 'great musicians,' with no power over melody or harmony; the 'great painters,' mixing their colors with as much filth as the police will allow. His keen thrusts at these incarnations of folly and obscenity in the last quarter of the nineteenth century, and especially those who seek to hide the poverty of their ideas in the obscurity of their phrases, encourages one to think that in the next generation the day of such pretenders will be done. His prophesying against 'art for art's sake'; his denunciation of art which simply ministers to sensual pleasure; his ridicule of art which can only be discerned by 'people of culture'; his love for art which has a sense not only of its power but of its obligations, which puts itself at the service of great and worthy ideas, which appeals to men as men—in these he is one of the best teachers of his time and of future times.

"Yet here come in his unfortunate limitations. From his substitutions of assertion for inference, and from the inadequacy of his views regarding sundry growths in art, literature, and science, arises endless confusion. For who will not be skeptical as to the value of any criticism by a man who pours contempt over the pictures of Puvis de Chavannes, stigmatizes one of Beethoven's purest creations as 'corrupting,' calls Shakespeare a

'scribbler,' and denounces nearly all that he has himself ever written? . . . At times, as we walked together, he would pour forth a stream of reasoning so lucid and reach conclusions so cogent that he seemed divinely inspired; at other times he would develop a line of argument so outworn, and arrive at conclusions so inane, that I could not but look into his face closely to see if he could be really in earnest; but it always bore that same expression, forbidding the slightest suspicion that he was uttering anything save that which he believed—at least for the time being. As to the moral side, the stream of his thought was usually limpid, but at times it became turbid, and his better ideas seemed to float on the surface as iridescent bubbles.

"Had he lived in any other country, he would have been a power mighty and permanent in influencing its thought and in directing its policy; as it is, his utterances will pass mainly as the confused, incoherent wail and cry of a giant struggling against the heavy adverse currents in that vast ocean of Russian life:

"'The cry of some strong swimmer in his agony.'"

## MOST POPULAR BOOKS OF THE MONTH.

THE most widely read books of the month, according to the latest reports from book-dealers and librarians in the leading cities, sent to *The World's Work* (May), are as follows:

BOOK-DEALERS' REPORTS.

1. Alice of Old Vincennes—Thompson.
2. Eben Holden—Bacheller.
3. Babs, the Impossible—Grand.
4. Monsieur Beaucaire—Tarkington.
5. Eleanor—Ward.
6. The Life and Death of Richard Yea-and-Nay—Hewlett.
7. Quincy Adams Sawyer—Pidgin.
8. Rostand's L'Aiglon—Parker.
9. In the Name of a Woman—Marchmont.
10. Stringtown on the Pike—Lloyd.
11. A King's Pawn—Drummond.
12. The Visits of Elizabeth—Glyn.
13. The Cardinal's Snuff-Box—Harland.
14. An Englishwoman's Love Letters—Anon.
15. Eastover Court House—Boone and Brown.
16. The Mantle of Elijah—Zangwill.
17. That Mainwaring Affair—Barbour.
18. Napoleon, the Last Phase—Rosebery.
19. Uncle Terry—Munn.
20. In the Palace of the King—Crawford.
21. Herod—Phillips.
22. The Turn of the Road—Frothingham.
23. Tommy and Grizel—Barrie.
24. The King of Honey Island—Thompson.
25. Up From Slavery—Washington.
26. The Heritage of Unrest—Overton.
27. The Redemption of David Corson—Goss.
28. Literary Friends and Acquaintance—Howells.
29. The Master Christian—Corelli.
30. Crittenden—Fox.

LIBRARIANS' REPORT.

1. Eben Holden—Bacheller.
2. Alice of Old Vincennes—Thompson,
3. Eleanor—Ward.
4. The Life and Death of Richard Yea-and-Nay—Hewlett.
5. In the Palace of the King—Crawford.
6. The Master Christian—Corelli.
7. Stringtown on the Pike—Lloyd.
8. When Knighthood Was in Flower—Major.
9. Rostand's L'Aiglon—Parker.
10. The Life of Phillips Brooks—Allen.
11. The Reign of Law—Allen.
12. Napoleon, the Last Phase—Rosebery.
13. The Cardinal's Snuff-Box—Harland.
14. Elizabeth and Her German Garden—Anon.
15. The Life of T. H. Huxley—Huxley.
16. An Englishwoman's Love Letters—Anon.
17. Janice Meredith—Ford.
18. The Gentleman from Indiana—Tarkington.
19. To Have and to Hold—Johnston.
20. The Redemption of David Corson—Goss.
21. Black Rock—Connor.
22. Wild Animals I Have Known—Thompson.
23. A Woman Tenderfoot—Thompson.
24. Italian Cities—Blashfield.
25. Tommy and Grizel—Barrie.
26. The Riddle of the Universe—Haeckel.
27. Richard Carvel—Churchill.
28. Sky Pilot—Connor.
29. Like Another Helen—Horton.
30. Unleavened Bread—Grant.

Concerning these lists *The World's Work* makes the following comment:

"Twelve books are mentioned in both lists. Five, 'Eben Holden,' 'Alice of Old Vincennes,' 'Eleanor,' 'Richard Yea-and-Nay,' and 'Stringtown on the Pike' are among the first twelve in both lists, and are, therefore, probably the most widely read books of the month. Three of the five most popular books noted above are of American, two of English authorship. 'Eben Holden' and 'Alice of Old Vincennes' are mentioned at the top of nearly every separate report and are easily the leaders in popularity. Some of the formerly popular books like 'To Have and to Hold,' 'Janice Meredith,' 'Richard Carvel' and others are still mentioned, particularly in the librarians' list. Dramatizations are helping, doubtless, to keep these stories before the public. There are six books not fiction in the dealers' reports, ten in the librarians' reports."

## THE DISAPPEARANCE OF RIMED POETRY.

IS the art of making rime a lost one? Are the poets of the near future to abandon rime as ill-suited to the poetic expression of modern thought? These questions were discussed by a distinguished Russian critic, orator, and "ex-poet," C. N. Andreievsky, in a lecture which has attracted considerable attention. Ten years ago Andreievsky discarded poetry and resolved to express himself in prose, and he is convinced that while poetry is as vital, significant, and essential as ever, it is destined to undergo a radical change of form. His argument is replete with observations challenged as too sweeping and audacious, tho recognized as fruitful of suggestion.

It was Pushkin who declared that, however philosophy, science, and literature generally might evolve, poetry always remains the same in substance and in form, in aim and in means. Great poetry is always great, always fresh and impressive, and time or tide does not affect it. Where, asked Pushkin, are the astronomers, physicists, and metaphysicians of antiquity? The poetry of antiquity has not grown old or obsolete, and never will lose its power and charm. Andreievsky, referring to this view of the greatest Russian poet, supplements it by asserting that forms once beautiful and adequate may become wholly incapable of conveying the thoughts of the age. This, he claims, is the case now. The decadents have sought to devise a new form, but they have failed. The main burden of the lecture is summarized in the press as follows:

"Rimed verse is nearing the end of its days. There is nothing more to be expected from the old forms. Since Heine, Europe has not had a real master of rime. Three great poets, Turgeneff, Flaubert, and Maupassant, wrote prose. There has, in fact, developed a rimeless poetry, prose-poetry. After the middle of the nineteenth century that splendid rhetorician, Victor Hugo, continued to sing about the ideal, the mysteries of life and the depths of the human soul; but he was the last idealist-romanticist of Europe, and in his verses, which are not poetry of the highest type, there are a beauty and lyrical quality we shall never again enjoy in poetic productions. Hugo remained outside the all-pervading positivism and veritism of his time.

"But the later poets, influenced by the tendencies of the age, have not been able to give expression to the sentiments and ideas now prevalent. There has been no lack of skill or technical dexterity; but the old forms do not correspond to the new content and substance. The most exquisite makers of rime fail to produce genuine poetry and are either artificial or unintelligible. They leave the reader cold, indifferent. We no longer sing 'as the birds sing,' but rather as the blind pilgrims at the door of the cathedral. The magic crystal through which the old poets viewed the world is broken. Rime is fit for romances, librettos, humorous verses, but not for poetry.

"Analyze the works of the most talented poets of the last decade, and we find a hopeless antagonism between form and substance. Rostand is clever, brilliant, marvelous; but his substance is trivial, totally unrelated to modern themes. There are poets who have messages to deliver, but they deliver them in verse devoid of beauty and passion. It is idle to perfect and polish rime; the result is *nil* from any standpoint identified with the requirements of genuine poetry. Humanity has outgrown the old forms and methods.

"Yet poetry can not die. What forms will future poetic speech fashion? It is impossible to say. The artists of expression are seeking appropriate vehicles. The decadents have failed utterly, and it is not unlikely that the poetry of the future will be a compromise between Homer and Dostoiyevski. There will be no sudden change; the soil is gradually being prepared. Meantime, whenever a real piece of poetry is produced, it represents

a reversion to romanticism, to old motives and subjects. What value have such reversions? What satisfaction can they give readers who yearn for the note of modernity and expect the poet to interpret present life, express the new emotions, the new mode of comprehending nature and humanity?"

One critic, writing in the *Novoye Vremya*, holds that the pessimistic "ex-poet" has mistaken temporary satiety and confusion of schools for a permanent condition.—*Translations made for* THE LITERARY DIGEST.

## A DEFENSE OF SLANG.

THE present age has been called the "age of slang," and a recent writer, calling attention to the fact that slang is as much talked in the world of fashion as among the masses, takes occasion to analyze the relations of slang to literary speech, and to defend the former as a valuable adjunct of language. Writing in the London *Speaker*, he says:

"The fashionable slang is hardly even a language: it is like the formless cries of animals, dimly indicating certain broad, well-understood states of mind. 'Bored,' 'cut up,' 'jolly,' 'rotten' and so on are like the words of some tribe of savages, whose vocabulary has only twenty of them. If a man of fashion wished to protest against some solecism in another man of fashion, his utterance would be a mere string of set phrases, as lifeless as a string of dead fish. But an omnibus conductor (being filled with the Muse) would burst out into a solid literary effort: 'You're a gen'leman, arent yer . . . yer boots is a lot brighter than yer 'ed . . . there's precious little of yer and that's clothes . . . that's right, put yer cigar in yer mouth 'cos I can't see yer be'ind it . . . take it out again, do yer? you're young for smokin', but I've sent for yer mother. . . . Goin'? oh, don't run away, I won't 'arm yer. I've got a good 'art, I 'ave. . . . "Down with cruelty to animals," I say,' and so on. It is evident that this mode of speech is not only literary, but literary in a very ornate and almost artificial sense. Keats never put into a sonnet so many remote metaphors as a coster puts into a curse: his speech is one long allegory, like Spenser's 'Faerie Queen.'

"I do not imagine that it is necessary to demonstrate that this poetic allusiveness is the characteristic of true slang. Such an expression as 'Keep your hair on' is positively Meredithian in its perverse and mysterious manner of expressing an idea. The Americans have a well-known expression about 'swelled-head' as a description of self-approval, and the other day I heard a remarkable fantasia upon this air. An American said that after the Chinese war the Japanese wanted 'to put on their hats with a shoe-horn.' This is a monument of the true nature of slang, which consists in getting further and further away from the original conception, in treating it more and more as an assumption. It is rather like the literary doctrine of the Symbolists. . . . . .

"The real reason of this great development of eloquence among the lower orders again brings us back to the case of the aristocracy in earlier times. The lower classes live in a state of war, a war of words. Their readiness is the product of the same fiery individualism as the readiness of the old fighting oligarchs. Any cabman has to be ready with his tongue, as any gentleman of the last century had to be ready with his sword. It is unfortunate that the poetry which is developed by this process should be purely a grotesque poetry. But as the higher orders of society have entirely abdicated their right to speak with a heroic eloquence, it is no wonder that the language should develop by itself in the direction of a rowdy eloquence. The essential point is that somebody must be at work adding new symbols and new circumlocutions to a language.

"All slang is metaphor, and all metaphor is poetry. If we paused for a moment to examine the cheapest cant phrases that pass our lips every day, we should find that they were as rich and suggestive as so many sonnets. To take a single instance: we speak of a man in English social relations 'breaking the ice.' If this were expanded into a sonnet, we should have before us a dark and sublime picture of an ocean of everlasting ice, the somber and baffling mirror of the northern nature, over which men walked and danced and skated easily, but under which the living waters roared and toiled fathoms below. The world of slang is a kind of topsy-turveydom of poetry, full of blue moons and white elephants, of men losing their heads and men whose tongues run away with them—a whole chaos of fairy tales."

**Poetry and the Russian Censor.**—An amusing account of the vagaries of a Russian press censor named Krassovsky, who lived in the reign of the Czar Nicholas I. and was the terror of poets, is given by a recent writer in *The Anglo-Russian* (London). This literary iconoclast, whose black stamp was even more formidable than the blue-pencil wielded by the editor of our leading "smart" journal, of which Mr. Barry lately complained, not only blacked out all that did not meet his approval, but often gave the poet the benefit of his criticism. A poet named Alline wrote the following verses, which we give as translated in *The Anglo-Russian*, together with the interjected criticisms of the censor:

What bliss to live with Thee, to call Thee mine,
My love! Thou Pearl of all creation!
To catch upon Thy lips a smile divine,
Or gaze at Thee in rapturous adoration.

CENSOR: "*Rather strongly put. Woman is not worthy for her smile to be called divine.*"

Surrounded by a crowd of foes and spies,
When so-called friends would make us part,
Thou didst not listen to their slanderous lies
But Thou didst understand the longings of my heart.

CENSOR: "*You ought to have stated the exact nature of these longings. It is no matter to be trifled with, sir, you are talking of your soul.*"

Let envy hurl her poisoned shafts at me,
Let hatred persecute and curse,
Sweet girl, one loving look for Thee
Is worth the suffrage of the Universe.

CENSOR: "*Indeed? ! ! You forget that the Universe contains Czars, kings and other legal authorities whose good will is well worth cultivating—I should think!*"

Come, let us fly to desert distant parts,
Far from the madding crowd to rest at last,
True happiness to find when our (two) hearts
Together beat forgetful of the past.

CENSOR: "*The thoughts here expressed are dangerous in the extreme, and ought not to be disseminated, for they evidently mean that the poet declines to continue his service to the Czar, so as to be able to spend all his time with his beloved.*"

## NOTES.

THE history of the famous lost Gainsborough, which has just been recovered in Chicago and sold to Mr. J. Pierpont Morgan at a reported price of $125,000, is a singular one. The painting is a portrait of Elizabeth, Duchess of Devonshire, and at the Wynn-Ellis sale in 1876 it was bought by Messrs. Agnew for £10,605 (about $53,000), the largest sum ever paid up to that time in London for a single picture. While in the Bond Street premises it was stolen. A reward of £1,000 was offered, but the whereabouts of the picture remained a mystery until a short time ago, when the Scotland Yard officials informed Messrs. Agnew that they had traced the picture to America. Mr. Morland Agnew at once went to Chicago, where he identified the picture and returned with it in his possession.

OF the Diary of Captain Dreyfus, a part of which has lately appeared in *McClure's Magazine*, and which is now published in book form, *Literature* (London) says: "The book is a complete narrative, what the French would call a *simple récit*, of five years of this officer's life—'Cinq Années de ma Vie,' indeed, will be the French title. It includes the diary kept by Captain Dreyfus at the Ile du Diable—but this is only an episode, as the book starts at the very beginning, and ends after the Rennes trial. It is a plain straightforward tale crowded with facts, and absolutely free from declamation. There are no expostulations, no recriminations. Captain Dreyfus, in fact, has had but one aim—namely, to contribute to the *dossier* of this famous case the facts which he alone was in a position to note; and the absence of personal feeling adds greatly to the importance of the book. The book contains many letters from the captain's wife."

THE following characteristic letter from Mr. Rudyard Kipling to a friend on the editorial staff of the London *Times*, enclosing a copy of "The Recessional," has been printed by the New York *Times*, which gives it on "the very best authority":

"Dear——: Inclosed please find my sentiments on things—which I hope are yours. We've been blowing up the Trumpets of the New Moon a little too much for White Men, and it's about time we sobered down.

"If you would like it, it's at your service—on the old conditions, that I can use it if I want it later in book form. The sooner it's in print the better. I don't want any proof. Couldn't you run it to-night, so as to end the week piously?

"If it's not your line, please drop me a wire. Ever yours sincerely,
"R. K."

Kipling was asked to name his own price, but absolutely declined to accept any payment.

## SCIENCE AND INVENTION.

### THE TRANS-SIBERIAN EXPRESS.

WE are accustomed to think that the height of luxury in long railway journeys has been attained in this country. Our transcontinental trip, however, seems short in comparison with the journey from Moscow to Irkutsk, which takes nine days; and about four more will be required to reach the Pacific at Port Arthur, when the railway has been completed. Our Russian friends believe that they have succeeded in equipping a train whose accommodations are proportionately comfortable, and include some things that are unknown elsewhere. These are described in an article in the *Magasin Pittoresque* (Paris) written from information furnished by the Russian director of railroads. We translate several paragraphs below. Says the writer:

"The trans-Siberian express is composed of six coaches, one first- and two second-class, a saloon-coach containing a dining-room and a library, and a baggage-car. Great attention has been paid to the mechanical construction of the coaches so as to dimin ish as much as possible the motion of the cars, which on so long a journey becomes very tirèsome. Screens are placed at all the windows in such a manner as to protect the interior from dust and smoke.

"The cars are heated by means of hot water, and the temperature of each car can be controlled at will. From fifteen to twenty minutes suffices to heat the train, whose average temperature in the coldest weather never descends below 15° C. [59° F.]. Ventilators are provided for the escape of the impure air. . . . It is hardly necessary to state that the cars are lighted both within and without by electricity. The lamps suspended from the ceiling of the sleeping-compartments are furnished with an ingenious automatic contrivance whereby the light is extinguished or relighted as one closes or draws aside the curtains.

"The train is capable of carrying eighteen first-class and forty-eight second-class passengers. The dining-room contains nine small tables, and is capable of seating twenty-eight persons at

FIRST-CLASS COMPARTMENT.

one time. Travelers have also the privilege of being served with tea, coffee, and other refreshments in their own apartments. Meals are served at fixed hours, but the restaurant and buffet are open from eight o'clock in the morning to midnight.

"Adjoining the dining-room is the library, which is like a little *salon* elegantly furnished, with a bookcase containing about a hundred books in the Russian language, besides numerous foreign works, maps, periodicals, and the newspapers of the principal cities of the route. The best official and private publications regarding Siberia are also to be found here. Besides reading, travelers can while away the time with music, for the e is a piano, or seek amusement in cards, dominos, or chess, the favorite game of the Russians.

"One of the coaches contains a bath-room with enameled tub and a very complete arrangement for shower-baths. Like all the other toilet-rooms, floor and walls as high as windows are covered with decorated porcelain tiles. The rest of the walls and the ceiling are covered with wood paneling. Hot and cold water for baths and douches are provided by means of a reservoir placed on top of the coach capable of holding 300 gallons and frequently renewed.

"Besides all this there is a gymnasium with all kinds of apparatus for exercising all the muscles of the body, including a cham-

THE LIBRARY.

ber velocipede. Finally, for the use of the tourist-photographer, of whom there are multitudes at present, a dark cabinet has been fitted up with all the necessary paraphernalia.

"Besides the usual number of conductors, each train is provided with a mechanician, an electrician, a *chef de train*, three cooks, five waiters, and two men for the lighting and heating. The personnel of the express train also comprises a health officer, who has a little pharmacy and surgical instruments at his disposal in case of sickness or accident. As on the transatlantic steamers, medical service is gratuitous."—*Translation made for* THE LITERARY DIGEST.

### THE SURGICAL INSTINCT IN BIRDS.

SOME remarkable stories are told by a well-known French sportsman and writer on natural history regarding what he calls the "surgical instinct" of birds. According to this authority, the woodcock, partridge, and rail, and possibly some other birds, are able to dress their wounds with considerable skill. The following instances are quoted in *The National Druggist:*

"M. Fatio says that on several occasions he has killed woodcocks that were, when shot, convalescing from wounds previously received, and in every instance found the old injury neatly dressed with down plucked from the stems of feathers, and skilfully arranged over the wound, evidently by the long beak of the bird. In some instances, a solid plaster was thus formed, and in others ligatures had been applied to wounded or broken limbs.

"One day, he avers, in his bag he found a bird that had been severely wounded at some recent period, and on examining the wound he found it covered and protected by a sort of network of feathers, plucked by the bird from its own body and so arranged as to form a plaster completely covering and protecting the wounded surface, having evidently acted as a hemostatic in the first place, and subsequently as a shield, covering the wound. The feathers were fairly netted together, passing alternately under and above each other and forming a truly textile fabric, protecting the injury.

"The author declares that ten times, in his experience, among the game killed in his shooting-excursions, he has found birds whose limbs had been broken by shot, with the fractured ends neatly approximated and ligated together—a statement whose

truth is vouched for by no less a naturalist than Fulbert Dumonteil. . . . . .

"Another and really astounding fact, related by M. Fatio, and also vouched for by M. Dumonteil, is in regard to a woodcock that had been hit by M. Fatio in the afternoon of a certain day. After a long search the bird was given up, but the next morning, by accident, it was discovered, and, in the mean time, the wounded legs were found to be neatly ligated, a bandage, 'irreproachable in neatness,' declares our author, 'having been placed around each wounded limb.' The poor bird, however, had, in the process of dressing his wounds, got his beak entangled with some long soft feathers, from which, having no use of his feet, he was unable to free it, and was thus condemned, had he not been thus early discovered, to die of starvation. Referring to the skill and intelligence displayed by the bird in approximating and bandaging the broken limb, M. Fatio exclaims: 'Is not this proof of a sense of instinct of high order worthy of record?' While entirely agreeing with him in this respect, we can not but wonder that a man capable of entertaining such an opinion can find any pleasure in shooting such intelligent creatures."

## CAUSE OF IMMUNITY TO DISEASE.

IN an interesting address on this subject, Henry Winston Harper states his belief that, altho we do not yet know the exact mechanism by which certain processes confer immunity on the animal organism, we can be sure that the problem will shortly be solved. It seems clear to him that the process is chemical rather than purely physiological. Says Dr. Harper (as reported in *Science*, May 3):

"In its broadest sense, immunity represents that state of the living organism (animal or vegetable) which enables it to resist the toxic action of substances, whether such substances be introduced from an external source or are developed within the organism. Specific immunity is a state of immunity against a specific substance. This may be natural, as when the organism is normally non-susceptible; or it may be artificial (acquired), as in the case of protection against disease developed by a previous attack of the disease (as in smallpox), or by some other artificial means (vaccination, for instance)."

In Pasteur's time, the writer tells us, it seemed probable that artificial immunity was due to the action of microorganisms; but it soon was shown that the chemical products of these organisms had the same effect, and, later, it was demonstrated that the immunizing effect was due, not to the toxins produced by the bacteria, but to specific protective substances. To quote again:

"At this point Hueppe [one of the later authorities on the subject] says: 'It has been established that: (1) undergoing the disease; (2) inoculation with attenuated germs; (3) inoculation with disease germs which have become wholly impotent; (4) inoculation with saprophytes; and (5) inoculation with the metabolic products of the parasite, can all confer immunity; while, (6) inoculation with the specific poisons effects no immunization.' Then followed the experimental proof that completely attenuated bacteria can no longer produce the specific poison. This effectually separates the protective substance and the poison.

"The next important advance was the discovery of substances in the blood serum of animals immunized against diphtheria and tetanus that were able to specifically protect other animals against the toxins of these diseases. This discovery was made by Behring, and it at once opened an entirely new and promising field for investigation."

The result of this discovery was the introduction of diphtheria "antitoxin," and of other similar remedies, and the creation of serum-therapeutics. The quantitative relation between the "toxic" and the "anti" substances was shown for the first time in 1896 by Prof. Thomas R. Fraser in a lecture at the Royal Institution, London. Dr. Fraser concludes that, so far as snake venom is concerned, the antidotism of the "antivenene" is not the result of physiological reaction, is not due to phagocytic action, nor to the "resistance of tissues," but that a chemical theory, implying a reaction between antivenene and venom, which results in a neutralization of the toxic activities of the venom, is entirely compatible with the observed facts.

Acquired immunity, Dr. Harper goes on to say, may now be divided into two types, active and passive. Active immunity is produced by injection of non-fatal doses of an organism or its toxins; passive immunity, by injection of the serum of an actively immunized animal. Active immunity lasts much longer than the passive type. The phenomena of passive immunity disprove most of the theories that have been framed in the past to account for all these facts, such as Pasteur's theory that immunity is due to exhaustion of some special substance in the body on which the germs subsist, or Metchnikoff's that it depends on the education of the white blood corpuscles to contend successfully with their germ enemies. Buchner's hypothesis, which explains it as due to chemical changes in the integral cells of the body, is probably near the mark. In conclusion the author says:

"That the problem of immunity will be solved is only a question of time. The active research now in progress is rapidly dissipating the unknown; and when the chemical structure of the various animal proteids becomes a known quantity, their interaction will be readily seen and the solution of the problem will be an accomplished fact."

## PREVENTION OF UNFIT MARRIAGES.

THE recent passage, in several States, of laws framed for the purpose of preventing diseased or insane persons from marrying has not met with universal approval among scientific men. For instance, *The Hospital* (April 20), while maintaining that it is very wrong for epileptics, imbeciles, and diseased persons to marry and produce their kind, asserts that it is difficult to see how the evil consequences of these unions are to be prevented, and that attempts to control them by law are hardly likely to have the desired effect. Says this paper:

"In several States laws have been passed with the object of preventing the marriage of persons suffering from certain forms of disease and certain states of mental disorder, and if there were any hope of their being effective in preventing not only the marriage but the union of such persons laws to this effect would have our every sympathy. When, however, it becomes a question of demanding medical certificates testifying to the health of the applicants and their fitness for marriage, we rather shrink from the responsibility thus sought to be imposed upon the medical profession. We may be permitted, indeed, to doubt whether any physician, or any such board of physicians as is contemplated in Minnesota, for example, would find it practicable to establish any acceptable standard of fitness for marriage which would on the one hand be effectual, and on the other would be generally accepted. . . . No one who has watched the various changes of opinion which have followed the growth of knowledge concerning these diseases can pretend that there is any criterion by which admission within the pale of matrimony could be safely regulated without excluding so many as to set up a large and influential caste of compulsory celibates—a dangerous institution. . . . It would be a safe and a good rule, no doubt, for those so afflicted to be debarred from perpetuating their species. But that would not be enough. The family taint exists in others besides the one who shows the symptom, and if the result aimed at is to be attained, they also must be excluded from the pale of matrimony! According to the bill now proposed in Minnesota a physician must certify not only to the saneness of mind of the contracting parties, but to the soundness of intellect of both their families, and the minister who marries people without such a certificate is liable to fine, or even to imprisonment. The proposals are impracticable, good as may be their intent. To render illegal the marriage of the obviously insane or the actively diseased is good, but perhaps hardly worth while in view of the infrequency with which such marriages take place. To attempt, on the other hand, such a widespread interference with marriage as should exclude all those who bore the taint would not only be a big affair, but would in practise so largely depend upon medi-

cal certificates regarding matters as to which medical knowledge is by no means positive that its chief direct effect would be to give occupation to the lawyers. Indirectly, moreover, such a scheme would be certainly productive of many evils. No State can debar from marriage a large section of its people without running the risk of marriage itself becoming a matter of indifference."

## TO PREVENT WRECKS.

A LOSS of 7,642 human lives—that is the record of the twenty-three great shipwrecks of the nineteenth century; and this is but a small fraction of the total mortality through accident at sea. The heirs of Anthony Pollock, who went down with the ill-fated *Bourgogne*, have recently offered a prize of $19,000 "for the best appliance for the saving of life in case of maritime disaster." The award is about to be made, and according to Henry Harrison Lewis, who writes on the subject in *The World's Work* (May), it is possible that we may shortly bid good-by to all fear of such great ocean calamities as are even now too frequent. Mr. Lewis describes some of the devices offered: Those designed to prevent collisions are most numerous, and depend on wireless telegraphy, the detection of delicate sounds, and on heat and cold. It is practicable to record the approach of a vessel by the heat that it transmits, a feat that does not seem so wonderful when we remember that Ganot recorded in his Physics his invention of a thermopile that was sensitive to the heat of a candle held a quarter of a mile away.

Mr. Herman Herberts, of Newark, has constructed a thermopile that will detect differences of temperature as slight as one-one-millionth of a degree centigrade. One thermopile will be used on each side of a vessel, and wires will extend from it to the bridge of the vessel, where they connect with a galvanometer. One bell will ring on the approach of a heated object, as another steamer; another bell will ring on the approach of a colder object, like an iceberg.

Thomas A. Edison has a plan in which he disregards electricity and depends on the capacity of water for transmitting sound. In the keel he would have constructed a diaphragm operated by compressed air. An electric battery or a dynamo could operate this diaphragm so as to produce an explosive note which would travel miles through the water and be received on the diaphragms of other vessels. A code of signals could be used and long messages exchanged.

One of the most interesting instruments for detecting sounds at sea is invented by Dr. Joseph Schmitt, of the island of Anticosti, and is thus described by Mr. Lewis:

"It consists primarily of a hood in which the operator stands listening for distant sounds, which are collected in a funnel fixed just above the hood. There is a diaphragm in the funnel, and leading down therefrom two rubber tubes which are adjusted to the ears of the listener. There is also a mariner's compass resting under the funnel to let the listener know which direction the funnel is pointing when it records a sound. Dr. Schmitt made his first instrument from a dry-goods box which he used for a hood, a pair of old stethoscope tubes, and a piece of tin bent into the form of a funnel. Yet it worked successfully from the start. Sounds which could not be detected by the unaided ear, or, if audible, were lost as to direction, were instantly located by the director. Its value on ships and in lighthouses is undeniable, as the throbbing of a vessel may be heard with it when it is not possible to detect it with the ear unaided."

All these ideas and inventions, Mr. Lewis reminds us, presuppose the existence of fog, and Prof. Oliver Lodge, of Liverpool, asserts that fog can be dispersed by static electricity, discharges of which can be made to turn all fog banks into rain. Says the writer:

"The idea originated some years ago. Professor Lodge was crossing the ocean, and his vessel was detained several hours by the fog. On his arrival in Liverpool he set to work to see what could be done to dissipate fog on a small scale. He began to investigate the dust fog that often envelops cities. He succeeded in clearing a reservoir of magnesium smoke by means of electric discharges. . . . Speaking of his experiences on shipboard, he said:

"'On every steamer there are donkey-engines, and these can drive a very powerful Holtz or Wimshurst machine, one pole of which may be led to points on the masts. When electricity is discharged into fog on a small scale, the fog coagulates into globules and falls as rain. Perhaps it will on a large scale too.'

"Mr. McAdie [of the United States Weather Bureau] urges the practical application of Professor Lodge's ideas. He calls attention to the fact that nearly every steamer carries dynamos which could be used to charge transformers so that at least 50,000 volts could be obtained. Now as a matter of fact, this is merely a mundane application of what nature does when we talk of the phenomenon called 'thunder clearing the air,' for a static charge of 50,000 volts is a lightning flash of no mean proportions. It would certainly be a spectacular display, a number of great ocean liners speeding along with artificial lightning leaping from mast to mast. The flashing lights would be a source of protection even if the fog were not dissipated, and this brings us directly to those spectacular devices which even now are available.

"The constant use of rockets on a vessel may save it from destruction in a fog bank, and vessels have been known to avert disaster by flashing a searchlight rapidly across and back through the air. For a fog bank is an evanescent thing which may roll up like a rain-storm and cover a very limited or a very wide area. And sometimes the shaft of light reaches higher into the air than the low-lying bank of mist."

These, of course, are but a very small fraction of the protective devices that have been presented in competition for the Pollock prize. These include all kinds of life-buoys, bulkhead-doors, and life-boats, and extend as far as the system of storm warnings and charts perfected by the United States Hydrographic Office, which is probably the most far-reaching attempt to protect the mariner.

## SHALL WE SPLIT UP OUR LOCOMOTIVES?

IN our present locomotives the boiler and machinery are carried on one set of wheels. It is suggested editorially in *The Scientific American* (April 27) that since these wheels now have about all that they can carry, it may be necessary in case of further increase in size to separate the machinery from the boiler and carry them on different structures, practically moving the present machinery into the tender. After describing the enormous dimensions of some recent locomotives, the writer goes on to say:

"At the present juncture, then, we may reasonably ask whether, in view of the restrictions upon boiler space offered by the present method of carrying the engines and the boiler upon one frame, it would not be advisable to remove the engines and driving-wheels to the tender, replacing the present locomotive frame by a low frame or platform, designed simply for carrying a boiler of the full diameter allowable by the present loading gage. We have given the subject considerable study, and are satisfied that, as far as the tender is concerned, there are no structural difficulties to prevent the engines from being carried upon the same frame as the coal and water.

"By this separation of engines and boiler, it would be quite practicable to produce an express locomotive of from two and one-half to three times the power of the most powerful express locomotive existing to-day. In the first place, the boiler platform could be carried on two low, six-wheeled trucks, and by utilizing its full ten feet of width to carry a water-tube boiler of the Yarrow or some other first-class torpedo-boat type, and installing the necessary fans for forced draft (the latter, by the way, a device tried as long ago as 1830 by Seguin on one of Stephenson's engines), it would be possible to provide three times as much heating surface as is found in the boilers of our largest express locomotives.

"As to the utilization of this great steam capacity, the tender might contain two independent sets of engines, arranged on the

Atlantic type system, with the cylinders carried over four-wheeled trucks at either end, and two independent sets of four-coupled driving-wheels between them. The coal space on the tender could be built with its sides and ends sloping to the center after the fashion of a hopper-car, and a small bucket or screw conveyor could be arranged to bring a constant feed of coal from the bottom of the coal space up to the foot-plate of the boiler. . . . . .

"A water-tube boiler, built up to the full limits of the platform on which it was carried, would provide an ample supply of steam at 225 pounds pressure for two sets of the largest-sized engines that the adhesive weight of the tender would allow.

"If the steam-tender were provided with four 22 x 28-inch cylinders, and the maximum load on each set of coupled drivers were 110,000 pounds, the total draw-bar pull would be about 60,000 pounds, or sufficient to haul a train of fifteen Pullman cars over a road of normal gradients and curvature at an average speed of 60 to 65 miles an hour."

## RESPIRATION IN TUBERCULOSIS.

IT has been generally believed that consumptives breathe less air than persons in normal health, and that their respiration decreases as their lungs are invaded more and more by the disease. These ideas are completely overturned by a recent series of measurements made in France on nearly four hundred patients by Drs. Robin and Binet, who have reported their results to the Paris Academy of Sciences. We quote from a report in the *Revue Scientifique* (March 30):

"The investigators have discovered that the respiratory exchanges become greater in phthisical patients than in healthy persons, and this rule seems almost invariable, since in one hundred and sixty-three patients they found only eight per cent. of exceptions. The results bring out the following facts:

"(1) The volume of inspired air increases by 110 per cent. in men and 80 per cent. in women.

"(2) The exhaled carbonic acid per unit of weight and per minute increases 86 per cent. in women and 64 per cent. in men.

"(3) The total oxygen consumed proportionately to the weight and time increases 100 per cent. in women and 70 per cent. in men.

"(4) The oxygen absorbed by the tissues increases 162 per cent. in women and 94 per cent. in men.

"This abnormal activity of respiration exists also in the acute forms of the disease. . . . It undergoes alterations that have some relation with the progress or amelioration of the tuberculosis."

The investigators also find that the degree of increase of respiration and the chemical composition of the expired air are so characteristic of tuberculosis that they form an easy means of distinguishing between the true disease and the various maladies that are often confounded with it. They also believe that the old name "consumption" is a good one for the disease. They say:

"It is the consumption produced by the abnormal respiratory action and by demineralization which prepares the ground for the bacillary invasion. So when an individual is seen to be predisposed to the disease it is not sufficient to remove the bacillus: it is necessary to treat the patient hygienically and therapeutically in such manner as to modify the functional and nutritive trouble that is the condition of the development of the bacillus. Tuberculosis will become really avoidable only when we succeed in rendering the organism of those who are predisposed to it refractory to the germ of the disease."—*Translation made for* THE LITERARY DIGEST.

**Gluttony on Board Ship.**—An appeal for a simpler and less expensive cuisine on passenger steamers is made by Eustace Miles in *Health Culture* (April). Says Mr. Miles:

"It is the feeding which is the worst expense in the steamer voyage. It is because of the feeding that the charges for tickets are so high. Why is this? First of all, the foods are expensive in themselves. If we look at any list of prices—for instance, if we go into a restaurant, or if we examine ordinary wholesale or retail charges—we notice that the most costly items are meat and fish. Beef, mutton, lobster, crabs, poultry, etc., cost two or three times as much as other articles of food. Secondly, the quantity of food taken on board and consumed on board is stupendous. I do not like here to reveal what was told me by the purser of a large liner, but the figures were almost beyond belief. Thirdly, there is the waste, for more has to be taken on board than can be consumed. The weather may be rough, but it does not do to allow for a rough voyage. If the voyage be smooth, food will be wanted for all the passengers all the time, and much of the food is perishable unless it be kept in the ice-room, and that does not improve the taste. This vast amount of food is all the more objectionable because on a voyage one has less exercise and less worry than on land. One can not conduct business on board ship, and so, surely, the body and the brain should both need less food."

The writer believes that a line of steamers on which a specialty was made of cheap and wholesome food would be both popular and profitable. He says:

"Surely every one would prefer to pay a small price for his food if he reflected that for a certain proportion of the voyage he was not going to eat any food at all. It is maddening to have to pay for three or four large meals a day if one omits meals for three days out of the six. For the other three days one might well insist on having foods which were simple and nourishing and yet cheap. I can not say what the saving of cost would be to a traveler, but any one who took the trouble could work it out for himself."

**Injury of Coal by Exposure to the Weather.**—Coal exposed to the open air loses its heating power slowly. This loss, according to an editorial on the subject in *The Engineer*, is due to a slow combustion or union of the coal with the oxygen of the air, which differs from ordinary combustion only by its slowness and the small part of the coal which is liable to combustion under such circumstances. The author goes on to say: "Owing to the slowness of the operation the heat generated has an opportunity of escaping, and thus there is no marked rise of temperature. If, however, the heat thus generated is prevented from escaping, it may become banked up, so to speak, in the coal pile, and a rise of temperature may follow which will tend to accelerate the combustion, and thus these two conditions will progress, each tending to increase the other until finally active combustion bursts out, and *spontaneous combustion* is said to result. In general, however, danger of spontaneous combustion is not likely to arise under the conditions affecting the stationary engineer, and he is chiefly concerned with this slow combustion as an influence which may affect the quality of his coal. . . . The chief external conditions which may affect weathering are *moisture* and *temperature*. With a coal free from iron pyrites the presence of moisture is believed to slightly retard the operation of slow combustion, and thus to exercise a beneficial influence. On the other hand, with a coal rich in iron pyrites the conditions are reversed. This substance readily oxidizes at ordinary temperatures, the operation being aided by moisture. As a result of the operation, heat is developed and the pyrites is destroyed, in consequence of which the lump of coal tends to break up into small bits, thus exposing fresh surfaces to the air."

**Boats Towed by Kites.**—"Since the kite has entered into the domain of science, it has been greatly perfected," says *Cosmos* (April 20). "The aim has been to give it considerable ascensional force and great stability, so that it may be used to carry into the air apparatus used in meteorology and photography without fear of disastrous fall. But hitherto little has been done to utilize its force of traction, which may be considerable if it is given sufficient height. Recently, however, experiments in this direction have been made on the Moselle by a man who, having flown a Malay kite 2 meters [6½ feet] in length, caused it to tow against a somewhat swift current a boat holding six persons. The wind was quite strong, and it was very easy to increase the force of traction by flying several kites. Those of the Hargrave system would perhaps be the best, since one of this kind having a height of 1.4 meters [4⅔ feet] can scarcely be held by two men, when enough cord has been paid out. The retaining cable must possess great strength, especially if it is to hold several kites, or the tractive force may rupture it. It is evident that in this original mode of locomotion the direction of the wind plays an important part, for if the angle that it makes with the water-course exceeds 45° or 50°, the boat is hard to steer and moves slowly. Nevertheless this method of seeking a continuous current of air at a certain height is of the greatest simplicity. If it is not used, the reason is doubtless that it has been thought that not enough force would be developed by it. Still, the results already obtained are interesting."—*Translation made for* THE LITERARY DIGEST.

# THE RELIGIOUS WORLD.

## A HIGHER CRITIC ON THE ESSENTIALS OF CHRISTIANITY.

THE merely negative side of German Biblical criticism is the one most familiar to English readers. But, as in the case of the leader of American higher critics, Professor Briggs, the advanced German critics profess the utmost reverence for the person of Christ. In Dr. Adolf Harnack's book of printed lectures entitled "What is Christianity?" an English translation of which has lately appeared, passage follows passage in which the language of devotion to Christ could hardly be exceeded by an orthodox believer. The London *Spectator* (April 20), in commenting on this book, says:

"The purpose of the lectures, as announced in the first of the series, is to insist upon the importance for the world of fact 'that a man of the name of Jesus Christ once stood in their midst,' and upon the importance of the Gospel which He proclaimed. What was, and is, the Gospel? In Dr. Harnack's view it was, and is, 'eternal life in the midst of time, by the strength and under the eyes of God.' It will be the simplest course to make as clear as possible first of all what Dr. Harnack includes in this definition, and then offer any criticisms that suggest themselves.

"Christianity is a life, and it must therefore be studied, first of all, in the life of its Founder. The most striking characteristic of Christ, in Dr. Harnack's view, is the combination of entire absorption in His relation to God with a frank interest in the world, and avoidance of asceticism. 'He lived in the continual consciousness of God's presence. His food and drink was to do God's will. But he did not speak like an heroic penitent, or like an ascetic who has turned his back upon the world. His eye rested kindly upon the whole world, and he saw it as it was, in all its varied and changing colors. His gaze penetrated the veil of the earthly, and he recognized everywhere the hand of the living God.' Consequently the new teacher's idea of God came into conflict with that of the official leaders of the people. 'They thought of God as of a despot guarding the ceremonial observances in His household; he breathed in the presence of God. They saw Him only in His law, which they had converted into a labyrinth of dark defiles, blind alleys, and secret passages; he saw and felt Him everywhere.' The teaching of Christ, therefore, was all concerned with man's soul and its relation to God. This relation is expressed in the Gospel in three chief ways—in regard to 'the kingdom of God,' the Fatherhood of God, and the attainment of righteousness by the new method of love and humility. . . . . .

"What, then, the reader will ask, has Dr. Harnack to say about the root affirmations of the Christian creed, the divinity of Christ, His resurrection from the dead, and His mission of the Comforter? In the first place, he allows that the title 'Son of God' was one which Jesus applied to Himself. The story of the temptation in the wilderness is sufficient in itself, he considers, to demonstrate this. What is implied in the term is knowledge of God. 'No man *knoweth* the Son but the Father; neither *knoweth* any man the Father save the Son.' Dr. Harnack allows that the knowledge of the Father claimed by Jesus was unique. 'Jesus is convinced that he knows God in a way in which no one ever knew Him before.' . . . And yet, while allowing that Jesus Christ was in every way absolutely unique in history, Dr. Harnack will not allow the Christian Church to worship Him. From the Synoptists he rejects the story of the birth, and he considers that the faith had already been seriously corrupted when the Fourth Gospel was written, with its notion of a life with God before the Incarnation. In the same way, as to the Resurrection, Dr. Harnack is candor itself in his admissions: 'There is no historical fact more certain than that the Apostle Paul was not the first to emphasize so prominently the significance of Christ's death and resurrection, but that in recognizing their meaning he stood exactly on the same ground as the primitive community.' He considers that St. Paul knew the early tradition about the empty grave. Further, he allows that the world owes 'the certainty of eternal life *for which it was meant*' to the open grave of Jesus: 'It is useless to cite Plato; it is useless to point to the Persian religion, and the ideas and the literature of later Judaism. All that would have perished and has perished; but the certainty of the Resurrection and of a life eternal which is bound up with the grave in Joseph's garden has not perished, and on the conviction that *Jesus lives* we still base those hopes of citizenship in an Eternal City which make an earthly life worth living and tolerable.' 'Dr. Harnack, then, allows the Resurrection story?' asks the reader. Not at all. He holds that the evidence of the post-Resurrection appearances is not trustworthy, so that the 'certainty' of which he speaks is not certainty at all. That is to say, Dr. Harnack holds up in one hand to our admiration the perfect flower of the Christian faith and hope, while with the other hand he cuts away their roots. . . . . .

"We sympathize most heartily with Dr. Harnack's wish to retain the Christian religion as an effective force among educated people; but we do not believe the Christian religion can be divorced from the great Christian affirmations of the divinity and resurrection of Christ."

## THE MISSIONARIES AND THEIR CRITICS AGAIN.

THE discussion over the conduct of the missionaries in China, begun last year but precipitated anew by Mark Twain in *The North American Review* for February, still continues unabated. The most important article of the month is one by the Rev. Dr. Judson Smith, corresponding secretary of the American Board of Commissioners for Foreign Missions. We have already given Dr. Smith's letter to Mark Twain in defense of the Rev. Mr. Ament, and Mark Twain's reply. In *The North American Review* (May), Dr. Smith confines himself mainly to a defense of the two missionaries whose actions have drawn forth the most criticism.

After painting a vivid picture of conditions in China during the Boxer outbreak, when "the imperial Government was paralyzed" and the "provincial and local government was interrupted," Dr. Smith says:

"Messrs. Ament and Tewksbury, of the American Board, like the missionaries of other boards in similar positions, felt that it would be intolerable for them to suffer those Chinese refugees, who had helped during the siege and won encomiums for the share they had borne in it, to perish, as they must if something were not done in their behalf. The case was urgent. These natives were without homes, without food, and without means of obtaining either; food and shelter for the very next day, and then for the days after that, must be found. Delay meant starvation and death. In the absence of all native authority, with the knowledge and approval of Mr. Conger and other ambassadors, two colonies were established in different parts of Peking, in courts abandoned by their owners, and were supported from the resources that were found in those courts; just as the ambassadors and all the rest in the siege had been kept alive by what they found within their reach from the British Legation. All that was done by Dr. Ament and Mr. Tewkesbury, in occupying these two courts and in supplying the immediate, pressing necessities of the refugees under their care, was done by the advice and with the full knowledge of Mr. Conger, to whom the perplexing questions were referred for counsel; and their associates have unanimously recorded their deliberate approval of what they did. . . . . .

"When the Empress fled to Shensi, a thousand miles away, and the court followed her, all Chinese authority in Peking ceased, and the allies policed the captured and ruined city. They declared that they could not provide for these native refugees. There was no one else to whom these hapless ones could look for help but their missionary friends and leaders. If these failed, then they must be turned into the streets of Peking, or into the lawless and ravaged districts outside, to starve, or to perish by the sword. The Boxers and those who acted with the Boxers had robbed them of all they possessed, had destroyed their homes, had driven them into exile, had slain hundreds and thousands of their associates in cold blood. What should the missionaries have done? . . . . .

"In a letter of November 18, which was given at once to the

public, Dr. Ament says that he 'seized the palace of a petty prince,' who had harbored the Boxers for many weeks, and sat as judge on the execution of the native converts in that part of the city. This has seemed to some to indicate violence, disregard of law, and practical robbery. But Dr. Ament had no soldiers to aid him; his refugees were unarmed men, women, and children; the owner of the courts had fled, and there was no one to oppose him. He did what Mr. Conger advised; he took possession for the time, and used what he found for the temporary relief of himself and his dependents, who had no other shelter or resource."

This, however, was a mere temporary arrangement, and some more permanent provision was demanded. Dr. Smith continues:

"It was under these circumstances that Messrs. Ament and Tewksbury struck out the plan which they have followed with such remarkable success, of securing indemnity for the Chinese who had suffered losses, from the very villages where these losses had been incurred. In this course, they have had the open and public approval of Mr. Conger and other authorities, and have followed a well-known Chinese usage. With great energy and good sense and patience, which have won the commendation of the ambassadors in Peking, of the Chinese commissioners of peace, Li Hung Chang and Prince Ching, and of the native authorities themselves in the several villages where they have gone, these gentlemen have secured the indemnity that was justly due, *not for themselves, not for the mission*, let it be clearly understood, but wholly and solely *for the Chinese who were dependent upon them.* Those who had robbed and dispossessed these people were the very ones to whom appeal was made by the missionary, not with military force to back him, but with his own personal influence and the justice of the case to sustain his plea that they make good the loss which they had inflicted, and provide for those whom they had made outcasts. The good sense of the head men of these Chinese villages acknowledged the justice of the claim, and most of these exiled Chinese are reinstated in their villages. New homes are promised them and support until they can provide for it. Money was brought in such amounts as to constitute a fund for the support of widows and orphans, and for the reestablishment of churches that had been destroyed. According to immemorial custom in China, these villages, through their head men, are responsible for the gross indignities and losses inflicted on innocent men and women within their walls. They knew these people had been wronged, and that the village ought to repair the wrong. The head men acted for the village, used the common property of the village to reimburse the losses, and assumed the duty of meting out justice to the individual offenders."

The following four articles are, according to Mr. Tewksbury, "practically the basis" on which settlements were made:

"'1. Cemetery and suitable burial for adherents murdered.

"'2. Pensions for the aged, for widows and orphans, and for others left by the Boxer outrages without adequate support or helpers.

"'3. Money compensation for property destroyed was reckoned, in general, about one-third above the value of the property, which may be called a *primitive* indemnity. We asked no indemnity for life except where there were individuals left without support. All money to be in care of the church, and no payment to be made to individual Christians until claims for indemnity have been audited by committee of foreigners and natives appointed by the church. Any balance after all claims are paid to be used as designated by the church.

"'4. If desired by us, in any village where disturbances have occurred, a suitable location shall be provided for a Christian chapel."

As to the third of these articles, Dr. Smith writes:

"Why was one-third additional to the actual damages included in the settlement? It was a part of the restitution which the villages owed to those of their own citizens who had suffered outrage and exile, as well as the loss of property, at their hands or by their fault. The property destroyed in such cases never covers all the loss. The missionaries are the only source of information on this point, and they have not said enough about this feature of the case to make it altogether plain. Dr. Ament speaks of the 'one-third' as used in supporting widows and orphans, those whose natural wage-earners had been murdered by the Boxers and their accomplices in these villages. Mr. Tewksbury speaks of it as the proper measure of money compensation for property destroyed. This additional one-third was an integral part of the settlement, agreed upon and accepted by the village officials without a murmur, approved by Li Hung Chang and by his lieutenant. No one in China appears to have raised a question about it. It is difficult to see why any one else should be disturbed about it."

The New York *Sun*, which, tho an "expansion" paper, has been the chief critic of the missionaries, analyzes Dr. Smith's statements in two lengthy editorials. It says (May 4):

"The corresponding secretary of the American Board of Foreign Missions adds nothing by his article in this month's *North American Review* to the material for forming an unprejudiced judgment of the conduct of the missionaries. The Rev. Dr. Judson Smith's intentions are good, but his statements are unconsciously biased by the idea that the cause of foreign missions will suffer unless these particular missionaries are 'vindicated.' His account of their doings, therefore, is much less candid than the avowals of Dr. Ament and Mr. Tewksbury themselves. Where Dr. Ament and Mr. Tewksbury, in China, have stated the facts squarely and defended the irregularity of their proceedings only on the ground of high emergency superseding the ordinary moral law, the Rev. Dr. Judson Smith, at his desk in Boston, glosses over the questionable transactions with a series of euphemisms of which we shall give a few illustrations.

"The unlawful occupation by the missionaries of Chinese establishments deserted by Boxers or alleged 'Boxer sympathizers' and the unlawful conversion by the missionaries of objects of value found in those houses are compared by Dr. Smith—will it be believed?—to the occupation and use of the British Legation by the other legationers during the siege:

"'In the absence of all native authority, with the knowledge and approval of Mr. Conger and other ambassadors, two colonies were established in different parts of Peking, in courts abandoned by their owners, and were supported from the resources found in those courts; *just as the ambassadors and all the rest in the siege had been kept alive by what they found within their reach in the British Legation.*'

"What Dr. Judson Smith describes as 'support from the resources found in these courts,' Dr. Ament has already described, without mincing words, as 'selling off the stuff found in the palace he [the missionary] took as a residence.'

"Dr. Judson Smith says further that the missionaries have denied 'the charge of looting.' Mr. Conger also has said, 'The missionaries did not loot.' But Dr. Ament, in an article dictated and revised by himself for publication in *The Sun*, has bluntly admitted the looting and even attempted to justify it. We quote his own words [the italics are *The Sun's*]:

"'In explanation of *anything the missionaries may have done in the line of looting*, it is only right to say that a famine was predicted for the coming winter, that they had hundreds of people in their charge who were in immediate need of food, clothing, and shelter, and who looked to the missionaries for assistance. It is but justice to them to say that if in the ardor of their desire to provide for their people they did some things that attracted criticism, *they did it with the best of intentions.*'

"And in an interview at Kobe, Dr. Ament, while on his way home to this country in Mr. Conger's company, gave an amazing picture of his experience in 'selling stuff' that did not belong to him. We are now quoting from the Kobe *Herald* of April 6:

'"The Tungchau mission, through Mr. Tewksbury, were selling things at Prince Yu's residence, and Miss Smith, of the London Mission, was selling off stuff from Boxer premises she had taken for her people. Mine was the last sale of the three. There were no especially valuable things on our premises—the owner was a broken-down Mongol prince; one sable robe, numbers of fox and squirrel-skin garments, and a large number of garments of inferior quality. The sale lasted two weeks."

'"Did you have it at stated times of day, then?"

'"No, at any time when the officers came. I had an experienced Chinaman put a value on the things, and I then charged about one-half or two-thirds of the value they would have brought in ordinary times. The officers were very glad to purchase at those rates."

'"Then there was no regular sale?"

'"No, the things were marked, and the officers would come and go, prowling around the rooms and bringing to me what they

wanted while I was going on with my work, and this, as I say, went on for about a fortnight. When they saw what things were wanted, some of our Christians borrowed a little money and went on the streets and purchased fur garments from Russian or Sikh soldiers, and brought them in and sold them to the officers at a good profit."'

"Thus was the palace occupied in the absence of its proprietor by the Rev. Dr. Ament turned into a receptacle and mart for stolen goods; not stolen, he asserts, by the 'Christians' who brought the stuff in, but by them purchased on speculation from the original looters and sold under Dr. Ament's supervision at a good profit. . . . If the Rev. Dr. Judson Smith blinks the word loot, the Rev. Dr. W. S. Ament doesn't. We wonder whether the first-named divine has really read all the evidence afforded by his own chief witness."

In its issue of May 6, commenting on Mr. Tewksbury's statement concerning the one-third "primitive indemnity" (possibly a misprint for *punitive* indemnity) in excess of actual damages, and the missionaries' demand that "suitable locations shall be provided for a Christian chapel" by the Chinese, *The Sun* says:

"Instead of showing a perfect understanding of the facts about the exaction and collection of the 'indemnity' and the additional fine of thirty-three and one-third per cent., the Rev. Dr. Judson Smith manifests either an astonishing ignorance of what Dr. Ament and Mr. Tewksbury have admitted that they did, or discreditable willingness to blur and obscure with unctuous generalities the specific facts. . . . In addition to indemnity for life destroyed and damages for property up to its full value and one-third beyond, a grant of land for a mission chapel was exacted, according to Mr. Tewksbury, wherever a site was 'desired' by the missionaries. When we bear in mind the fact that the assessment and collection of the damages for the sufferers, and the imposition of the additional thirty-three and one-third per cent. 'to be used as designated by the church,' and the acquisition of chapel sites wherever desired by the missionaries, were all prosecuted under lynch law, we turn again with some confusion of mind to the Rev. Dr. Judson Smith's conclusion that 'the closer we investigate the clearer is their course, the nobler seem their deeds.'

"No statement yet from any source has explained satisfactorily the additional penalty which Mr. Tewksbury, as reported by Dr. Judson Smith, describes as a 'primitive indemnity,' and of which Dr. Ament says more candidly: 'In most cases a sum equal to about one-third of the above indemnity was *demanded for the church.*' . . . Neither Dr. Ament nor Minister Conger, whom Dr. Judson Smith represents as having approved the illegal descent upon the villages for the collection of a primitive or punitive indemnity, as the case may be, has thrown any light upon the character of the moral suasion, or coercion, or terrorism, or fear of the military, which induced the Chinese of the village to over their taels."

Mr. Ament's own explanation of the "one-third extra" is given in an interview in Chicago, quoted in the Springfield *Republican* pay (May 4), as follows:

"Let it be understood that the clan is the unit of Chinese society, not the individual. The clan is responsible for the actions of its members. If a member goes wrong, the whole community is held responsible. If one member is promoted it works to the advantage of the whole community. In the various clans were people who had no property. They had to be cared for, and it was for their support that the extra one-third was assessed. This is one of the principles of Chinese society that is to be commended. In this connection let me say that it is the policy of the missionaries to conserve everything in Chinese society that is conducive to good morals."

In a previous explanation, made to *The Sun*, he had said:

"In general the process has been as follows: To demand the rebuilding of houses or an equivalent in money, to demand payment for tools and grains carried off, or for animals stolen; in case the head of a family had been murdered, or one who was the provider, the sum of 500 taels is demanded for the support of the survivor. In most cases, a sum equal to about one-third of the above-mentioned indemnity was demanded for the church, which sum was used more or less entirely to provide for the present needs of distressed people."

This, says the Springfield *Republican*, "is an explanation which does not explain, and it is to be hoped that Dr. Ament will try again to clear up the point":

"It is hard to comprehend the equity of collecting an extra sum 'for the church,' equal to one-third of the indemnities collected for persons who had suffered losses, said extra sum to be used for 'distressed persons,' who apparently had lost nothing of sufficient value to warrant the collection of indemnities for them. Who were those 'distressed people'? What was the real basis of their claims? In his Chicago statement Dr. Ament speaks of them as persons 'who had no property,' the inference being that they had had no property at any time. Were they in reality converts whom the missionaries had been accustomed to support and whom they still felt constrained to feed and clothe? In that case they made their indigent protégés a charge upon the Chinese villages, notwithstanding that no indemnity could be collected for them on the ground that they had suffered losses in life or property."

In *The Independent* (May 9), Mr. Ament writes a short defense of his actions. He says nothing further about "the one-third excess" indemnity, but claims the authority of Mr. Conger for all that was done by the American missionaries.

## CHURCH UNITY AS SEEN FROM THREE DIFFERENT STANDPOINTS.

THE subject of church unity, which has occupied so large a place in the religious horizon of late years, was discussed under novel conditions at the annual meeting of the New Jersey Association of Congregational Churches, held in Baltimore on April 24. Three plans for Christian unity were presented: the first, by the Rev. Dr. W. H. Ward, editor of *The Independent*, on behalf of the Congregationalists; the second, by Bishop Paret, of the Protestant Episcopal diocese of Maryland, on behalf of Anglicans; and the third, by the Rev. M. F. Foley, rector of St. Paul's Roman Catholic Church, Baltimore, who represented Cardinal Gibbons.

Dr. Ward's plan was that all who accept the discipleship of Christ and "love His church and its work" should unite on the basis of "liberty of conscience in the interpretation of the Scriptures and in the administration of the church." He continued (we quote from *The Pilot*, Boston, May 4):

"Liberty is our word and message. We would have in the same universal church congregations that baptize infants and those that baptize nobody; conferences that want bishops and those that want none. We would have many denominations unite organically, and others that are not ready for it unite federatively, but all recognizing, fellowshiping all. Ours is a very simple, we believe the only feasible, way for church union until we can melt all minds into one mold, something not to be desired even if it were possible."

Dr. Paret's plan is, naturally, more organic than the Congregational one. He wishes the church to have "the oneness of the living tree." The living tree, he adds, "was Christ's own emblem for His church and its oneness." He then lays down the well-known "Lambeth Quadrilateral," prepared by the Anglican bishops of England and America in 1888 as a basis of church unity. These four essentials are (we quote from *The Church Standard*, Prot. Episc.):

"(1) The Holy Scriptures of the Old and New Testaments, as 'containing all things necessary to salvation,' and as being the rule and ultimate standard of faith.

"(2) The Apostles' Creed, as the baptismal symbol; and the Nicene Creed as the sufficient statement of the Christian faith.

"(3) The two sacraments ordained by Christ Himself—Baptism and the Supper of the Lord—ministered with unfailing use of Christ's words of institution, and of the elements ordained by Him.

"(4) The historic episcopate, locally adapted in the methods of

its administration to the varying needs of the nations and peoples called of God into the unity of His church."

Dr. Paret added:

"I do not look for any absorption of one body by another or any great coalescing of different denominations. I think it must come by the slow process of growth of individual character in Christian knowledge and in love. But, whether I am right or wrong in my belief, let us lovingly pray for it, work for it, hope for it, and patiently wait for it."

The Roman Catholic plan for Christian unity was thus given by Father Foley:

"I desire to say with Cardinal Gibbons that I can not conceive any practical plan for the ecclesiastical union of all who bear the Christian name which does not recognize:

"1. Some authority, living and acting, that can definitely say what is or is not divinely revealed truth, since upon Christ's revelation His church must be grounded.

"2. The obligation of receiving in its entirety Christian revelation, since Christ's work in giving a revelation would be, to say the least, useless if each individual were left free to accept or reject that revelation, or any part of it, as his whim might dictate.

"3. That since Christ left a revelation He must have left some authorized interpreter of it; otherwise it would be a puzzle given to unaided ignorance, something which the 'unlearned and unstable' might 'wrest to their own destruction.'

"4. That since the mission of Christ's church is to 'teach all nations to observe all things whatsoever He has commanded,' there must be some teacher teaching in Christ's name and 'as one having authority' to guide His people unerringly in the way of truth. All that can be said on this great subject has been stated by Leo XIII. on Christian unity, when he says:

"'It is sufficiently well known unto you that no small share of our thoughts and of our care is devoted to the endeavor of bringing back to the fold, placed under the guardianship of Jesus Christ, Chief Pastor of souls, sheep that have strayed. Bent upon this, we have thought it most conducive to this salutary end and purpose to outline the model and, as it were, the lineaments of the church. Among these the most worthy of our chief consideration is unity. This the divine Author impressed on it as a lasting sign of truth and unconquerable strength.'"

## MODERN ISRAEL AND ITS IDEALS.

IN the course of a discussion of the longings and hopes of modern Israel, the *Alte Glaube*, of Leipsic, speaks of a "remarkable movement" going on in Israel, especially in Germany. This movement appears to be in the direction of Zionism. We condense the writer's statements as follows:

"Altho officially the Jews are recognized by modern law as the equals of their Christian neighbors, they evidently do not feel themselves at home in the present surroundings. Antisemitism is not only a political but also a social power, against which all of the wealth of modern Judaism is helpless. A large portion of the Jewish youth in Central Europe, in order to find access to the positions of power and influence in the state and in society, submit to baptism and nominally become Christians. As officially reported, the average number of Jews who each year enter the churches is in Germany alone about five hundred, while in Austria it is proportionally larger. In the parliament, peculiar Jewish interests find but feeble defenders; not even does political liberalism have the courage to combat antisemitism. This the Jews themselves feel, and they are not able to summon up courage to insist upon recognition socially and politically, and are often ready to deny their Jewish descent.

It is this quasi-inferior position in public life that has induced the Jews themselves to call for a "general Jewish convention," which is to devise ways and means to remedy this trouble. In some of the preliminary meetings held for this purpose, the question whether the Jews are a nation or only a religious communion was vigorously debated, some speakers maintaining that Israel as a nation has no possible future, its mission in this respect having been fulfilled. It is noteworthy that all speakers who expressed sentiments of this kind were coldly received, while those who maintained that the Jews still constitute a nation were applauded to the echo, and those who pictured the national future of the peculiar people in glowing words were enthusiastically cheered. The ideals of Zionism evidently are expressive of the hopes and longings of many sections of modern Israel; and facts like these, after the emancipation politically of the Jews for many decades, show that the purposes which modern liberal legislation had in these reforms, namely, that the Jews should amalgamate with the various nations, will never be achieved. Israel evidently still hopes to become a nation.—*Translation made for* THE LITERARY DIGEST.

## THE AMERICAN PASSION PLAY.

ONCE in ten years American journals devote the skill of artist and writer to delineations of the drama acted by rude peasant folk in a distant Bavarian village, and thousands of Americans take the long journey thither to witness it; and yet, a late writer points out, they could have beheld, without leaving the confines of America, "a drama based on the same motive as that at Ober-Ammergau, but more intense, more real, more tragic than any ever attempted by the peasants of Bavaria." In *The Home Magazine* (May) Mr. Gilbert Cramer writes:

"'Know well thine own land' is a wise command, and one that should be taken into careful account by those Americans who have yet to learn that in their own country there is an order whose members at dozens of different places yearly represent Christ's journey to His crucifixion, bearing crosses of crushing weight along paths of cruel stones and cactus to a mimic Calvary, whereon takes place the flesh-and-blood crucifixion of an unworthy representative of the Redeemer. More than 300 years ago the order of Los Hermanos Penitentes—The Penitent Brothers—was founded in Spain. Brought to Mexico, and afterward to what is now New Mexico, by the Franciscan friars, who kept step with the *conquistadores*, the order soon secured a firm and lasting foothold among the brave but ignorant and fanatic people who sprang from Spain's contribution to the New World."

It is chiefly in Lent that the Penitentes are active. On every Friday in that season occur their terrible self-tortures, in which the flagellants apply their heavy whips to their naked backs while marching from morning until evening in a religious procession. But it is on Good Friday that the most interesting ceremony occurs—the drama of the crucifixion. This begins with a march, from the morada to a cross on a neighboring hill—called "the Procession of the Blood of Christ." At the foot of the cross, the cross-bearers throw themselves upon the ground and with the heavy beams resting upon their backs lie prostrate for many minutes. Then the procession returns and the Penitentes retire within the morada. The writer continues:

"The supreme moment of the day is now at hand. Willing Brothers of Light burrow out a deep hole, a few yards from the morada, and lay a large cross beside it. Presently the *Hermano Mayor*, with two of his assistants, come forth from the morada leading a blood-stained figure, clad only in white drawers and black head-bag. In some places the prospective occupant of the cross is yearly chosen by lot, but at Taos he is a volunteer. Without flinching, and with no sign of fear, he walks to the prostrate cross and lays himself at full length upon it. Instantly two stalwart Brothers of Light seize the ends of a stout hempen rope, and lash the arms, trunk, and legs of the victim to the timbers of the cross. Others, without delay, lift the beam, with its living burden, and drop it into the waiting hole, which is at once filled up with loose dirt and stones. Formerly it was the practise to spike the victim to the cross, and deaths among the crucified were not uncommon; but so persistent has been the opposition of both church and state to all the practises of the Penitentes that nailing to the cross is now practised only in a few remote hamlets. In other places, as already indicated, recourse is had to binding with the rope, that has first been soaked in water. The victim fares badly enough, even under the new order. The weight of the hanging man causes the wet rope to sink deeper

into the flesh and stays the circulation of the blood. The skin assumes a purple hue, and then turns slowly to a black, while the closed eyes and drooping head soon give token that the sufferer has relapsed into unconsciousness. Already an intense hush has fallen upon the group gathered at the foot of the cross, where lies a black-capped penitent barebacked upon a bed of cactus. The other brothers, their brows clasped in crowns of cactus, stand motionless as statues, their eyes lifted in reverent awe to the central figure. Here and there lips are seen to move in silent prayer, but the only sounds that are heard are the low sobs of some kneeling woman.

"The moments drag with painful weariness, and seem to have lengthened into hours before the *Hermano Mayor* gives the signal to lower the cross. This done, the Brothers of Light quickly loose the bonds of the crucified one, and the motionless form is dragged into the morada, to be brought to life again. Even since nailing has gone out of fashion there are times when the body taken from the cross gives no sign of life, and is never seen in public after it is carried into the morada.

"The crucifixion over, the cross-bearers, cactus-bearers, and self-whippers, with their attendants, resume their grisly marches between morada and graveyard, and these are kept up till sunset. About eight o'clock in the evening the *timeblas* or 'dark' services—designated to represent the arrival of the soul in Purgatory—are held in a closed and unlighted room. Only active members are admitted; and to the huddled watchers outside comes nothing but groans and sobs and the clank of chains. At the end of an hour the procession returns to the morada; the door is closed, and until midnight the Penitentes are busied with prayer. Then the door creaks once more, and dark forms scatter to the four quarters of the compass. Till Lent comes again the Brotherhood has balanced its account with God."

## RELIGIOUS NOTES.

In referring to the regulations governing elective study in some of the leading American universities, we inadvertently included Harvard among the number of those which require students to select one major and two minors at the outset of their course (THE LITERARY DIGEST, April 13). This plan, which is quite general in advanced or graduate study both in this country and Germany, does not, a Harvard man reminds us, prevail at Harvard in undergraduate work for the degree of B.A. The requiremnte there is to choose a certain amount of work from a very wide range of electives, and the studies actually selected may be either few or numerous.

At the Golden Rule meeting recently held in New York under the auspices of the De Hirsch Monument Association (THE LITERARY DIGEST, April 13), it was resolved to organize a Golden Rule Brotherhood, for the purpose, first, of "teaching the world to appreciate and practise the Golden Rule"; second, of "eradicating racial prejudice and religious intolerance"; third, of "advocating and advancing peace, and uniting men in a universal fraternity." The organization is wholly non-sectarian, and it is expected that Jew, Christian, Confucian, and all other believers in brotherhood will be equally interested, as they all have an equal right to lay claim to the "Golden Rule." The chairman of the committee on organization is Mr. James Talcott, of 7 West Fifty-seventh Street. "We feel," say the committee, "that no argument is needed to emphasize the timeliness of such a brotherhood, and the great good it can accomplish in teaching men to practise the principles of religion and of American citizenship—namely, freedom, equality, and fraternity."

Mr. Willard S. Mattox, of the Christian Science Publication Committee of New York State, writes us concerning Dr. Carroll's statistics which appeared in our columns April 13:

*Editor of* THE LITERARY DIGEST: Dr. H. K. Carroll's estimate of the membership of the Christian Science Churches, as tabulated by him along with other denominational statistics, is incorrect. Whatever his source of information, he has been misled as to the facts. Christian Science has not decreased in membership during any year since its discovery and founding. There are no statistics compiled by the Christian Science Church showing the total membership throughout the world. It is impossible, therefore, for Dr. Carroll to base his figures on any exact knowledge of his own. The total number of Christian Scientists in 1899 was not 100,000, and it was not 90,000 in 1890. While the statistics for all the Christian Science churches throughout the world are not obtainable, we know the membership of The First Church of Christ, Scientist, in Boston, Mass., the mother church. In July, 1889, this was 14,843; in 1890 in was 18,131, an increase in one year of 3,288. This marvelous growth in the mother church is indicative of the rapid development of the general movement in the field. Thirty-eight new branch churches were established in this year, between 1889 and 1900, when Dr. Carroll says there was a falling-off in membership of 10,000. The number of public reading-rooms associated with Christian Science churches has multiplied in ratio corresponding to the increase of membership in the mother church. In fact, all the figures within our reach, all the signs of the times, locally and abroad, point to a state of affairs the reverse of that indicated by Dr. Carroll's statistics, which are not correct in any particular. WILLARD S. MATTOX.

# FOREIGN TOPICS.

## THE BRITISH BUDGET.

THE British Budget for 1901, as proposed by Sir Michael Hicks-Beach, Chancellor of the Exchequer, has been the main theme of discussion in the European press for several weeks. The chief proposal of this budget, which *The Spectator* (London) characterizes as "the most momentous of modern times in any country," is to increase greatly the indirect taxation of the empire; and it is to this proposal that most of the newspaper comment is directed. In brief, the Chancellor's statement is as follows:

The estimated expenditure for the current year is, in round figures, $938,000,000, and the revenue, on the existing basis of taxation, approximately, $661,000,000, leaving a deficit of $277,000,000, which, however, will be slightly reduced by a number of "little saving processes." This deficit the Chancellor proposes to deal with by suspending the sinking fund, by levying new taxes (estimated to yield $55,000,000 a year), and by raising a new consols loan of $300,000,000. The new taxes are to be distributed as follows: $1.04 per hundredweight duty on refined sugar, with corresponding duties of 50 cents and 41 cents on molasses and glucose respectively; 25 cents per ton duty on exported coal; and an addition of four cents to the income tax.

British newspaper comment varies from the verdict of *The Morning Post* (London), that the budget is "a vast improvement on anything the country has seen for many years, bold and statesmanlike enough to be heralded as beginning a new era in our financial history," to the characterization of *The Express* (London), which calls the proposals "cowardly, unimaginative, and mechanical, sure to bring only injury to the country and discredit to the ministry."

The general tone of British comment is one of regret that new forms of indirect taxation, particularly the export duty on coal, were found necessary; but at the same time indicates ready acceptance of the inevitable. We reproduce some of the more striking comments.

The Chancellor, says *The Spectator*, has arranged his budget with great skill, and with a "due regard to the essential principles of our fiscal system." Referring to the drain on the national treasury caused by the Boer war, *The Spectator* says:

"We believe that in spite of the injury done to our fiscal system, and the drain on the national resources, the war has been of immense indirect advantage to us. We had to fight, as we have just said, in order to decide whether South Africa should be purely Dutch and outside the empire, or Dutch and British, as Canada is French and English, but within the empire; but this necessity might have brought us little indirect gain. As it is, however, we believe that the war has saved us from a position of very great peril. It has shown us that our army had become demoralized, not by peace, but by the easy triumphs won in native wars. We had made war in too amateur a way, and had won victories too easily. The Boers have made us realize how serious a business war is, and how absolutely necessary it is to be prepared at all points. Had we fought a formidable European state two years ago the position would have been one of serious peril. As it is, we should have no fear of the results."

The budget, says *The Speaker* (London), paints a picture of the national finances "in colors as black as could be desired by the bitterest enemy of England." The whole financial policy of the ministry, continues this journal, is the "most deplorable example of poltroonery ever exhibited by a prosperous community of civilized men." It says, in conclusion:

"Of the four great wars which made the national debt, the war against our American colonies, the war against the French republic, the (Crimean) war for the integrity of Turkish territory, and the war against the Boer republics, all except the third and the least costly have been the sole handiwork of the Tory Party—cheered on of course in the shouting stage by a few Whig or

Liberal imperialists. Sir William Harcourt sums up the drift and meaning of their whole policy in two words: Conscription and protection. Both are now very near. . . . . .

"Meanwhile there are many signs that the prosperity of the country is beginning to decline. . . . The commercial crisis in Russia and the depression in Germany will account for reductions in exports to two of our best customers for some time to come. And as for South Africa, every month's delay in the return of the chosen people to Johannesburg makes a crash in the Kafir circus more probable. Besides a falling-off of the production of gold aways tends to dulness of trade as well as to lower

CLIMBING THE WAR PYRAMID.

JOHN BULL: "This is all very well, but whenever shall I get to the top?" —*Westminster Gazette.*

prices. But the stoppage of the gold-fields is a comparatively insignificant factor. It is the constant drain of money to South Africa, the consumption every week of from one and a half to two millions sterling that constitutes the real economic danger. The policy of borrowing is almost certain to lead to heavy failures. Consols have fallen from 113 to 95. . . . British credit has already fallen below French for almost the first time since the Napoleonic wars."

"Perhaps the least unpopular budget that could have been framed," says *The Saturday Review* (London); "not an original or comprehensive financial scheme, but, on the whole, a fair tho commonplace plan for meeting an enormous deficit."

We can not congratulate the Chancellor, says *The Standard* (London); "on the whole, the budget indicates a regrettable absence of statesmanlike resource." All classes have acquiesced in the extraordinary war expenditure, says *The St. James's Gazette* (London), and should, therefore, take their share in the unpleasant duty of footing the bill without whimpering. John Bull has braced his broad back to carry his new load without a quiver, says *The Daily Telegraph* (London), which adds: "What has struck the imagination of every foreign power, on the other hand, is that Parliament and the money market have provided the Chancellor of the Exchequer with a sum closely approaching the famous five milliards wrung by Bismarck from France."

The Liberal journals, altho commending the Chancellor for his courage and honesty in facing a bad state of affairs, bitterly comment on the drain caused by the war in South Africa. *The Guardian* (Manchester) points out the fact that the war taxes will not end when the war ends:

"The ugly fact is that we are paying war taxes, as they are called, and not paying for the war with them. We are paying for the war by borrowing, and, on the strength of appeals to bear the necessary expenses of a special crisis, we are paying at extravagant and rapidly rising rates for the ordinary, or what may be termed the non-war, administration of the country. There is a delusive idea abroad that if the war comes to an end, the war taxes will come to an end with it. Sir Michael Hicks-Beach does a good service by showing that in all probability they will not, and would not even if Dutch South Africa could be held down for nothing, and if it cost nothing to bring into cultivation again the wilderness that the war has made. There is only too much likelihood that with the advance of the decline in trade which has now begun and the consequent decline in the productiveness of the existing taxes, the rates of taxation will have to be increased in order to bring in the same actual sum. In fact, there is every reason to fear that even if a peace, of which there is as yet no sign, were to come, we should have our special war taxes raised rather than lowered during the years succeeding it."

Tory finance, observes *The Daily News* (London), may be summed up in the statement that nineteen months of war have wiped out the savings made in twenty years of peace. It continues:

"To-day, thanks to the fact that a national crisis finds our finances in the hands of the party of privilege and reaction, we are entering under Tory guidance the thorny path of protection. For that is what all this chaos of warring voices and indignant protests means. The foundations of our trade are being shaken, its freedom is being shackled, and with the loss of freedom the claim of sectional interests to protection becomes insistent. With the wakening of the spirit of protection comes the peril of retaliation from our commercial rivals abroad. We look to the Liberal Party—the party of free trade—to fight this disastrous policy at every step."

The export duty on coal has excited the most bitter denunciation. "A crude and mischievous device," says *The Westminster Gazette* (London). "It will place the British exporter at the mercy of his foreign rivals," declares *The South Wales Daily News* (Swansea), in the great Welsh coal section.

The coal duty is the worst part of the budget, *The Daily News* (London) maintains. "Export duties," it holds, "are thoroughly unsound in principle, because they interfere with trade, and discourage commercial intercourse with other countries."

*The Northern Whig* (Belfast), however, says: "Only a short time ago the coal owners, as Sir Michael Hicks-Beach reminded them, were talking of putting on no less than two shillings per ton for their own benefit, and it is difficult to see why two shillings in the coal owners' pocket would be a good thing and harmless to the trade while one shilling in the Chancellor's pocket would mean ruin."

THE AMERICANIZATION OF JOHN BULL.

Since we must seek in Yankee land
The very boots in which we stand,
Their steel for rails, their corn for bread,
Their heiresses for peers to wed –

Since standard libraries we sell
Spelt in the way they choose to spell,
'Tis time the Bull that once we knew
Assumed their national costume, too.

*Daily Mail, London.*

Most of the Canadian papers express disappointment over the budget. While imposing a duty upon sugar, why, they ask, could not Sir Michael Hicks-Beach have given some preference in favor of West Indian and Queensland products?

*Events* (Ottawa) regards the budget as the most important since the abolition of the corn laws, and of "grave significance" to Canada. *The Weekly Sun* (Toronto) also looks upon the budget as a warning to Canadians. It says: "Canada so far has shared the excitement, the glory, the honors; but borne little of

the burden. She has found the transportation, but Great Britain has found the pay. It will not be so for the future. If Canada is to participate in imperial wars and adventures, she will have to pay her share."

The continental European press takes an unusual amount of interest in the budget proposals. Few of the French papers can refrain from flinging a taunt to the effect that "war is a great thing, but somebody must pay the piper." The *Temps* (Paris) contrasts the good old days of peace, when Peel and Gladstone were able to make British finances a model, with this terribly expensive epoch of latter-day imperialism. The Chancellor of the British Exchequer, says the *Temps*, "has abolished the free breakfast table, and opened the door to the partizans of reciprocity tariffs which are the forerunners of protection." The *Journal des Débats* (Paris) considers the budget scheme "technically businesslike," but adds: "It is a scandal to behold the representative of a government which let loose so light-heartedly the present war justify his financial system by the remark that it is good to show the nation that the poor as well as the rich have to suffer from the consequences of the war." In general, the *Débats* believes that Englishmen, in order to avoid further taxation, will insist upon the Government's concluding as speedy and honorable a peace as possible, "even if Mr. Chamberlain's reputation does suffer." The financial statement of Sir Michael Hicks-Beach, declares the *Figaro* (Paris), may be justified by present circumstances, but it is "certainly condemned by the experience of half a century." It continues:

"For fifty years all the economists of France and Europe have cited as a model the financial policy of Great Britain. The suppression of loans, the regular reduction of debts, freedom from taxation of necessities, in fact all the reforms that continental nations have failed to realize, were normally applied across the Channel, and the results proved their excellence. The debt of nineteen milliards of francs in 1876 fell, twenty-four years later, to sixteen milliards. Public wealth increased enormously. By means of peace, liberalism, and economy, Great Britain gradually raised herself to an incomparable prosperity. Imperialism has changed all this. The Transvaal war has been frightfully expensive. The reduction of the debt, scrupulously carried out for so many years, was first diminished and then suspended. Loans have reappeared. . . . The measures now proposed are a real abandonment of the financial principles of England. During these many years she has sought after and realized a system that levied no taxes upon an article of necessity, yet now she puts a tax on sugar. For many years she has believed in the sovereign virtue of free trade; now she considers that when she is at war, foreigners must pay some of her expenses. For decades she has refused to allow a generation responsible for entering upon a war to place the cost on its descendants by means of a loan; now she has given up these scruples and does not hesitate to draw a bill on the future in order to liquidate the embarrassments of the present."

The whole financial policy of the Conservative ministry, concludes the *Figaro*, has brought an end to an exemplary period of wisdom and prosperity and inaugurated a kind of decadence.

The German press gives free vent to its usual *Schadenfreude* (joy at another's misfortune) over the financial effects of the war in South Africa. Most of the comment is on the sugar import and coal export duties. The *Kreuz-Zeitung* (Berlin), generally regarded as the organ of Dr. von Miquel, the retiring Prussian Minister of Finance, declares that the coal duties will favor the competition of German coal in the German coast districts as well as in Belgium, Holland, and other parts of Europe; but, on the other hand, it points out that an advantage not to be underrated is given to the British iron industry. The production of continental products which are bound to use British coal will be rendered more costly. A decrease in the price of England's coal at home, it also contends, will be followed by a reduction in the cost of British production and a corresponding increase in England's competing power in the world's markets. This is expected to have a bad effect on German industry in particular. The *Börsen-Courier* (Berlin) also declares that the competition of English raw iron will be henceforth much keener in Germany. The export duty on coal, says this journal, is "in direct opposition to the high principles which have hitherto governed British trade." The *Politische Nachrichten* (Berlin) argues in the same vein. The *Neueste Nachrichten* (Berlin), in commenting on the sugar duty, remarks: "It is possible that the countries which grant bounties on the export of sugar will at last get tired of providing the British consumer with cheap sugar, especially when they see that by a continuance of the present system they will be helping to bear the cost of the South African war." This journal says in conclusion: "There is something of greatness and self-sacrifice in the sudden submission, by the British Government, of a bill involving an increase of taxes and duties to the extent of several hundred million marks, and in the House of Commons agreeing to it at a single sitting."

Vienna newspaper comment is to the general effect that Great Britain has abandoned free trade. The English people, says the *Neues Wiener Tageblatt*, have "made a breach in Cobden's policy, and the whole structure of international trade has received a powerful shock which will be felt throughout the world." Other papers believe that the duty on sugar will injure Austrian industry in this product. The *Fremdenblatt*, semi-official, declares that England has again proved her practical business sense in throwing part of the costs of the war on the foreigner.—*Translations made for* THE LITERARY DIGEST.

---

## UNIVERSITY REFORM IN RUSSIA.

THE appointment by the Czar of Gen. Peter S. Vannovsky as Minister of National Education appears to have given general satisfaction in Russia. Every section of the press of the empire welcomes the appointment and sees in it a pledge of conciliation, reform, and a more liberal policy toward the university students. The exception to this rule is found in two ultra-reactionary newspapers which have advocated the reduction of the number of schools. The Czar's rescript making the appointment is regarded as highly significant, for it recognizes the radical defects of the present system and calls upon General Vannovsky to assist the Czar in formulating and applying a new and modern policy, one suited to the spirit of the age as well as to the fundamental conditions of Russia.

GEN. PETER S. VANNOVSKY,

New Russian Minister of Education.

General Vannovsky is a man eighty years old, who has had but little experience in educational matters. He has been minister of war and an active soldier, but in investigating previous student disturbances he proved himself humane, progressive, and in sympathy with the dissatisfied youth. Prince Mestchorki, in

his *Grashdanin* (St. Petersburg), referring to the delight with which Vannovsky's appointment has been received in all circles, says:

"It might seem as if the selection of a purely military man must excite in some quarters the fear of a drastic reaction; yet the effect has been the reverse. Everybody tells us that the students are pleased and convinced of the new minister's sympathy with their aspirations and demands. We, too, are grateful for this phenomenon, for it shows that, in spite of the efforts of our intellectuals to breed confusion and revolt among the students, we are still very far from that mental state in which only Robespierres and Marats would be looked upon as the proper guides of our educational world."

The *Nedielia* (weekly, St. Petersburg) makes a furious assault on the present system and hopes that the Government contemplates radical reorganization, both as to curriculum and discipline. It says:

"What has it [the system] given us in the last twenty-five years? It has given us incapables, victims of the unhealthy 'classical' studies, hate-inspired revolutionists who had sworn to avenge their wasted years, and nameless, impotent nobodies having no interest in real life and trained to dull obedience and official routine.

"In our university courses all live sciences were rigidly excluded or kept down to the least possible proportion. The spirit of brotherly association, of free and spontaneous intercourse; the influence of university life, the influence of cordial treatment of students by professors—all this was banished. Everything which binds men together, creates sympathy and mutuality, was prohibited. What can such universities do for science, for society? Science in our universities has fallen to the lowest estate."

Even the *Novoye Vremya*, which the students have regarded as hostile and which was at one time boycotted by them, expresses the same opinion. "Whatever," it says, "Russia still has of mental vigor and freshness is due to influences wholly independent of the schools. The universities have graduated little Hamlets, mediocre pedants. The literature of the university-trained writers is a literature of and for the dead, and the science of the same people is a colorless, trivial, empty ceremony." It hopes that all this will soon be a thing of the past, the memory of a nightmare, and that the ministry of education will put routine aside and call to its aid strong, free, original spirits who do not fear intellect and modern science. Society, the fathers and mothers of the rising generation, expect and sigh for such a change, says the St. Petersburg *Viedomosti*, another severe critic of the present system, which, it asserts, has driven the best men out of the faculties and has poisoned the life of thousands of young men.

The French papers generally comment approvingly on the new appointment; but the *Temps* (Paris) fears that General Vannovsky is too old a man to accomplish much in the way of a progressive policy. The three root causes of the discontent among Russian students, says *The St. James's Gazette* (London), are "spiritual tyranny, the suppression of thought, and the supremacy of the police administration." These, it thinks, are as yet beyond the power of a minister of education to remedy. The Russian review *Pravo* is quoted by *The Anglo-Russian* (London) as follows:

"Not only statutes but rights—this should be the watchword of all true friends of a legal order of things. In converse proportion to the growth of civilization and the developments of national life, the present lifeless system of laws becomes more inadequate than ever, and the need for extended personal and public rights, guaranteed by statutes, more and more pressing. Whoever believes himself capable of satisfying the national aspirations by technical improvements in industry, and the embodiment of law in a perfectly organized bureaucracy, who believes that personal rights simply are a hobby of the obnoxious West, with which Russian society might well dispense—he nourishes a misconception which, compelling men to turn their backs upon Europe and their faces toward Siberia, would be dangerous were it not so conspicuously fallacious. No technical advancements, nor any objective system of laws, will meet the demands of the fast developing, grandly proportioned Russian culture becoming more and more intricate every day."—*Translations made for* THE LITERARY DIGEST.

## CHINESE OPINION OF THE MANCHURIAN TREATY.

NATIVE public opinion in China, as represented in the Chinese press, is thoroughly aroused over the secret treaty with Russia concerning Manchuria. The native papers are full of indignant protests, and high officials such as the Viceroys Liu Kun Yi and Chang Chih Tung have repeatedly memorialized the throne to reject the treaty. Many protests have also been sent to the Emperor, the Empress-Dowager, the peace plenipotentiaries in Peking, and even the Chinese minister in St. Petersburg. Two indignation meetings, unique in Chinese history, were recently held in Shanghai and were largely attended by Chinese of rank and influence. The meetings, as reported in the Chinese daily papers, show a copying of Western ways that is new for China. There is a regularly chosen presiding officer; a set of resolutions is brought forward; earnest speeches are made which show remarkable familiarity with the subject, each good point being accorded applause; and telegraphic resolutions are sent to influential persons all over the country, and to the Emperor. Among the speakers at the second meeting was a Chinese girl of sixteen, who, it is reported, made a very effective speech. *The North China Daily News* (Shanghai) translates from a native paper the following remarks made by her:

"People of all ranks and classes seem hopelessly to lack union and patriotism. The officials seem to care only for their posts and their families, and the people regard themselves as helpless babies and leave everything in the hands of the officials. This is why China is so weak. In foreign countries, such as England, America, Japan, every one, in office or not, feels an interest in the government, and treats everything in connection with it as his own business. Hence, these countries are strong and no one dares insult them. The Russo-Chinese agreement shakes the very foundation of China, and yet many Chinese seem indifferent. The people should be solidly united against this dangerous and dishonorable compact. The only persons who seem to be in favor of this agreement are Prince Ching and Li Hung Chang."

*The Chung Wai Jih Pao* (Universal Gazette, Peking), in discussing Russian methods, observes:

"We Chinese find it hard to understand the ways of Westerners in the matter of politics, which are both clever and obscure. There is in both East and West a use of funds in the conduct of the government of which the people are in ignorance. The public funds to be used each year are always made through appropriations.

"In accomplishing her [Russia's] objects, money is a small consideration. The year before last, China sent an ambassador to the court of Russia, and he received attention such as was given to the ambassador of no other country. He was accorded many audiences with the Czar. Because of the many presents and the marked attention, he became a captive of Russia. At another time, a governor of one of the provinces, on his way to Peking, had business with a Russian bank, and the manager of the bank told him that, any time he was in need of funds, he might draw on the bank freely. There was another instance of a Russian minister's having given money to one of the underlings of a Chinese minister who went to pay his respects to him. Altho a small matter, it showed the disposition of the Russians to buy the favor of the Chinese. A man who recently went to Tien-Tsin to establish a newspaper received from a Russian consul an offer to sell 20,000 copies of the paper. The editor, however, instead of showing favor to the Russians, exposed their methods, and the consul had nothing more to do with the paper. Russian agents came to Shanghai in 1899 to investigate the na-

tive newspapers, and offered bribes to those who would favor the Russian cause; but none of the newspapers would agree. Now that the secret treaty has come to light and is being publicly discussed, the Russians deny it, and put false representations in the mouth of the American minister [referring to a reputed denial of the treaty on the part of Minister Conger]. They say it is invented by Japan, tho the facts are as clear as day. Even a Chinese newspaper has helped the Russians by denying the existence of the treaty, most certainly because of some bribe. . . . The indignation meetings in Shanghai do not manifest hatred of Russia or friendship for England and Japan more than others, but they are a recognition that now help is to be looked for only from England and Japan. If the secret treaty is agreed to at this time, it will mean nothing less than the division and destruction of the empire."

The Shanghai *Mercury* translates from the native daily, *Su Pao*, the following comment on the treaty:

"These Eastern encroachments of Russia are all in accordance with the will of Peter the Great. But China herself must stiffen her opposition to Russia before she can hope to get help from any one else. True, Russia does not fear China, but she fears the other kingdoms. . . . . .

"If we sign it [the treaty], the other nations will not keep their hands off, and if we do not, Russia will be displeased. Like a man on a tiger's back he naturally does not know whether it is better to keep his seat or get down. The Boxers had the audacity to attack all the world, but it is not likely that Russia with all her ferocity will have the courage of Tuan Wang and Kangyi [Boxer leaders]."

---

**British Approval of Our Policy in China.**—The press of Great Britain is almost unanimous in commending our Chinese policy. *The Times* and *The Daily News* (London), usually at opposite political poles, seldom lose an opportunity to praise our moderation and good sense. The American suggestions in the far East are always sensible, says *The Guardian* (Radical, Manchester). Commenting on Mr. Rockhill's plan for basing the Chinese indemnity on the sum China can afford to pay without becoming bankrupt, *The Guardian* says:

"Compensation there must be; but the assumption throughout the negotiations that it is the lower limit that is fixed by the actual expenditure of the victors in the war is wholly novel. Besides, technically we have never been at war with China; what, then, is the legal justification of an indemnity? Again, what compensation do the powers mean to pay to China for the indiscriminate pillage in which their troops have indulged? Surely the losses incurred by China through the shameless violation of the laws of war by some of the international troops should be told off against the expenditure incurred by the powers in protecting their legations?"

Mr. Rockhill's plan is a common-sense and businesslike proposition, says *The Outlook* (London); but it fears that the plan is too simple for acceptance. *The Celestial Empire* (Shanghai), published under English auspices, sees evidences of an attempt on the part of Russia to gain American friendship and even alliance. This journal quotes the Russian statesman, Prince Ukhtomsky, as declaring that "Russian autocracy has nothing in common with Cæsarism, but is a national idea of unity which fits her for alliance with America against English imperialism." It scouts this idea and asserts that Russia and America can have nothing in common. Their policies in China are at complete variance. Russia opposes sending missionaries to China, as the enlightenment of the Chinese would mean the failure of Russian ambition. But the American missionary, "perhaps more than any other, stands for enlightenment."

---

**The Future of the Kongo Free State.**—The present Belgian parliament has the problem before it of providing for the future of the Kongo Free State. It is to decide, says *The Guardian* (Manchester), whether or not it will annex the Kongo State to Belgium and whether, if it postpones annexation, it will impose any restrictions on "the despotic rule which has discredited the Kongo administration and so brought discredit on Belgium herself." The Kongo State, it will be remembered, was organized in 1884 as an absolutely free state, under the patronage of King Leopold of Belgium. *The Guardian* declares that almost all the provisions of the Berlin agreement, which brought the state into being, have been violated:

"Within a few years from its foundation, the Kongo State began to throw off the mask and to show that its real aims were very different from those set forth at Berlin. Nominally free trade was to prevail on the Kongo; as a matter of fact, by various decrees dating from 1889 onward, the Kongo State assumed to itself a monopoly of all trade within three-fourths of its territories. In theory slavery was to be abolished, and by the destruction of the great Arab slave-traders of the South in successive campaigns the Kongo State seemed to have accomplished its purpose. In reality, as Consul Pickersgill reported in 1898, 'the outcome of this lofty enterprise' has been a 'mere modification of the evil that was so righteously attacked,' and the slave released by Kongo-state troops has, in our consul's words, 'to pay for his freedom by serving a new master during a fixed term of years for wages merely nominal'—that is to say, there is one public slave-owner, the Kongo State, in place of many private owners. As for the obligation to care for the moral and material well-being of the population, the Kongo State has simply ignored it. Every native has to work for the state, either as a porter or in collecting rubber, and defaulters are massacred by the armed savages who constitute the Kongo-state militia and police. The Kongo State, founded on a basis of free trade and philanthropy, has become a great commercial monopoly, utterly regardless of justice or humanity in its pursuit of gain. Uncontrolled by public opinion, it has permitted or connived at some of the worst excesses recorded in the history of European rule in Africa."

It is now generally admitted, concludes this Manchester journal, that the creation of the Kongo State was a mistake, and it should be annexed to Belgium.

---

**London and Paris: A Contrast.**—The contrasts presented by Paris and London are rather amusingly put by Felix Pejat, in the *Matin*, of the former city. He says:

"Paris does most things with the right hand or at the right side; London follows the left.

"Parisian coachmen keep to the right, those of London to the left.

"Paris grows by absorption, London by expansion.

"Paris is built of stone, London of brick.

"Paris has high houses and narrow streets, London's buildings are low and its streets wide.

"The windows of Paris open like doors, those of London à la guillotine.

"Paris is collectivistic, it dwells in houses which are really caravansaries; London is individualistic, each family having its own house.

"Paris has its *portièr*, London its night-key.

"Paris gets up early from its bed which is against the wall; London arises late from its bed which is in the center of the room.

"Paris dines, London eats.

"London, said Voltaire, has one hundred religions and but one sauce; Paris has one hundred sauces and no religion at all.

"Paris is gay, London sad.

"London has too few soldiers, Paris too many. The soldiers in Paris wears a blue tunic and red pantaloons, while the London man-of-war is clad in a red coat and blue trousers.

"In Paris priests perform the marriage rites; in London they marry themselves.

"In Paris the married women are free; in London when a woman marries she ceases to be.

"Paris has more suicides, London more homicides.

"Paris works, London traffics.

"In Paris the street crowds fight by kicks, in London by blows of the fist.

"The proletariat of Paris refers to the pawn-shop as 'My aunt,' while in London they say 'My uncle.'"—*Translation made for* THE LITERARY DIGEST.

# A GOOD CIGAR AT ANY PRICE.

## "THE 3 GREAT B's."

**Brunita** (BUENO SIZE) — CLEAR 15c. HAVANA

TRADE A M C MARK

**Brunswick** (BONITO SIZE) — FINEST 10c. DOMESTIC

TRADE MARK

**Bossy** (BARATO SIZE) — BEST 5c CIGAR

TRADE MARK

*Guaranteed to give the consumer the most value for his money obtainable in Cigars.*

**Brunita** (BUENO SIZE)
All Havana, Strictly Spanish Hand-Made.
$10.00 for 100
Box of 12 for $1.50

**Brunswick** (BONITO SIZE)
Sumatra and Havana. The Highest Grade of Domestic Cigars.
$7.50 for 100 12 for $1.00

**Bossy** (BARATO SIZE)
A SELECT NICKEL CIGAR
$4.50 for 100 25 for $1.25

*Send Your Money by Registered Mail.*

We will not tire you with the usual parrot chatter that goes with most other brands of Cigars regarding their worth; our goods are on sale at all the leading stands, hotels, and clubs in the United States. **TEST THEM!**

We are responsible for their quality and we must bear the severest criticism of the Great American Consumer; on his judgment rests the future of our brands.

**Brunita** (BUENO SIZE)

**High Grade "Vuelta" All Havana. Strictly Spanish Hand Made.**

Long practice and constant observation have enabled us to place this brand before the public a perfect product. High grade Vuelta Havana, grown on the most favored tracts of the renowned VUELTA ABAJO DISTRICT, is used, thus imparting that exquisite flavor peculiar to this tobacco.

**Brunswick** (BONITO SIZE)

The "BRUNSWICK BRAND" of Cigars is the most extensively used and widely known Brand of Cigars in the world. Wherever tested it has been pronounced the superior in make and quality of tobacco. Two International Exhibitions have awarded it Diplomas and Medals for being first in Purity, Flavor, and Perfection of Manufacture. It is sold in the leading Cities of the United States, and largely exported to Foreign Countries. Could we offer you greater testimonials to express its worth?—TEST IT!

**Bossy** (BARATO SIZE)

The BOSSY CIGAR is first among the five-cent Cigars on the American market. It is manufactured with the care of a high-grade cigar and has the easy, even-burning quality so rarely found in a five-cent cigar. Smokers take to the Bossy and refuse to change. Dealers who want to meet the expectations of their customers should sell the Bossy. Look for the star on every cigar.

**Each brand is Made in a separate factory, thus avoiding any possible mistake in putting together the various tobaccos.**

CONSUMERS, if you are not within easy reach of our Cigars, we will forward you goods to any part of the world. We will endeavor to supply your regular dealer if you will kindly send us his name and address.

Our Cigars are on sale in the principal cities of the United States and foreign countries.

We are seeking wholesale distributors in districts which are not reached by our representatives and invite correspondence.

**Special Terms on Quantities Furnished on Application.**

## A. Montañez Company.

All Havana Cigars Exclusively.

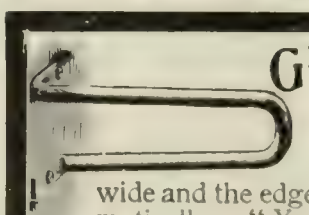
CABLE ADDRESS: "Success" Western Union Code.

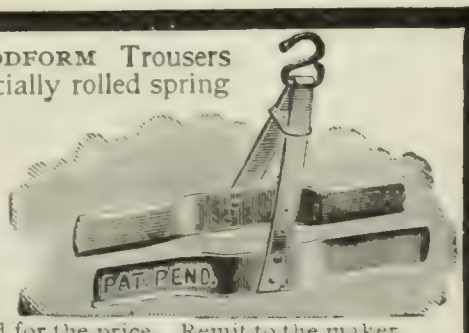
## PIANO Do You Want a Genuine Bargain in a Piano?

We have hundreds of Upright Pianos returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our salesrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Uprights as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment, $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. Every piano warranted exactly as represented. **LYON & HEALY, 46 Adams St., Chicago.**

*The World's Largest Music House.*



GENTLEMEN: — The GOODFORM Trousers Hanger is made of fine, specially rolled spring steel, heavily nickel-plated on copper. The parts in contact with the fabric are wide and the edges rounded. It operates automatically. "You press the button," and the keeper does the rest. Sample by mail, 35c.; 3 for $1.00; 6 and a closet loop, $2.00. All express prepaid. **This is what you want if you want the best.**



Sold by Hardware and Furnishing stores, or prepaid for the price. Remit to the maker.

**CHICAGO FORM CO., Dept. 28 124 La Salle St., CHICAGO**

*We have no agents or branch stores. All orders should be sent direct to us.*

# Suits and Skirts.

WE are never satisfied with last year's products. Last year they were the best anywhere, but not good enough for us. Nothing is good enough for us unless it is the best that we can make, and every year's experience raises the standard.

Therefore *this year's new and smart styles show better shape, better materials and lower prices than ever before.*

Our Catalogue illustrates:

**Tailor-Made Suits, $8 up.**
**Visiting Costumes, lined throughout with excellent taffeta silk, $15 up.**
**Skirts, $4 up. Wash Skirts, $3 up.**
**Rainy-Day Skirts, $5 up.**

"The Complete Pocket Guide to Europe."—Ed. by E. C. Stedman and T. L. Stedman. (W. R. Jenkins.)

## CURRENT POETRY.

### The Gray Wolf.

By ARTHUR SYMONS.

The gray wolf comes again: I had made fast
The door with chains; how has the gray wolf passed
My threshold? I have nothing left to give;
Go from me now, gray wolf, and let me live!
I have fed you once, given all you would, given all
I had to give, I have been prodigal;
I am poor now, the table is but spread
With water and a little wheaten bread;
You have taken all I ever had from me:
Go from me now, gray wolf, and let me be!

The gray wolf, crouching by the bolted door,
Waits, watching for his food upon the floor;
I see the old hunger and the old thirst of blood
Rise up, under his eyelids, like a flood;
What shall I do that the gray wolf may go?
This time, I have no store of meats to throw;
He waits; but I have nothing, and I stand
Helpless, and his eyes fasten on my hand.
O gray wolf, gray wolf, will you not depart,
This time, unless I feed you with my heart?

—The London *Saturday Review.*

## MORE OR LESS PUNGENT.

**Her Fault.**—HE: "I can't understand Phyllis rejecting me last night."

SHE: "Never mind. You'll soon get over it."

HE: "Oh, *I've* got over it right enough; but I can't help feeling so doosid sorry for *her*. I shan't ask her again!"—*London Punch.*

**News to Him.**—"Are you going to marry sister Ruth?" "Why—er—I really don't know, you know!" "That's what I thought. Well, you are!"—*Life.*

**A Mild Attack.**—"I think I've heard of one man who died of seasickness." "Heavens! I hope I won't!" "Oh! You're not very bad, or you wouldn't care whether you'd die or not!"—*Puck.*

**After a Day's Hard Work**

**Take Horsford's Acid Phosphate.**

It nourishes, strengthens and imparts new life and vigor, by supplying the needed nerve food. Relieves the worst forms of dyspepsia.

# Pears'

was the first maker of sticks of soap for shaving. Pears' soap established over 100 years.

It is the purest and best soap, both for the toilet and for shaving.

All sorts of people use Pears' soap, all sorts of stores sell it, especially druggists.

# A Hot Bath

**Scientific Physical Culture**
**Successfully Taught by Mail**

Very few persons know what it means to feel good all the time—to be **strong** and to **feel** your strength. Exercise—inteligent, scientific, persistent—will accomplish it.

**The Stone System** requires only a few minutes a day, in your own room, before retiring, with no apparatus whatever. Your **individual** condition carefully considered, and mild, medium, or vigorous exercise prescribed exactly as your particular requirements and mode of living demand. Intelligent exercise will cure or prevent most of the ills to which the flesh is heir.

**Mr. Frederick W. Stone,** Director of Athletics of **The Stone School of Scientific Physical Culture,** has been director of Athletics of Columbia College. The Knickerbocker Athletic Association, and is at present acting in that capacity with the Chicago Athletic Association. At the rather advanced age of 5 years, he is still very nearly a physically perfect man. He established the World's record for 100 yards sprint (9 4-5 seconds). He has been before the public 30 years as an athlete, and trainer of athletes, and is admittedly capable of teaching physical culture intel gently and scientifically. Our aim is to create a perfect development, greater strength and better health, rather than to produce professional strong men. Does not overtax the heart. Both sexes, all ages—from 15 to 85—are alike benefited.

**Illustrated descriptive booklet and measurement blank sent FREE.**

**LYON & HEALY, 20 Adams St., Chicago.**

**Her First.**—MRS. NUWED (at the cigar-store): "I'd like to see some cigars for a stout, dark man, please!"—*Puck.*

**Agreed With Her.**—JIMMY: "Me aunt was tryin' to tell me that smokin' is injur'ous."

TOMMY: "Well, it might be if yer ole man ketches yer."—*Puck.*

**The Humor of Phillips Brooks.**—It does not lessen the dignity of Phillips Brooks's memory to learn from his biographer, Alexander V. G. Allen, of Cambridge, that he had an abounding sense of humor—humor that crops out in a fund of anecdote

To the person who wondered at the possibility of the whale's swallowing Jonah he said: "There was no difficulty. Jonah was one of the minor prophets."

Contrasting the ancient church with the modern, he remarked that the early devout tried to save their young men from being thrown to the lions. "Now," he added, "we are glad if we can save them from going to the dogs."

A clergyman going abroad talked in jest of bringing back a new religion with him.

"You might have some trouble in getting it through the custom-house," some one remarked.

"No," observed Bishop Brooks; "we may take it for granted that a new religion would have no duties attached."

A person, for the sake, no doubt, of argument, once drew attention to the fact that some men, calling themselves atheists, seemed to lead moral lives, and Brooks promptly disposed of it.

"They have to," said he. "They have no God to forgive them if they don't."—*The Youth's Companion.*

## Current Events.

### Foreign.

CHINA.

May 7.—A fight between German troops and Chinese cavalry occurs near Kalgan, resulting in Chinese defeat.

May 9.—A formal demand for 450,000,000 taels indemnity is made upon the Chinese plentipotentiaries by the ministers of the powers in Peking.

May 10.—The Americans in Peking evacuate the districts under their control, with the exception of those in the Forbidden City.

OTHER FOREIGN NEWS.

May 6.—General Kitchener reports further captures of Boers and ammunition in South Africa; the British War Office announces the total number of deaths in the Boer war at 714 officers and 14,264 men.

The Duke and Duchess of Cornwall and York land at Melbourne and are received with great enthusiasm.

May 7.—Stockholders of the Leyland Line are notified of the transfer of the line to Morgan interests; rumors of the sale of the Red Star and Atlantic Transport lines to J. P. Morgan are not confirmed.

May 8.—At the annual meeting of the Iron and Steel Institute in London addresses are made by William Garrett, of Cleveland, O., and others. Mr. Carnegie advises British manufacturers to follow American methods.

The ambassadors at Constantinople send a note to the Porte, characterizing the Government's tampering with the mails as a breach of international law.

May 9.—The Duke of Cornwall and York formally opens the new Parliament of the Commonwealth of Australia.

Scenes similar to those in Wall Street are witnessed in Shorter's Court, London, and on the Glasgow Stock Exchange, where brokers and speculators deal in American securities.

May 10.—The question of the seizure of William O'Brien's paper, *The Irish People*, for a bitter attack on King Edward VII. and Cardinal Vaughan, is debated in the House of Commons; copies of the paper are confiscated by the police.

May 11.—There is a practical severance of relations between the Porte and the foreign ambassadors at Constantinople, arising out of the differences over the foreign post-offices.

Wholesale shooting of revolutionary Macedonians is committed by the Turkish authorities.

The degree of Doctor of Laws is conferred on

# Vice-President ROOSEVELT says

*"I have greatly enjoyed your collection of Famous Tales. I think the collection an admirable one, and I am taking it on to Washington with me."*

L. D. 5-18

the Duke of York by the University of Melbourne.

May 12.—General DeWet is reported to have resumed operations in South Africa, crossing into the Transvaal with two thousand men.

Count Esterhazy, in affidavits made in Brussels, admits being the author of the bordereau in the Dreyfus case.

## Domestic.

DOMESTIC NEWS.

May 6.—President McKinley leaves El Paso, Tex., after exchanging official greetings with General Hernandez, the representative of President Diaz, of Mexico; he also speaks at Deming, N. M.

The cup defender, *Constitution*, is successfully launched at Bristol, Conn.

The work of rebuilding Jacksonville is being pushed rapidly; many bodies are recovered from the St. John's River.

May 7.—The President spends the day in Arizona, visiting a gold-mine near Phœnix in the morning.

Northern Pacific stock makes sharp advances in Wall Street, where great activity prevails.

Bishop Potter, Charles R. Flint, Samuel Gompers, John Mitchell, and others, participate in a conference in New York which aims at industrial conciliation between labor and capital.

May 8.—President McKinley and his party arrive in California, being met at Redlands and welcomed to the State by Governor Gage.

The ceremonies incident to the formal bestowal of the red biretta of a cardinal on Monsignor Martinelli by Cardinal Gibbons take place in the Baltimore Cathedral in the presence of many church dignitaries.

Fire destroys several cotton warehouses in Augusta, Ga., inflicting a loss of about $160,000.

May 9.—The President spends the day at Los Angeles, visiting the Soldiers' Home and reviewing a floral parade.

Minister Conger arrives in Washington, for the purpose of conferring with State Department officials regarding the situation in China.

The stock market in Wall Street suffers one of the worst short panics known in its history, due to the struggle for control of Northern Pacific.

May 10.—President McKinley gets an enthusiastic reception, and makes a brief speech, in Santa Barbara, Cal.

Stocks are stronger and higher, and the panic subsides; Wall Street inclines to the belief that the Morgan-Hill interests triumphed in the Northern Pacific contest.

May 11.—President McKinley and party arrive at Del Monte, Cal.

Charles M. Schwab, president of the United States Steel Corporation, testifies before the Industrial Commission in Washington.

Governor Jennings visits the scene of the recent disastrous fire at Jacksonville, Fla., and State troops are stationed there to prevent disorder.

May 12.—The President and his wife reach San Francisco, where Mrs. McKinley becomes indisposed and is taken to the home of Henry T. Scott.

Unpleasant weather mars the success of the Buffalo Exposition, which, nevertheless, is visited by great crowds.

A fire in a suburb of Detroit destroys property to the extent of $800,000.

AMERICAN DEPENDENCIES.

May 7.—*Philippines:* Troopers of the First Cavalry defeat a Filipino force in Batanyas province, Luzon.

May 8.—Colonel Astilla, and other Filipino officers and soldiers, surrender to the American troops.

May 10.—*Hawaii:* The legislature passes a resolution containing a memorial to President McKinley to remove Governor Dole, on the ground that he has obstructed legislation.

May 11.—*Philippines:* There is opposition among the native priests of the Philippines to the return to the islands of Archbishop Chapelle as administrator; it is reported that attempts are being made to assassinate Aguinaldo.

C. Brett,

"All of the Wheat that's fit to eat"

BREAD Made From Franklin Mills FLOUR A Fine Flour of the Entire Wheat

The starchy part of Wheat

adulterated with bran and "middlings," may be called a "whole wheat flour," and many mixtures of this sort are sold as such, but they are not fit food for the human stomach. The woody outer hull of the wheat berry is retained in these mixtures and these hulls are not only indigestible but irritate the delicate linings of the stomach and bowels.

Franklin Mills FLOUR by an exclusive patented process, retains every portion of the wheat except this outer woody shell.

It is of as fine and velvety a texture as any white flour and more than twice as nourishing, retaining all of the rich, nut-like flavor of the hard wheat kernel.

Franklin Mills FLOUR *is sold by Grocers generally in original packages from 6 1-8 lbs. to full barrels of 196 lbs.*

### Lasker in New York.

The Champion of the World is giving a series of exhibition games against the "crack" players of the Manhattan Chess-Club. The veteran Delmar opened the first of these games, and had to resign after the Champion's thirty-fifth move. The game is very instructive, showing careful and accurate play against what appeared to be a very strong attack. Here are the moves:

Queen's Pawn Opening.

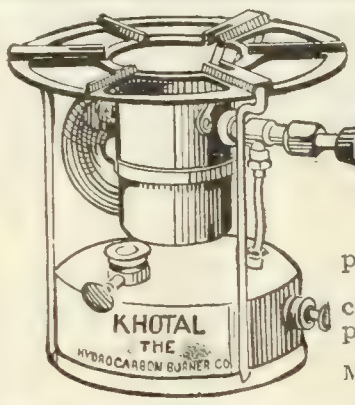
Dr. Lasker has also beaten Hanham and Showalter, and played twenty-three games, simultaneously, against twenty-three picked men, winning seventeen, losing three, and drawing three.

van Houten's Cocoa

contains more digestible nourishment than the finest Beef tea. For Breakfast, Luncheon, or Supper, it is unequalled.

Sold at all grocery stores—order it next time.



The "Khotal" Blue Flame Oil Stove

(For Home or Camp or Yacht)

**generates gas from common kerosene.** It will boil a quart of water in two minutes and cook a dinner quickly. It can be regulated to any desired degree of heat. It has no wick and no asbestos substitute. It is strong, durable and ornamental, being made of brass of superior finish and excellent workmanship. A child can operate it.

The "Khotal" costs little to buy and little to run. The combustion is perfect; no smoke, no smell, no soot deposit on pots and pans.

Picture shows smallest size, 8 ins. high, weight 5½ lbs. Price, $3.75. Made in sizes large enough to cook a course dinner.

# The Literary Digest

VOL. XXII., NO. 21 NEW YORK, MAY 25, 1901. WHOLE NUMBER, 579

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given**.

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**VACATION NOTICE TO SUBSCRIBERS.**

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

## TOPICS OF THE DAY.

### THE CHINESE INDEMNITY SITUATION.

THE allied powers have demanded that China pay an indemnity of 450,000,000 taels (or $315,000,000, reckoning the tael at 70 cents) for the damage inflicted by the Boxers and the expense incurred by the powers in restoring order. The Chinese Government has agreed to pay it. This simple demand and reply, however, begin to take on the complexity that seems to characterize all the diplomacy of the Far East when the time of payment and the method of raising the money are considered. China proposes to meet the indemnity by an annual payment of 15,000,000 taels ($10,500,000) for thirty years, beginning with July of next year. The revenues of the Chinese Government are so small, however, that even this annual payment, as the Chinese plenipotentiaries point out in their reply, would leave the country unable to meet the current expenses of the Government; so they ask that the customs duties paid by foreigners in the treaty ports be increased one-third, and that this extra one-third be given to China for administrative purposes. The New York *Sun* thinks that this "seems but a moderate request on the part of the Chinese commissioners," and the German, British, and American governments are reported to be in favor of granting it. The Pittsburg *Commercial Gazette* goes further, and declares that the demand upon China for this large indemnity "looks like a bold and shameless scheme of highway robbery." Most of the American press, indeed, seem to believe that China is being required to perform an impossibility, and express the opinion that the arrangement has in it the germs of future trouble. The Washington correspondent of the New York *Times* reports that "the State Department does not believe that China is able to pay the bill, in spite of her willingness to accept it. By yielding to the demand she will accomplish what at present seems to be her only desire—to get the foreigners off her soil and have a chance to restore peace and order in the provinces where the foreigners have created anarchy. But when she attempts to pay the bill and can not pay it, there will be another reckoning, and the only way to get what China promised to pay will be by partition. From the standpoint of the Administration it is a deplorable situation, the worst feature of which is that China, in her frenzied anxiety to get the foreigners and anarchy away from her soil, has made it next to impossible to do anything for her." The same paper says editorially:

"There was a great opportunity before the powers, the opportunity of modernizing and civilizing China, and in such wise as to make it a source of strength and not of weakness in the modern world, and of commending to it not only the inventions, but the spirit of the modern Western World. It is the distinction of our Government, it may hereafter appear to be its great distinction, that it has steadfastly striven toward this end. Apparently it has, for the time, been baffled by the immediate avarice of the European powers and by the ignorance or cowardice of the representatives of China. If China should pay the indemnity, the Western powers will have no further claim upon her. If China should default, the only apparent remedy of the Western powers will be to enter in and take possession of the land and dismember the empire. The effect of such a step would be not to promote but to arrest the development of China, and to arrest it incalculably. If that proves to be the case our own Government can absolutely wash its hands of the baleful result."

Some papers notice that the Chinese proposal to pay the indemnity in thirty instalments really amounts to paying a little over three per cent. of it every year, probably less than the Chinese Government would have to pay as interest on bonds if it borrowed the money and paid it in a lump sum; and they also remark that the extra customs duties, to be paid by foreigners to assist the Chinese Government while it is paying the indemnity, will really amount to the payment of part of the indemnity by the foreigners themselves, and that, too, by a restriction on the very trade that these powers are trying so hard to build up. But "whatever method of payment is adopted," says the Springfield *Republican*, "whether by a loan or by annual instalments, China seems sure to remain in the grip of the foreigners. Either her finances and revenue system will be taken over altogether for foreign administration, or her territory will be occupied in part until the bill is settled. The possibility that in the end the powers will recompense themselves by slices of Chinese territory is as great as ever." The Denver *News* takes a more hopeful view. It says:

"If China can float a loan in the money centers of the Western world and interest American, British, French, German, and Russian financiers in her securities, the surest guaranty against dismemberment will have been obtained. If China is wiped off the map as an empire, her bonds will go out of existence with her government. Turkey would long ago have been demolished had it not been that European bankers held Turkish bonds, whose value would have been destroyed with the end of the Sultan's reign in Europe. It was the money power that saved Greece from being overrun by Turkey in the late war and annexed to the Sultan's domains. Greece owed her deliverance to her debts. A large debt to European nations would be China's

surest guaranty of safety. No nation whose capitalists held Chinese bonds would dare countenance a policy favorable to the dismemberment of the empire."

What the Chicago *Journal* considers a pat description of the situation was given recently by the Chinese Minister in Paris. Chinese reports have it that a million natives have been killed by the foreign troops since their arrival in China. Said the Minister:

"I am reminded of one of the stories in a little collection of amusing tales and jokes called in our country 'Teia-Pao' ('The Family Treasure'), published in 1707 in the reign of Kang Chi. A certain man, who was reputed to have much wealth, was attacked one day by a robber who cried out, 'Hand me over all your money or I will kill you.' Ts'ai-mi, for that was his name, refused to give the money, and thereupon the robber seized him and belabored him without mercy. 'Now,' he cried again at length, when tired of beating his victim, 'will you give the money?' 'Let us examine the question,' returned Ts'ai-mi between his groans. 'You have half killed me. Would it not be fair to take only half my money?' Now, that is the state of affairs in China!"

## RECENT SHIPPING DEALS.

MR. MORGAN'S purchase of the Leyland line has stirred up an amount of comment that would not have resulted, it seems likely, if the line had been bought by anybody else. The fact that Mr. Morgan was the organizer of the steel trust and the anthracite coal trust, and that he has just brought about an agreement, altho perhaps only temporary, among the men who control all the transcontinental railroads in the United States, except the Atchison, gives an uncommon interest to his entry upon a new field. The New York *Journal* thinks that his purchase "is the most momentous event that has occurred in the field of world commerce since the Confederate cruisers drove the American flag from the ocean," and that "it means nothing less than that American capital is preparing to grasp that sovereignty of the seas which we seemed on the point of attaining fifty years ago." The Liverpool correspondent of the Boston *Transcript* says that "in Liverpool shipping and mercantile circles the news of the latest acquisition of the all-powerful syndicate engineering the American trusts has been received with a good deal of trepidation, not unmixed perhaps with consternation."

The report is pretty generally credited that the Atlantic Transport line will be combined with the Leyland line, and the New York *Sun* says that "it is not unlikely that the deal between the Leyland and Atlantic Transport lines will be put through before the end of the summer." President Bernard N. Baker, of the latter line, is reported as saying last week: "If the Leyland and Atlantic Transport lines were merged, and I do not say that they are, they would do practically all the carrying trade in passengers and freight to London." He further observed that if the two lines were combined they would have a total tonnage, afloat and building, of over 700,000 tons, and that the Hamburg-American would be next, with 630,000 tons, and the North German Lloyd third, with 500,000 tons. The fourth would be the British India Steam Navigation Company, with 386,000 tons, and the fifth the "P. & O.," with 313,000. Thus the largest merchant fleet in the world would be owned in America and the second and third in Germany, Britannia taking fourth place. As Mr. Rockefeller is largely interested in the American and Red Star lines, and as he has been associated with Mr. Morgan in some of his recent plans, a report has gained currency that these two lines may also enter the combination. The idea of a steamship "trust," in the sense of a monopoly, however, is not feared. As Mr. John Lee, manager of the White Star line, is reported to have said in discussing the Leyland purchase, "the ocean can never be controlled by a trust"; but as the cargoes of the transatlantic steamers are brought to the seaboard by rail, it is believed that with the railroads controlled by the same people who are now acquiring fleets of steamers, the rates can be so adjusted that shippers will see the advantage of having their freight go by the right line.

Along with the news of the Leyland purchase comes the news that the Hamburg-American Company (German) has bought the Atlas line, the only British line plying between New York and the West Indies and South America. The general manager of the Hamburg-American Company is reported to have said in an interview, that "the purchase of the Atlas line is a continuation of the policy of the Germans to wrest the supremacy of the sea from England." German tonnage has increased rapidly in the last thirty years. In 1873 it was 167,000 tons, in 1898 it was over 1,000,000 tons. Says the Boston *Journal*, in commenting on the Atlas-line purchase: "This transaction is very much more significant than it seems upon the surface. It is a declaration by the Hamburg-American Company of war upon the maritime interests of the United States. The Atlas line rightly belonged to America. Its British owners recognized it. They believed that it was only a question of time when it would fall into our hands. But the Hamburg-American people, with their vast resources, were determined to prevent this. They were eager to cut in while there was opportunity. They have possessed themselves of an important link in our natural line of communication with the Southern countries, and it will require a strenuous effort to dislodge them."

ALL THE WORLD'S A WHEEL.
And J. Pierpont Morgan is the Wheelman.
—*The Minneapolis Journal.*

According to the German navigation laws the Atlas line steamers, being now owned in Germany, can fly the German flag. The Leyland line steamers, however, can not fly the American flag, as our navigation laws admit to American registry only ships built in this country. Says the Baltimore *Sun*:

"The United States has an excellent opportunity now to extend its markets and to enlarge its merchant marine by reason of Great Britain's 'preoccupation' in South Africa. This can be done without compelling the American people to pay one cent in the way of subsidy to shipowners. If our navigation laws were amended so that foreign-built ships could be admitted to American registry and sailed under the American flag, the problem of enlarging our merchant marine would be solved at once. The practical German does not hesitate to adopt this policy, altho his industrial and commercial development is of a more recent date than that of the United States. In the first year of the twentieth

century the United States leads all the nations as a factor in the world's commerce, but in the future it may be assumed that the rivalry between the nations will be keener than ever before. If, as is contended, a mighty merchant marine is essential to our commercial supremacy, this is as good a time as any to begin laying the foundation of the American merchant marine. We can not, for the present at least, compete with Great Britain in the number of vessels our shipyards can turn out, but if Americans were allowed to buy foreign-built ships and sail them under the American flag we would soon have a merchant fleet adequate to the needs of our commercial development. Meantime, the fact that the Germans are making renewed efforts to develop larger trade relations with South America and the West Indies should stimulate the energies of Americans. Our manufacturers and merchants may discover some day that Europe does not intend to admit them always to its markets upon as favorable terms as they now enjoy. In anticipation of that day they should lose no time in cultivating commercial relations with South America. A dollar made in trade with our Southern neighbors is worth quite as much as one acquired by the sale of our products in the European market. It is not true Yankee thrift or enterprise to allow such a valuable trade field to remain only half developed."

## NEW LIGHT ON THE CONDUCT OF THE AMERICAN TROOPS IN CHINA.

IN view of the severe charges of cruelty and outrage that have been made against the allied forces in China, two authoritative statements regarding the conduct of the American troops, from the pens of General Chaffee and Lieut. Thomas Franklin, have aroused wide interest. General Chaffee, in a communication to the War Department, warmly protests against the "exaggerations" of many of the correspondents who have written for the American press on the Chinese campaign, and he takes up in particular and refutes in detail the statements made by Thomas F. Millard in an article entitled "A Comparison of the Armies in China," published in *Scribner's Magazine* last January. General Chaffee declares this article to be "an exaggerated statement in many instances and extraordinary as a whole," and gives it as his opinion that "Mr. Millard must surely base his statements on hearsay, supplemented by his imagination."

Mr. Millard's most serious charges against the American troops are that they participated in the shooting and bayoneting of harmless and helpless people, and that "every town, every village, every peasant's hut in the path of our troops was first looted, then burned." Both of these statements General Chaffee declares to be untrue. Fully three-quarters of the houses passed, he says, are standing to-day, and during the march of the column to Peking part of but one town, Chang-chia-wan, was burned. General Chaffee charges the magazine critic with a multitude of inaccuracies and distortions in his allegations and comparisons on minor matters, and concludes with some remarks on the evil effect upon the army caused by the publication of such false statements. Exaggeration of the unavoidable hardships of warfare and constant harping on the privations endured, he says, have the worst possible effect on the soldier's spirit, tending to depress and weaken, instead of to strengthen, his powers of endurance. "In putting his finger on this misleading article," observes the Pittsburg *Commercial Gazette*, "General Chaffee has rendered a service to the cause of truth and helped to set the allies, and especially his own countrymen, in a proper light before the world."

The report of Lieutenant Franklin, one of General Chaffee's aides in the march to Peking, is chiefly interesting on account of the wealth of detail that it gives in relation to the methods employed by the allied forces in their campaign. He starts with the statement that "the American soldier was the best fighting man of all the allies," and he declares that the American column, during the arduous march to the relief of the beleagured legation, was the best fed and provided for. The Americans, moreover, "kept the best policed and cleanest camps." "In transportation," he continues, "none of the allies could touch the Americans. Altho we had only escort wagons, their size and the amount they hauled surprised the foreigners." Lieutenant Franklin describes the uniforms of our troops as more practical than ornamental, but condemns the laxity that led officers as well as men to appear careless as to their personal appearance. Nevertheless, "the American's arms were always clean and in good order, and he can shoot and take care of himself better than his more neatly dressed brothers-in-arms"; and "he was animated by a spirit of humanity and regard for the rights of others that was in marked contrast to the actions of these same presumably disciplined troops." "After all," he adds, "these things are

AS DOCTOR OF LAWS PRESIDENT M'KINLEY WILL HAVE NO TROUBLE FINDING PATIENTS.

—*The Chicago Daily News.*

CLEAN FORGOT WHAT HE WENT AFTER.

CUBA: "Where's that absolute independence broom I sent you to Washington for?"

THE DELEGATE. "By gum! I thought there was something I had forgotten."

—*The Minneapolis Journal.*

## POLITICAL WOES IN CARICATURE.

the true test of true discipline, and not perfect alinement and polished buttons. But both could go hand-in-hand." Commenting on these interesting statements from the field of war, the Boston *Journal* declares that "this official report of a keen, accomplished, professional soldier makes very amateurish the stories which brilliant correspondents have told in newspapers and magazines. What he writes is, in the main, just what citizens who are proud of their country would desire and expect as the record of the troops of the republic."

A tribute is also paid to the American forces by Gen. Sir Alfred Gaselee, the British commander at Peking, who, in a recent report to the British War Office, warmly praises the conduct of the American and Japanese troops, and makes special mention of the friendly cooperation and loyalty of General Chaffee, General Wilson, and the other American officers.

## END OF THE ALBANY STREET-RAILROAD STRIKE.

THE strike of street-car employees in Albany, N. Y., culminating in bloodshed and the calling-out of troops, and occurring at a time when other important bodies of workingmen are threatening to strike, has attracted national attention. This labor war, affecting over a thousand employees and dislocating fifty miles of street-railroad traffic, was caused by the men's demand for the recognition of the union and a uniform wage scale. It is said that the cause which actually precipitated the strike

THE BIRD IS WATCHING THE BONE!
—*The New York World.*

was the demand of the union that certain non-union men be dismissed from the employ of the company or else be compelled to join the union. The company refused these demands, the strike began, and on May 14 the company tried to operate its cars with non-union men. The cars as they left the barn were met by crowds of strikers and their sympathizers; one of the cars was wrecked and left lying in the gutter, and the motorman was severely wounded by a missile. The management of the trolley system asked the governor for protection, and he called upon the National Guard of the State. Over two thousand militiamen were sent to Albany, and on May 16 the scenes of disorder were repeated. Many men were wounded in the streets, and two merchants, standing by as spectators, were fatally wounded by a volley fired into the crowd by soldiers on a street-car.

On the 18th the company and its striking employees reached an agreement, and the strike ended. The men won their demand for twenty cents an hour and the demand that the company agree to treat with committees of the employees. The men, in turn, conceded the right of the company "to employ union or non-union men and to discharge them for cause." The following unusual paragraph in the agreement attracts a good deal of commendation:

"To reduce as much as possible inconvenience to the traveling public, it is agreed that no proposition for a strike shall be acted upon by any division at the same meeting at which it is introduced, but that at least forty-eight hours shall elapse before such proposition shall be voted upon. And if a strike shall be ordered it shall not take effect until at least six days have elapsed after notice to the company, during which time the employees shall continue their work."

In addition to the loss of two lives, the cost of the strike, which lasted twelve days, is estimated at nearly $70,000. The cost to the company was about $17,500; to the men, $17,800; and to the county, for the expenses of the military, $33,700. Most of the daily papers argue that, however righteous the demands of the men, they had no legal or moral right to prevent by force the work of the non-union men imported to take their places. The Chicago *Tribune* and the Springfield *Republican* advocate compulsory arbitration as the best preventive of strike riots, while the New York *Journal* believes that public ownership of the street railways would accomplish that result.

The New York *Worker* (successor to *The People*), in answer to the question, "What would Socialists in office do in such an emergency as this?" replies:

"A Social-Democratic city council would appropriate money to aid the strikers, if needed—as Socialist city councils have done in France.

"It would forbid the importation of scabs and use the police to enforce the provision.

"It would, when the company's franchise was legally forfeited, take possession of the street-car system and operate it for the public good—with an eight-hour day, union wages, and fair treatment for the employees.

"A Social-Democratic governor would support the local authorities and would call out the troops, if needed, to enforce such action."

**Do Large Salaries Afford any Assurance of Honesty in Employees?**—The remarks of Judge Wofford, of the criminal court in Kansas City, in sentencing a young man who had been found guilty of stealing a tray of diamonds from his employer, open up a broad line of inquiry. The judge plainly intimated that this diamond merchant deserved to have his goods stolen as a punishment for paying his clerk only $6 a week. This incident suggests to the Washington *Post* the following question:

"Ought the wages of employees to bear any relation to the value of things they handle, the degree of temptation to which they are exposed, or the facilities afforded by the positions they fill for appropriating their employer's property?"

*The Post* answers its own question in the negative. "Most of the great embezzlements," it says, "the looting of banks, trust companies, and other corporations, are not the work of underpaid employees"; and it adds that "large salaries do not furnish any security against rascality, and inadequate compensation does not make an honest boy or man turn to thieving." The New York *Commercial*, on the other hand, declares:

"It may with fairness be submitted that of two bank cashiers in a given community—with equal degrees of natural honesty, of the same training and tastes, with about the same yearly expenses to be met, each performing about the same work actually worth, say, $2,000 a year, but one receiving $2,500 and the other only $1,500—the underpaid man is much the more likely to 'go wrong.'

"And we can not withhold a measure of sympathy from Judge Wofford in his impulse to 'roast' the employer of the six-dollar-a-week diamond salesman, or fail to commend the sentiments of the late Judge Danforth, of the Maine supreme court, who, in sentencing a defaulting bank cashier to a long term in state's prison, remarked casually but forcibly and significantly:

"'I only wish that the law permitted me to send along to prison with you every one of the bank directors, who, through a long term of years, expected you to do your work, live respectably and becomingly, bring up a large family, and be honest—all on a salary of $600.'"

## AMERICAN AND ENGLISH WORKING PEOPLE.

AS the American invasion of European markets advances, the alarm of the European press, as will be seen by an article in our Foreign Topics Department this week, seems to increase. The proposal of Paul Leroy-Beaulieu that Europe form a tariff union against the United States has not met a wide response, and now the Cologne *Gazette*, according to the cable despatches, proposes a Russo-German commercial union against America, only to find that the Russians are reported to be more inclined to favor a Russo-American union against Germany. What the governments thus fail in doing, however, may be attempted by the manufacturers interested, if we are to credit a Geneva despatch to the London *Daily Mail* to the effect that the Swiss, Austrian, and German manufacturers are contemplating a union to boycott American goods. This news is undoubtedly "important if true"; but in a cable despatch from the manufacturing city of Prague, in Austria, where the movement is said to have originated, it is stated that the manufacturers there know nothing about such a movement. In the mean time, our successes in the arena of international trade rivalry go on. The German "Verein für Socialpolitik" has just brought out a book containing an alarmist view of American trade competition, written by Dr. Carl Ballod, who sees great danger to European manufacturers in our growing iron, steel, cotton, and silk industries. The American consul at Edinburgh says: "The tide of American imports into Scotland steadily rises. This is true not only of our food products, which are in almost universal demand, but also as to a numerous variety of manufactures. During the last twelve months the quantity of American goods in the markets of the east of Scotland has been much larger than ever before, and the volume of trade visibly greater."

All this lends a good deal of interest to a remarkably frank discussion of the superiority of the American workingman to his British cousin that appears in the current *Edinburgh Review*. The superiority is due principally, thinks this writer, to the fact that "whatever the recognized number of their [the American workingmen's] hours may be, whatever the kind of work, whatever the conditions under which it is carried on, the overwhelming majority of them put their hearts and minds into their work, and make their output as large as is possible to them." The American, further, "seems, as it were, to catch the spirit of the vast combinations of subtle mechanism amid which he plays his important but limited part, and to be glad of every opportunity of aiding in the development of the speed and economy with which they fulfil the constructive and adaptive functions for which they exist. And so, not only does he do what in him lies to get the largest results out of the machinery on which he is employed, as it stands, but it frequently happens that men come to the manager, or the head of their department, with ideas as to some further saving or still greater increase of production." This spirit, it seems, is almost unknown in Great Britain.

Another factor that tells in America's favor is the climate:

"The keen dry air of the larger part of that area in the States in which industrial operations seriously competing with our own are carried on is a constant and powerful incentive to activity of body and mind. Its results are seen in the strenuous lives led by persons of every class and occupation. The intensity of the nervous stress daily submitted to, and apparently with something like enjoyment, by the average professional and business man in the States bears the same kind of relation to that which is usual with us, as is borne by the manner of life of all but our leisure classes to that common in England before the days of telegraphs and telephones. . . . Speaking broadly, therefore, a climate which, like the American, acts as a perpetual nerve tonic, is calculated to enhance production—to give those who live subject to its influence corresponding industrial advantages."

This leads to the consideration of another advantage:

"For the realization of those advantages, however, another condition appears to be necessary, which condition is also present in the United States—that is, the currency of rates of wages high enough to enable the workingman to eat a large amount of meat. Without that form of support in extensive quantities the high evolution of energy witnessed in the American workingman would either not take place, or would result very speedily in mental and bodily exhaustion. In the United States the rates of wages in most manual occupations are quite sufficiently higher than those current here to allow of the regular consumption by the workingman and his family of a much greater amount of meat than is ordinarily eaten in corresponding working-class households in this country. The impression current in some quarters, that, by reason of the protective tariff, the cost of living in the United States is so much greater than in this country that the notoriously considerable and frequently great difference in nominal wages fails to secure an appreciably higher standard of material well-being, is altogether erroneous. There may, no doubt, be conveniences and luxuries for which the discrepancy in current cost is altogether to the disadvantage of the dweller in the United States. Cab-hire and clothes at fashionable tailors' are, doubtless, more costly than is the case with us. But American workingmen do not incur these charges any more than workmen here, and in their budgets rent is probably the only item which, as a rule, is considerably larger than is usual in this country, having reference to the article obtained. Meat is about as cheap as, or perhaps somewhat cheaper than, with us. Boots are probably no more expensive, of the kinds worn by working people. As to clothes of corresponding qualities there is some difference of opinion, but having regard to the fact that cotton can be, and is, worn during the hot months, it seems doubtful whether the total cost for dress is more for a working-class household of the same size in the States than in this country. Some figures published in the Bulletin of the United States Department of Labor in September, 1898, on wages in the United States and Europe, are put forward very tentatively, being professedly based, so far as this country is concerned, on very limited data. Still, a few of them may be mentioned as affording probably an at least approximate illustration of the differences between the wages current here and in the United States in some of the occupations most closely associated with the engineering industry. We take the figures for 1896, as that appears to be the latest year for which a comparison is available. The average daily wages for 'machinists,' probably equivalent to what we should call a good average workman in an engineering shop, for iron-molders, and for pattern-makers are—translated into our money—approximately, for certain cities in the United States, ten shillings [$2.40], ten shillings and sevenpence [$2.54], and eleven and ninepence [$2.80], and in certain cities of Great Britain six and threepence [$1.50], six and eightpence [$1.60], and six and sevenpence [$1.58]. It is quite possible that the disparity thus indicated is greater than that which actually obtains, but even a considerable deduction would leave the margin of difference still important. In the steel industry there is reason to believe that the disproportion in the general scale of wages between the two countries is markedly on the same side."

Added to these physical advantages are "certain moral and intellectual advantages":

"Chief among the former, from the economic point of view, is the democratic structure of society in the United States and the absence in the industrial sphere of anything corresponding to those sharply marked distinctions of class which are so perceptible through the factory and workshop systems of this country. There is, of course, plenty of careful grading in the finely organized manufacturing establishments of the great republic, but its basis is purely one of professional merit. There is no barrier there, vague and indefinable perhaps, but none the less real, such as still makes it always appear much more probable than not, even to the good English workman, that he will die a workman. To the American artisan of the same relative quality the chances seem excellent that he will have raised himself to a position, not of social superiority, but of greater comfort and larger leisure. The upward path is entirely open; he has seen, and daily sees, it mounted with sure and rapid steps by scores and even hundreds of his fellows, and there is no reason why, by the exercise of the same energy and resourcefulness, he should not attain a like success. In a word, the absence in the industrial system of the States and the presence in ours of distinctions cor-

responding to that between commissioned and non-commissioned ranks in the army, or, however loosely, to that between gentle and simple, serves in an important degree to enhance the comparative stimulus to strenuous and intelligent exertion among American workingmen."

As to the intellectual advantage, a "higher level of intelligence prevailing among American workingmen" is frankly conceded, and we are told:

"They are, it must be remembered, in so far as they come of American stock, the members of a race of which, for many generations, a primary education of sound intellectual quality and of deeply democratic inspiration has been the common heritage. It has developed an average character of exceptional force and initiative. It prepared the way also for the establishment and the utilization of those institutions for instruction in applied science which have sprung up widely during the last thirty years, and which during the past fifteen years have been extended and developed by wealthy Americans with princely lavishness of building and equipment. Therein certainly has lain much of the nursing-ground of the industrial competition which we are now facing. We have to encounter a race of employers who fully appreciate the value of the best scientific and technical training for industrial life. And among the working classes we have to reckon with great numbers of parents who do not want their boys to be adding to the family income before they are sixteen or seventeen, and until they reach that age desire them to avail themselves as fully as possible of the excellently equipped secondary and technical schools which are so widely diffused in the principal industrial States. The result is that a large proportion of the youths and young men, with which the great establishments of the metal and other industries are constantly being recruited, enter the works with a general intelligence so well trained that they are speedily able to apprehend the principles of the machinery on which they are employed. Thus prepared, they find nothing uninteresting or ignoble in the limited parts assigned to the eye and hand of man in many of the highly specialized processes by which American manufacturing industry is increasingly distinguished. If put to such work, it is their aim that their machine should produce a 'record' in their works, and that, if possible, by improvements at their suggestion, their works should produce a 'record' in the States.

"Where is there to be found among us this admirable spirit? Will it continue in its full present measure with those who have it, and who, having it, deserve and are bound to pass us and any others who have it not? Is there any hope that by any modifications of the conditions in which our industries are set something of the same spirit may come to dominate our working classes? There are a few observers who deprecate alarm, for the reason that, as they hold, the American industrial pace is a great deal too hot to be permanently maintained by any nation that is not perpetually recruited by fresh blood from abroad. This view was forcibly maintained in an article on American *versus* British workmen by a very well-informed occasional correspondent of *The Engineer* newspaper. This acute writer, the whole of whose article (January 26, 1900) is highly deserving of study, and to whose analysis of the causes of difference between the industrial position here and in the States we feel much indebted, goes so far as to suggest that the population of the principal industrial States of the Union 'would cease to multiply, or would even actually diminish if the influx from Europe were to stop.' We believe that the fact noted by other well-informed observers, that at any rate among the better-class American artisan families there are rarely more than two children, may certainly be regarded as affording some support to the suggestion of which we have spoken."

Instances are then adduced to show that the American artisan finds himself too old to work at forty-five, sometimes younger. At this point the British workingman has an advantage:

"There can be little doubt that the effective industrial life of the British artisan exceeds by some ten to fifteen years that usual in the States, and that in trades in which the competition of American producers is most keenly felt. The Lancashire cotton-weavers and spinners commonly work on to the age of fifty-five or more, and engineers till between fifty-five and sixty or even later, and many of our own iron and steel workers to from fifty to fifty-five. Here, plainly, is a point in our favor. The difference between the total efficiency, as an agent in manufacturing production, of the average British and the average American artisan is very much less than appears from the records of their respective achievements in any single year, or even in any decade. And the stock of the British artisan in his own country is much more fruitful than when transplanted across the Atlantic. The average number of children in working-class families is much larger here than in the States. There is some consolation for us in these reflections, but it is of a kind which we need to cherish with much caution."

It is evident that a tremendous struggle is at hand:

"The American working classes are constantly being recruited by new blood, which they assimilate with surprising rapidity, and there seems to be no reason to anticipate that the stream of immigration will cease for many years to come. Until it does, and for some considerable time after that event, we have good cause to anticipate that American production will go forward at an ever-increasing rate of progression under the influence of the conditions which we have analyzed. . . . . .

"Yet there are things to be remembered which afford ground for sober encouragement. For a considerable time to come much the larger part of American manufacturing production in many departments will be required to meet the demands of the vast and ever-growing home market. British manufacturers, therefore, and British artisans have time, not to waste, indeed, in the vain hope that the industrialism of the States will wear itself out before setting itself to capture all our markets, but to prepare themselves for such a struggle as neither they nor their fathers have ever known."

## TOPICS IN BRIEF.

## LETTERS AND ART.

### GREAT WRITERS AS REVOLUTIONISTS.

THE antagonistic attitude of Count Tolstoy toward state and church in Russia, and the enthusiasm with which the Russian students and many of the Russian people view him, were recently compared by the Vicomte de Voguë (in the *Gaulois*, Paris) to the reign of King Voltaire in France a century and a half ago. In commenting on this remark, *Literature* (London, April 27) says:

"There is no denying the exactness of the parallel, and there is nothing surprising in the alacrity with which the Vicomte de Voguë has pounced upon it. The only wonder is that he did not cover a whole page with parallels. For the phenomenon which he recognizes is one with which, tho it is hardly known in England, a long series of experiences has made most countries on the Continent familiar—the phenomenon of the man of letters as the centre of a disturbance. In Russia, of course, the causes of the phenomenon are clear enough. The poets and the novelists are the only Russians who ever get a fair chance of issuing manifestoes in opposition to the opinions of the ruling powers. Extinguishers are easily put upon the journalists and pamphleteers, but the imaginative writers are not, to the same extent, the objects of suspicion. On the one hand, the censor does not study their productions nearly so closely as he studies the newspapers; on the other hand, they have subtle ways of insinuating a gospel instead of preaching it. Consequently they are able, so to say, to steal the horse before the stable door is locked, and become the centers of disturbances because of their exceptional opportunities for causing them. In France the case is different; there any one may cause a disturbance who likes, and the name of those who like is legion. The strange thing, to the English observer, is that the men of letters should so readily be accepted as the leaders of popular movements. For of the fact that they are habitually so accepted there is no room for doubt. The Vicomte de Voguë instances the case of Voltaire as if it were unique. It is, on the contrary, the typical precursor of innumerable cases. As Voltaire was the center of a disturbance in the case of Calas, so was Zola the center of a disturbance in the case of Dreyfus. Their nearest analog in English literary history is Charles Reade; but tho Charles Reade delighted in disturbances, and wrote to the papers, like Zola, to stir them up, he was never taken so seriously. Not he, but Samuel Plimsoll, was the center of the disturbance to which 'Foul Play' was a contribution. But, in France, the cases of Voltaire and Zola do not exhaust the list, but only begin it. Other notable examples which at once suggest themselves are those of Rousseau, who set not France only, but a great part of the Continent, by the ears on a variety of questions ranging from the propriety of playgoing to the propriety of employing foster nurses; of Madame de Staël, who led the opposition to the first Empire, and of Victor Hugo, who led the opposition to the second; of Etienne Arago, the astronomer, who headed the rioters when they assailed the guardhouse in the Place du Château d'Eau in 1848; of Lamartine, who told the Anarchists that the Tricolor had been carried round the world, whereas their red flag had only been carried round the Champ de Mars; of François Coppée and Jules Lemaître, those great twin brethren of the meetings of the Nationalist League; and of Paul Déroulède, the French Kipling, who, whether he lives at Paris or at San Sebastian, is always the animated center of lively internecine strife. It is a long list, and we in England have no list to compare with it. Among our contemporary men of letters the only one who has any claim at all to be placed upon such a list is Dr. Conan Doyle; and tho Dr. Doyle fires off many stirring letters about army reform and the misdeeds of South African cricketers, we do not find the general public taking sides for and against him as the French public takes sides for and against M. Déroulède. The only cases, in fact, in which the British public has violently taken sides for and against a man of letters have been those of Huxley and Lord Byron. The one was a center of disturbance because of his opinions as to the descent of man; the other because British respectability considered itself affronted by certain circumstances in his personal history. The difference in the phenomena is no doubt due to differences in national temperament. But it is certainly one which deserves attention from the literary historian."

Probably the most notable of all English literary revolutionists were two poets—Milton, who gave his lifetime and sacrificed his sight in the cause of political, religious, and divorce reform, and Shelley. Among other notable poet-liberals are Leigh Hunt (who suffered two years' imprisonment for a daring literary attack on the Prince Regent), Keats, and (in some respects) Byron. To the preceding group was opposed the reactionary school of Wordsworth (the "lost leader"), Southey, Scott, and Coleridge. Among more recent writers, the most notable reformers and liberals have been Whitman and Edwin Markham in America, and Ruskin and Morris in England.

### THE LATEST PHASE OF THE SHAKESPEARE-BACON CONTROVERSY.

VERY few literary students or professional writers take the subject of the Baconian authorship of the Shakespearian plays seriously, or admit that the question is within the pale of "literary respectability." Indeed, with hardly an exception they are content to leave its discussion to writers whom they term "lawyers without a brief" and to the "uncritical herd," who are supposed to be the only persons visibly excited by the ingenious hypotheses of Judge Holmes (one of the originators of the Baconian theory) or by the great cryptogram of the late Ignatius Donnelly. A writer who does take this subject seriously, however, is Mr. Appleton Morgan, founder and president of the Shakespeare Society of New York, and editor of the Banks edition of Shakespeare in twenty volumes. Mr. Morgan, who is a lawyer as well as a Shakespearian student, many years ago developed a theory that the Shakespearian plays, as printed in the First Folio of 1623 (the first collected edition of the works) are "not monographs, but the work of many actors and stage censors, improving them constantly from their original mounting by Shakespeare." In support of this theory, he wrote "The Shakespearian Myth, or William Shakespeare and Circumstantial Evidence." During the course of fifteen or twenty years' study, however, Mr. Morgan has from time to time altered his hypothesis to accord, as he believes, with facts which he has discovered in his investigations, and his position at present appears to have approached more and more to the views of the Baconians. Among the curious facts which have lately been brought to his attention are the following (we quote from *The Conservator*, April):

"Taking up a copy of 'Falstaff in Equity,' by my good friend, Judge Charles E. Phelps, of the supreme bench of Baltimore, I believed myself safe; for I knew he, at any rate, was no 'Baconian.' But this is what I read on page 130:

"'One of the famous controversies of the day the decision of which settled the action of assumpsit upon a firm basis, was Slades Case, reported by Coke. The courts being divided in opinion, the case was twice argued before all the judges of England. Francis Bacon was of Counsel, and associated with him as attorney on the same side was a lawyer named John Halstaff. The case was pending from 1596 to 1602. When the author of the First Part of King Henry the Fourth found himself obliged, in 1597, to find some other name to substitute for the offensive Sir John Oldcastle, and to find it in a hurry, did he get it from the name of his associate, John Halstaff? ["Sir John Falstaff"].'

"I admit that the appearance of the First Folio in 1623 is hardly explicable, except upon the theory that some one, not of Shakespeare's family, who did not own the copyright to a single one of the plays and who indicated no interest in his renown as a dramatist or playwright, or of Shakespeare's fellow actors, who were not persons of means, went to the large expense of getting it out. It was rather a costly book. Allowing for an edition of only five hundred copies, the outlay must have been from £840 to £1,400,* accordingly as we take Halliwell Phil-

* This is the estimate of Theodore L. De Vinne, given me April 4.

lipps' estimate of from twelve to twenty times for the purchasing value of money in those days—that is, from four to seven thousand dollars. As no trace can be discovered of any interest in Shakespeare, or even a mention of his name, between the years 1616 and 1623, there certainly was no commercial demand to justify the outlay. Nor did the First Folio operate as a 'boom.' The Second Folio was probably a 'remainder' from the First, as, except that the hopeless pagination of the First Folio was corrected therein, it is page for page and line for line a duplicate. Mr. De Vinne tells me that the type of that day was so heavy it would have been practically impossible to keep the matter 'standing' for seven years. We know there were no processes for stereotyping.* It by no means follows, of course, that Lord Bacon advanced this considerable sum of money to launch the First Folio, but, fully allowing for the non-sequitur, he was liberated at that date from his chancellorship; had been interested in theatrical matters; had a theory that stage plays should be encouraged as making 'history visible' to the people (thereby inculcating patriotism and divers other desirable things), and the probability is not one to be passed without consideration, especially as he had put into prose, in the year 1621, a History of King Henry the Seventh, the only sequent king whose reign had not been used by Shakespeare as a dramatic theme."

Mr. Morgan also cites several "coincidences," hitherto unpublished, among them the following:

"Othello was first published, in 1622, in Quarto (Shakespeare having died in 1616). In 1653 [1623?] it was reprinted in the Folio, with many important additions, among which was this passage:

> Like to the Pontic sea
> Whose icy current and compulsive course
> Ne'er feels returning ebb, but keeps right on
> To the Propontic and the Hellespont.

A short time previously Bacon had been studying the phenomena of tides and currents, and had discovered the fact that the current in the Bosporus always runs from east to west."

In fact, Bacon himself used this illustration in his posthumous treatise on tides of the sea, Another recent discovery is that "the author of one of the plays knew and restated the contents of a letter written by one French potentate to another, the original of which never came to light until 1780." Mr. Morgan's query is: Would William Shakespeare, the London actor-manager, or Francis Bacon, Lord Chancellor of England, have had the more ready access to this secret of state?

And yet Mr. Morgan, while appearing to believe that the argument for some great interest felt by Bacon in the plays is very strong, does not admit that his possible mask and substitute, William Shakespeare, was a mere "oaf who could not write his name—a letterless clown, a chump." To have made such a choice would have exposed Bacon beyond denial, says Mr. Morgan, and the evidence is pretty clear that the manager Shakespeare's personal friends, including his fellow actors, Ben Jonson, and many others, accepted him as a man of wit and parts; neither could all London, which thronged to see the plays, have been persuaded that they had been written by a man who did not know even how to write his name.

In conclusion, Mr. Morgan signs the following "protocol" with the Baconian iconoclasts, which certainly indicates that he is willing to go a long way with them, altho not accepting, as yet proved, the Baconian authorship of the plays:

"I. The plays known as Shakespeare's were produced in London as William Shakespeare's between the years 1584 and 1616, and were repeatedly printed and reprinted as his, in quarto, without cavil or demurrer from anybody except Richard Green and perhaps one other rival playwright.

"II. As they stand in the First Folio, the Shakespeare plays are the product of either the growth, or the augmentation, by their author or authors, of the Quarto versions, and contain thousands of eloquent lines and twelve out of sixteen entire plays, which, so far as any record can be discovered, never saw the light in Shakespeare's lifetime, or until seven years after his death.

"III. There are so many thousands of identities of thought, opinion, circumstance, error, and simultaneous correction of error, in the literatures we call respectively 'Shakespeare' and 'Bacon,' and so many coincidences between Bacon's known circumstances, doings, and studies, and the material of certain Shakespeare plays, that it is a wellnigh successful demonstration that Bacon had more or less to do with the issuing of the first folio edition of the Shakespeare plays.

"IV. The Baconian theory, so called, has arrived at a point where it can not be longer safely ignored. It is a monster of such frightful mien as, to be hated, needs but to be seen. But seen too oft, familiar with its face, we first endure, then pity, then embrace. The only safety is to look the other way; or to say: 'There is absolutely nothing in it'—and take the consequences!

"V. The spirit of the whole series of plays is dominated by one man—tho this man might have had, and probably did have, helpers and coadjutors.

"As to the last article, I would like to add, that the most successful portion of Judge Henry Allen's work in refutation of the Baconian, or any other, anti-Shakespearian theory, is that in which he shows that all Shakespeare's predecessors and contemporary playwrights stuffed their plays with legal terms. That proposition, to my mind, amply shows where Shakespeare got his law, so that we are not driven to Bacon to find, for the legal terms in the plays at least, 'helpers and coadjutors.'"

* This is important. Of course, it could have been kept standing for a little while. Mr. De Vinne's idea was that the seven years' preservation in a printing-house was improbable.

---

## ERNESTO NOVELLI, A NEW SUCCESSOR TO SALVINI.

ERNESTO NOVELLI, who is now generally accepted as Italy's greatest actor and a fitting successor to Tommaso Salvini and Ernesto Rossi, has lately finished a second engagement in Vienna, where he has made a profound impression. In this visit he has added four new characters to his already large repertory—Othello, Hamlet, Shylock, and Petruchio. The Vienna correspondent of the New York *Commercial Advertiser* (May 8) remarks that wherever he has played in the course of the last year in Germany and Austria, critical theatergoers have been convinced that he deserves his high Italian reputation and "nobly merits to be ranked among the greatest histrionic artists of all countries and of all times." We quote as follows:

ERNESTO NOVELLI.

"That measure of comparison which is so apt to be applied in the case of all new applicants for public favor inevitably brings his ability in juxtaposition to that of his two famous compatriots, Salvini and Rossi. And it may at the outset be said that while his art stands on a plane of excellence in every essential as high as theirs, he surpasses them appreciably in two respects—in his greater versatility and in a certain modern spirit of realism that brings his creations nearer to the sphere of our own appreciation and sensibility. By nature not as richly endowed as either of his great predecessors, with whom beauty of features, voice, and form played a not unimportant rôle, Novelli has succeeded in

impressing on his work the stamp of a nature essentially sunny and lovable, much in the same manner as with us Joseph Jefferson, and it is this quality of goodness that characterizes so many of his principal creations, endearing them with a lasting affection for all who once have come within the influence of their charm."

In Paris and throughout Germany, Novelli has been acclaimed by the professional critics and by other actors as *facile princeps*. The Vienna correspondent thus speaks of his Shakespearian rôles:

"Two he has made his own in a manner that, once seen, is likely never to be forgotten: Shylock and Petruchio, stringent as they are in character, become in his hands typical figures that can be witnessed again and again, and ever with renewed delight. His Shylock has much of that Southern blood in his veins that gave life and vigor to the Othello of Salvini. Numberless little traits combine to present a distinctively Oriental type of Jew of the kind that unquestionably must have existed in Vienna in the time of Shakespeare and that is still to be found in Italy to-day. As for Petruchio it is simply a joy from beginning to end—such a brilliant *tour de force*, carried through with evident relish in the fun of the situation, is rarely seen on any stage, but once experienced one realizes that only in this joyous spirit of daring hilarity can 'The Taming of the Shrew' be given with full effect. The impression of the play was not unlike that of some original old Italian buffoonery, as living and apposite now as the day it was written."

---

## AN AUSTRALIAN VIEW OF THE LITERARY OUTLOOK.

A CENTURY ago, the idea of literary criticism in the antipodes would have seemed as incredible to our ancestors as would the vitascope and the automobile; and even fifty years later Macaulay would hardly have prophesied the appearance of his New Zealander in the year 1901. Yet British Oceanica is already furnishing a noticeable contingent of poets and prose writers, and the interest felt by Australians in literature is evinced by a recent article on the literary outlook in the Sydney *Daily Telegraph*. Most of the predictions revealing what the twentieth century will bring forth, remarks the writer, are depressing, since they are based on the unsatisfactory data of the present hour. Kipling has evidently reached his zenith; George Meredith is an old man, writing indifferent verse; and of the crowd of verse-writers whose names a few years ago were familiar as household words, there are few, if any, who have retained their hold on public attention. As to the great poets of the immediate future, they have yet to make their claims. The writer continues:

"The official chief singer of England—for in the world's thought the laureateship is a recognition of high poetical status—is lamentable as a successor to Tennyson and Wordsworth. Swinburne's day is over; the burning fervors of his genius we find no longer in occasional writings, which are little more than triumphs of technique. We have, for what they are worth, the London school of capable minor poets, Davidson, Le Gallienne, Thompson, and the rest, who have each produced a notable poem or two, and subsided. There has been a distinctively Celtic renaissance, with W. B. Yeats as its mystic high bard, and Moira O'Neill as its admirable popular exponent. Yeats is young, and may yet come down from his heights into the atmosphere of human probability. His genius is of the exalted spiritual type that seems to ordinary minds inarticulate. Moira O'Neill's songs of people who live and love, and suffer and laugh, are among the best of their kind ever written. Norah Hopper, Katherine Tynam, Fiona Macleod, and Jane Barlow form a very fine team of minors, in the various branches of Celtic literature of a distinctly poetical type. Indeed, it may be said that the minor poets of the past half-century have been superior on the whole to their class of former periods, making up as far as possible for lack of the highest inspiration by good workmanship. But of all those who write in the English tongue throughout the world there is no name generally known as that of a man or woman likely to produce work equal to that of the finest poets of the Victorian era. . . . At this hour the most promising, probably, is Stephen Phillips. His 'Christ in Hades' has passages of poetical exaltation more impressive than anything that has been written in our time; his 'Herod' has been hailed by many enthusiastic critics as a magnificently powerful drama, almost perfect in construction, and filled with rare beauty of thought and expression. Mr. Phillips is a young man, and those who hope that he will give the world a new series of great English plays may not be disappointed. As a deep student of the great masters of versification, he cultivated richly his capacity for conveying passion, emotion, and philosophy in perfect words and sonorous sentences. As a professional actor, credited with an especial knowledge of stagecraft, he should triumph over difficulties which proved too much for Tennyson and other poets, who vainly attempted to produce dramas suitable for public representation. . . . . .

"There is no reason to despair of a great literary harvest for the new century because the writers of unusual promise now in view are not many. In one of the London newspapers a critic has pointed out that the nineteenth century, in which imaginative literature achieved noble development, began even less auspiciously. The abject, almost unheard-of Pye was poet laureate in its first year. Wordsworth and Coleridge had just made their earliest efforts, only to be derided by current criticism. Lamb and Hazlitt were unknown to men, Byron was at Harrow, Shelley and Keats were little children. The nineteenth century, in its earliest decade, was almost barren of high-class literary production, but the gathering in of a rich harvest soon began. When the accession to the throne of the late Queen took place, Wordsworth, Southey, Landor, Campbell, Moore, Rogers, Hogg, Leigh Hunt, Hood, and several lesser poets were living and most active literary forces. . . . Other branches of literature were well represented by writers still in the flesh, such as De Quincey, Maria Edgeworth, Galt, Isaac Disraeli, Sydney Smith, Bulwer Lytton, Hallam, James and Horace Smith, Brougham, Wilson, and Sir William Hamilton. The literary value of the Victorian era was contributed to by later comers, however, for most of these were near to the ending of their day.

"Of the survivors who remain a few are of the first rank, but will not much longer wear harness effectively. Among the best known in different fields of work are Herbert Spencer, Russell Wallace, Hardy, Hall Caine, Aubrey De Vere, Robert Bridges, Leslie Stephen, Sir Walter Besant, and Sir Edwin Arnold. But it rests with the future to disclose the names of men and women who will do for the twentieth century in literature as well as did those of the nineteenth for their own period. Without exercising the gift of absolute prophecy, unhelped by any evidence whatever, it would be impossible to pick them out from among the mass of people now living. But they are probably there, indistinguishable now, but to make themselves known hereafter."

---

## M. FAGUET, THE NEW ACADEMICIAN.

THE latest name added to the group of French immortals is that of M. Emile Faguet, who was recently received into the Academy, and who, like his predecessors, MM. Brunetière and Lemaitre, is a distinguished critic. He is also a successful professor and a student of politics. From a short sketch of the new academician, found in *Le Magasin Pittoresque* (April 15), we quote the following:

"M. Emile Faguet is the son of a professor and was born at Roche-sur-Yon in 1847. Here he began his studies, which were continued at Poitiers and finished at Paris, whither he came in 1864 and where, three years later, he entered the Normal School. In 1870 he retook the road to the Province, to the 'far West,' whence he had come, and served successively as professor at La Rochelle, Poitiers, Moulins, and Bordeaux, his advancement following a regular course and bringing him back to Paris, the first and last hope of every good *normalien*. This first hope was not unaccompanied by another, that of devoting to newspapers and reviews the fruit of his leisure moments and his literary recreations. In this he was not disappointed. Between his classes, M. Faguet wrote on current topics for *L'Evénement*, and afterward passed on to *La France*, where he began his ca-

reer as dramatic critic. Finally, when M. Jules Lemaitre left *Les Débats*, it was M. Faguet whom he designated and who became his successor. M. Faguet contributes also to other journals, reserving his most elaborate studies for the *Revue Bleue* or the *Revue des Deux Mondes*. But M. Faguet does not devote himself exclusively to this work. A professor he has been and a professor he wishes to remain, and in this direction his surest claims to distinction lie. His studies upon our great writers are regular lecture-courses, and have gained for him his chair in the Sorbonne. He writes as he lectures, and he lectures as he writes, without disdain, without pedantry, with vivacity and cheerful humor. As critic he is familiar with all our great literary periods, but his best studies are those devoted to the eighteenth and nineteenth centuries. He is thus prepared for the study of the actual problems of to-day and for the field of speculative politics in which he has also won renown. His latest work is entitled 'Political Problems of the Present Time,' and has been already cited as an authority. His style is rapid and nervous, and he excels in pronouncing judgments in a single phrase, as, for example, when speaking of Voltaire, of whom he made a brilliant study ten years ago, 'This great intellect is a chaos of clear ideas,' and, again, 'He was a classical scholar who comprehended nothing of antiquity.' "—*Translation made for* THE LITERARY DIGEST.

M. EMILE FAGUET.

## THE BEST AGE FOR LITERARY ACHIEVEMENT.

THE question as to what is the age at which a writer's powers are at their highest is one that is frequently cropping up in literary discussions. *Literature* (London) recently retold the story of the painstaking author who, after a laborious calculation, had proved that the acme of brain-power is at sixty-three. After saving his best ideas for several decades, he at last wrote his "greatest effort" at the proper age, when to his grief and surprise his book was received with contempt. But his surprise, tho not his grief, was lessened when he discovered that his birth-certificate, through a lamentable error, had been misdated by two years, so that he had really written his book at sixty-five. Thereupon, in disgust at life, he is said to have turned reviewer.

In commenting on this article the New York *Bookman* (May) quotes various examples which show that the subject is by no means a matter of such simple calculation as this story would imply. It says:

"Of the greater novelists of the nineteenth century, George Eliot, as has been noted above, is one of those whose genius ripened the latest. Thackeray did not begin the writing of 'Vanity Fair' until he was thirty-five, and all of his longer novels were written between that age and the age of fifty-two, at which he died. 'Barry Lyndon' was published when he was thirty-one, and altho that is a very brilliant and even extraordinary book, Thackeray, in the years before the appearance of 'Vanity Fair,' was ranked only as a clever literary hack. In direct contrast were the early successes of Dickens. Before he was thirty he had given half a dozen masterpieces to the English reading world. He was little more than out of his teens when he began the writing of 'Sketches by Boz,' and he was only twenty-four when he undertook the adventures of Mr. Pickwick and his companions. While on this subject, it may be said that Dickens was rather an exception, because, altho in the work of his later life there was lacking some of that spontaneous humor and animal spirit which characterized his first productions, there was, on the whole, no marked diminution of his power. Trollope, as was told in the April number of *The Bookman*, began his literary career late in life. 'The Warden,' the first of his successful novels, did not appear until 1855, when the author was forty years of age. Victor Hugo, as every one knows, won his first extraordinary literary successes at so early an age that he was known as 'the divine child.' 'Les Misérables,' the greatest of his novels, however, was not written until late in life. Between the ages of twenty and thirty Balzac wrote a great number of novels and short stories which seem to have had no astonishing merit. It was not until about 1830 that there came to him the scheme of the 'Comédie Humaine,' and the beginning of his great success.

"To establish any hard-and-fast rule would, of course, be manifestly absurd, the history of literature is so filled with contradictions. Milton was fifty when he began the work of writing 'Paradise Lost.' Swift produced 'Gulliver's Travels' at fifty-nine. Defoe was fifty-eight when he gave up hack journalism to write 'Robinson Crusoe.' Scott had been for years a poet of world-wide reputation when, at the age of forty-four, he published the first of the Waverley novels. At fifty Darwin published 'The Origin of Species.' 'Middlemarch,' which is generally considered George Eliot's finest book, was not written until she was fifty-two. Hood was forty-six when he wrote 'The Bridge of Sighs' and 'The Song of the Shirt.' At the other extreme we have, for example, Byron, and Burns, and Pope, and Musset, and Gautier, and a score of others, whose greatest works were produced at an early age."

## TALKS WITH THOMAS HARDY AND MRS. CRAIGIE.

THE series of articles entitled "Real Conversations," by the English critic, Mr. William Archer, appear to have struck a new note in contemporary literature. Under a semi-dramatic guise, Mr. Archer records the conversations which he has had with celebrated men and women of letters. In the opening paper (*The Critic*, April) there is a lengthy talk with Mr. Thomas Hardy. The dramatic caption is as follows: "Scene—Mr. Hardy's library at —— House, near Casterbridge. Discovered, before a smouldering fire of elms-logs, Thomas Hardy and W. A." The conversation ranges over various themes—the geography of "Wessex," Mr. Hardy's literary methods, and particularly his attitude toward the supernatural. In this connection some new facts are brought out as to Mr. Hardy's philosophical position. Incidentally, he announces that he is not a pessimist, as is commonly supposed, but rather a "meliorist." The conversation at this point proceeds thus:

"*W. A.* And the pessimist holds, I take it, that the principle of evil is the stronger.

"*Mr. Hardy.* No, I should not put it precisely in that way. For instance, people call me a pessimist; and if it is pessimism to think, with Sophocles, that 'not to have been born is best,' then I do not reject the designation. I never could understand why the word 'pessimism' should be such a red rag to many worthy people; and I believe, indeed, that a good deal of the robustious, swaggering optimism of recent literature is at bottom cowardly and insincere. I do not see that we are likely to improve the world by asseverating, however loudly, that black is white, or at least that black is but a necessary contrast and foil, without which white would be white no longer. That is mere juggling with a metaphor. But my pessimism, if pessimism it be, does not involve the assumption that the world is going to the dogs, and that Ahriman is winning all along the line. On the contrary, my practical philosophy is distinctly meliorist. What are my books but one plea against 'man's inhumanity to man'—to woman—and to the lower animals? (By the way, my opposition to 'sport' is the one point on which I am at all in conflict with my neighbors hereabouts.) Whatever may be the inherent good or evil of life, it is certain that men make it much worse than it need be. When we have got rid of a thousand remediable ills, it will be time enough to determine whether the ill that is irremediable outweighs the good.

"*W. A.* And you think that we *are* getting rid of the remediable ills?

"*Mr. Hardy.* Slowly but surely—yes.

"*W. A.* War, for instance?

"*Mr. Hardy.* Oh, yes, war is doomed. It is doomed by the gradual growth of the introspective faculty in mankind—of their power of putting themselves in another's place, and taking a point of view that is not their own. In another aspect, this may be called the growth of a sense of humor. Not to-day, nor to-morrow, but in the fulness of time, war will come to an end, not for moral reasons, but because of its absurdity."

In the next issue of the same magazine, Mr. Archer talks with Mrs. Craigie ("John Oliver Hobbs"). The scene is appropriately located in her drawing-room, and the "period" is "tea-time." Mrs. Craigie has recently entered the communion of the Roman Catholic Church, and among some striking things brought out by this conversation are her views as to the relation of the Roman Church to fiction—a truly novel theme:

"*Mrs. Craigie.* Has it ever struck you that the Church of Rome, which alone among the churches of Western Europe enjoins and enforces continual examinations of conscience, is the real creator of modern analytical fiction? The Fathers of the church are the fathers of psychology. St. Augustine, St. Thomas Aquinas, St. Bernard, and Abelard—where will you find subtler soul-searching than in their writings?

"*W. A.* Alas, my dear Mrs. Craigie, you are speaking not only to a heretic, but to an ignoramus. My theological education has been sadly neglected. I have failed to read even Newman. His workmanship, of course, I admired; but he was exclusively concerned with issues that had no reality for me. . . . I should like to hear more about the connection between Catholicism and the art of fiction.

"*Mrs. Craigie.* Why, surely it is manifest. Analytic fiction has always arisen and flourished in the neighborhood of the confessional. Look at Racine, that exquisite psychologist—was he not a pupil of the Port Royal? And does not the modern analytic novel take its origin in France, among men who, tho some of them rejected Catholicism, one and all sprang from Catholic surroundings and were familiar with the theory and practise of confession? Look at Stendhal, Balzac, Flaubert, Bourget, Renan—all products of Catholicism, even if some of them fell away from the fold. And remember that Russia, the country of Turgeneff, Dostoiyevsky, Tolstoy, is also a country of the confessional. Why, it stands to reason—no Protestant searches his conscience, or habitually weighs his actions and scrutinizes their motives, as every Catholic must. Believe me, the analytic fiction of Protestants has always taken its analytic bent under Catholic influences.

"*W. A.* I think I could name one or two exceptions to the rule. I don't see what Catholic influence stimulated the genius of that sturdy Protestant Samuel Richardson, or, indeed, of Jane Austen. And, for that matter, what do you make of Shakespeare?

"*Mrs. Craigie.* My strongest case in point! He may or may not have been a Catholic himself (I think there is a very strong probability that he was); but at all events it is beyond dispute that he perfectly understood Catholicism, and was familiar with its rites and practises. Look at 'Romeo and Juliet,' for instance—the relation between Juliet and Friar Lawrence, and between Romeo and the Friar, is the relation between penitent and confessor, quite accurately portrayed. And see how Shakespeare has carefully eliminated the anti-Catholic bias of the man from whom he borrowed the theme—what was his name?

"*W. A.* Arthur Brooke, I think.

"*Mrs. Craigie.* ——who declares that he tells the story as an awful warning against the practise of 'conferring with superstitious friars.' Believe me, Shakespeare knew all about the confessional.

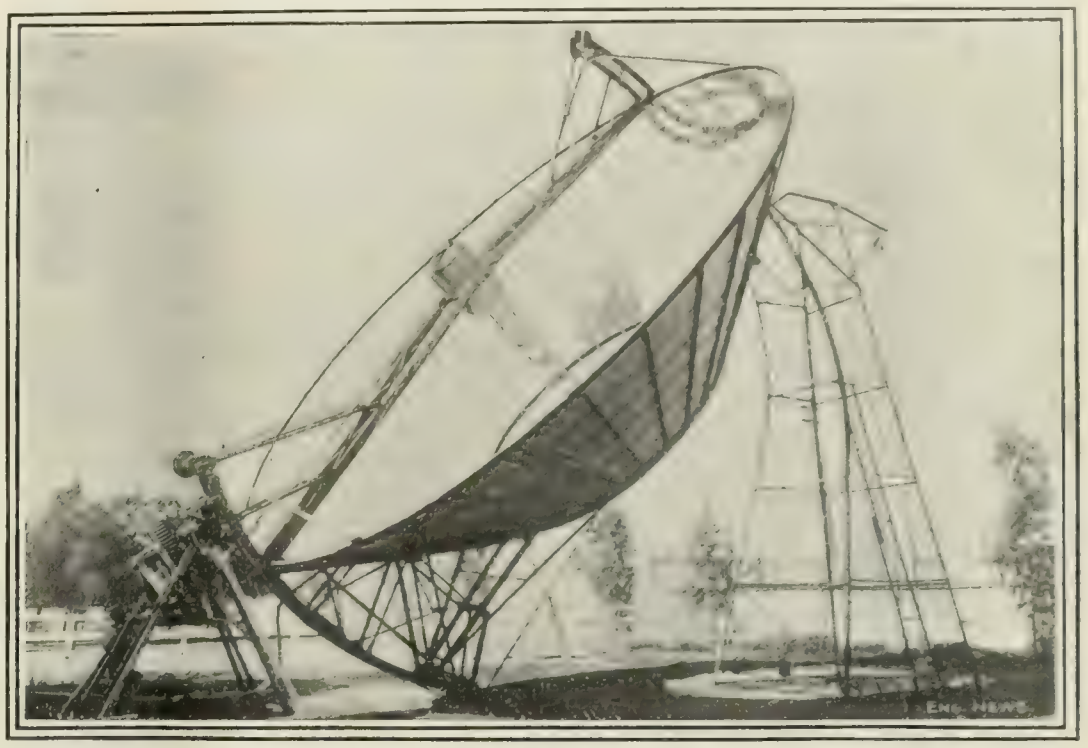
"*W. A.* Well, on the general point, I can bring you another, probably unexpected, ally. It would be hard, I fancy, to trace any Catholic influence on Henryk Ibsen; but in a very well-known epigram, he has said: 'At digte, det er at holde Dommedag over sig selv' ('Poetical creation means holding judgment-day upon yourself.') That is, in another form, your idea that constant self-examination makes the great artist; only, in Ibsen's view, the poet is his own confessor.

"*Mrs. Craigie.* I have sometimes thought of writing a drama round one of the great Catholic soul-searchers; but the subject would be too impracticable for the modern public, in the theater or out of it."

## SCIENCE AND INVENTION.

### ENGINE RUN BY SOLAR HEAT.

THE California "Solar Motor," about which the daily papers have been printing a good deal, is no new invention, but merely a perfected form of a device that has been known for some time. It is at South Pasadena, and has attained considerable success, due chiefly to painstaking attention to the details of construction and the improved application of principles which have been made use of in former unsuccessful solar motors. The



SOLAR MOTOR AT SOUTH PASADENA OSTRICH FARM, CALIFORNIA.

description quoted below is from an article contributed to *The Engineering News* (May 9) by Alfred L. Davenport. Says this writer:

"The two principal features of the machine are the reflector and the boiler. The reflector takes the form of a truncated right circular cone. The greatest diameter is about 33 feet, the smallest diameter 16 feet. The surface of the reflector is made up of 1,788 plane mirrors whose reflecting sides form the inner surface of the cone. These mirrors are of glass, of the thickness of ordinary window glass, and are covered on the back with three coats of pure silver, and over this is a preparation to render them weather-proof.

"It will be seen that if the axis of the cone is in line with the sun, all rays incident upon the mirrors will come to focus on the axis. The reflector is put in this position in the morning, and is automatically kept in focus by an escapement device which is operated electrically by a clock every twenty seconds. The reflector is thus put in perfect focus every twenty seconds throughout the day.

"The whole machine is suspended in two trolley-ways by two heavy cables. The rollers are pivoted on top of either tower, and the tracks are double and curved, so that the entire reflector may be revolved on the rollers to secure the proper inclination. The photograph was taken in the winter, when the sun was far south, and shows the reflector tipped well up on edge.

"The structural work is entirely of iron, and is designed to resist a wind velocity of 100 miles per hour.

"The boiler is, of course, in the focus of the rays at the axis of the reflector. It is 13 feet 6 inches in length and has a capacity of 100 gallons of water, with an additional space of 8 cubic feet for steam. The shell of the boiler is a large straight steel tube, with a steam dome at the upper end.

"The interior construction of the boiler is of a special design, as is at once seen to be necessary, since it must be turned with the reflector through nearly 180° every day in order to follow the sun. A special device prevents water from siphoning over into the engine as the boiler is tipped back and forth. The managers do not wish to describe this feature of the apparatus at present.

The boiler is, of course, furnished with a safety-valve and water-gage. It works at a pressure of 150 pounds, which is attained in one hour after the reflector is placed in focus. The boiler is covered with a preparation containing lampblack. . . . . .

"The most obvious application of solar power is to pump water from the thousands of wells which are used for irrigation in vast regions of Southern California, Nevada, New Mexico, and Arizona. The days in those localities are almost absolutely cloudless from April to October, and the heat in many places is intense.

"The chief obstacles to the development of large portions of these lands are scarcity of water and the high cost of fuel. If the solar motor succeeds in providing the former, while avoiding the cost of the latter, all the more desirable parts of the great American desert can be brought to a fair degree of productiveness.

"It is thought that it will not be found advisable to increase the size of the machine over the one now in operation. This one now furnishes fully 10 horse-power, and improvements now under way will probably increase this to 15 horse-power.

"Where large power is required, several reflectors and boilers may be used to furnish steam to one large engine."

## HOW DISEASE GERMS POISON US.

DISEASES, in a very large number of instances, are merely cases of poisoning, and in germ-diseases the poison is manufactured within the tissues of the body, where it will do the greatest amount of harm. How this comes about is told in the course of a recent lecture on "Poisonous Plants which Grow Within Our Bodies," by Dr. Henry H. Rusby, an abstract of which appears in *The Scientific American Supplement*. Says Dr. Rusby:

"The production of poisons by these plants is most easily demonstrated. It has already been shown that if the germs taken directly from the body of one suffering from a given disease be introduced into the body of another, the disease may be communicated to him; also that the germs can be propagated in some extraneous medium, as bouillon, for an indefinite period, and then be similarly used to inoculate another with their disease. In both these cases, the party to whom the disease is communicated can become the source for another inoculation, and so on, showing the successive reproduction and development of the plants in the bodies of the different persons. If, now, a portion of the liquid containing these germs be heated to a temperature known to be fatal to the latter, this power for the continued transmission of the disease is lost, as is clearly proven by inoculating an animal with the substance and failing to secure any further transmission of the disease from the substance of this body. No living germs, therefore, were conveyed to him in the inoculated substance. Yet, under these circumstances, we find that he will exhibit the subjective symptoms of the disease, so severely sometimes as to promptly cause his death. From this observation there is but one rational conclusion, namely, that the germs, while growing in the liquid, gave out to it their produced poison, which poison, injected in solution into the animal's body, poisoned it, just as it would have done had it been produced within that animal's body by germs existing there. So strong, it is said, will this poison solution sometimes become, where diphtheria germs are cultivated, that a single drop of it will kill a large and healthy horse.

"The extent to which the poison is produced under different conditions, or the 'virulence' of the germs, is extremely variable. This variation is manifested in different epidemics and in different cases of the same epidemic.

"Two quite distinct methods exist for the production of the poisons. One is the same as that followed by ordinary poisonous plants, like the toad-stool, or the aconite, belladonna, or strychnin plants. In each of these the poison results as a waste-product from the nutritive processes going on within the plant-body, so that the substance of the poison has previously belonged to the substance of the plant-body. While this poison can be of service to the plant as a protection, yet it can not be allowed to accumulate indefinitely. The aconite plant gets rid of it by storage in its tuber, which then decays in the soil after producing the plant of the following year. The belladonna plant stores most of it in the leaves, which fall and decay, while the strychnin plant does the same with its seeds. In the case of bacterial plants growing within our bodies, these poisons can be discarded from the plant-bodies only by excretion directly into our blood, and this, we have already seen, is proved by observed effects.

"The other method of poison-production is that by which the bacteria tear apart the organic substances of the tissues or fluids which surround them, extracting the very small portion which they can use, and leaving the residue, or part of it, in the form of a poisonous body. So far as the result is concerned, this method does not differ from the other, tho it explains the extremely destructive nature of these organisms in disease."

## VOLCANOES AND THE WEATHER.

VOLCANIC phenomena have been a standing puzzle to scientific men, and it can not be said that they are yet agreed regarding the primary causes of eruptions. Some recent attempts to connect volcanic outbreaks with astronomical or meteorological phenomena are interesting. Two of these are discussed in *Cosmos* (Paris, April 27) by M. P. Goggia, in an article on "The Last Phase of Activity of Vesuvius." This phase, the author tells us, altho it has been marked by no great catastrophes, has been "fertile in observations and investigations," which have been brought to public attention by papers read before the various learned societies. He speaks particularly of attempts to connect the varying phases of the volcano's activity with the phases of the moon on the one hand and with the amount of rainfall on the other. Says the writer:

"During the last years of his life, Professor Palmieri thought that he had established a relationship between the phases of the moon and the activity of Vesuvius, analogous to that existing between the periodic movements of the sea [the tides] and the age of the moon . . . ; he even attempted to show that in every twenty-four hours there was a maximum and a minimum of volcanic force corresponding to the passage of the moon over the meridian. This was a seductive idea; but it would have a better basis if the existence of a central fire could be established irrefutably. Probably, also, M. Palmieri, under the influence of a preconceived idea, was led to generalize from facts due simply to chance; for many scientists have not accepted his theories and have even sought to establish their inexactness by researches of their own. Thus, M. Semmola, having observed Vesuvius during the two years succeeding the month of July, 1895, showed that in this period of time there were 265 days of particularly intense or feeble activity—a number which can not be made to correspond with the 103 lunar phases of the period of observation. Besides this, during full and new moon the volcanic activity was increasing 22 times, decreasing 13 times, and stationary 17 times; while at the quarters it was increasing 21 times, diminishing 12 times, and stationary 18 times. Despite these contradictory facts, we should note that as we have no exact standard to calculate the intensity of volcanic phenomena, the theory of Palmieri ought not to be definitely rejected. . . . . .

"The same may be said of the alleged relations between the rainfall and the phases of Vesuvian activity, studied by Dr. de Lorenzo. . . . The author attempts to show, by means of his observations, that the eruption of Vesuvius that took place in May last was due in great part, if not entirely, to the heavy rains of the preceding winter, which, filtering slowly through the soil to great depths, reached molten lava and caused the explosion. . . . He supports this idea by stating that after six months of comparative repose, coinciding with a long dry period, the volcano became all at once threatening in the latter part of November, after three weeks of excessive rain. Not content with his own observations, he refers to the history of Vesuvius and shows that the minimum of activity generally occurs yearly in the autumn, following the dry summer weather. It is well known that numerous scientific men have attributed great volcanic outbreaks to the sudden vaporization of sea-water that penetrates by means of fissures in the rock to the molten lava mass. Others, however, think that we may discard this hypothesis, as a number of

the most active volcanoes are more than one hundred miles from the sea; while in the Sandwich Islands boiling lava remains at a great height in a rocky mass situated in the open ocean, where there is easy communication with the water, without a single explosion ever taking place. . . . Certainly those who think that the sudden conversion of sea-water into steam will explain these explosions will accept M. Lorenzo's theory as accounting for them when they take place in inland volcanoes. Nevertheless, this is like all the great problems of the universe—we may build all kinds of hypotheses about them, but their solution will keep the human intellect busy for a long time to come."—*Translation made for* THE LITERARY DIGEST.

## HOW A GASOLINE MOTOR WORKS.

CONSIDERING the extent to which the naphtha or gasoline engine is used, especially in automobiles, there is great popular ignorance regarding its working. Many persons believe it to be an engine in which gasoline is used as fuel, and even those who know better than this, and who understand that it is a motor in which the piston is driven by the explosion of gasoline vapor, would have trouble in explaining details. For the benefit of such persons, M. E. Dieudonné describes in *La Science Illustrée* (Paris, April 20) a common type of motor used to drive automobiles. Says this writer: "The vital parts of the apparatus may be divided into three classes: the motor itself, the carburator, and the arrangement for producing an electric spark, which is the usual method of exploding the gaseous mixture. Naphtha, air, oil, and the electric spark are the primary elements of its motion."

The motor consists of a cylinder in which slides a piston connected with two fly-wheels. It is closed on one side by a cover in which are two valves—one for aspiration, which admits the gas into the cylinder; the other for the escape of the gas after combustion. To explode the mixture, an induction-coil is usually employed, which is fed by a dry battery or by a small storage-battery. In order that this may give a spark, the primary circuit of the coil must of course be broken, and this is not done automatically by a vibrator, as in the ordinary induction-coil, but by an attachment to a secondary axle.

The carburator is a device in which the air is saturated with the vapors of the hydrocarbons contained in the naphtha. There are two kinds of carburators. In one, the air drawn in by the aspirator touches the surface of the naphtha contained in a reservoir; in the other, the gasoline is reduced to spray, the air is charged with the fine drops and is then drawn into the motor through a tube.

The motor works as follows:

"After the quantity of explosive and the arrangement of the sparking-apparatus have been regulated, the motor is started either by means of pedals, as in a tricycle or a quadricycle, or by turning a crank, as in an automobile proper. This displaces the piston in the cylinder, leaving a vacuum behind it; . . . at the same time the admission-valve opens and allows the explosive mixture from the carburator to enter the free space in the cylinder behind the piston. When the latter reaches the end of its course, the aspiration ceases and the valve closes. The explosive mixture is then contained in a closed space and is thus compressed by the piston on its return. At the end of the backward journey, the compression of the gas has reached its height. At this precise moment a cam fastened to a secondary axle has made one whole revolution, and the interrupter actuated by it breaks the battery circuit, causing a spark to pass between the terminals of the induction-coil. This explodes the gaseous mixture, which throws the piston forcibly forward to the end of its course. The axle bearing the fly-wheels continues to revolve, the piston moves back and pushes before it the burned gases, which escape by the escape-valve. . . . . .

"As we have seen, the working of the motor is thus characterized by four phases: Aspiration, compression, explosion, and evacuation. For this reason the motor is known as a 'four-time' motor. The positive work is done during the third phase—that of the explosion.

"These four phases follow each other with great speed, a two-horse-power motor making 1,500 to 2,000 revolutions a minute. The result is an enormous heating of the cylinder. To cool it, the constructors furnish it with radiant metal wings that increase the surface of the walls and favor the radiation of the heat into the exterior air. For motors of more than two horse-power, this mode of cooling is insufficient and it is necessary to establish a current of water around the walls of the cylinder.

"A word about the way in which speed is altered. In large automobiles, this is done by modification of the transmitting-gear, without affecting the number of revolutions made by the motor. In light vehicles the speed is changed by regulation of the point where the explosive mixture is set off by the electric spark, whose occurrence is hastened or retarded. Experience shows that the explosion has the greatest force when the mixture is ignited a little before the piston reaches the 'dead point,' because the explosion, even with the electric spark, is not absolutely instantaneous and the ignition is not propagated instantaneously throughout the whole gaseous mass. When the explosion is slightly premature, it has had time to extend throughout the whole volume of the mixture when the piston reaches the dead point of its course, and the effect is greatest. Retardation of the ignition, that is to say, its postponement until after the piston has passed the dead point, produces a contrary effect. Thus, the regulation of the time of ignition furnishes one mode of regulating the speed."—*Translation made for* THE LITERARY DIGEST.

## PROPORTION OF MEN TO WOMEN IN DIFFERENT LANDS.

THE estimated population of the earth is 1,500 millions, of whom a little more than half have been actually counted, says the *Staats-Zeitung* (New York). For 1,283 millions, or 88 per cent. of the whole, the sexes have been distinguished in the enumeration and estimation with the following result:

"Europe, with a population of 334 millions, has a female excess of 3⅔ millions; but the males are in excess in all the other continents. The excess of males is, in Asia, 16 millions in a population of 815 millions, in Africa more than a million in a population of 27 millions, in America more than a million in a population of 102 millions, in Australia half a million in a population of 4 millions. In the whole 1,283 millions, the net excess of males amounts to 15⅓ millions, or more than one per cent. Even in Europe there are large districts in which the males outnumber the females. These districts comprise Italy, Greece, Rumania, Bulgaria, Servia, Bosnia, and Herzogovina, and the country of the Don Cossacks—all in Southeastern Europe—in addition to the little German principality of Liechtenstein; and their aggregate excess of males amounts to half a million. In Portugal, Sweden and Norway, Russian Poland, and Great Britain, there are, on the other hand, 106 females for every 100 males. Germany has 104 females to 100 males, and the female excess in Hungary, Russia, France, and Belgium is comparatively small. Nor are males in excess in every non-European country. Nicaragua, for example, has a great excess of females, and, as its population consists largely of Indians and half-breeds, we see that female excess is not a peculiarity of the white race. Among the adult negroes of the Transvaal, too, there are many more women than men. The most peculiar ratios are shown by Hongkong and Hawaii. Hawaii has only 533 women, Hongkong only 409, for each 1,000 men.

"The general conclusion would seem to be that women are more social creatures than men, for they are rarest among sparse populations. Pastoral tribes and those that live by the chase show a large excess of males. So do agricultural countries, while in manufacturing countries females predominate. Laws, especially of real estate, inheritance, and marriage have an influence. Climate seems not to be without effect, for in general females predominate in the temperate, males in the hot and cold zones. Even the amount of rainfall has an apparent influence on the ratio of the sexes, arid regions having more males, wet regions more females. The cause is probably the scarcity of food in dry countries.

"The most striking result of these statistics is, however, the

great total excess of males, which far exceeds the excess of females in Europe. But the superfluous woman of Europe will probably derive little consolation from the fact that five husbands—or nearly so—are waiting for her in the wilderness."—*Translation made for* THE LITERARY DIGEST.

## CONTINUOUS RAILS.

CONTINUOUS rails are now common in this country on trolley lines, the joints formerly considered necessary to allow for expansion being obliterated by welding the rails together at the ends so as to make a line without break. It has been found that the rails are so firmly held by being made part of a continuous structure and embedded in the pavement that there is no danger of their buckling under the strain of expansion in hot weather. But engineers have not yet dared to apply this method to the steam railways, where continuous rails would be even more desirable owing to the higher speed and the very disagreeable effect of the jolt felt on passing from rail to rail, not to speak of the resulting injury to both the roadbed and the rolling-stock. Now an engineer of the Jura-Simplon Company in Switzerland has been investigating the matter mathematically and has come to the conclusion that continuous rails are just as practicable for trunk lines as for street-railroads. Says the *Revue Scientifique*, speaking of this engineer's work:

"He supposes that a rail 12 meters [40 feet] long and of 36 kilograms [80 pounds] is employed, which corresponds to ordinary usage; and he has based his calculations on a certain number of these rails laid without joints and exposed to a difference of temperature of 35° C. [63° F.]. The maximum force resulting from expansion of one rail would be transmitted to its extremity as a compression of 8.7 kilograms to the square millimeter [about 6 tons to the square inch], while the resistance to compression in a rail of this kind is normally about 80 kilos [20 tons]. It may be understood, then, that this addition to the normal resistance is absolutely negligible. And what is more, we must not think that it is wholly transmitted to the end of the rail. The rail is far from being able to expand freely along its entire length; it is held by the spikes that fasten it to the ties, and these in turn are embedded in the ballast, which holds them with considerable firmness. In fact, a thin layer of ballast is sufficient to counteract this whole tendency to expansion, and even to annul it completely. We have not yet reached the point, probably, where we can affirm that the joints are quite useless, and that all the rails ought to be welded end to end; such fastening is now contemplated only at points where the rails are somewhat sheltered from the sun, as in cuts or tunnels; but it seems to us not at all rash to generalize the theory and to consider that in the near future continuous rails will be adopted everywhere."—*Translation made for* THE LITERARY DIGEST.

**Curious Landslide.**—"The village of Vaglio, in the Etruscan Apennines, situated 2,500 feet above sea-level, began to slide into the valley of the Scoltenna on March 21," says *Cosmos*. "The entire village has now disappeared, and where nine hundred persons recently lived there is now only a lake. At 3 P.M. the curé of Vaglio, whose parsonage and church are at the highest point of the village, was stupefied to observe that his house had begun to move and was sliding down the slope. The surrounding houses followed in turn at a speed of about 25 centimeters [10 inches] an hour. The inhabitants made haste to save what could easily be carried away, and in a few hours they had removed the furniture, the sacred vessels of the church, etc. On the following day the landslide extended, and soon the whole village was sliding toward the valley. The efforts of the inhabitants to save their property were redoubled; the domestic animals were led away to a distance and the peasants camped out in the surrounding country. The slipping of the soil produced movements of the ground in front resembling huge waves, covering and engulfing houses and trees. In the following night the level of the river Scoltenna suddenly rose and changed the whole valley into a lake of more than 2 square kilometers (¾ square mile]. Nothing but water can now be seen on the spot where once stood the pretty village of Vaglio."—*Translation made for* THE LITERARY DIGEST.

**Preservation of Eggs.**—The results of experiments made recently in Germany on various modes of keeping eggs are published in the *Markthalen Zeitung* (Berlin). Fresh eggs were taken in June last, treated for preservation in various ways, and examined in February with the following results, which speak for themselves:

| *Method.* | *Percentage Spoiled.* |
|---|---|
| Kept in salt water | 100 |
| Wrapped in paper | 80 |
| In a mixture of salicylic acid and glycerin | 80 |
| Rubbed with salt | 70 |
| Painted with salicylic acid and glycerin | 70 |
| Dipped 12 to 15 seconds in boiling water | 50 |
| Dipped in a solution of alum | 50 |
| Dipped in a solution of salicylic acid | 50 |
| Painted with silicate of potassium | 40 |
| Painted with collodion | 40 |
| Kept in wood ashes | 20 |
| Varnished with gum-lac | 20 |
| Treated with a mixture of boric acid and silicate of potassium | 20 |
| Treated with permanganate of potassium | 20 |
| Covered with vaselin | 0 |
| Kept in lime-water | 0 |
| Kept in a solution of silicate of potassium | 0 |

**Niagara by Searchlight.**—"There is little doubt," says *The Western Electrician*, "that the searchlight illumination of the Falls of Niagara, which is to be seen in all its glory this summer, will add materially to the attractive features of the Niagara frontier. The famous cataract is glorious by day, and when under the illumination of powerful searchlights, it is a truly remarkable sight. The illumination that will first be seen will be done by the Michigan Central Railroad Company, and it is barely possible that the commissioners of the free parks will also recognize the advantage of making the spectacle as attractive by day as by night. It mars no natural beauty to direct powerful lights upon the plunging waters in order that admiring humanity may be entertained. As a feature of the Pan-American Exposition, powerful searchlights will be placed on the electric tower in the grounds at Buffalo and also on the observation tower at Niagara Falls. They will exchange beams of light, as it were, and it is expected that the spectacle will attract great attention. It is believed that the Niagara light will be visible as far as Toronto."

## SCIENCE BREVITIES.

THE work of constructing the Cairo-Cape telegraph line is being actively carried on, and keeps pace with the construction of the railroad from Mombassa to the Victoria Nyanza, says *The Scientific American*. Instead of cut poles, living trees, the branches of which are cut off, are planted along the line. Experience has shown that the living trees are not attacked by white ants like the poles. These trees take root easily, and only need to have the branches cut off from time to time. The wires are fixed simply by well-tarred hemp cords, which take the place of insulators. The trees will be replaced later on by iron poles, as has already been done over a part of the system.

THE discovery in a Chilian copper-mine of the body of an Indian workman who had died there many years ago, and who had been preserved from decay by the antiseptic action of the copper, is reported by J. A. W. Murdock in *The Engineering and Mining Journal* (May 11). The mine in question is situated in the district of Chuquicamata, in the desert of Atacama. The Indian had evidently been killed by a fall from the roof, while engaged in collecting atacamite in a small basket, which was still in his hand, his stone implements being found alongside. "The body is in a perfect state of preservation, evidently due to impregnation of the tissues by copper salts, as well as to the antiseptic action of the exceedingly dry climate. As these mines were apparently quite unknown to the early Spanish colonists, it is to be inferred that the body is of considerably antiquity; this is corroborated by the style of dress (a waistcloth and two anklets) and by the stone tools used. The local belief is that it dates from before the time of the Spanish occupation, say 1600 A.D."

# THE RELIGIOUS WORLD.

## JESUS FROM THE JEWISH POINT OF VIEW.

THE once popular novel by George Croly, entitled "Salathiel," has been recently revived under the title "Tarry Thou Till I Come"—the words which Christ, according to tradition, spoke to Salathiel on the way to Calvary, and which have been used as the basis of a number of romances on "The Wandering Jew." In an appendix to this new edition of Croly's novel appears an interesting symposium by a number of Jewish scholars and rabbis in response to the question: What is the Jewish Thought To-day of Jesus of Nazareth?

The first answer is from Dr. Isidore Singer, managing editor of the "Jewish Encyclopedia," now in process of publication. He says in part:

"I regard Jesus of Nazareth as a Jew of the Jews, one whom all Jewish people are learning to love. His teaching has been an immense service to the world in bringing Israel's God to the knowledge of hundreds of millions of mankind.

"The great change in Jewish thought concerning Jesus of Nazareth I can not better illustrate than by this fact: When I was a boy, had my father, who was a very pious man, heard the name of Jesus uttered from the pulpit of our synagog, he and every other man in the congregation would have left the building, and the rabbi would have been dismissed at once. Now, it is not strange, in many synagogs, to hear sermons preached eulogistic of this Jesus, and nobody thinks of protesting—in fact, we are all glad to claim Jesus as one of our people."

One of the most striking expressions of opinion is from Dr. Kaufman Kohler, rabbi of Temple Beth-El, New York. He writes:

"The true history of Jesus is so wrapped up in myth, the story of his life told in the Gospels so replete with contradictions, that it is rather difficult for the unbiased reader to arrive at the true historical facts. Still the beautiful tales about the things that happened around the lake of Galilee show that there was a spiritual daybreak in that dark corner of Judea of which official Judaism had failed to take sufficient cognizance. 'The stone that the builders rejected has become the cornerstone' of a new world. . . . . .

"His whole manner of teaching, the so-called Lord's Prayer, the Golden Rule, the code of ethics expounded for the elect ones in the Sermon on the Mount, no less than his miraculous cures, show him to have been one of the Essenes, a popular saint. But he was more than an ordinary teacher and healer of men. He went to the very core of religion and laid bare the depths of the human soul. As a veritable prophet, Jesus, in such striking manner, disclaimed allegiance to any of the Pharisean schools and asked for no authority but that of the living voice within, while passing judgment on the law, in order to raise life to a higher standard. He was a bold religious and social reformer, eager to regenerate Judaism. True, a large number of sayings were attributed to the dead master by his disciples which had been current in the schools. Still, the charm of true originality is felt in these utterances of his when the great realities of life, when the idea of Sabbath, the principle of purity, the value of a human soul, of woman, even of the abject sinner, are touched upon. None can read these parables and verdicts of the Nazarene and not be thrilled with the joy of a truth unspelled before. There is wonderful music in the voice which stays an angry crowd, saying, 'Let him that is without sin cast the first stone!' —that speaks the words, 'Be like children, and you are not far from the kingdom of God!' . . . . . .

"'Did the Jews reject Christ?' Jesus anticipated a reign of perfect love, but centuries of hatred came. Could the Jews, victims of Christian intolerance, look with calmness and admiration upon Jesus, in whose name all the atrocities were perpetrated? Still, the leading thinkers of Judaism willingly recognized that the founder of the Christian Church, as well as that of Islamism, was sent by divine Providence to prepare the pagan world for the Messianic kingdom of truth and righteousness. The Jew of to-day beholds in Jesus an inspiring ideal of matchless beauty. While he lacks the element of stern justice expressed so forcibly in the law and in the Old-Testament characters, the firmness of self-assertion so necessary to the full development of manhood, all those social qualities which build up the home and society, industry and worldly progress, he is the unique exponent of the principle of redeeming love. His name as helper of the poor, as sympathizing friend of the fallen, as brother of every fellow sufferer, as lover of man and redeemer of woman, has become the inspiration, the symbol, and the watchword for the world's greatest achievements in the field of benevolence. While continuing the work of the synagog, the Christian Church with the larger means at her disposal created those institutions of charity and redeeming love that accomplished wondrous things. The very sign of the cross has lent a new meaning, a holier pathos to suffering, sickness, and sin, so as to offer new practical solutions for the great problems of evil which fill the human heart with new joys of self-sacrificing love.

"All this modern Judaism gladly acknowledges, reclaiming Jesus as one of its greatest sons. But it denies that one single man, or one church, however broad, holds the key to many-sided truth. It waits for the time when all life's deepest mysteries will have been spelled and to the ideals of sage and saint that of the seeker of all that is good, beautiful, and true will have been joined; when Jew and Gentile, synagog and church, will merge into the church universal, into the great city of humanity whose name is 'God is there.'"

Cesare Lombroso, the celebrated criminologist and professor in the University of Turin, says:

"In my eyes Jesus is one of the greatest geniuses the world has produced; but he was, like all geniuses, somewhat unbalanced, anticipating by ten centuries the emancipation of the slave, and by twenty centuries socialism and the emancipation of woman. He did not proceed by a precise, systematic demonstration, but through short sentences and by leaps and bounds, so that without the downfall of the Temple, and without the persecutions of the Christians under Nero, his work would have been lost."

Dr. Max Nordau, the critic and philosopher, writes:

"Jesus is soul of our soul, as he is flesh of our flesh. Who, then, could think of excluding him from the people of Israel? St. Peter will remain the only Jew who said of the son of David, 'I know not the man.' If the Jews up to the present time have not publicly rendered homage to the sublime moral beauty of the figure of Jesus, it is because their tormentors have always persecuted, tortured, assassinated them in his name. The Jews have drawn their conclusions from the disciples as to the Master, which was a wrong, a wrong pardonable in the eternal victims of the implacable, cruel hatred of those who call themselves Christians. Every time that a Jew mounted to the sources and contemplated Christ alone, without his pretended faithful, he cried, with tenderness and admiration: 'Putting aside the Messianic mission, this man is ours. He honors our race and we claim him as we claim the Gospels—flowers of Jewish literature, and only Jewish.'"

Dr. Emil G. Hirsch, of the Sinai Congregation and professor of rabbinical literature in the University of Chicago, says:

"Under close analysis, his precepts will be found to contain nothing that was new. There is scarce an expression credited to him but has its analogon in the well-known sayings of the rabbis. He did not pretend to found a new religion. The doctrines he developed were the familiar truths of Israel's prophetic monotheism. Nor did his ethical proclamation sound a note before unknown in the household of the synagog or in the schools. He was in method a wonderfully gifted Hagadist. His originality lies in the striking form which he understood to give to the old vitalities of his ancestral religion. He moved the heart of the people.

"The Jews of every shade of religious belief do not regard Jesus in the light of Paul's theology. But the gospel Jesus, the Jesus who teaches so superbly the principles of Jewish ethics, is revered by all the liberal expounders of Judaism. His words are studied; the New Testament forms a part of Jewish literature. Among the great preceptors that have worded the truths of which

Judaism is the historical guardian, none, in our estimation and esteem, takes precedence of the rabbi of Nazareth. To impute to us suspicious sentiments concerning him does us gross injustice. We know him to be among our greatest and purest."

## BERAUD'S NEW PICTURE OF CHRIST IN THE PARIS SALON.

THE most remarkable work in this year's Salon is pronounced to be a painting by Jean Beraud called "Christ Bound to a Pillar." It is thus described by the Paris correspondent of the New York *Tribune*:

"By its daring conception, masterful coloring and technique, no less than by the artist's choice of a harrowing subject, verging upon the sacrilegious, this picture seems to hypnotize all who enter the room in which it hangs. Beraud's memorable 'Modern Christ,' which caused a sensation about a dozen years ago; his 'Parisian Magdalen' and his 'Descent from the Cross' are all surpassed by this new Christ with blue eyes and auburn hair, crowned with thorns and clad in a flowing scarlet robe, standing at bay with bare and bleeding breast, confronted by an infuriated group of twentieth-century persecutors. Around the Savior's waist is a rope thrice coiled, being pulled tight by a stalwart workman in corduroy trousers, who, to obtain a better purchase, presses his upraised knee against the right thigh of the Christ. A herculean butcher, with brutal head and wearing a blood-stained apron, and having a claspknife and steel dangling from his side, is drawing up the sleeve from his forearm, preparatory to giving the *coup de grace*. An oily, sensual stockbroker, wearing the Phrygian cap of liberty, clothes of the latest cut, and a vulgar profusion of jewelry, helps to adjust the rope around the Savior's waist. A Free Mason in evening-dress, white tie, and wearing the apron and insignia of the thirty-third degree, threatens Jesus with his clenched fist. A harlot clutches a lock of the Savior's hair, about to tear it from the scalp. A weird, nervous, male hand in the foreground grasps a stone. There are uplifted arms and hands holding whips, canes, and burning torches. The countenances gleam with anger, irony, and hatred. Almost all the figures are represented with open mouths, from which one can hear in imagination utterances of jeering and derision. These twentieth-century persecutors are students, socialists, and artisans, all the more disquieting in their portraiture because their faces resemble those of prominent men in French public life. This strange 'Hic Flagellavit' is unquestionably Beraud's masterpiece."

"CHRIST BOUND TO A PILLAR."

## AN ENGLISHWOMAN'S STUDY OF HINDUISM.

MISS F. HENRIETTA MULLER, editor and publisher of the London *Woman's Herald*, and well known in philanthropic and educational work, has lately given the results of her nine years' study of Hinduism as seen by her in Bengal, Bombay, Madras, and the Punjab. Miss Muller, according to her own statements, went to India strongly prepossessed in favor of Hinduism, but finally came away thoroughly disillusionized with it as held by the masses of the people. Hinduism, called also Brahmanism (of which Vedantism is one of the philosophical interpretations), is founded upon the sacred scriptures known as the Vedas, supposed to have been first composed several thousand years before our era. Altho there are some seven millions of Buddhists in India, and about fifty-nine million Mohammedans, Hinduism is vastly in the ascendency and possesses some two hundred million adherents. The Boston *Woman's Journal* thus summarizes Miss Muller's conclusions:

"According to Miss Muller, the two pillars upon which the whole system of the Hindu religion rests are the complete and ruthless sacrifice of the woman, and the worship of idols, which means, in their eyes, the propitiation of demons. And it is always the evil deities that receive the most propitiations. A great many more offerings are made, for instance, to the goddess of smallpox than to the goddess of health. Hinduism is a religion of fear and of mutual mistrust; for if a man commits a trifling violation of some one of the innumerable rules of caste, any one who sees him do it can blackmail him, holding over his head the threat to proclaim it and cause him to be made an outcast, with the utter ostracism that this implies. A young Brahman was guilty of being present at the wedding of a friend who married a widow. An old Brahman who had a grudge against this young man sat for days over against the door of his house, where his mother lay dying, and warned everybody that if they went in or gave the slightest assistance, he (the old Brahman) would pronounce them outcasts. The young man had to take the whole

care of his mother himself, and afterward to bury her with his own hands, thereby incurring, as he believed, heavy spiritual penalties.

"Miss Muller thinks it improbable that Christianity can get any general hold on the Hindus for a very long time to come, if ever. She believes that their deliverance from Hinduism is more likely to come through Buddhism. They can receive this more easily than Christianity, because it is an Eastern religion, with much of the antiquated Eastern atmosphere still hanging about it. On the other hand, Buddhism is infinitely superior to Hinduism, as it is a religion of kindness and compassion, and free from the tyrannical restrictions of caste. She thinks it may prove an intermediate step toward Christianity.

"Miss Muller fully confirms all that Dr. Emily B. Ryder has related as to the evils of child marriage. She says the total subjugation of women, prescribed by Hinduism, has harmed the men even more than the women; that Hindu women are still sweet, lovable, and womanly, but the mass of the men have wholly lost their manliness. They are a decadent race. Their will power is so impaired that even when they see clearly what is right, they have not the strength of character to follow their convictions. . . . Miss Muller says that as the combined result of child marriage, the oppression of women, the cultivation of occult powers by abnormal means, and the practise of indescribable vices, the Hindu race has been almost utterly ruined. A few strong men are still to be found among them, but the majority are completely decrepit in physical and moral strength. A blow which would not seriously damage an English boy of ten will often kill a Hindu. A native once referred to Miss Muller as old. She answered, 'I am younger now than you were when you were born!' She declares that most of the Hindus are born decrepit, enfeebled in body and soul."

Vedantism, the form of Hinduism having various missions in this country and represented by the Vedanta Society of New York, presents the ancient Vedic doctrine from a standpoint very different from that of the corrupt popular form seen by Miss Muller. As taught in India and this country, it is a system of transcendental philosophy and ethics not dissimilar from that of Emerson, and is founded on Vedic doctrine as interpreted by the great Hindu sage Ramakrishna. In it idol worship, caste, child marriage, and other corruptions into which the original Hindu religion has fallen have no place. Several works published by the New York Vedanta Society present the Hindu side of this subject. Among these is "A Voice from the Himalayas," dealing with Hindu morality in general, and a lecture by Swâmi Abhedânanda on "Woman's Place in Hindu Religion." The Swâmi thus contrasts the views of the Old and New Testaments with the teachings of the Hindu sacred scriptures:

"No other scriptures of the world have ever given to the woman such equality with the man as the Vedas of the Hindus. The Old Testament, the Koran, and the Zend-Avesta have made woman the scapegoat for all the crimes committed by man. The Old Testament, in describing the creation of woman and fall of man, has established the idea that woman was created for man's pleasure, consequently her duty was to obey him implicitly. It makes her an instrument in the hands of Satan for the temptation and fall of the holy man with whom she was enjoying the felicity of paradise. Adam's first thought on that occasion was to shift the burden of guilt on to the shoulders of the woman. St. Paul, in the New Testament, shows that, through Adam's fall, woman was the means of bringing sin, suffering, and death into the world. Popular Christianity has been trying lately to take away this idea, but in spite of all the efforts of the preachers the same idea still lurks behind the eulogies that have been piled upon the conception of womanhood in Christian lands. How is it possible for one who believes the accounts given in Genesis to be literally true to reject the idea there set forth that woman was the cause of the temptation and fall of man, thereby bringing sin and suffering and death into the world? For one who accepts the Biblical account there is no other alternative left.

"In India, such ideas never arose in the minds of the Vedic seers, nor have kindred notions found expression in the writings of the lawgivers of later days. The Hindu legislators realized that both sexes are equal, and said before the world that women had equal rights with men for freedom, for the acquirement of knowledge, education, and spirituality. It is for this reason that we find in the Rig-Veda the names of so many inspired women who attained to the realization of the highest spiritual truths. These inspired women are recognized by all classes as the seers of truth, as spiritual instructors, divine speakers and revealers, equally with the inspired men of Vedic hymns.

"It is often said that Hindu women are treated like slaves by their husbands; but it is not a fact. On the contrary, the Hindu women get better treatment than the majority of the wives of Englishmen or of Americans endowed with the spirit of an English husband. Sir M. M. Williams says: 'Indian wives often possess greater influence than the wives of Europeans.' The number of wife-beaters is considerably smaller in India than in Europe or America. He is not a true Hindu who does not regard a woman's body as sacred as the temple of God. He is an outcast who touches a woman's body with irreverence, hatred, or anger. 'A woman's body,' says Manu the lawgiver, 'must not be struck hard even with a flower, because it is sacred.' It is for this reason that Hindus do not allow capital punishment for women."

After quoting the opinions of a number of observers, including Mrs. F. A. Steele, an Englishwoman who resided in India twenty-five years and who has said that "in regard to the general position of women in India, I think it is rather better than our own; women in India can hold property, and a widow always gets a fixed portion of her husband's estate," the Swâmi concludes:

"Lastly, the position of women in Hindu religion can be understood better by that unique idea of the motherhood of God, which is nowhere so strongly expressed and recognized as in India. The mother is so highly honored in India that the Hindus are not satisfied until they see divinity in the form of an earthly mother. They say that one mother is greater than a thousand fathers, therefore the Hindus prefer to call the Supreme Being the Mother of the Universe. According to Hindu religion, each woman, whether old or young, is the living representative of the divine Mother on earth. The divine Mother is greater than the 'Creator' of other religions. She is the *Producer* of the Creator, or the First-born Lord of all creatures. There is no other country in the world where every living mother is venerated as an incarnation of the divine Mother, where every village has a guardian mother who protects all as her own children.

"Listen to the prayer that rises every day to the Almighty Mother of the universe from the hearts of Hindu worshipers:

"'O Mother Divine, Thou art beyond the reach of our praises; Thou pervadest every particle of the universe; all knowledge proceeds from Thee, O Infinite Source of wisdom! Thou dwellest in every feminine form, and all women are Thy living representatives upon earth.'"

---

**Will British Congregationalists and Baptists Unite?**—The movement toward church union and federation, evident of late in nearly every part of Christendom, has been particularly noticeable in Great Britain during the past year. Closely following the organic union of the Free and United Presbyterian churches of Scotland and the proposed union of all evangelical bodies in that kingdom, has come the first joint assembly of the Congregational and Baptist churches of England. Both these bodies are strongly Congregational in church polity and Calvinistic in theology; and there seems to be every reason to believe that their corporate union is only a question of a comparatively short time. Indeed, Mr. Alfred Dawson, English editor of *The Congregationalist*, speaks of that union as a consummation "sure to take place." The *rapprochement* which has been going on for a long period this year culminated in two joint sessions of these bodies, which Mr. Dawson pronounces "the most wonderful series of religious gatherings" he has ever attended. He writes (*The Congregationalist*, May 11):

"There were two joint assemblies: on Tuesday, April 23, when Dr. Parker presided and Dr. McLaren delivered his address as president of the Baptist Union; and on the following Thursday,

when the positions were reversed, Dr. McLaren presiding and Dr. Parker delivering his address as chairman of the Congregational Union. The experiment was in every way a success; perfect harmony and the warmest fraternal feeling prevailed throughout, and not one single jarring note was struck. . . . . .

"Reverting to the paramount question of Baptist and Congregational union, the committee of the latter body frankly remarked in their annual report: 'Neither of the joint assemblies can meet without the ideas occurring to many minds that a permanent union of Baptists and Congregationalists should not be an impossible dream.' Certainly many of the leaders and rank and file on both sides do not so regard it."

## TWO VIEWS OF CHRISTIAN MISSIONS.

THE controversy between Mark Twain and the Christian missionaries has revealed a fundamental difference of opinion between those officially interested in the process of evangelizing the heathen, and a large lay element. This fundamental difference of view is well illustrated by two recent pronouncements, one by the Rev. Judson Smith, "recording secretary of the American Board of Commissioners for Foreign Missions," in *The North American Review* (March); the other by an article in *Reynolds' Newspaper*, one of the most widely read journals in Great Britain. Dr. Smith, in an article summing up the work accomplished during the nineteenth century by Protestant foreign missions, says:

"The good will of the people has been won; schools have been organized and are in successful operation; churches have been gathered and are in training under native pastors for an increasing share in the work; the Bible, wholly or in parts, has been translated into hundreds of languages or dialects, and is accessible to the vast majority of the unevangelized peoples of the earth; text-books for schools and a Christian literature are provided in large measure, to aid in the development of the Christian body. These things will not need to be done again, but they stand ready for continued and more effective use—the splendid apparatus of a vigorous and world-wide campaign. There is in many lands a strong, well-trained, and experienced body of missionaries, surrounded and aided by seven times their own number of native helpers, prepared to take advantage of all these vast facilities, and push the work of Christianizing the world in the most energetic and effective way. We have already observed a constant acceleration in the rate of increase in the positive results of mission work; and we have every reason to expect that this rate of increase will steadily rise throughout the coming century. Probably, in no respect is the progress of this work during the nineteenth century more marked or significant than in the accomplishment of all this vast preliminary and pioneer work. It took three years to marshal and train the armies of the Union; but when that had been done, it required but another year to bring the war to a victorious end. But the progress in those years of preparation was as real and significant as in that one year of resistless advance.

"But even the nineteenth century has recorded signal successes, foretastes of the final victory. Witness the conversion of Tahiti, of the Society Islands, of Samoa, of the Friendly Islands, of the New Hebrides, of the Sandwich Islands and so many other islands of the Pacific. Recall, also, the inspiring progress in Madagascar and Uganda, among the Telugus and the Karens, in Japan and in the older missions in China. Enough has been achieved to prove the possibility of universal success. It is no experiment in which we are engaged; it is a supremely successful work. There are no backward steps in Christ's march down the centuries and across the nations to universal victory. This imposing work, with its impregnable foundations, its powerful and growing array, is beyond the reach of cavil or sneer, is confessedly the one resistless, triumphant force in the enlightenment of the nations and in the uplifting of the world. We do not now celebrate the triumph, but we are on the march; every foe flees before us, every year makes the cause more resistless; and the end is both certain and near at hand."

On the other hand, these words have been termed "grandiloquent and boastful," and it has been argued that this "characteristically pharisaic spirit of the modern Christian divine" is hardly justified in view of the fact that the slums close at hand have not been reclaimed nor the scholarly pagans at home convinced that Christianity has any exclusive message or advantage. *Reynolds' Newspaper* (April 28) says of this phase of the subject, apropos of a recent report:

"The news of the murder of fourteen missionaries in New Guinea does not encourage the belief that our methods of evangelizing the heathen are particularly successful. Noble characters such as Bishop Colenso, Bishop Mackensie, Carey, and Livingstone, have been attracted to the mission service and done splendid work in helping mankind to mark a degree higher on the scale of existence; but great men are rare and the missionary societies unfortunately do not invariably send out the right men to carry on the work first started by St. Paul. We have no doubt that the Revs. James Chalmers and O. F. Tomkins, who, with twelve students, have lost their lives at Aird River, were brave men deserving all the tributes that will be paid to their memory at the various religious gatherings to be held in London during the next few weeks. But we question the wisdom of trying to impress the people of New Guinea or anywhere else with the superiority of our own theological ideas, or of interfering in the internal disputes amongst aboriginal tribes. Messrs. Chalmers and Tomkins, with their companions, lost their lives, it appears, during a tribal fight which they tried to stop. We wish to say nothing in disparagement of well-intentioned efforts in which men risk their lives; but it is as well to point out that the history of missions is largely tragic because of the political ascendancy which missionaries have too often sought to exercise over tribes whom they are sent to convert. Our troubles in South Africa were originally caused by the mischievous action of the Rev. Dr. Phillips, of the London Missionary Society, who was little better than an agent of Lord Glenelg, the 'statesman' chiefly responsible for the policy which led to the Great Trek.

"What right have we to assume that the people of New Guinea need converting? Tho they have been officially described as a very low type of humanity, they are yet in many respects more civilized than ourselves. No doubt they worship Belial in a different way from that which we adopt, and settle tribal disputes with spears and scalping-knives, instead of with bayonets and Long Toms, but they have not yet reared any temples to Mammon. They have neither stock exchanges, nor jails, nor workhouses, nor gambling-hells and other dens of infamy which are products of our beautiful civilization. Moreover, they are communists to a man and sink the interests of the individual in the interests of the tribe. We are told, too, on the authority of a young missionary who was actually converted from Christianity by these Papuans, that their social system is really based upon the principles laid down by the early Christians. If one member of a tribe falls ill, his neighbors in turn cultivate his ground till he gets better. They hold property in common and have a high standard of sexual morality. Great mischief is done by missionaries in trying to Europeanize these people. They are first of all taught the rights of private property, whereas they have no conception of any rights of property except tribal rights. Then, in the interests of British commerce, they are taught to clothe themselves with Manchester and other wares, and then of course the spirit of snobbery is fostered. In Uganda we are told, on the authority of Bishop Tucker, Christian missions have been so successful that there is a great demand among the natives for locks and bolts and bars.

"Mark Twain has recently been saying some severe things about Christian missionaries in China, but you can not always take Mark seriously. There can be no doubt, however, as Lord Salisbury himself recently hinted, missionaries, with the best intentions, often do an immense amount of harm. The so-called 'heathen' to whom we send missionaries have another virtue which we do not possess. They are tolerant of other people's opinions. This is especially true of the Chinese, the Burmans, and the Indians. The traveler Niebuhr declared that the Indians were the most tolerant nation in the world. In what country of Europe, he asks, would people of another faith be allowed openly to preach down the dominant religion of the land? In an able article in the current number of *The Madras Review*, Sir John Jardine, K.C.I.E., calls timely attention to the fact that the Indian Government, in the interests of the missionaries, have recently abandoned that neutral attitude on religious questions which, by the Queen's Proclamation of 1858, they were bound to adopt. 'Altho our bishops,' he says, 'paid with salaries out of the Indian taxes, have of late been allowed to become the active heads of the missionary movement, the Hindus and Mussulmans have not hitherto shown any open resentment at what they regard as a departure from the governing principle.' It seems to us that we have quite as much to learn from the 'heathen' as we can teach them."

# FOREIGN TOPICS.

## WISDOM AND JUSTICE OF THE CHINESE INDEMNITY.

IN the long, serious, and, at times, acrimonious discussion over the amount China should be required to pay toward defraying the expenses of the troops who rescued the legations and who have been chastising the Chinese since then, there is an occasional gleam of humor which seems to get at the "true inwardness" of the situation better than the more sober comment. The indemnity scheme in general appeals to *The St. James's Gazette* (London) as "so riotously humorous" that this journal presents it as "an alternative to the solemnities of *Punch*." Says *The Gazette*:

AT PEKING.

We've had our differences, 'tis true, But in our wish for £ s. d.
As proper nations ought to do, We all agree, we all agree.
—*Figaro, Paris.*

"Sixty-five million pounds is the total at length arrived at as the measure of damage inflicted by Chinese obstreperousness on the patient and long-suffering powers. The ministers set out by saying that it is 'highly improbable' that China could pay this sum out of her own resources. We think so too; but then the question arises, out of whose resources is she going to pay it? Four alternatives suggest themselves to the committee, and they form a sort of *crescendo* of hilarity. First, a Chinese loan not guarantied by the powers, which would prove 'almost ruinous to China.' Second, a loan guarantied by the powers—as if when one asked a friend for the return of that 'fiver' he borrowed he should reply: 'All right, old fellow. I'll give you a bill at three months if you'll back it.' The committee with deep insight points out that this arrangement 'might lead to situations of great difficulty in the event of differences among the guaranteeing powers, who might require control over the revenues hypothecated.' They might. But the height of screaming farce is reached in the third suggestion: The issue of Chinese bonds to each power for the amount of the indemnity, payable at fixed terms. 'The bonds, bearing interest,' we are told, 'could serve as security for a national loan.' In other words, unless the telegram of *The Times* correspondent misrepresents the proposal, China is to offer her unpaid bills as security for a loan. Shade of Sam Lewis! After this there is something of anti-climax in the commonplace suggestion of annual payments 'which possess the inconvenience of involving an undue prolongation of the time of payment'—till somewhere the other side of the millennium, we should anticipate."

The indemnity proposals, continues this journal, "complete the *reductio ad absurdum* of the position of the powers" in China:

"They went there without any clear idea of what they wanted, or how it was to be obtained, and now they are in as great a difficulty as to how to make a dignified exit as were Mr. Puff's kneeling characters in the 'Critic.' It would not be dignified, we suppose, to proffer them Mr. Puff's advice to get up and dance off; but really we feel that the chances of a definite solution are so remote, and the dangers of a prolonged occupation so great that we should be prepared to sacrifice a little dignity to see matters safely at an end. We have consistently deprecated the policy of demanding a huge indemnity from China, believing that, since our interests in that country are commercial, it is folly or worse to cripple her resources and hamper trade. We are glad, therefore, to notice that the British minister refused to support his colleagues in some of their more objectionable proposals. Above all, it is to our interest to see that no opportunity is given to any ambitious power to grab this or that source of revenue on the pretext of obtaining security for payment of China's debt to itself. On grounds of dignity alone, it is impossible to imagine anything much less impressive than the present attitude of the powers, which practically says: 'Dear, dear! We've forgotten what we came for, but give us some money and we'll go!'"

*The St. James's Gazette* wishes England had followed America's lead "all through the dismal Chinese business," and *The Daily News* also commends our policy in the Orient as "eminently wise and moderate." The most curious items in the bill against China, says *The Chronicle* (London), are the demands of Austria and Spain, who put themselves down for thirty million dollars. "One can not avoid the suspicion," continues *The Chronicle*, "that these enterprising nations regard China as a sort of lucky tub into which they may dip their fingers for a prize. Meanwhile, Great Britain, the greatest sufferer, will admire her own moderation."

Thomas F. Millard, for many years a resident of Eastern China, does not agree with *The Chronicle's* statement that Great Britain has been the greatest sufferer by the events in China. Next to China herself, he says (in *Scribner's Magazine*), "the United States has more than any other nation footed the bill for the punitive campaign, and stands to suffer most from an irrational or delayed settlement." America's chance of eventual payment, however, he declares, is better than that of any other nation; for, "if the United States, with the shortest haul to China of any of the trade rivals, and with such good will to aid, does not manage to secure a superior footing in the far East, it will be her own fault."

The *Journal des Débats* (Paris) treats the indemnity question exhaustively. Germany, it admits, has a right to the biggest share, because she sent out more troops than any other power. Russia and Belgium also have large claims based on the destruction of railroad property. France wants pay not only for the fourteen thousand soldiers she sent, but bases her claim also on her Catholic protectorate. The *Débats* insists that the French Government, in considering the indemnity, must not forget the latter point.

CRACKED CHINA.

An awfully tedious and confusing task this of patching the cracked parts.
—*Hindu Punch, Bombay.*

*Events* (Ottawa) comments severely on the demand of the powers for such a vast indemnity while millions of Chinese are starving. Says this Canadian journal:

"To such a state of want and savagery have some of the inhabitants been reduced that after eating every blade of grass and every root they could find, they have taken to eating one

another. If we heard that any of the nations called civilized were reduced to this sad and inhuman extremity, we would be shocked, our sympathies would be aroused, and we would raise money and send shiploads of food to relieve their suffering. But told of the Chinese it is only an interesting bit of news. We do not think of them as human beings with the same capacity for suffering as ourselves, and the thought never comes to us to offer them aid. Instead we view without protest, if not with approval, the presence of our armies in the famine-stricken country, demanding millions of money that should go to feed the unfortunates. And the money has to be provided at once to satisfy the Christian hosts who have come to avenge the slaughter of a few missionaries. If the starving Chinese of to-day transmit to their posterity an everlasting hatred of the very name 'Christian,' it is not any more than is to be expected nor than we deserve."—*Translations made for* THE LITERARY DIGEST.

## PROGRESS AND PROGRAM OF SOCIALISM.

SOCIALISM and its program has recently been the subject of much intelligent, tho generally heated and hostile, comment, in the European press, much of it called out at the time of the May holiday. The hand of the Socialist is recognized in the student and other social disturbances in Russia, many of the German papers charge Socialists with responsibility for the recent attacks on the Kaiser, and the widespread strikes and other labor troubles which are still keeping the French Government on the rack are laid at the door of Socialism—Socialism exultant, says M. Paul Leroy-Beaulieu, in the *Économiste Français* (Paris), because of the presence of the Socialist Millerand in the cabinet of the republic. France is honeycombed with Socialism, declares M. Leroy-Beaulieu, and she must beware. Municipal Socialism is likely to become a great menace to the stability of the republic. To which M. Millerand (in his paper, the *Lanterne*, Paris) responds that when the workingman has once learned what his rights are, he can be trusted to look after the government of cities. Alcide Ebray, writing in the *Journal des Débats* (Paris) declares that the French Socialists are gradually bringing about a return by France to her old-time rôle of criticizing and meddling with the affairs of other nations, as she did in the days of the Revolution. He cites the criticism by the French press of Russia's domestic troubles as a case in point. We have an international rôle, says M. Ebray, but we must be exceedingly careful how we play it. France is not now in the position to act the part of a leader in Europe—that is, of a leader in great political and social movements. The Italian people, declares Prof. Alessandro Schiavi (in an article quoted in *The International Socialist Review*, Chicago), are too miserably poor and ignorant for any effective propaganda or education along Socialistic lines. Between taxation and militarism, "financial and economic progress in Italy is in a bad way." All that has been accomplished in the way of political advancement in Italy during the past few years, he continues, has been due, in the main, to the Socialist deputies in the Parliament. He says on this point:

"It is no exaggeration to say that since the sad days of May, 1898, there is not a fight against the forces of reaction, not a contest in the parliament, but was led by the group of Socialists that form the extreme left, assisted by Republicans and Radicals. Even the solution of the late cabinet crisis in an almost democratic sense is due to the energy of the Socialist deputies. After the spirited campaign of obstruction maintained by the extreme left for the purpose of defeating the attacks of the reaction, we finally arrived at the Saracco ministry, on which devolved the duty of removing the sad débris of the reactionary period. But like all such transitional governments, this cabinet was ever balancing itself, without bringing any actual results, between the pretentious demands of the still reactionary majority of employers and the alertness of the extreme left, that was always ready to obstruct a backward movement."

*The Saturday Review* (London) hopes that Socialism will not always be "so unfortunate as it is at present in its advocates." There is very little future for it as now constituted. Socialism as an organization has always gone to pieces because its various parties were extremists and would not compromise. *Justice* (London), the leading Socialist organ of Great Britain, declares that the modern financial "panic" is directly traceable to "the incapacity of the capitalist class to handle the great instruments of modern production." Every section of the world, it continues, has "suffered in one way or another from the results of a system which dictates that production must be limited to the purchasing power of the customers whom the capitalist can discover."

H. M. Hyndman, the well-known English Socialist, writing in *Justice*, declares that, as long ago as 1880, while on a visit to the United States, he prophesied that "within a generation huge trusts and combines would completely control American industry, and would render the antagonism between capital and labor more bitter in the United States than anywhere else." For this he was ridiculed, he says, in both this country and England. But, he continues, "my prophecy has come true":

"The vast expanse of the 'far West' has been so completely brought under the domination of capitalism that the free farmers and land-owners of the Middle and Western States are now little better than an overworked and underpaid agricultural proletariat; the frontier line has been entirely obliterated for the adventurous spirits who wish to emancipate themselves from capitalist control; the United States all through have developed into the classic land of capitalist evolution in place of Great Britain;

SOCIALISM AND THE IMPERIALISTIC WILL-'O-THE-WISP.

SOCIALIST PARTY TO THE BRITISH WORKMAN: "If you follow that lead, my friend, you'll only sink in deeper, especially when you are handicapped like that. Besides, just look at the work waiting to be done at home, on solid ground!" —*Justice, London.*

every industry of importance, from the Atlantic to the Pacific, and from the border-line to the Gulf, has been consolidated and trustified in the hands of monopolists, up to the vast steel trust of a billion dollars, with its affiliated tens of thousands of miles of railways and ownership of great steamship lines, which has

just astonished the world. The entire capitalist business of America, in short, is now so fully organized under the control of a few men of inconceivable wealth that the democratic principles on which the republic was founded have become a mere joke, and the workers, with their labor-power, their intelligence, and their votes, are just bought and handled like so many dumb cattle and with even less consideration for their well-being."

But Socialism, he concludes, is everywhere gaining ground. "Under despotism as under constitutionalism, under republicanism as under militarism, in small states as in large, the opening of the century sees Socialism marching steadily on toward its goal, without haste and without rest."

The problem of industrial reorganization on a fair and adequate basis, says *Justice* editorially, will "only be solved in proportion as democracy gains self-consciousness, consciousness of the force in which the concert of a great number of men makes up for the weakness of each man taken by himself":

"As one stands watching the monster engines of an Atlantic liner when they are driving the huge vessel along the ocean highway the individual is filled with a sense of his own powerlessness, and that humiliating sense is only exchanged for one of exultation when he rids himself momentarily of the individualist sense in the reflection that mankind has subjected steam to its service, just as it has compelled electricity to work its will, tho the timid individual still shrinks with terror from the feeblest flicker of its spectral flame. And if the use of the collective noun instead of the personal pronoun substitutes for the sense of the feebleness of the individual one of pride in the achievements of our race, we as collectivists can exult in the knowledge that the very same economic forces that alarm the individualist because they have undermined the capitalist system of production for individual profit, and will soon bring about its collapse, can be directed into the channel of collectivism, made subject to man's will, and rendered conducive to the common welfare, to universal well-being. But democracy is not yet fully conscious that its field of conquest is social freedom, not political freedom."—*Translations made for* THE LITERARY DIGEST.

## MORE FOREIGN CRITICISM ON OUR CUBAN RELATIONS.

THE foreign critics of the United States continue to reproach us for what they term our perfidy toward the Cubans. The American Government, declares *The Chronicle* (a British paper of Kobe, Japan), in its dealings with Cuba, has violated principles which have hitherto been looked upon as inherent in the American Constitution. The right of nations to govern their own affairs, continues *The Chronicle*, have formerly met with no more sincere advocate than the United States; but "now that the United States Government has decided to establish a suzerainty over one people, and to force her rule upon another people, it is scarcely astonishing that the observer rubs his eyes in astonishment, and for the time is unable to regard such a *volte face* with complacency." Referring to the Supreme Court's decision in the Neely extradition case, that Cuba is "a foreign country," this journal says:

"Should the Supreme Court, as is presaged, declare the Philippines and Porto Rico 'foreign countries,' the height of inconsistency will be reached, for we shall have the spectacle of a republic founded on the principle of the rights of independent government controlling the internal affairs and taxing the products of two foreign countries. The Americans who broke free from the suzerainty of Great Britain because the suzerain power exacted taxes and sent troops into the country to enforce them, are very far removed from the Americans who are eager to tax other foreign states and enforce their demands at the point of the sword."

A dry rot seems to have set in upon the former ideals of the Anglo-Saxon race, concludes *The Chronicle*:

"On one side of the Atlantic we find a branch of the race, whose boast has been that it aided 'peoples rightly struggling to be free,' annexing territory and striking out that offensive word from the name of the state 'absorbed,' and on the other side we find another branch of the race, which broke away from the mother-land because it disliked government from a distance, now undertaking suzerainty and paying itself with naval stations for an act of intervention that originally was claimed to be purely humanitarian. The twentieth century has opened upon an extraordinary reaction from the ideals of fifty years ago."

Congress has deliberately broken faith with Cuba, declares *The Daily Witness* (Montreal), which says further:

"In the nature of things the promise was perhaps a rash one. It was perhaps based on an ideal not quite applicable to the actual conditions. Had it been ever so possible to carry it out, however, it is not certain that it would have been done. Party majorities in Congress have never been tenacious of pledges when such are found to conflict with the interests or sentiments on which those majorities depend."

*The Tribune* (Winnipeg) analyzes the figures of American trade with Cuba since the outbreak of the Spanish war, and remarks: "We are sorry for the United States. Figures show quite as much increase in imports into Cuba from European countries as a decrease in imports from the United States. To all appearances the protectorate over the island has not been commercially profitable."

The French economist, Leroy-Beaulieu, writing in the *Economiste Français* (Paris), declares that Porto Rico would have given the United States as much trouble as Cuba if it had not been "so small and so easy to hold when once conquered." He warns European sugar producers against the American "booming" of the cane-sugar industry in Porto Rico.—*Translation made for* THE LITERARY DIGEST.

## WILL EUROPE COMBINE AGAINST THE UNITED STATES?

A COMMERCIAL alliance of all Europe against the United States is again advocated by a prominent European statesman. Admiral Canevaro, of the Italian navy, in adding his voice of warning against American competition to those of Count Goluchowski, the Austrian Foreign Minister, and Leroy-Beaulieu, the French economist, has expressed himself with great emphasis, and a number of European journals are now gravely discussing the possibility of even a general war, military as well as commercial, on America. In his speech at Toulon, Admiral Canevaro said (as reported by the Paris *Figaro*): "The peace of Europe under the Dual and Triple Alliances would perhaps lead European nations to consider the possibility and necessity of uniting against America, Africa, and Asia, as the future of civilization will require them to do." Commenting on this remark, *The Spectator* (London), which is generally favorable to an Anglo-American alliance, warns the United States that there is a real and strong sentiment behind such speeches. It points out that Count Canevaro is no "man in the street," that he has been Italy's Minister of Foreign Affairs, and that he attracted favorable attention from all Europe in the Cretan embroglio. His utterance, says *The Spectator*, is "no rash, irresponsible outburst"; but the "matured judgment of a man who knows how people think." Africa, continues this London journal, proceeding to analyze the speech, is already "divided in theory and by agreement; but the attack on Asia has just begun, and the obstacle presented by America is now clearly perceived." The annoyance of the Continent with America, we are told, which is very deep, is based upon three reasons. These are, first, the conviction that, owing to our wealth and resources, business competition with us is almost impossible; second, the fear that we will elbow Europe out of the markets she is aiming at in Asia; and, third, the "dog-in-manger attitude of the United States about the future of South America." Our wealth and energy, Europeans believe, are employed chiefly "to monopolize trade, and so control in the end all the wealth of the world." The giant trusts of America, says *The Spectator*, are regarded as enemies, "inexpressibly formidable because they do not raise

prices, which would to traders be some compensation, but look to monopoly of business as their reward, and because, if the governments fence them off with tariffs, the Americans, being protectionists, do not scruple to commence quick and severe reprisals." As the governments are always "trembling with nervousness lest their industrials, if driven out of work, should turn to socialism as a refuge, this cause alone inspires them with a permanent suspicion and dislike of American action." In Asia, "it is clear that America is sadly in the way" of the continental nations:

"The whole action of Washington in this Chinese muddle points to a single conclusion, that altho Americans took the Philippines, they are unwilling to see any but native powers in possession or control of the richer countries of Asia. They do not much mind England, because she admits all the world to share her commerce, or Russia, because they regard Manchuria as a mere railway route; but they are utterly opposed to a partition of China, or a subjugation of Japan, or any other great change which would place their manufactures at a disadvantage. That opposition is most irritating to men who sincerely believe that open trade is of no use to them because America and England are sure to get it, and who look therefore to conquest in one form or another as the only permanent protection for their industry. The bitterness is all the deeper because it is, in a sense, philanthropic, those who feel it honestly pitying their own people because they can not, in the fierce competition which prevails, get enough work to do."

Europe is bitter against the United States because she will neither take South America herself nor let any one else take it. Says *The Spectator* on this point:

"There lies the vast continent with scarcely anybody in it, with climates which, tho varied, do not prohibit European labor, with sources of wealth in the soil that are practically limitless, and with vast rivers which render entrance into the far interior at once cheap and easy. There is no prize left in this rapidly dwindling little planet like South America. Germany would like the whole of Brazil, in which she is already strong; Italy even now sends her children by the hundred thousand to Argentina; France would feel richer if she could acquire the Hinterland of Guiana; and even Hungary would much rather that her Slav children, who in tens of thousands are doing the hard work of North America, should find acceptable homes under their own flag in Uruguay. All are warned off by the Union in a way which, as she will not annex, or even allow herself to be responsible for these territories, seems to the statesmen of the Continent the very height of selfish impertinence. Why, they think, should their children be shut out by a pure caprice from natural and profitable careers?"

*The Spectator* concludes by warning us to awaken from our illusion, to increase our fleet steadily instead of by rushes, and to think out what we (the Americans) are doing, and not act, as the British too often do, upon the spur of the moment. Americans will find out very soon, this journal believes, that, as in the Spanish war, our only ally is our half-suspected kinsman, and that, be the consequences good or bad, the freedom and the peace of the world can only be preserved by the rule, not yet accepted, that those who speak English must in the hour of danger stand together.

The recent action of the United States Senate with regard to reciprocity treaties was the occasion of a meeting of Austrian manufacturers in Vienna, which *The Saturday Review* (London), generally anti-American in its sentiments, believes will result in "serious consequences for the United States." The presiding officer declared (so the London *Standard* reports) that "on the renewal of the treaties it will be necessary to keep an eye on our powerful transatlantic rival and to take care that America is not permitted, under the most-favored-nation clause, to monopolize the benefit of any hard-won concessions which might be secured by the Dual Monarchy from its European neighbors."

Commenting on this, *The Tribune* (Winnipeg, Canada) says:

"If the Dual Monarchy secures favorable terms for the admission of Austro-Hungarian goods into other European countries, those countries must not admit American goods on the same or equally favorable terms under any most-favored-nation clause. If Austria-Hungary carries that point, of course all other European countries, Britain possibly excepted, will insist that discrimination against American goods be made by Austria-Hungary as well as by each of the other countries. That will mean simply a commercial war on the United States by all Europe. And the discrimination, as a matter of course, will be made to affect American goods entering the ports of all Europe and dependencies."

The general tone of the American press in all matters relating to international trade, says *The Chronicle* (a British paper of Kobe, Japan) is boastful and offensive. Americans appear to hold that, while any attempt to put a protective duty on American manufactures is a direct insult to the United States, the right to place protective duties on imports coming into America is the natural prerogative of the citizens of the republic.

*The Saturday Review* (London) believes that the enormous expansion of the German navy now in progress does not presage a design against Great Britain, but indicates careful preparation for a future "brush" with Uncle Sam, if he persists in keeping Europe out of South America.. Over that vast and little exploited continent, says this journal, "hangs the shadow of the Monroe doctrine, and in that must lie the supreme menace of German expansion." Europe has neglected South America, we are informed, because of the "corrupt and ephemeral nature of the South American governments, and the existence of the Monroe doctrine." If we mean to keep Europe out, why, asks *The Saturday Review*, do we not develop the great continent ourselves? It continues:

"America neither keeps its protégé in order nor allows others to do so, a hopelessly illogical position which can not continue forever. Before they [the United States] became a conquering power there was perhaps some shadow of justification for this attitude; now that they are themselves attacking and enslaving Eastern races, the claim to speak on behalf of freedom against encroachment from without loses all logical basis. The occupation of Cuba has placed the United States in a position the strength of which no maritime power with interest in South America can afford to ignore. Cuba in old days formed the pivot of Spanish rule on the continent, and from thence American expansion will work."

There are, we are told, more than half a million German colonists in South America, principally in Brazil and Chile, and the Kaiser "will see to it they are protected in their development." Says this London journal, in conclusion: "The cavalier treatment of her would-be protector by Venezuela, and the resentment now being shown by the Central American republics at the calm assumption by the Senate that an interoceanic canal concerns the United States alone, are also indications which no statesman can afford to ignore."

The Kaiser is entirely logical, says *The World* (Toronto), in assuming that America herself has violated the Monroe doctrine by her interference in the Philippines and China. *The World* warns the United States as follows: "If it ever comes to a fight over the Monroe doctrine, the United States will probably have to face continental Europe as a whole and not any isolated country. The whole of Europe is interested in the Monroe doctrine, and especially in its validity under existing conditions; and when the doctrine is carried to the court of last resort it will be Europe vs. America."

The recent purchase of the Leyland Transatlantic line of steamships by Mr. J. Pierpont Morgan has stirred up the Canadian press. The best part of the British mercantile navy, declares *The Herald* (Montreal), is in danger of passing into American possession. It is all simply a part of the inevitable development of commerce and industry, says *The Globe* (Toronto). Of momentous significance, declares the *Patrie* (Ottawa), the leader of French thought in the Dominion.

"Calchas," writing in *The Fortnightly Review* (London, April), declares that, altho Germany may yet surpass England in trade and industry, she will not be able to successfully resist America. He says on this point:

"The United States has *the* special gift in which no country can compare with her—business ability. She has infinitely more material, more labor, more mechanical inventiveness, more transport and shipping facilities, more means for reducing the cost of manufacture to a lower point than can be possible anywhere else in the world. Germany can not compete with her in the colossal mass or the minute specialization of her production, in everything that is represented by the great steel trust; and the genius of America is concentrated upon commercial energy as the German spirit, which will continue to excel in many other and some higher things, never can be. German industry in its turn will be reduced to the defensive, perhaps within the next decade. The idea of a United States of Europe, which is much in evidence, will assuredly not be formed in the interests of Germany. Russia will not join it against America, and the attempt would probably end in nothing so certainly as a final determination of America to keep China open at any cost."—*Translations made for* THE LITERARY DIGEST.

## MISCELLANEOUS.

### CAPTAIN DREYFUS'S STORY OF HIS EXILE.

"IT will be strange," says *Literature* (London), speaking of Dreyfus's new book, published in England and America under the title "Five Years of My Life," "if this revelation of the man's nature does not at last bring that revulsion of feeling in France for which we have waited so long."

The period of five years covered by the book begins with the arrest and ends with the pardon at Rennes. The story is told, for the most part, by means of letters and extracts from his diary; but where these do not tell the story clearly enough, they are reinforced by very simple narrative.

The author opens with a brief description of his early life and the different gradations through which he passed until he became attached to the second bureau of the General Staff of the French army. He had just begun a term of service in an infantry regiment when, in October, 1894, he received a service note summoning him to the Ministry of War to report in civilian's dress for general inspection. The early hour named, and the fact that he was requested to appear without uniform, caused him some surprise; otherwise he attached no special importance to the note. Arriving at the ministry building, he was met by Commandant Picquart, who ushered him into the presence of Commandant du Paty de Clam. Here Dreyfus describes how he wrote, at the latter's dictation, the letter which later on he recognized as a part of the famous bordereau. Altho surprised at the rudeness and hostile manner of the commandant, he was far from suspecting the well-prepared plan for his own betrayal. Of the scene which followed he writes:

"As soon as the dictation was over, Commandant du Paty arose, and, placing his hand on my shoulder, cried out in a loud voice: 'In the name of the law I arrest you. You are accused of the crime of high treason.' A thunderbolt falling at my feet would not have produced in me a more violent emotion; I blurted out disconnected sentences, protesting against so infamous an accusation which nothing in my life could have given rise to."

Next Mr. Cochefort and his secretary threw themselves upon him and searched him. He did not offer the slightest resistance, he says, but cried to them, "Take my keys, open everything in my house. I am innocent!" Then he asked for the proofs of his guilt. They answered that the accusations were overwhelming, but refused to state what they were or who had made them. He was taken to the military prison Cherche Midi, placed in solitary confinement, and not permitted to hold communication with any of his friends; even his jailors were forbidden to speak to him. His mental agony was intense, but, he writes, "no matter what my tortures may have been, my conscience was awake and unerringly dictated my duty to me. 'If you die,' it said to me, 'they will believe you guilty; whatever happens, you must live to cry aloud your innocence to the world.'"

The investigation lasted seven weeks, during which time he remained in solitary confinement. When the order for his trial was signed, he was permitted to write an open letter to his wife, who had not been allowed to see him since his arrest. This letter and another written her the day before his trial opened express the utmost confidence in the ultimate triumph of his innocence and the entire confidence he had in the loyalty and conscientiousness of his judges.

His trial, which opened December 19, 1894, was held behind closed doors. On the evidence of the bordereau, he was found guilty. Writing to his wife the next day, he says, among other things:

"It is for you alone that I have resisted until to-day; it is for you alone, my beloved, that I have borne my long agony. I would ere this have ended this sad life if thoughts of you, if the fear of augmenting your grief, had not stayed my hand. Will my strength hold out until the end? I can not tell. No one but you can give me courage. It is your love alone that inspires my fortitude."

His wife writes in reply a letter, characteristic of all their subsequent correspondence. She says:

"What wretchedness, what torture, what ignominy! We are all terrified, utterly crushed. I know how courageous you are, you unhappy martyr! I beseech you, continue to endure valiantly these new tortures. Our fortunes, our lives—all shall be devoted to seeking out the guilty ones. We will find them; it must be done. You shall be rehabilitated."

She vows that she will follow him, no matter how far away they may send him; bids him be brave and strong in his innocence; tells him he must live for his children and his wife, who thinks only of him. She writes to him every day—letters full of pathos and love.

His description of his degradation (January 5, 1895) is as follows:

"As soon as the sentence had been read out, I cried aloud, addressing myself to the troops: 'Soldiers, they are degrading an innocent man. Vive la France, vive l'armée!' A sergeant of the Republican Guard came up to me. He tore off rapidly buttons, trouser-stripes, the signs of my rank from cap and sleeves, and then broke my sword across his knee. I saw all these material emblems of my honor fall at my feet. Then, my whole being racked by a fearful paroxysm, but with body erect and head high, I shouted again and again to the soldiers and to the assembled crowd the cry of my soul, 'I am innocent!'"

He was taken to Santé Prison, where his wife was allowed to visit him twice a week, while letters passed between them every day.

Without being informed of his impending departure or accorded an opportunity to bid his wife farewell, he was hurried from La Santé Prison, handcuffed and with irons on his ankles, conveyed to the Ile de Ré. Here also his wife was allowed to visit him, tho they were not permitted to approach each other. Dreyfus speaks of this devoted woman's last visit to him thus: "On the 21st of February I saw my wife for the last time. She asked that they tie her hands behind her back and let her approach and kiss me. The director gave a rough refusal. After interview, which was from two to three o'clock, I was suddenly told that I must get ready for my departure, without either of us being previously informed." His diary records his sojourn on Devil's Island, a barren rock used previously for the isolation of lepers. He opens it as follows:

"SUNDAY, APRIL 14, 1895.

"To-day I begin the diary of my sad and tragic life. Indeed, only to-day have I paper at my disposal. Each sheet is numbered and signed, so that I can not use it without it being known. I must account for every bit of it. But what could I do with it? Of what use could it be to me? To whom would I give it? What secret have I to confide to paper? Questions and enigma."

Undergoing fearful mental and physical tortures, the remembrance of his wife bore him up. By day he was allowed what he calls a semblance of liberty, that is, the privilege of walking about in a space less than half an acre in extent, followed step by step by the guards, at nightfall shut up in a hut thirteen feet square, closed by a door of iron bars, through which relays of guards watched him all night long. April 15, 1895, he makes this entry:

"It is impossible for me to sleep. This cage before which the guard walks up and down like a phantom appearing in my dreams, the plague of insects which run over my skin, the rage which is smothered in my heart that I should be here, when I have always and everywhere done my duty—all this excites my nerves, which are already shattered, and drives away sleep. When shall I again pass a calm and tranquil night? Perhaps not until I find in the tomb the sleep that is everlasting."

His mental agony was increased by the failure to receive any

word from his wife. At last in June he received letters from her dated in February. A rigorous censorship had been exercised ere they were delivered to him, and she was obliged to keep absolutely silent about events in France. The letters came regularly then, altho they were two months old and more before they were delivered to him. These letters were the one ray of light at that despairing time.

In the autumn of 1896 the little liberty he had was denied altogether and in the terrific tropical heat he was forced to spend the twenty-four hours in his hut without a minute's exercise. Added to this was the further indignity of being fastened to his bed at night with irons, in such a manner that he could not change his position. This torture lasted two months. He writes:

"The hut was surrounded by a palisade, about seven feet high and about five feet distant from the hut. The palisade was much higher than the little barred windows of the hut, which were not quite four feet above the ground, consequently I had neither light nor air in the interior of the hut. Beyond this first palisade, which was completely closed, and which was a palisade of defense, a second palisade was built, also completely closed and of the same height, and which, like the first one, hid everything outside it from my sight. After about three months of the strictest confinement, I received permission to walk between these two palisades, which thus formed a narrow walk, under a burning sun, with no trace of shade, and always accompanied by a warder. . . . . .

"My books were in a pitiable state; vermin got into them, gnawed them, and laid their eggs in them. Vermin swarmed in my hut; mosquitoes as soon as the rainy season began; ants, all the year round, in such large numbers that I had to isolate my table by placing the legs of it in old preserve boxes filled with petroleum. . . . The most tiresome insect was the spider-crab; its bite is venomous. I killed many of them in my hut."

His wife's letters became more hopeful, his guard was removed, and then, still a prisoner, he was taken back to France. A brief chapter is devoted to the court-martial at Rennes. The world knows the result.

## THE ENGAGING AUTOBIOGRAPHY OF MAX MÜLLER.

THE late Prof. Max Müller, in his autobiography, recently published, quotes Professor Jowett on the advantage of every man's writing his own memoirs. "For friends," as Professor Jowett said, "always think it necessary (except Boswell, that great genius) to tell lies about their deceased friend; they leave out all his faults, less the public should exaggerate them. But we want to know his faults—that is probably the most interesting part of him." Professor Müller seems to have had no very serious faults and truth-telling had no terrors for him; but this does not prevent his autobiography from being exceedingly interesting, inasmuch as he does not spare some of his great contemporaries. Newman, for instance, he speaks of as follows:

"Both on the Newman side and among those whom I met at Jowett's and Froude's was a curious want of openness and manliness in discussing these simple questions [of religious controversy]—simple if not complicated by ecclesiastical theories. When Newman at Iffley was spoken of, it was in hushed tones, and when rumors of his going over to Rome reached his friends at Oxford, their consternation seemed to be like that of people watching the death-bed of a friend. I am sorry I saw nothing of Newman at that time. When I sat afterward with him in his study at Birmingham, he was evidently tired of controversy, and unwilling to reopen questions which to him were settled once for all, or, if not settled, at all events closed and relinquished. I could never form a clear opinion of the man, much as I admired his sermons; his brother and his own friends gave such different accounts of him. And it so happened that at the same time I knew of families rendered miserable by Newman's influence, of young girls, daughters of narrow-minded Anglicans, hurried over to Rome, of young men at Oxford with their troubled consciences, which under Newman's direct or indirect guidance could end only in Rome. Newman's influence must have been extraordinary; the tone in which people wished to free themselves of him, actually left him, spoke of him, seemed tremulous with awe. I would have much to have known him at that time; but I knew him through disciples only. They were caught in various ways. I know one, a brilliant writer, who had been entrusted by Newman with writing some of the lives of the saints. He did it with great industry; but, in the course of his researches, he arrived at the conviction that there was hardly anything truly historical about his saints, and that the miracles ascribed to them were insipid, and might be the inventions of their friends. Such legends, he felt, would take no root on English soil, at all events not in the present generation. In consequence, he informed Newman that he could not keep his promise, or that, if he did so, he must speak the truth, tell people what they might believe about these saints and what was purely fanciful in the accounts of their lives. And what was Newman's answer? He did not respect the young man's scruples, but encouraged him to go on.

"I confess I can not quite follow. If a man like Newman believed in these saints and their miracles, his pleadings would become intelligible; but it seems from this very letter [to the young scholar referred to] that he did not, and yet he tried to persuade his young friend to go on and not to gather the tares 'lest haply he might root up the wheat with them. Let both grow together until the harvest.' I do not like to judge; but I doubt whether this kind of teaching could have strengthened the healthy moral fiber of a man's conscience and have led him to depend entirely on his sense of truth. And yet this was the man who at one time was supposed to draw the best spirits of Oxford with him to Rome."

Max Müller did not live to bring his memoirs beyond his early Oxford days, as his son explains in an introductory note. In the chapter that closes the volume he speaks of himself thus:

"One confession I have to make, and one for which I can hardly hope for absolution, whether from my friends or from my enemies. I have never done anything; I have never been a doer, a canvasser, a wire-puller, a manager in the ordinary sense of these words. I have also shrunk from agitation, from clubs and from cliques, even from most respectable associations and societies. Many people would call me an idle, useless, and indolent man, and tho I have not wasted many hours of my life, I can not deny the charge that I have neither fought battles nor helped to conquer new countries, nor joined any syndicate to roll up a fortune. I have been a scholar, a *Stubengelehrter*, and a *voila tout*.

"Much as I admired Ruskin when I saw him with his spade and wheelbarrow encouraging and helping his undergraduate friends to make a new road from one village to another, I never myself took to digging and shoveling and carting. Nor could I quite agree with him, happy as I always felt in listening to him, when he said: 'What we think, what we know, or what we believe, is in the end of little consequence. The only thing of consequence is what we do.' My view of life has always been the very opposite! What we do, or what we build up, has always seemed to me of little consequence. Even Nineveh is now a mere desert of sand, and Ruskin's new road also has long been worn away. The only thing of consequence, to my mind, is what we think, what we know, what we believe!"

## CORRESPONDENTS' CORNER.

### "The Disciples" and Their Relations to Other Denominations.

*Editor of* THE LITERARY DIGEST. On page 480 of your issue of April 20, under the caption of "The Doubtful Value of Church Statistics," appears the following quotation from the Chicago *Interior* (Presbyterian):

"Our friends of the body which calls itself 'The Disciples' claim an increase of 74 per cent. in the past ten years, the absurdity of which is patent. The Disciples, who are in fact Baptists with extreme views regarding immersion and its relations to the salvation of the soul, flourish chiefly in the middle and border States; and their growth is largely made up by defections from other denominations, denunciations of other churches characterizing their preaching in many localities."

In order to refute this utterly unwarranted and unjustifiable attack upon a church noted throughout the Christian world for its breadth and liberality of thought, I have only to refer you to page 483 of this same issue of THE LITERARY DIGEST, which contains the following notice:

"The national congress of the Disciples of Christ, lately held at Lexington, appointed a committee of seven to take charge of a movement in behalf of an international confederation of religious denominations. According to this scheme, the different religious bodies are to retain their own creeds, but will be auxiliary to an international congress and will affiliate will all other churches on a common platform. The ultimate aim is to create one international church. This movement is the first of its kind in America, and is in line with the widespread tendency to church federation and church unity, and with the rapidly growing spirit of internationalism in literature, social reform, and art."

# The Opportunity of a Lifetime

FOR THE

# CONSERVATIVE INVESTOR

## Of Large or Small Capital.

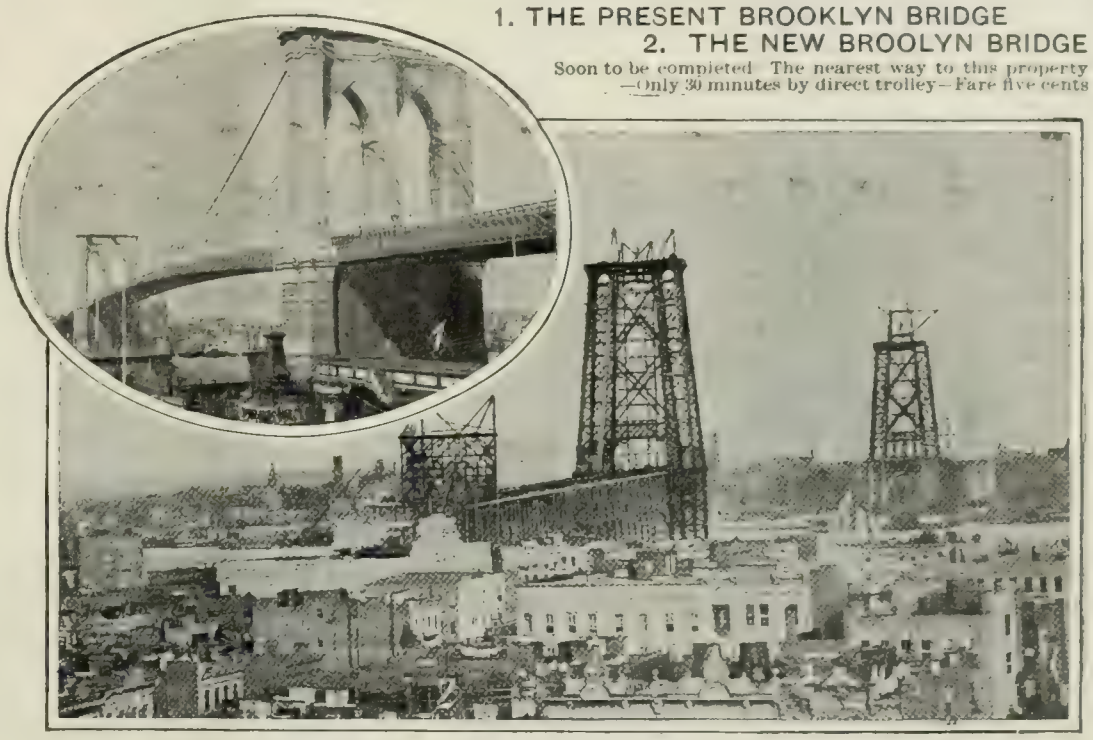
# READ EVERY WORD.

# $10 Secures $420 Lot IN GREATER NEW YORK

**Free Trip to New York City and Return**—Property is in the Heart of Brooklyn—Sure to Double in Value in Four Years—Best Opportunity Ever Offered in New York's History—Visit New York at Our Expense and Prove Our Claims to Your Own Satisfaction . . .

THE largest, most reliable, most successful Real Estate Company in the world, Wood, Harmon & Co., of New York City, are so positive that the values of their lots will increase 25 per cent. during the year 1901 that they will guarantee this increase to any investor—in case they cannot show it, they will agree to return all money paid them with 6 per cent. interest. We have one of the grandest opportunities of a lifetime for the small investor to make money—we give as good security as the strongest savings bank, and instead of the 4 per cent. interest on deposits we can guarantee over 25 per cent. We thoroughly believe the lot which we now sell for $420 will in 10 years bring $4,000, in 20 years from $20,000 upward. If you will carefully study this communication you will see our reasons.

The Astors and our wealthiest families have made their money from the increase in value of real estate. You can prove this point if you will take the pains to look it up. New York City property has increased in value more than that of any other place because of its enormous growth in population, and this growth of values and population is still going on. Since the consolidation of New York and Brooklyn, the increased facilities of rapid transit by bridge, trolley, and elevated, the immense tide of increased population has turned Brooklynward. The attention of the public has been called to the great advantages of Brooklyn because it is only in that section that New York can grow—please note that point, as it is the keynote to the situation. The influx of people into Brooklyn is so great as to severely tax Brooklyn Bridge - as a result new bridges are being built (one of which is nearly completed) and tunnels are being dug beneath the East River. Not only is Brooklyn Borough the only section in which New York can grow, but property in old New York City, the same distance from City Hall would cost 20 to 40 times the money—note that point carefully, it is absolutely true.



1. THE PRESENT BROOKLYN BRIDGE
2. THE NEW BROOLYN BRIDGE

Soon to be completed The nearest way to this property —Only 30 minutes by direct trolley—Fare five cents

**Listen to Our Story.** It is our business to study conditions existing or possible in the various cities of the United States, and we have aided in the development of 25 different cities. After 12 years' careful study in New York without purchasing, in 1898 we saw the trend of affairs, and before the consolidation of New York and Brooklyn we bought over 1,100 acres of the choicest land in Brooklyn, and which is now in the heart of that Borough. This land is only 3½ miles from Brooklyn Bridge and is only 35 minutes from New York City Hall. We have over $2,000,000 invested in this land and are making it one of the most beautiful spots of New York. The growth of the city, together with our improvements, have increased the value of the property over 25 per cent. since a year ago, and we feel so sure that the increase will be at least the same, that we think there is no risk in guaranteeing it.

**Listen to Our Proposition.** Our property is improved in exact accordance with City Specifications. Streets 60, 80, and 100 feet wide, built to City grade, bordered on each side by 5 feet granolithic cementine sidewalks, flower beds and shrubbery, city water, gas, etc., all at our expense. For $10 down and $1.50 per week, or $6.00 per month, we sell you a regular New York City lot, subject to the following guarantees from us :

If at the expiration of the year 1901 this lot is not worth $500, we will refund all of the money you have paid us with 6 per cent. interest additional.

If you should die at any time before payments have been completed we will give to your heirs a deed to the lot without further cost.

If you should get out of employment or be sick you will not forfeit the land.

Titles are guaranteed to us by the Title Guarantee & Trust Co. of New York.

You will note three distinct points of advantage in this proposition. First—It is a Life Insurance for your family. Second—It enables you to pay in small sums as you would in your savings bank, and cannot cramp you ; and, Third It enables you to participate in the great growth of values in New York real estate which are due to natural conditions ; and, furthermore, the three advantages are absolutely without risk.

**Our Guarantee of Increase.** Our guarantee of 25 per cent. increase in one year in the value of lots is a simple one and should not be misunderstood or misconstrued. It means that the regular prices publicly marked on our property (every unsold lot being plainly tagged and priced) and at which our large corps of salesmen will be then selling these lots, for ourselves and our customers, will be 25 per cent. in excess of the prices at which we now offer them.

IT DOES NOT MEAN that we can or will assume the responsibility of selling customer's lots except incidental to our business of development, or that we will take them off their hands ; this obviously would be impossible in the great work of development we are undertaking. This is intended as a straight business agreement of an honest increase in value, and that only.

**Free Trip to New York.** As a further guarantee of good faith, we agree with all persons living East of Chicago to pay you in cash the cost of your railroad fare to New York and return if you visit our property and find one word of this advertisement a misrepresentation, or **in case you buy** to credit cost of the trip to you on your purchase ; to those living farther away than Chicago we will pay that proportion equal to cost of fare to Chicago and return. We would advise you, if you are satisfied, to send first payment, $10 in cash, at our risk, immediately, and we will select the very best lot for you. Or, if you desire further particulars, to write immediately for maps, details, and information. It will cost you nothing to find out and thoroughly satisfy yourself. We solicit closest investigation. References by hundreds. Our reputation is national.

# WOOD, HARMON & CO., Dept. 121, 257 Broadway, N. Y.

**Note Our References.** The Commercial Agencies, 20 National Banks, and 30,000 customers all over the United States. The following is but one of thousands on file, from banks, public officials, and appreciative customers.

"There is no doubt the property offered by Wood, Harmon & Co., in the 29th ward, represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood, Harmon & Co. are perfectly reliable and are worthy the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States."

## CURRENT POETRY.

### The Rose of Dawn.

MISS HELEN HAY, the daughter of the Secretary of State, is the author of a narrative poem, recently published, entitled "The Rose of Dawn, A Tale of the South Sea." It is in blank verse, interspersed with lyrical passages, and has received warm commendation from the press. In a review, written for the Philadelphia *Press*, a writer says:

"The poem runs with a strong rhythmic swing, the stately heroic measure being broken here and there by rimed songs or pretty interludes which tinkle like a well-tuned lute. The 'Rose of Dawn' maintains its high plane throughout. . . . The poem is not one of the greatest ever written, but it will afford a satiated reader an hour's keen pleasure. It is pure and wholesome. No eroticism mars it. The love is natural, abounding, and sincere. The jealous chieftain stalks his way toward undeserved death with the grandeur and the dignity of a savage. Malua is a breathing spirit of ardent youth. He lavishes his love and receives the pretty homage of Taka in a way altogether natural."

The synopsis of the story in part, taken from the same paper, runs as follows:

"Taka, a queenly maiden of the island tribes, was betrothed to Uhila, an aged and sedate chieftain, and the battle friend of her father. Before the early dawn the tribesmen put off to take the 'great Bonita,' one of the strongest of the deep-sea fish. While the men are absent in the quest of food the dawn breaks and reveals the scene of the story. . . . .

"While the tribesmen and betrothed of Taka are fishing, a little bark, drifted by the wind and waves, comes to the shore laden with a chieftain of another isle—Malua. He is a boy in years, but out from the crowd Taka steps to welcome him, and the poetess lavishes her fancy on the maiden's modest, but spontaneous love. With the girl he goes to her father's house, and the absent Uhila is forgotten by father and daughter, because the youth fascinates them both. With sweeping passion he takes possession of her heart. . . . .

"Uhila (returning), writhes with jealousy, and

## Handsome Picture FREE

ASK your dealer for "Little Indian" collars, cuffs and shirts—if he does not keep them, send us his name and we will mail, *free*, a handsome engraving of the "Little Indian," 10 x 13 inches, mounted artistically on a rough gray mat. No advertising to prevent it being framed.

If you can't give dealer's name, send for particulars how to get the picture free in another way.

# PIANO

Our unique method of selling may interest you. Where no dealer sells our pianos we sell direct; practically bring our large Boston establishment, Factory and Warerooms to your door. We will quote you our lowest prices, explain our Easy Pay System, as available in the most remote village in the United States as if you lived in Boston or New York. More than this, if our careful selection of a piano fails to please you, in other words, if you don't want it after seeing and trying it, it returns to us and we pay railroad freights both ways. We solicit correspondence.

## IVERS & POND PIANO CO.,
**121 Boylston St., Boston, Mass.**

following Malua into the night seeks to slay him in a Homeric battle. The description here is good. Malua is finally thrown, and, fainting, until a stone striking his hand, he seizes it and crushes his enemy. The succeeding scene between the lovers, when the remorse and pity of the girl goes out to Uhila as guerdon for his unsought love, is affecting, and the tantalizing situation of the victor lover is well described, until her new-born love triumphs and

'Turning to the sea,
Taka, Malua, children of the sun,
Went forth to meet the sunrise and the day.'"

Here are a few of the passages dealing with the coming of dawn, in the opening part of the poem:

"Somnolent, vast, inert, the darkness lay
Waiting for dawn. Across the ocean stirred
A luminous haze, not light, but whispering light,
So softly yet, the islands had not heard.
The mystery of sleep was in the trees
And on the weary stars. . . . .
The dawn had not yet broken, and the soft
Beautiful haze that veils the birth of day
Hung on the water. . . . .
Then, as a soft blush mounts the cheek, a light
Breathed from the sea, and all the air seemed warm
As at the touch of spring, a violet streak
A pale leaf green, a golden, and a rose
Broke in the sky, and morning was revealed. . . . .
. . . Blue upon blue
The bright waves glittered like a shattered star
Set in the silver crescent of the sand."

When Malua the young chieftain, came to the isle of Kambara, and saw the maidens on the shore,

. . . . . "His flashing sun-bright eyes"
Struck thro' the group of girls as shoots a dart,
And caught and quivered in sweet Taka's breast."

His love grew stronger through the day, and Uhila, Taka's betrothed, heard of the young chieftain with Taka. He followed them to the forest and soon came upon them:

"Taka, her arms piled high with blossoms, stood,
An amber goddess of spring with flying hair
Beneath a flower-bent branch whose leaves had caught
One of the sun-kissed curls. Malua watched her . . . . .
His two arms o'er her slender shoulder laid,
With fingers little used to gentler arts
His timid touch unloosed her perfumed hair,
Too near—for aught but that her curving throat
Should be upturned to meet his sure caress,
And all the blossoms drifted thro' the air
And fell like blessings on their bended heads."

That night, in the midst of festivity, with Taka near,

. . . . . "Malua's soul
Fainted beneath the load of so much love" . . . . .

and he slipped away to the woods, followed by Uhila, who had resolved to slay him. In the forest—

"Uhila, watched him from the shadow. Gods!
How young he was! as Vave, the swift-footed,
Splendidly strong, an innocent god of war.
The morn with chilly lips laid myriad kisses
About his beauty, slipped thro' jealous leaves
Dripping with silver and fantastic fingers
Reached to caress him from the amorous trees."

This was the lover of Taka, who "caught in a very ecstasy of love,"

". . . . . laid his arms about a slender tree,
White in the moonlight, and his fevered cheek
Pressed on its cooling stem. With broken music
Shaken from his breast, he cried on Taka,—
Little happy words that mothers whisper

*Longerlife* TABLETS FREE

TRADE MARK

To prove their value, we will send *free* two 25-cent boxes of these tablets to any one who will agree to give them a fair trial, and who will after using them, **if benefited,** send us fifty cents in payment.

**Longerlife Tablets** contain all the essential elements of the various beef, wine and iron and sarsaparilla remedies—without the alcohol. They are beneficial as a **Spring Tonic** and for all skin or organic troubles caused by impoverished blood.

*Price 25 cents, at all druggists or by mail.*

**THE HYGIA MEDICAL CO., • Newark, N. J.**

Above their sleeping babes. 'If love could find
A way to utter love without her lips!'
Her lips, her eyes, the music of her voice—
Death would be easy on her golden heart."

Uhila, embittered by these signs of love

. . . . . "leapt
Into the moonlight and upon his foe.
Fixed to the ground, they strove as giant trees
Tossing fierce branches in a storm; their wrath
Smote on them like a tempest, hot with hate. . . .
Upon their heads and swaying bodies lay the silver light
Of the bright moon. The great night seemed to pause
Chin upon hand to watch the struggle, air
Hushed to retain the hoarse and laboring sobs
Such strain brought forth."

Malua, overthrown, felt Uhila,

"Kneel on his breast, lean fingers at his throat
Seizing his life."

But soon Malua's hand struck against a sharp stone, and, grasping it,

. . . . "he raised his weapon, struck
And struck and struck again.
The night looked down
Waning, and saw thro' tangled boughs a still,
Dead figure on the troubled earth. All stained
With crimson blood, there lay a crimson wreath
And thro' the forest stole a dusky shade
Fleeing he knew not where save that he 'scaped
Death, that was lying by the forest pool."

Of the numerous songs, throughout the poem, here is one, sung by Taka:

"Far away
In a fountain dwelt a maiden;
When the silver moon was high
She was glad, but heavy laden
Was she when its light must die
Far away.

"Far away
Came a stranger brave to love her,
Loved her when the moon was high;
When the moon was pale above her
Love grew pale and like to die
Far away.

"Far away
From the fountain's mist he drew her
Happy while the moon was high,
Waning, fled she, her pursuer
Held her back, and saw her die
Far away."

## The Wall Street Pit.

By EDWIN MARKHAM.

I see a hell of faces surge and whirl
Like maelstrom in the ocean—faces lean
And fleshless as the talons of a hawk—
Hot faces like the faces of the wolves
That track the traveler fleeing through the night—
Grim faces shrunken up and fallen in,
Deep plowed like weather-eaten bark of oak—
Drawn faces like the faces of the dead,
Grown suddenly old upon the brink of Earth.

Is this a whirl of madmen ravening
And blowing bubbles in their merriment?
Is Babel come again with shrieking crew
To eat the dust and drink the roaring wind?
And all for what? A handful of bright sand
To buy a shroud with and a length of earth?

Oh, saner are the hearts on stiller ways!
Thrice happier they who, far from these wild hours,
Grow softly as the apples on a bough.
Wiser the plowman with his scudding blade,
Turning a straight, fresh furrow down a field—
Wiser the herdsman whistling to his heart,
In the long shadows at the break of day—
Wiser the fisherman with quiet hand
Slanting his sail against the evening wind.

The swallow sweeps back from the south again,
The green of May is edging all the boughs,
The shy arbutus glimmers in the wood,

## Current Events.

### Foreign.

CHINA.

May 14.—The British Government opposes the proposition to increase the Chinese import tariff in order to aid expenses in paying the indemnity, unless further privileges are granted to foreign trade; a despatch to the London War Office from General Gaselee, commander of British troops in China, praises American officers.

May 16.—Great Britain submits an important proposal to the foreign ministers that China pay the indemnity out of her own native resources on a system affording her special facilities; the British military authorities extend the railroad to Tung Chow, along the Pei Ho.

May 17.—Renewed fighting between General Liu's troops and the Boxers is reported; the Chinese peace plenipotentiaries agree to the demands of the powers for legation sites.

OTHER FOREIGN NEWS.

May 13.—More arrests are reported in Russia; and it is declared that the revolutionary movement in the empire is spreading.

The army reorganization scheme of Secretary Brodrick is laid before the British House of Commons, and is attacked by the opposition leader, Sir Henry Campbell-Bannerman.

May 15.—Many lives are lost in an Italian village in the Apennines, a fall of rocks burying most of the houses.

The settlements on the London Stock Exchange are arranged satisfactorily, and a feared panic is averted; J. P. Morgan arrives in Paris.

May 16.—Secretary Brodrick's bill for army reform is adopted by a large majority in the British House of Commons.

Failure in the spring crops is severely felt in India, and 381,000 persons are receiving relief.

It is reported at Rome that French troops have taken possession of the Oasis of Rhadames, which gives them practical control of Tripoli.

May 17.—Two French cruisers appear at Tangier to enforce a settlement of claims against Morocco.

Reports from British consuls in Japan show the foreign trade conditions of the islands to be unsatisfactory; American commerce is displacing the business of the rival nations in Japan.

May 19.—The massacre of Paris Communards in 1871 is celebrated by revolutionary groups of Paris, who place wreaths in Père-la-Chaise Cemetery.

Hostilities are suspended in Colombia and the Government is negotiating terms of peace with the insurgents.

The draft of Secretary Hay's proposals for a

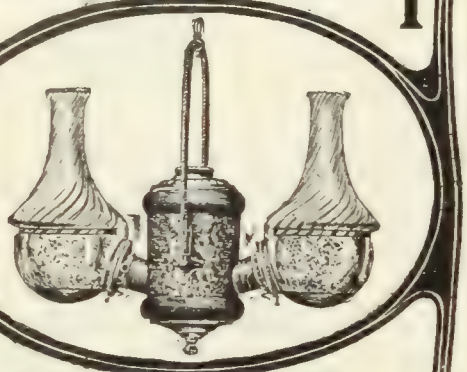
THE ANGLE LAMP



The Light that never fails

is the one light you can use during the warm months with genuine comfort. Its comparatively little heat, together with the little attention it requires, makes it the ideal warm weather light. Many **Summer Homes** are equipped with it to the exclusion of all other illumination. While more brilliant than gas or electricity, it never smokes, smells or gets out of order; is lighted and extinguished as easily as gas, and burns but about 18 cents worth of oil a month. It is a perfect substitute for gas and electricity as it is absolutely non-explosive. Our catalogue W shows all styles from $1.80 up. Sent on request. The Angle Lamp Co., 76 Park Pl., N. Y.

THE ANGLE LAMP IS GUARANTEED.

**Your money will be refunded if you do not find it exactly as represented.**

**Where's the Key?**

You don't need to ask this question if it's on an Improved Washburne Patent Key Ring, that holds fast to waist band or pocket till you lift the lever. Aluminum or steel chain. By mail, 25 cents.

Catalogue of novelties for personal wear, made with Washburne Fasteners, Free.

AMERICAN RING CO., Box 55, Waterbury, Conn.

new isthmian treaty is received by the British Government officials in London.

The Rev. Dr. Malthie D. Babcock, of New York, commits suicide in a Naples hospital.

## Domestic.

DOMESTIC NEWS.

May 13.—There is a slight improvement in the condition of Mrs. McKinley, and the President makes a brief visit to San José, where he addresses a large crowd.

The War Department issues an order fixing the strength of the regular army on a peace basis at 77,287.

Many lives are lost by the sinking of the *City of Paducah* in the Mississippi off the Illinois shore.

May 14.—President McKinley makes his official entry into San Francisco, and is greeted with a great public reception; Mrs. McKinley's condition is steadily improving.

The attempt of the Traction Company of Albany and Troy to run its cars with non-union men, in place of its striking employees, is accompanied by rioting and bloodshed; Governor Odell orders out the Twenty-third Regiment of Brooklyn and the Tenth Battalion of Albany.

May 15.—The illness of Mrs. McKinley causes the President to announce the abandonment of his trip to the Northwest.

Strike conditions in Albany continue to be critical; nearly two thousand militiamen are now at the scene of trouble.

May 16.—Mrs. McKinley's condition is most serious, and her death is expected.

Riot and disorder occur in Albany; militiamen in a street-car fire a volley into the crowd and kill two merchants; many men are wounded in street fights.

The Rev. Dr. Henry C. Minton is elected Moderator of the Presbyterian General Assembly in Philadelphia.

Minister Conger and the Rev. Dr. Ament are the principal speakers at the dinner of the American Asiatic Association in New York.

May 17.—There is a marked improvement in Mrs. McKinley's condition.

No settlement is reached in the strike at Albany, but there is no further violence, the cars being operated under protection of troops; the 9th Regiment, of New York, arrives in Albany.

Sessions of the Presbyterian Assembly continue in Philadelphia, and are largely attended.

Father Phillips, of Hazleton, Pa., is found dead in a New York tenement.

May 18.—There is continued improvement in Mrs. McKinley's condition; the President attends the launching of the battle-ship *Ohio* in San Francisco.

The strike of the Albany street-railway employees is settled by agreement between the company and the strikers, and the troops start for home.

The purchase of the Mexican Central Railroad by a St. Louis syndicate is believed to foreshadow the establishment of a new Eastern line of railroad.

May 19.—Mrs. McKinley's condition continues to improve, and she expects to return to Washington in a few days.

With the departure of the troops peace reigns again in Albany; the funerals of the two men killed by the militia take place.

Reports received indicate that four thousand machinists are ready to join in a national strike.

AMERICAN DEPENDENCIES.

May 13.—*Cuba:* The report of the special commission that visited Washington is laid before the Cuban Constitutional Convention in Havana; it favors, but does not recommend, acceptance of the Platt amendment.

May 17.—*Philippines:* Aguinaldo talks about the duties of the United States in the Philippine Archipelago; in Zambeles province General Mascardo and a large force surrender to American arms.

## CHESS.

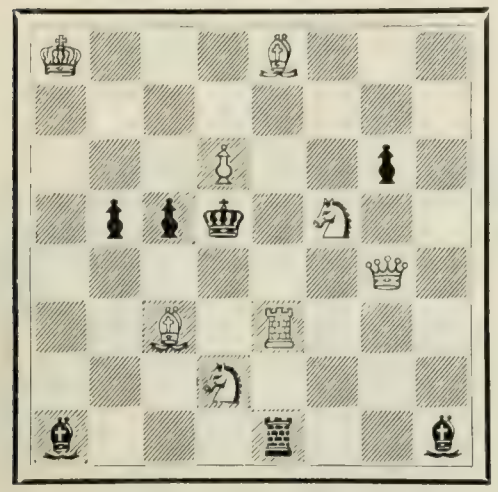
[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

### Problem 561.

By H. F. W. LANE.

First Prize Two-mover, *Brighton Society* Tournament.

Black—Seven Pieces.



White—Eight Pieces.

White mates in two moves.

### Correction.

In problem 560, by Dr. Dalton, printed last week, the black Pawn on Q B 3 should be omitted. As it stands, the white K is in check. Black has *nine* pieces, instead of eleven.

# BRAIN FOOD

## Is of Little Benefit Unless it is Digested.

Nearly everyone will admit that as a nation we eat too much meat and too little of vegetables and the grains.

For business men, office men and clerks, and in fact everyone engaged in sedentary or indoor occupations, grains, milk and vegetables are much more healthful.

Only men engaged in a severe outdoor manual labor can live on a heavy meat diet and continue in health.

As a general rule, meat once a day is sufficient for all classes of men, women and children, and grains, fruit and vegetables should constitute the bulk of food eaten.

But many of the most nutritious foods are difficult of digestion and it is of no use to advise brain workers to eat largely of grains and vegetables where the digestion is too weak to assimilate them properly.

It is always best to get the best results from our food, that some simple and harmless digestive should be taken after meals to assist the relaxed digestive organs, and several years' experience have proven Stuart's Dyspepsia Tablets to be a very safe, pleasant and effective digestive and a remedy which may be taken daily with the best results.

Stuart's Dyspepsia Tablets can hardly be called a patent medicine, as they do not act on the bowels nor any particular organ but only on the food eaten. They supply what weak stomachs lack, pepsin diastase and by stimulating the gastric glands increase the natural secretion of hydrochloric acid.

People who make a daily practice of taking one or two of Stuart's Dyspepsia Tablets after each meal are sure to have perfect digestion which means perfect health.

There is no danger of forming an injurious habit as the tablets contain absolutely nothing but natural digestives; cocaine, morphine and similar drugs have no place in a stomach medicine and Stuart's Dyspepsia Tablets are certainly the best known and most popular of all stomach remedies.

Ask your druggist for a fifty cent package of Stuart's Dyspepsia Tablets and after a week's use note the improvement in health, appetite and nervous energy.

If afflicted with sore eyes, use **Thompson's Eye Water**

**$75** **Month and Expenses;** no experience needed; position permanent; self-seller. PEASE MFG. CO., Station 102 Cincinnati, O.

### Solution of Problems.

No. 555.

Key-move, Q—B 7.

No. 556.

| | | |
|---|---|---|
| 1. Kt—R 6 / Kt x P | 2. Kt—Kt 4 / K—Q 5 | 3. Q—B 2, mate |
| | 2. ..... / Kt—Q 5 | 3. Kt—Q 5, mate |
| | 2. ..... / Any other | 3. Kt—B 2, mate |
| 1. ..... / Any other | 2. Q—B 3 ch / K—Q 5 (must) | 3. Q—K 4, mate |

Both problems solved by M. W. H., University of Virginia; the Rev. J. G. Law, Walhalla, S. C.; A Knight, Hillsboro, Tex.; Dr. H. W. Fannin, Hackett, Ark.; Dr. J. H. Stebbins, Geneva, N. Y.; W. R. Coumbe, Lakeland, Fla.; W. W. S., Randolph-Macon System, Lynchburg, Va.; J. E. Wharton, Sherman, Tex.; H. A. Seade, Mahomet, Ill.; O. C. Pitkin, Syracuse, N. Y.

555 (only): The Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; the Rev. G. Dobbs, New Orleans; H. M. Coss, Cattaraugus, N. Y.; the Rev. A. De R. Meares, Baltimore, Md.; J. P. Wilson, Youngstown, O.; L. A. Gouldie, Brooklyn, N. Y.; W. J. Leake, Richmond, Va.; G. Patterson, Winnipeg, Can.; S. S. Dunham and W. B. Morton, Washington, D.C.; C. N. Hartt, Brooklyn; C. B. Hoffman, Enterprise, Kan.; C. E. Lloyd, Washington, C.H., O.

556 (only): A. N. Cherry, Salt Lake City.

Comments (555): "Very good"—M. W. H.; "Very fine"—J. G. L.; "Exceedingly artful and pleasing"—A K.; "The best I've tried for a long time"—H. W. F.; "This pleases me. It is not hard, but neat and beautiful"—J. H. S.; "Worthy a special prize for economy"—W. R. C.; "Very fine"—M. M.; "Pretty easy"—G. D.; "Worthy of first"—H. M. C.; "I never met with a better 2-er"—A. De R. M.; "Oh! I don't know—It's not so much"—J. P. W.; "Clever"—L. A. G.

(556): "Excellent"—M. W. H.; "Exceedingly difficult"—J. G. L; "A little giant"—A K.; "Finely constructed and difficult"—H. W. F.; "The failure of more promising 'tries' leads to the key"—J. H. S.; "Little variety, but a hard nut to crack"—W. R. C.

A number of solvers thought that K—B 7 would solve 555, not seeing that Kt—K 6 shuts off the R.

The reason that so many failed with 556 is that they pinned their faith to Kt—R 2. The answer is Kt—Kt 6, and White can not force mate in two more moves.

In addition to those reported, F. F. Carroll, Aiken, Ga., and the Rev. W. H. W., Baltimore, got 551; A. H. Gansser, Bay City, Mich., 553; O. C P., 554.

*Notes from The Standard, London.*

No fault can be found with Black's treatment of the game (perhaps P—Q B 4 might have been considered) up to 23.., B—B sq, which allowed White to get the upper hand. The skilful American never relaxed his hold, and increased his advantage move by move. Atkins tried for a remote chance of drawing.

SECOND GAME WON BY GREAT BRITAIN.

Queen's Gambit Declined.

*Notes from The Standard, London.*

A lively and interesting game, as in the majority of cases with the counter attack 2.., P—K 4. Closer investigation is necessary to determine whether White could not have brought a sacrifice with B—B 6, pointed out below. Black's 11.., B—R 2 was not a good move, the Bishop becoming imprisoned; this move was the primary cause of the loss of the game. For White, instead of 14 K R—Q sq, 14 B—B 6, or Kt—B 6, might be considered. This must, however, be examined at leisure. Black's combination to capture the K P was faulty. Having the inferior position for the ending he should not have exchanged pieces. After 29.., R—R 7, Black's game was practically lost. White might have concluded it quicker with 32 B—B 7, followed by B—Kt 6, winning the exchange. His modus operandi was safe, but laborious. At move 63 White could have played at once R—Q 8, R—Q B 3; 64 K—Kt 7, R—Kt 8 ch; 65 K—B 8, winning easily. However time was called on the 64th move, and Black resigned.

# Pears'

Pears' soap is dried a whole year. That's why it lasts so. It wears to the thinness of a wafer.

All sorts of people use it, all sorts of stores sell it, especially druggists.

## Don't Cut Corns

**Don't do it Yourself—Don't Let Anybody do it for You.**

What man or woman suffering with painful and annoying corns will not give 25 cents to have them removed?

For 25 cents you get

**LEONARD'S**
**Hamburg**
**Corn Remover**

sent to your house, postpaid, which will remove every corn you have, no matter where it is, how long you have had it or how torturing it is. Razors are dangerous; pastes, salves and plasters are worthless. Send 25 c. to-day for this article of genuine merit—the only one that will do the work quickly and properly—it "Acts Like Lightning." Rids feet of corns, soft, hard or otherwise; on the joints, between the toes, or on the soles of the feet. Your money refunded if it does not do all this. Sent prepaid on receipt of 25 cents by

*Clean, Painless, Certain and GUARANTEED.*

**LEONARD & CO., 347 Unity Bldg., Chicago, Ill.**
Be sure to write to-day.

**100 VISITING CARDS** Post paid **35c**

# Beacon Lights of History

"A stimulating historian."—JOHN FISKE.

"I would have Lord's 'Beacon Lights' if I had to go without my dinner"—BISHOP JOHN P. NEWMAN.

"Fascinating, instructive, inspiring."—JOHN HENRY BARROWS, President Oberlin College.

"It is read as eagerly as a work of fiction, and at the same time is absolutely authentic."—F. W. GUNSAULUS, D.D.

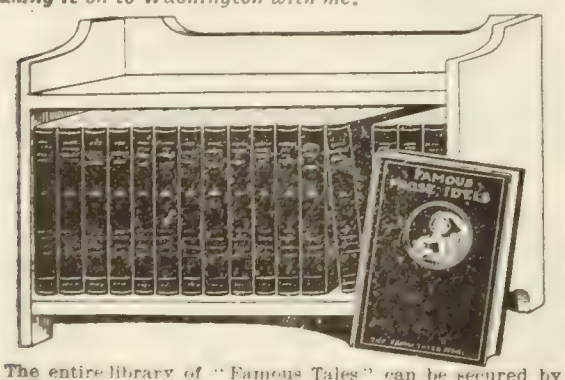
*10 Volumes. Send for June Offer to Digest Readers.*

**PROF. ELISHA GRAY'S "Nature's Miracles"** for Summer Reading on approval; 3 vols. at 60 cents each.

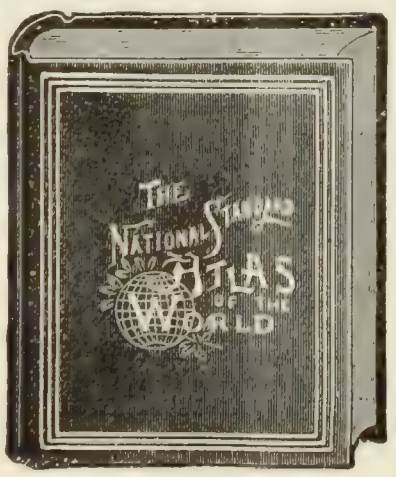
**FORDS, HOWARD, & HULBERT, 47 East 10th St., New York.**

## Vice-President ROOSEVELT says

*"I have greatly enjoyed your collection of Famous Tales. I think the collection an admirable one, and I am taking it on to Washington with me."*



The entire library of "Famous Tales" can be secured by DIGEST readers at a discount of 70 per cent. Full details sent free, on application to the Publishers, **Isaac H. Blanchard & Co.**, 268 270 Canal St., New York City.



## Atlas of the World—New Census Edition—$2.00

**436 pp., 12x15 in. in size, bound in cloth.** Large scale maps of every State, Territory and new possession, including **Cuba, Porto Rico, Hawaiian Islands, West Indies** and the **Philippines.** An illustrated description of every State and Country in the world. A complete alphabetical index of 150 pages gives every county, town, village and postoffice in the U. S. It is as large, complete and comprehensive as any atlas ever published for the price. Every Clergyman, Teacher, Business Man and Scholar should have one on their desk. You cannot afford to be without this atlas at the price for which we are offering it. The regular sale price is $4.75. **We want first-class agents to represent us.** Teachers can secure a good income during the summer months selling our atlas. **Young students, during your vacation why not make money and be independent?** Write for our terms. **Special offer: Send us $2.00 in the next few days** and we will send you an atlas like cut complete, by express prepaid. This offer will not appear again.

**The Fort Dearborn Pub. Co., 415-17 Dearborn St., Chicago.**

AGENTS WANTED

# The Literary Digest

VOL. XXII., NO. 22 NEW YORK, JUNE 1, 1901. WHOLE NUMBER, 580

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given**.

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**VACATION NOTICE TO SUBSCRIBERS.**

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

## TOPICS OF THE DAY.

### GERMANY AND THE MONROE DOCTRINE.

SEVERAL British papers, notably *The Spectator* and *The Saturday Review*, have been warning us repeatedly of late that Germany intends to make a German colony out of a section of Brazil that is thickly settled with German emigrants, and that the increase of the German navy is being made with an eye to a conflict with the United States over the Monroe doctrine when the time for attaching the colony to the German empire arrives. Another rumor that has recently been rife has it that Germany is bargaining with Venezuela for the lease or purchase of a small, barren island in the Caribbean for use as a coaling-station; but this rumor has been semi-officially denied. Despite the denial, however, the rumor seems to Senator Lodge, of Massachusetts, to be worthy of some consideration, and he declared last week in his speech at the opening of the Pan-American exposition that such a transaction would be a violation of the Monroe doctrine, and should be resisted. The Senator did not say specifically that he referred to the rumor mentioned above; but all the papers that comment on his speech agree that that is what he must have had in mind, and as he is an important member of the foreign relations committee of the Senate, his words are regarded as uncommonly significant. Addressing the delegates from the Central and South American republics, he said:

"We can not, we will not, permit any great military power to enter this hemisphere, settle down by our firesides, force us to create great standing armies, and from some point of vantage offer an eternal menace to our peace. You have your own countries and your own governments. We wish you peace, prosperity, an increasing population, and growing wealth; but we wish you to have it under your own flags and in absolute independence, without any possibility of interference by Europe. We ask you to be true to the doctrine which we announced seventy-five years ago. If you will put your faith in it and be true to it, we will defend it.

"No American soil shall be given up to any power of Europe. We wish nothing but friendship with Europe; we do not seek to meddle in any way with European affairs, and we do not wish to have Europe meddle with us. No power which now has no foothold in this hemisphere can be permitted to come in here and by purchase, lease, or other arrangement get control of even the smallest island for the purpose of establishing a naval station or a place of arms. When Spain sued for peace we could have demanded from her an island which would have given us a naval station in European waters; but we made no such request. In return we say no European power shall come in here to establish a naval station in the Caribbean Sea.

"A place of arms at that point, owned or controlled by one of the powers of Europe not now owning any territory in America, would be a menace to the canal and to every South American state. Under no conditions, under no stress of circumstances, can the smallest island or the most barren promontory on either continent ever be ceded or sold to one of the great powers of Europe. This danger is real. It can not be warded off by brave words, by Fourth of July orations, or by confident boasting of our strength and resources. It can only be avoided by a thorough agreement among all American states upon the Monroe doctrine, by the unceasing watchfulness, complete preparation, and the most absolute readiness on the part of the United States."

The Brooklyn *Eagle*, commenting on the "bumptiousness" of these remarks, observes that "fire-eaters sometimes add to the attractions of a fair, but they are not United States Senators. They are usually humbugs." "We suppose it is tolerably certain," says the Hartford *Times*, "that if the Republican jingoes of whom Lodge and Roosevelt are leaders are allowed to have their way, the United States will find itself involved in a war with Germany within the next fifteen years." The New York *Evening Post* calls the Senator "a dangerous man" who "broods upon war," and a "stirrer-up of international hatred and strife," whom the President "will have to keep his eye on if he does not want his policy of peace and trade with all nations tumbled into ruin." The Philadelphia *Record* thinks that "the South American states are tolerably able to take care of themselves in an emergency," and it remarks that "in the remoteness of any such danger the repeated offers of protection through the Monroe doctrine are anything but calculated to inspire the South American republics with sentiments of gratitude." The inclusion of coaling-stations in the doctrine, observes the Springfield *Republican*, is something new; and it goes on to say:

"It is to be feared that this extension of the Monroe doctrine is not altogether wise or expedient. No European power has ever taken such extreme ground in opposing the acquisition of naval or coaling-stations by other countries. The argument against Germany, in this instance, is, of course, that she would use a naval station in the Western hemisphere as a *point d'appui* in an extended program of aggression, which is mere assumption; on the other hand, it is certain that an attitude such as Mr. Lodge assumes is deeply irritating to Germany, which is a great commercial nation, and in the end will stir up more hard feeling and more conflicts in arms than a more conciliatory attitude. International good will and peace will not be promoted

in the long run by so openly branding a great and friendly power as a peril to our interests."

Senator Lodge finds defenders, however, in the New York *Sun*, which calls his speech "admirable in substance and correct in tone and expression," and in the Chicago *Inter Ocean*, which calls it "a notable utterance on a notable occasion," and adds that "it was not only the voice of the Administration in Washington, but the voice of the United States Senate and the voice of the American people."

A German-American view of the matter may be seen in the following comment from the New York *Staats-Zeitung:*

"Senator Lodge has childishly exaggerated the danger of a German coaling-station in the Caribbean Sea, but that does not alter the fact that opposition to their establishment is fully justified. . . . The assertion that Germany wants to acquire a coaling-station in Venezuela and establish colonies in Brazil which should be politically dependent upon the empire is not true. Therefore, we nail these misrepresentations where and whenever we find them. But if those reports were true, we should not hesitate a moment to take our stand against such undertakings. The United States must oppose them, and the idea that they dare not because they themselves have not always conducted themselves properly is utterly untenable.

"The Monroe doctrine may be abused and misrepresented and perverted, but one of its principles must never be abandoned, namely, that no European power can be permitted to increase its political influence upon the American continent. The fact is recognized by all European powers, and German-Americans should not pour oil on the fire by attacking the justice of the principle of it. In the interests of both countries they should continually let it be known that Germany has absolutely no intention to violate the Monroe doctrine, and, much more, has no secret designs upon American territory."

## OUR TROOPS LEAVE PEKING.

THE fact that General Chaffee and the American troops left Peking on Wednesday of last week, leaving behind only a legation guard, is made the subject of much less comment in the newspapers than is given to the Chinese petitions asking our troops to stay. These petitions, signed by 5,600 residents of Peking, were presented to General Chaffee on March 28, but reached the War Department in Washington only last week. The St. Louis *Globe-Democrat* calls the presentation of the petitions "something new in war"; the Philadelphia *Ledger* speaks of it as "an incident rare in the world's history," and the Baltimore *American* as "a testimonial without a parallel." The New York *Times* says that it "is doubtless without any precedent in the history of the world."

The first petition, addressed to Major Edgar B. Robertson of the Ninth Infantry, provost marshal of the American district in the Tatar city, reads as follows:

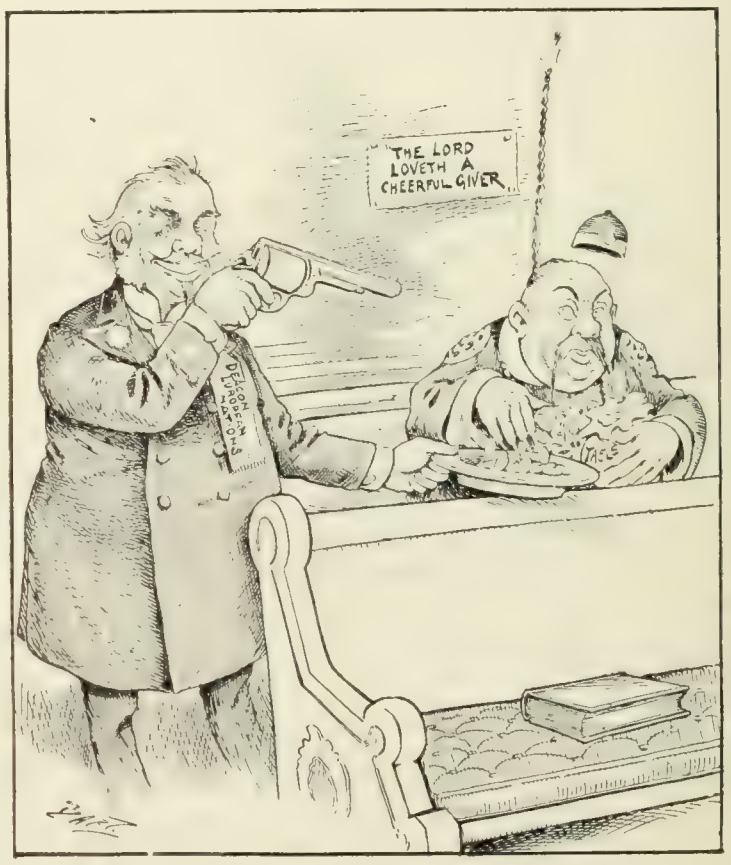
"We, the people of American section, consider ourselves fortunate to be protected under the glorious flag of the United States, a flag which has indeed secured us better protection than we ever had before. In addition to the commercial prosperity and individual privileges we have enjoyed since the arrival of the allied forces at Peking, we have been favored with many beneficial institutions, such as police-station, charity-house, board of health, vaccination, etc.

"The court of provost marshal, which seldom, if ever, leaves innocence without recognition and the guilty unpunished, is the center of justice. The watchfulness with which the American policemen perform their duty has protected many a merchant from being robbed by foreign soldiers and natives. Everything moves as smoothly as could be desired.

"Thousand of homeless people who otherwise would starve to death are being fed by the American charity-house. The excellence of the present sanitary arrangements, which was once so foreign to us, can not but win our admiration. We believe that Peking has never enjoyed such good health in all her history as she is enjoying at present. In short, as a conquered people we are more privileged than we are entitled to. We earnestly and sincerely request you, the American authorities, not to leave us until the time when all the nations withdraw their forces."

The second petition, from "the people and proprietors of two thousand business houses in the American section" and addressed to Captain John C. F. Tillson, of the Fourteenth Infantry, provost marshal of the American district in the Chinese city, is in much the same tenor as the first petition, except that it lays more stress on the suppression of crime, and expresses a fear that disorder, robbery, and ill-treatment may follow the introduction of other troops after the departure of the Americans. Captain Tillson's reply, which some of our critics might consider characteristically "American," gives, however, an instructive glimpse of what our troops have been doing in Peking. He said:

"I feel sure that this is the first time in the world's history that the invaded have begged the invaders to remain on their soil. Our work has been so well done that threatened epidemic



TAIL-RAISING EPISODE IN THE ORIENT.
—*The Minneapolis Journal.*

and famine have been avoided; thousands of your poor have been fed daily, and no one has been allowed to suffer from hunger. Business has been more than restored, and to-day there is not a more prosperous community in your broad empire than that part of Peking under the protection of the United States. In this district offenders have been invariably brought to punishment, regardless of their race, nationality, or position. Nevertheless, it is our proud record that there has been no case of capital punishment and only eight commitments to the penitentiary. There has been punishment for the law-breaker, charity for the poor and afflicted, and protection for all. It was our pleasure, too, to accomplish all this without taxing a people who had sufficient burdens to bear. Let us hope that this generous, charitable, and magnanimous treatment of the vanquished may prove an example to the nations of the world, and a step forward in the world's progress toward a higher and nobler humanity.

"It is needless to tell you, however, that the United States does not maintain an army for the purpose of furnishing the city of Peking with good municipal government, and as a business proposition your appeal for the United States forces to remain longer in Peking has little to stand upon.

"That you still need our protection there is little doubt, and as the broader principles of humanity most frequently sway the people of my country, your petition is not hopeless, and I shall be glad to refer it to our Government.

"Whatever the result of your petition, whether we stay or go,

it may be gratifying to you to know that the soldiers of the United States, who, by force of circumstances came to China as your enemies, are now your friends, and we hope that this friendship may endure."

## THE MACHINISTS' STRIKE.

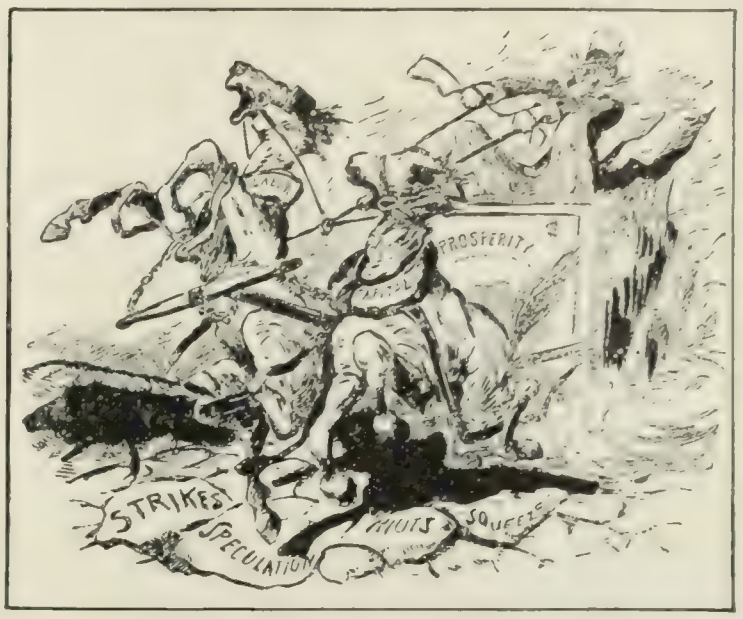
THE month of May, the favorite month for labor demonstrations in Europe, has witnessed a considerable number of strikes in this country, and two of them have been of sufficiently large proportions to awaken wide comment. The strike of the machinists, following closely on the heels of the Albany labor contest, was not unexpected, and the machinists' demand for a nine-hour workday at present wages receives a large share of public sympathy. "There have been few strikes with so good a basis of justice as this one," remarks the New York *World*. The number of men involved in the strike at its outset was estimated at 50,000; but this number has been reduced daily by numerous concessions made by employers. Almost all the great industrial centers are affected by the strike, which has assumed largest proportions in San Francisco, Scranton, New York, and Cincinnati. The contrast between the peace and orderliness of the machinists' strike and the violence of the Albany labor war is favorably commented on by several papers, as is also the statement of President O'Connell, of the International Association of Machinists, who is conducting the strike from headquarters at Washington and who asks that "an arrangement shall be made whereby all future difficulties may be adjusted by arbitration, thus preventing strikes and lockouts."

The strike has had the effect of bringing into public notice in a vivid way the whole question of the short-hour working-day, and the statement of the Brooklyn *Eagle* that the strikers' demand "harmonizes with what has come to be regarded as the industrial fitness of things on this side of the Atlantic" finds favor even in conservative quarters. The St. Paul *Dispatch* says:

"This action is in harmony with the universal industrial tendency, the mitigation of the mythical curse of the Garden of Eden, and the attainment of conditions when all, instead of a few, men will be able to secure the maximum comforts of life with the minimum of exertion. The official world sets the example. Office hours are leisurely and compensation liberal. Why may the men who work in shops not aspire to something of the same condition? In commercial life conditions are getting easier for the employed, shorter hours, vacations, and Saturday half-holidays. Is the machinist not as much entitled as is the clerk? But there is a larger reason, tho one less heard of and one in which society is concerned, for the shorter day. The ten-hour day for the man means a twelve-hour day, at its shortest, for the wife, and that reacts injuriously upon the homes whence come future citizens. Shorter hours for him means fewer hours of labor for her, and that means again better homes, better environment for children, and, in time, better citizens for the country."

An interesting discussion of the economic issues involved in the growing prevalence of the eight and nine-hour working-day is contained in Dr. Sarah S. Whittelsey's historical and critical study of Massachusetts Labor Legislation, recently published by the American Academy of Political and Social Science, Philadelphia. She maintains that there has been "much loose and unprofitable debate" regarding the increased efficiency due to increased leisure. While it is undoubtedly true, she says, that the reduction of excessively long workdays has told in greater vigor of work, and while it is also true that in some few instances, especially in cases where purely manual labor was involved, the full quota of work has been accomplished in the restricted day, yet of all the labor leaders she consulted, "not one has held that the ordinary factory operative succeeds in accomplishing the same amount of work in a ten-hour day, or a fifty-eight hour week, as he did before in eleven hours, or in the sixty-hour week." Indeed, the argument most frequently used by trade-unionists in their advocacy of shorter hours of work is that employment will thereby be given to more men. On the other hand, continues Dr. Whittelsey:

"Every reduction of hours thus far has been followed immediately by the speeding up of machinery; by imposing stricter time regulations; by introducing special discipline in 'gang work,' so that time may not be lost to a whole shift through the fault of a single member, etc.; eventually, by the replacement of old machines by new ones of greater capacity, and requiring, usually, fewer operatives to tend them; and also by such further changes in management or methods as can be devised to accomplish saving. This is the unanimous testimony of employers, laborers, and inspectors."



"WHOA-A-A!"

—*The New York World.*

## "TAMMANY PLUNDER."

THE belief that the government of New York is unspeakably extravagant and corrupt is so widespread that the sensational and damaging disclosures of Tammany's methods, made by Franklin Matthews in a recent issue of the New York *Evening Post*, are not greeted with any surprise. Mr. Matthews, whose article on "The Cost of Tammany Hall in Flesh and Blood" was reviewed in our issue of October 20 last, directs his present indictment against some of the leading officials holding power under the present city administration, and rests his case upon "documents now in the possession of certain authorities of the city of New York" and upon formal statements, appended to his article, which were "made in the office of the City Controller by business men and taken down in the presence of witnesses." Before proceeding to the more specific counts in his indictment, Mr. Matthews says of the general situation, existing as the result of present municipal conditions, that official figures in five departments of the city government show an increase in money expenditures, during three years of Tammany administration, of more than $23,000,000. He continues:

"About 10,000 additional names have been placed on the payrolls of the city in three years by Tammany. During 1899 salaries were increased arbitrarily $2,356,258.26. In 1900 the arbitrary increase—this does not include increase in school-teachers' salaries and the increases to policemen and firemen, due to advancement in grade—was about $480,000. The increases in 1901 are already asserted to be well on toward $100,000. The number of persons on the payrolls of the city is nearly 46,000. The appropriations for salaries are made practically in a lump sum, and the heads of departments do their own increasing. A great amount of plunder is collected by Tammany through practical collusion in the purchase of the vast amount of supplies the city needs; by making sure that favored Tammany men get the city

contracts, and then by laxity in the enforcement of those contracts; by loose methods of bookkeeping; by increasing salaries all around to the 'boys,' and then requiring that part of the increase be turned into Tammany Hall."

It is in relation to the commercial methods employed by the Fire Department, however, that Mr. Matthews makes his most striking charges, showing what he alleges to be grossest overcharging, and showing also that contractors are unable to deal with this branch of the city government except through a Tammany middleman, one William L. Marks, who gets a commission on sales reported to run as high as twenty-five per cent. Fire Commissioner Scannell denies that there has been any collusion between himself and Marks, but Mr. Matthews presents the following facts:

"Marks is the open agent—I might say, as the documents will prove, the undesired agent in some cases—of several companies and firms. Among the concerns whose interests he has advanced are the La France Fire Engine Company, the American Steam Fire Engine Company, the Akron Rubber Company, the Voorhees Rubber Company, the Fabric Hose Company, and the B. F. Goodrich Company. From these companies the city within one year purchased supplies worth $214,000, on all of which, according to the heads of these concerns, Marks got a commission, amounting, on some goods, to twenty-five per cent. In 1900 the Fire Department purchased 89,000 feet of hose. Marks's firms and companies received contracts for 83,000 feet, and one other concern got a contract for the other 6,000 feet. It is charged in the controller's office that the 'equal thereto' clause in their advertisements for bids is non-effective, because it 'leaves the matter absolutely in the discretion of the commissioner,' and because no such tests of new goods are now made as were made formerly."

The same kind of conditions are alleged to exist in the Department of Public Buildings, Lighting, and Supplies, where the purchase of safes, it is charged, depends largely on the intervention of one Jacob A. Mittnacht, a dealer in second-hand safes, and where the most exorbitant prices have been paid. Land bought for the city's use, says Mr. Matthews, is purchased through long and expensive condemnation proceedings, involving heavy fees for commissioners and lawyers, instead of by private contract. Charges of extraordinary incompetency and extravagance are also brought against the Water Department. When Tammany came into power four years ago, we are told, there were only thirteen private secretaries for city officials in all Greater New York, and their cost was but $17,500 annually. Now there are ninety-one persons acting in that capacity, and the cost is $158,000 a year. On the other hand stands the fact that, while every department of the city or county government except the public prosecutor's, has increased salaries since 1897, the expenditures on this account in the district attorney's office have been cut down more than $44,000 since Mr. Philbin was put in charge of it by the governor.

An interesting feature in the present situation, and one that has largely contributed to the strength of Mr. Matthews's disclosures, is the fact that both District-Attorney Philbin (whose appointment by Governor Roosevelt in place of Mr. Gardiner is still fresh in the public mind) and City Controller Coler seem to be willing and anxious to do all in their power toward putting the affairs of the city administration on a sound business basis. Mr. Coler has on several occasions attempted to stop the payment of excessive prices for supplies, and even went so far as to introduce a bill in the legislature giving him the power to cut down bills to the established market prices; but in every instance his intentions were thwarted. "It is an accident that the Tammany candidate for controller in 1897 was an honest man," remarks the New York *Times* (Ind.); "if Tammany feels sure of the next election, the accident will not occur again."

Mr. Matthews outlines three tentative remedies for the evils of which he complains: (1) The passing of legislation that will enable the controller to scale down bills to market rates; (2) the formation of some kind of an association upon which the controller could call to institute taxpayers' suits when he desires to contest payment of a bill; (3) the appointment of a competent bureau of statistics to supervise the finances of the city. But he frankly admits that such remedies are only tentative, and he hopes for a "tornado that will surpass any political storm this city has ever seen," and that will completely sweep Tammany from power.

## MR. CARNEGIE'S GIFT TO THE SCOTCH UNIVERSITIES.

A LARGE part of the comment on Mr. Carnegie's great gift to the universities of Edinburgh, Aberdeen, Glasgow, and St. Andrews was made on the basis of the report that the sum given was $10,000,000 and that the income was to be used only for students' tuition charges. A later despatch says that the amount is $7,500,000, and that it is not to be devoted to scholarships alone, but to endow science and to build up the universities themselves. The fears expressed by newspapers both in Great Britain and America, therefore, that the fund would swamp the universities with a flood of students for whom the universities' material equipment would be inadequate, seem to be unfounded. The New York *Times* says:

"On this side of the water it will be remarked with uncounterfeited glee that Mr. Carnegie's practise confounds Mr. Schwab's precept. The president of the vast United States steel corporation tells the boys of a trade-school that the college-bred boy can never catch up with the boy who has buckled down to the actual struggle of life in a foundry at the age of sixteen. But Mr. Carnegie, who was Mr. Schwab's dry nurse in the steel business, makes provision for drenching and saturating youth of all Scotland in high learning by the university process, which assuredly will leave few of them free to put on a jumper in a foundry before the age of twenty-five. As it is quite unimaginable that Mr. Carnegie would set aside $10,000,000 to retard the development of young Scotchmen and keep them hopelessly in the rear of the contemporaneous generation in other lands, we must conclude that he sees something in university education that the inexperienced eyes of Mr. Schwab have not yet perceived."

The Philadelphia *Press*, in an informing editorial, says:

"The Scotch universities are not rich. In 1889, when Parliament passed the Scotch universities act and settled the relations of the imperial exchequer to higher Scotch education, the endowment of Edinburgh was placed at $1,750,000, and the buildings, raising the entire capital account to the very modest sum, for a great university, of $2,500,000. In all, the income of the university was placed in 1888 at $215,000, and of this sum $150,000 was from the students and graduates.

"These modest endowments, still smaller for Glasgow and the joint University of St. Andrews and Dundee and Aberdeen, leave the Scotch universities in an altogether different position from the two wealthy English universities at Oxford and Cambridge. These receive no appropriation from the state. The Scotch institutions have always had this aid. Increased through successive years, the parliamentary grant in 1883, when the reorganization of the Scotch universities was first agitated, was $160,000 a year. By the Scotch university act of 1889 it was raised to $215,000 and placed on the consolidated fund, or, as we should say, was made a 'permanent appropriation.' At the same time the government of the institutions was reorganized by a commission, which only dissolved three years ago after changes which have increased the efficiency and continuity of Scotch university education and decreased the old, somewhat irregular attendance of the past.

"If Scotch universities have been poor in funds they have been rich in students. In 1900, with a population two-thirds the size of this State, they had 6,061 undergraduates, while Oxford and Cambridge had but 6,421. In 1884 Scotland had 6,600 students and England, with eight times the population, but 6,000. Today, when the attendance on higher education has greatly increased in England, Scotland still has two-thirds to three-quar-

ters as many students as are furnished by the richer and larger population to the South. If there ever was a country which did not need to have university education stimulated by free tuition it is Scotland.

"Nor, from American standards, is the tuition high. The average sum paid by a Scotch student in fees is about $50 a year, but as no one fee for the whole course is paid, but instead fees for classes and studies, the sums paid vary, and a student taking a full course and working for a degree will pay at Edinburgh about $200. Scotch professors, as a result of this fee system, have the largest academic salaries known to English-speaking institutions. In 1899 Dr. William Jacks, in mathematics, at Edinburgh, received $7,200 and a residence; Dr. John Ferguson, in chemistry, $6,500 and a residence, and Dr. John Cleland, in anatomy, $8,250 and a residence, with the privilege of practice. Considering the cost of living, these sums are equal to salaries here one-half larger. Few Scotch professors have less than $3,000, many have $4,000, and while the number per student is far below what we deem fit—Edinburgh has a teacher to every eighty students, where our larger institutions have one to every ten or fifteen—the salaries are far higher than in this country, absolutely and relatively.

"After ten years of more or less drastic reform from a university commission, 1889 to 1898, the Scotch universities have just settled down to a stable existence. Many in their senates and faculty must feel that Mr. Carnegie is one of those which trouble Israel. The income gift will meet the present return from fees about $250,000 a year, but the teaching force is now small. Students are certain to increase. With them, the cost of teaching and the professors' labors will grow. Now the popular professor's joy grows with his work. Commute fees into a salary and students will increase with no prospect that an eminent professor will sit at his desk personally taking in £1 notes from a lengthening line, as is the frugal Scotch fashion.

"All our Western State universities supported by taxation are to-day student-poor. If Mr. Carnegie's gift is accepted, and it can not very well be declined, the Scotch universities will also be student-poor."

## PUNISHMENT OF WEST POINT CADETS.

IN the dismissal of five cadets from the Military Academy at West Point and the suspension of six others for one year, it has come to light that the pledge given by the cadets to the congressional committee on January 19, to abstain from hazing, has not been kept. The hazing since that date, it is said, has been less severe, so much so, in fact, that the cadets consider that they were living up to the spirit of the pledge; but the academy authorities understood the pledge to mean that all hazing was to cease, and took measures to enforce the law forbidding it. This strict enforcement made Colonel Mills, the superintendent of the academy, unpopular with some of the cadets, and, after two of their number had been punished for hazing, a large number of them, on the evening of April 16, "engaged in an insubordinate demonstration directed at the superintendent of the Military Academy," as Colonel Mills says in his report of the affair, and the demonstration culminated in "the moving of the reveille gun from its accustomed place to a position on the plain immediately in front of the superintendent's quarters, at the door of which the muzzle was pointed." This led to an official investigation by a board of officers, who reported all the facts obtainable to the superintendent, and the superintendent made his report and recommendations to the Secretary of War, and upon this report the Secretary acted as related above. The eleven thus punished are said to be the ringleaders, and the others who took part in the demonstration are to be dealt with later, with less severity. Colonel Mills says in his report: "I believe it is necessary for the discipline of the corps of cadets that the leaders in the insubordination be separated from the academy for good. To permit them to remain under any promise of reformation would, in my judgment, be a mistake, and might involve very serious consequences. The academy can not afford to have any repetitions of hazing or other outbreaks. The present demonstration plainly exhibits among its leaders a total lack of appreciation of their responsibilities and obligations, entirely inexcusable among cadets finishing their third year at the Military Academy."

The newspapers seem to be practically of one opinion. The Cleveland *Plain Dealer* calls the guilty cadets "mutineers," and the New York *Herald* says that "they need excite no sentimental heroics nor induce mistaken persons to petition and pester the highest authorities for the exercise of clemency." The New York *Press* believes that the main point is the violation of the pledge against hazing, and it says: "In the United States army there is no room for men of broken or twisted honor." "There is a natural sympathy," observes the New York *Journal*, "for the young men whose characters have seemed to be blasted," but it believes, nevertheless, that "it would be better to make a clean sweep of the entire institution and fill it up with a fresh lot than to allow insubordination, disorder, and untruthfulness to breed among the future officers of our army." The Boston *Herald* goes still further, and says that "the nation can afford to do without West Point better than it can afford to train up officers of the army who assume the right to disobey their superiors." Many other papers, all over the country, express unqualified approval of the cadets' punishment. Says the Washington *Post*:

"We have had our misgivings ever since the close of the congressional investigation of the hazing scandals. The fact that the upper-classmen were then permitted to pose as making gracious concessions to the United States Government, and the further fact that this lordly condescension was hailed on all sides as a miracle of noble self-abnegation, warned us that the trouble was not over by any means. It seemed to us that, on the contrary, such overtures should have been rigorously snubbed and the cadets' attitude treated as a demonstration of insolence. The spectacle of the United States Government petting, thanking, and applauding a lot of its own dependents and beneficiaries because the latter had finally assented to the laws governing the academy, struck us as an exhibition of weakness and servility which must sooner or later invoke appropriate punishment. That punishment now appears to be on the way. So far from having been reduced to discipline or improved in any respect by the investigations already referred to, the cadets are really more demoralized and uncontrollable to-day than they were a year ago. They not only claim the right to create, or at least amend to suit themselves, the laws and regulations relating to the academy, they take the further step of appealing to political influence to secure the removal of their superior officers!

"In the face of such a condition—a condition so grotesque and so astounding that we can hardly discuss it with patience—there can be no possible opportunity for weighing the merits or demerits of Superintendent Mills. Whether he be efficient or derelict; whether he be the man for the place or a palpable and sorry blunder—the Secretary of War has no alternative save that of upholding him at any cost. We do not believe that any important men in Congress can be induced to encourage the cadets in the amazing policy they have adopted, for to do that would be to destroy forever the usefulness of the academy; but, however that may be, the Secretary's course lies plainly defined before him. He must suppress this impudent rebellion if he has to dismiss four-fifths, or even all, of the students at West Point. Better make a clean sweep and begin anew than have the Government run by its wards. In our opinion, the department could throw out a drag-net almost anywhere and capture better material for the service than West Point seems to have at its disposal now."

---

"YES," said the West Point cadet, "the cruelty we all have to put up with at the academy is something unspeakable." "What is the trouble now," asked the sympathetic parent. "They won't let us haze one another any more."—*The Washington Star*.

---

IF there were a Carnegie clan in Scotland its tartan pattern might pardonably be turned into the biggest kind of a check.—*The Philadelphia Times*.

## RESIGNATION OF THE SOUTH CAROLINA SENATORS.

THE resignations of United States Senators Tillman and McLaurin, of South Carolina, to take effect November 15, are understood to be merely the necessary preliminary to an appeal to the people of the State to decide which stripe of Democracy they prefer, the Tillman stripe or the McLaurin stripe.

HILL: "Ahem!"
—*The Chicago Inter Ocean.*

The Senators have asked the governor not to fill the vacancies except in the unlikely event of an extra session of the Senate, and both will make a determined canvass of the State for election to the six-year term made vacant by the resignation of Senator Tillman, leaving the short term to be filled by some one else. Both the Senators declare their unwavering allegiance to the Democratic Party, but disagree radically as to the policies the Democratic Party should follow. Senator Tillman upholds the policies advocated by Mr. Bryan, while Senator McLaurin upholds the policies advocated by the Republican Party. "Logically," remarks the Philadelphia *Ledger*, "McLaurin should join the Republican Party; but his aim appears to be to Republicanize the Democracy."

The Columbia (S. C.) *State* (Dem.) says of Senator McLaurin:

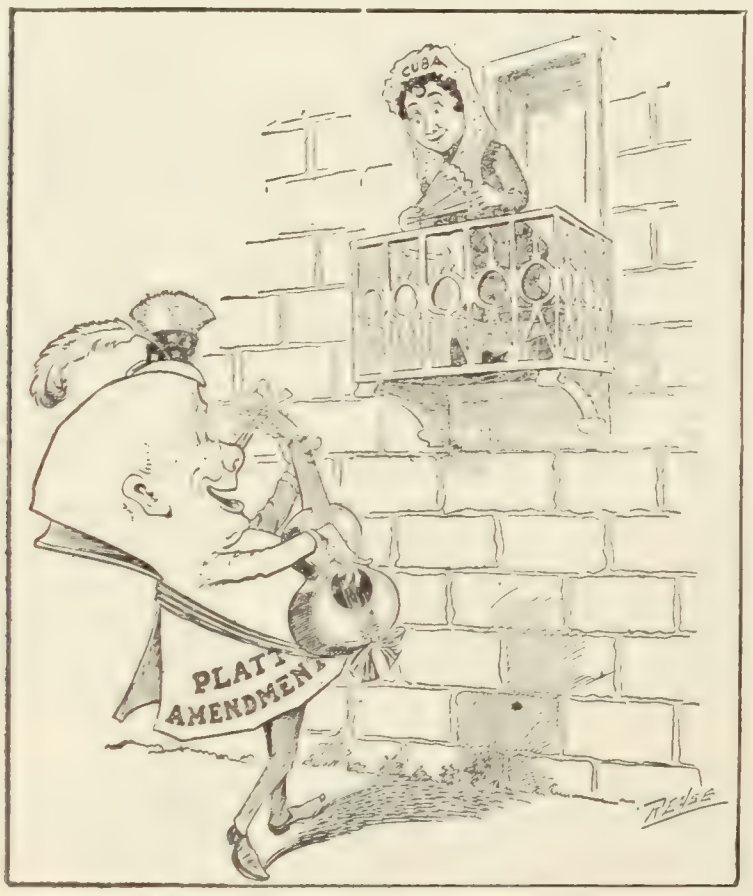
"None of his supporters nor even the Senator himself has been able to give a sufficient or even plausible explanation of why he does not openly adopt the name of the party to whose policies he is so enthusiastic a convert. The unspoken, unwritten reason, of course, is that the name 'Republican' is in South Carolina a millstone hung to the political neck of its possessor, and that Senator McLaurin can do much more for the Republican Party and its policies by calling himself a Democrat and pretending that Republican principles are Democratic than by making a straight and open fight under his true colors."

The Charleston (S. C.) *News and Courier*, which, tho Democratic, is not a supporter of Senator Tillman, says:

"The main question is, to which party ought the people of South Carolina to belong? They are and have been Democrats. Has the time come for them to change their party allegiance and become Republicans? That is the real question, and it is a question Mr. McLaurin has not dared to ask. With his opinions as to American policies, he must believe that it is to the interest of South Carolina for her people to belong to the Republican Party. If his professions of disinterestedness and patriotic motives were genuine, he would not hesitate to meet that issue and defend his convictions, and try to carry his people with him."

A more favorable view of Senator McLaurin appears in the Macon (Ga.) *Telegraph* (Dem.), which says:

"It should not be forgotten that this revolt against the leadership of Bryan and Altgeld and Tillman has a very large amount of justice and truth and good practical sense behind it, and that it can not be disposed of by abuse and misrepresentation. In a word, it can not be kicked out contemptuously, or put aside by the wave of the hand. On the contrary, it is as sure to grow as the sun shines, unless the party leaders recognize the importance of getting away from some of the follies of the past two campaigns, and of putting themselves in line with the progress of the day. McLaurin may be lost in the coming storm, but he is yet a warning petrel perched upon the rigging of the old Democratic ship. Not to steer the ship upon the smoother and better highway is to defy the storm and invite further disaster."



CUBA: "I'm sure I could learn to love him."
—*The St. Paul Pioneer Press.*

SALISBURY: "The war in South Africa has shown the strength of England."
—*The Des Moines Leader.*

## CURRENT CARTOONS.

## SIGNIFICANCE OF THE SUPREME COURT'S DECISION.

THE affirmation of the constitutionality of the Foraker act by the United States Supreme Court is accepted as also affirming the power of Congress to deal with our present and future "dependencies" without being hampered by the tariff limitations of the Constitution. In common parlance, the court decides that the Constitution does not "follow the flag." The Constitution declares that "all duties, imports, and excises shall be uniform throughout the United States," but the Foraker act, passed by the last session of Congress, set up a tariff between Porto Rico and the United States. If Porto Rico was a part of the United States under the Constitution, therefore, this act was unconstitutional; the Supreme Court decides that the law is constitutional, therefore Porto Rico is declared to be to that extent outside the domain of the Constitution. Some confusion was caused on the day of the decision by another decision handed down first, that the tariff between Porto Rico and the United States after the treaty of Paris was signed, and before the Foraker act took effect, was unconstitutional, but the force of that decision ended with the passage of the Foraker law, and so does not not affect present conditions. The case under which the more important decision was rendered was the Downes case, in which a tariff was collected under the Foraker law. The court affirms the constitutionality of the law and upholds the collection of the tariff by a majority of five to four, Justices Brown, Gray, Shiras, White, and McKenna uniting in the prevailing opinion, and Chief Justice Fuller and Justices Harlan, Brewer, and Peckham dissenting.

Justice Brown, who delivered the opinion of the court, said in part:

"We are of opinion that the island of Porto Rico is a territory appurtenant and belonging to the United States, but not a part of the United States within the revenue clause of the Constitution; that the Foraker act is constitutional so far as it imposes duties upon imports from such island, and that the plaintiff can not recover back the duties exacted in this case. . . . . .

"We are also of opinion that power to acquire territory by treaty implies not only the power to govern such territory, but to prescribe upon what terms the United States will receive its inhabitants and what their status shall be in what Chief Justice Marshall termed the 'American empire.' There seems to be no middle ground between this position and the doctrine that if their inhabitants do not become, immediately upon annexation, citizens of the United States, their children thereafter born, whether savages or civilized, are such and entitled to all the rights, privileges, and immunities of citizens. If such be their status, the consequences will be extremely serious. Indeed, it is doubtful if Congress would ever assent to the annexation of territory upon the condition that its inhabitants, however foreign they may be to our habits, traditions, and modes of life, shall become at once citizens of the United States. In all its treaties hitherto, the treaty-making power has made special provision for this subject.

"Grave apprehensions of danger are felt by many eminent men—a fear lest an unrestrained possession of power on the part of Congress may lead to unjust and oppressive legislation, in which the natural rights of territories or their inhabitants may be engulfed in a centralized despotism. These fears, however, find no justification in the action of Congress in the past century, nor in the conduct of the British Parliament toward its outlying possessions since the American Revolution. . . . . .

"Whatever may be finally decided by the American people as to the status of these islands and their inhabitants—whether they shall be introduced into the sisterhood of States or be permitted to form independent government—it does not follow that, in the mean time, awaiting that decision, the people are in the matter of personal rights unprotected by the provisions of our Constitution and subject to the merely arbitrary control of Congress. Even if regarded as aliens, they are entitled under the principles of the Constitution to be protected in life, liberty, and property."

Chief Justice Fuller, in dissenting from the majority view, said that he could not accept the view that even after a territory was organized, "Congress has the power to keep it like a disembodied shade, in an intermediate state of ambiguous existence for an indefinite period, and, more than that, after it has been called from that limbo, commerce with it is absolutely subject to the will of Congress, irrespective of constitutional provisions." He said further:

"From Marbury *vs.* Madison to the present day no utterance of this court has intimated a doubt that in its operation on the people, by whom and for whom it was established, the national Government is a Government of enumerated powers, the exercise of which is restricted to the use of means appropriate and plainly adapted to constitutional ends, and which are 'not prohibited, but consistent with the letter and spirit of the Constitution.'

"The powers delegated by the people to their agents are not enlarged by the expansion of the domain within which they are exercised. When the restriction on the exercise of a particular power by a particular agent is ascertained, that is an end of the question. To hold otherwise is to overthrow the basis of our constitutional law, and, moreover, in effect, to reassert the proposition that the States and not the people created the Government. There are many prohibitory clauses in the Constitution, and this court repeatedly has given effect to them in respect of the Territories and the District of Columbia. . . . . .

"A treaty which undertook to take away what the Constitution secured or to enlarge the federal jurisdiction would be simply void. It certainly can not be admitted that the power of Congress to lay and collect taxes and duties can be curtailed by an arrangement made with a foreign nation by the President and two-thirds of a quorum of the Senate. The Constitution does not yield to treaty or enactment, nor does its theory bend to circumstances."

Justice Harlan said, among other things:

"The idea that this country may acquire territory anywhere upon the earth, by conquest or treaty, and hold it as mere colonies or provinces, is wholly inconsistent with the spirit and genius as well as with the words of the Constitution. The glory of our American system of government is that it was created by a written Constitution which protects the people against the exercise of arbitrary, unlimited power, and the limits of which may not be passed by the Government it created, or by any branch of it, or even by the people who ordained it, except by amendment. It will be an evil day for American liberty if the theory of a government outside of the supreme law of the land finds lodgment in our constitutional jurisprudence."

The New York *Herald* (Ind.), referring to a remark in the opinion of the dissenting justices, observes that "it can hardly be said that either the court or the country is to be congratulated on a decision which four of its members say 'overthrows the basis of our constitutional law and asserts that the States, and not the people, created the Government'"; and the New York *Times* (Ind.), after expressing the opinion that the court's view may be reversed by a future decision, says: "It is perhaps ungracious to add that the reasoning of the court in these cases will not be read with the same intellectual pleasure by future generations of lawyers and laymen as has been felt now for many generations in the study of the opinions of the great constitutional interpreters of the past."

The New York *World* (Ind. Dem.) points out, however, that the non-partizan character of the decision "is shown by the fact that in this vital case one justice who was a Democrat before he went upon the bench and four who were Republicans made up the majority, while two who were Democrats and two who were Republicans made up the minority." The New York *Sun* (Rep.) rejoices that the court has "refused to grant an injunction against American progress during the twentieth century along the lines indicated by the events of 1897 and pursued up to this time by the American Congress and the American Executive." And the New York *Tribune* (Rep.) says: "The great victory has been won for this nation which insures it power to exercise its sovereign authority as necessity may require, without incurring the obligation to bring all sorts and conditions of men into the close circle of our Union as present necessary beneficiaries of our tariff laws and subsequent participants in our Government."

## LETTERS AND ART.

### "THE SUBSTITUTES"—A SATIRICAL SOCIAL DRAMA.

THE literary and dramatic success of the theatrical year in Paris, according to the French critics, has been Brieux's purpose-play, "Les Remplacantes" ("The Substitutes"). It teaches a healthy and rather elementary moral, but French fashionable society is held to be greatly in need of this dramatic sermon. The Théâtre Antoine, which, since it was first established as a "free theater" for the production of radical, unconventional, and artistic plays, has been the home of dramatic experiments, has never enjoyed so much prosperity and popularity as during the Brieux season.

As a playwright, Brieux, unlike Rostand, has dealt with modern, living questions. His dramas are social, tho not didactic, and his bent is decidedly satirical. Georges Clemenceau, in his new paper *Le Bloc*, declares that Brieux is without a peer among contemporary French dramatists. Social satire, he says, as conceived by Brieux, acquires an incredible intensity of truth which induces in the spectators bitter reflections upon the vaunted order of things under which they thrive. But Parisian society has enjoyed this exposure of its own frivolity and carelessness, especially since Brieux has not spared the lower classes and has provided a cheerful and satisfactory ending. The idea of the play is as follows:

The fashionable French women, under the advice of their physicians, refuse to nurse their own babies. They have other "duties," social, charitable, and artistic, which demand freedom of movement and the absence of care about home and family affairs. Hence they need *remplacantes*, substitutes, and these are found in young peasant mothers whose poverty compels them to forsake their own children and go to the cities to replace the cultured mothers. Being healthy, strong, and active, they transmit their qualities with their substitute-mothers' milk to the children of the aristocratic and decadent rich. The wet-nurses are habituated to comfort and luxury, frequently corrupted, sometimes seduced, and, when they are through with their function, find the old life in the villages, with their poor peasant-husbands, dull and intolerable. The husbands, during the absence of the young wives, become dissolute, while the babies are exposed to neglect, disease, maltreatment, by grandmothers or old neighbors, and many of them die before the mothers return from the city.

The heroine is one of these wet-nurses (called in French *nounou*). She is young, pretty, ardently devoted to her husband and baby. When offered a position as a wet-nurse in an aristocratic house, she declines to go, realizing vaguely the wrong to her own first-born. But her husband is greedy, selfish, and sordid, and his threats and reproaches, joined to those of the mother-in-law, finally induce the healthy-minded peasant-woman to become a *remplacante*. Her wages she sends home regularly, and the husband spends them in the wine-shop. He forms an illicit connection with another woman, goes steadily from bad to worse, and, to extort more money, writes blackmailing letters to his wife's employers.

When she learns the situation at home, she abandons her aristocratic charge and returns. She expels the husband's paramour, brings him to his senses, tames the stepmother, and reclaims her child. She has remained pure and faithful, tho her city environment left much to be desired. A friend of the employer's family, an outspoken physician, is made the playwright's mouthpiece in expounding the principles involved and revealing the awful and ruinous effects of this system of "substitution." He tells what he knows from personal observation of the immorality and slaughter of the innocents produced by the system. He advocates the nursing and breast-feeding of babies by their own mothers, and the payment of bounties by the state to the poor mothers who can not afford to forego the wages now commanded by the *remplacantes*.

Clemenceau reviews the play, praises its literary and artistic qualities, and criticizes the author's intentional avoidance of the worst side of this problem. He writes:

"The idea brought into the theater by Brieux is a master-idea. He has developed his theme with rare skill and impressed upon the spectator all the consequences of the practise dealt with. The revelation of the rapacity of the peasantry is especially penetrating and pitiless. The philosophizing physician is charged with holding up the mirror to human nature and withdrawing the conclusions from the facts presented. A play which makes people laugh and cry, and which leaves them content after feeling the evils of a certain social organization, is certain of a high degree of success.

"And this leads me to the only objection I have to the piece. The real evils of the 'replacement' system, which are at bottom the subject of the play, are not put on the scene at all. It is necessary that Dr. Richon should give us a lecture on maternal duty, should explain the holocaust of rural babies sacrificed to the little Parisians, and the physical and moral gangrene carried from the city into the country. All this is only recited, while on the stage we are shown good folk led astray for a time by the lust of gold, but reclaimed to family virtues of the kind that are preached more than they are practised. The public demands a happy *dénoument*. The subject, in reality tragic, is made a comedy, with the dramatic element introduced by recital. . . . The grand scene of the return of the 'substitute,' with the beautiful sentiments expressed therein, is, I fear, wholly unrelated to actual life, and is based on pure convention."

But Clemenceau, nevertheless, welcomes the drama and its moral, and recalls that several years ago, in an official report to the General Council of the Seine, he recommended state support of mothers too poor to nurse their own children.—*Translation made for* THE LITERARY DIGEST.

### WHY "LITERARY RUBBISH" SELLS SO WELL.

IN a recent issue, we gave some of Mr. Howells's reasons for the present vogue of what he terms "literary rubbish," especially the enormous editions of popular novels of the day. A clever reply to Mr. Howells appears in the literary supplement of the New York *Times* (May 11), by "John Paul" (William Henry Webb). Mr. Howells gave forth his oracles from the comfortable cushions of "The Easy Chair" (*Harper's Magazine*, April). Mr. Webb chooses a less lofty and luxurious perch —"The Office Stool." The debate proceeds as follows:

"The Office Stool is not so easy as the Easy Chair—not by any manner of means—as the man who has wriggled on one to the cost of his nether wear for a half-century finds to his disappointment when he attempts to strike a match. But being brought more closely in contact with the brains of the multitude than the Easy Chair and having a wider range of experience, I consult it in preference to the latter when I wish to feel the popular pulse.

"'The Easy Chair has furnished its opinion as to the merits of the books that have a phenomenal sale,' I remarked to the Office Stool, 'and, by way of an offset I would like to have yours. Also I would like to have you explain, if possible, how it comes that the masses clamor for an "Eben Harum," a "David Holden," "When Janice Meredith Was in Flower," and things of that sort, while they will have but little of George Meredith and droop their ears at the mere mention of Henry James or Marcus Aurelius?'

"'My dear friend,' replied the Office Stool, 'you embarrass me. As well ask me why more uneasy chairs—I mean parlor chairs—and camp stools and office stools are sold than easy chairs. For my part I love the Easy Chair. And when it crosses its legs and crooks its arms and pulls its bang over its dear, honest forehead and sits down on the first book or banana that comes handy, I generally stand in a respectful attitude and listen. When it tells me in all seriousness that the author of "Henry Esmond" is not a novelist, and that—well, any man of to-day is, I only feel that I'd like to feel its bumps. Since books first were, it seems to me that it has only been necessary for the public to take a book up if you'd have the critics turn it down. Tup-

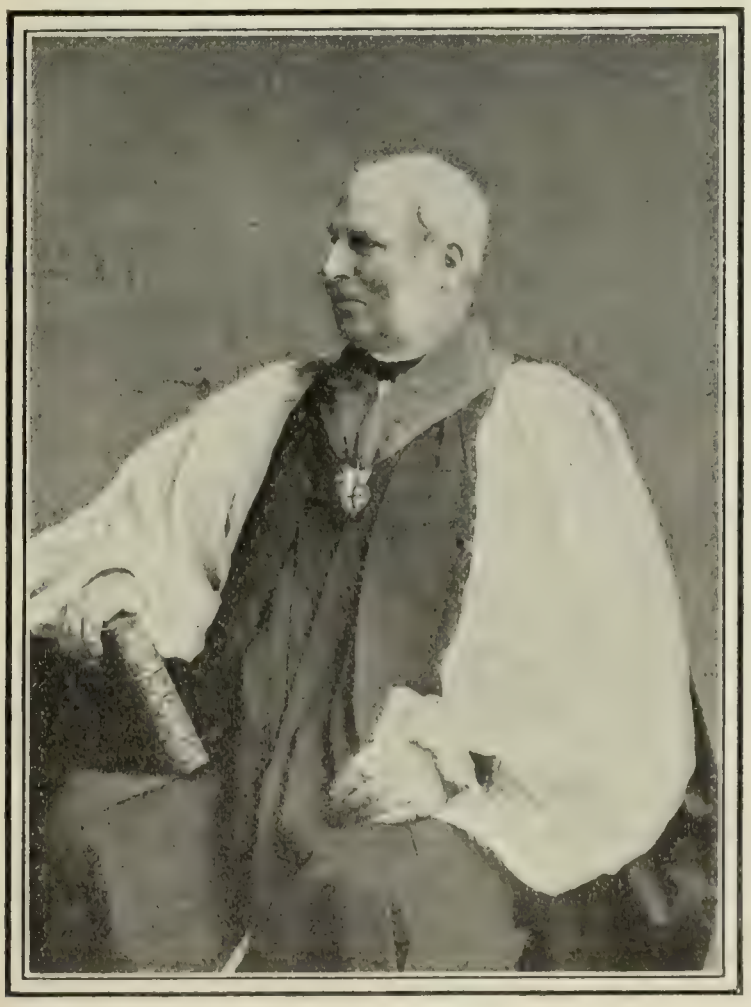
per was a joke to them, and in "The Lamplighter" they saw nothing illuminating. Yet the movement of the day seems to be toward government by the majority, and tho the popular pendulum may in some instances swing too far in one direction, is it not true that the majority generally are right?'

"'Not in the affair of the Flood,' I suggested; 'there the minority had decidedly the best of it.' And in choosing Barabbas it seems to me the multitude displayed about as much taste as they do in their choice of books. But "The Pilgrim's Progress," "Robinson Crusoe," "Uncle Tom's Cabin," and several other books I could mention, were taken up by both critics and the public from the first and had most satisfactory sales at once.

"'But do you really think that critics know anything?' persisted the Office Stool with some show of temper. 'What I was about to say was that you may notice that these great sellers of the day are all books within the range of the common understanding, and sweet and clean. They do not have to be explained to those who don't know Greek, nor apologized for to those who know nothing else. . . . And it strengthens my faith in the mental cleanliness that is finding physical expression in bathing facilities and dairy restaurants, with plain cooking and electrical contrivances for shooing off flies. The great public do not like the high flavors that your epicures affect. If it's woodcock they want, they don't want it hung on a nail for a week. It's not necessary that a thing smells bad to stimulate their simple palates. That is a curious fact, by the way, about your finer sort of critics and your "subtle" folk generally. They remind me in that respect of pointer dogs. You may have noticed that the finer the nose of these creatures the better the breed, the more dukely the kennel they come from, the more they delight in sniffing at unsavory substances.'"

## THE GREATEST OF MODERN HISTORIANS.

THE modern school of English historical scholarship represented by John Richard Green, Edward A. Freeman, Mandell Creighton, and William Stubbs has received two great losses this year in the deaths of the two last-named writers, both



BISHOP STUBBS.

widely accepted as masters in their several fields, and both bishops of the Established Church of England. Of this school, essentially German in its inspiration and methods, Dr. Stubbs is commonly accepted as the leader. The London *Outlook* (April 27), referring to him as "the greatest English master of historical learning," remarks that of this English school Professor Maitland (to whose name others would add that of Gardiner) now alone remains. It says:

"The great figures pass away, a crowd of specialists remain. For Bishop Stubbs was not only a scholar of profound and far-reaching erudition, he possessed also the architectonic skill necessary for the planning of a great work, and the genius of insight and selection so essential in the historian of a long period. His great work on the constitutional history of England from the earliest times to the eve of the Tudors is unmatched in our literature, and altho it is unknown to any but historical students, it may well be set next to the 'Decline and Fall' among the masterpieces of history in the English language. Its theme can not, of course, be compared in interest to that of Gibbon; the glow of Macaulay's advocacy, the lucid narrative of Froude, the stirring rhetoric of Freeman, the somber philosophy of Carlyle are not there. In style the book is of a scholarly plainness, and every temptation to eloquence is resisted. But the facts of social evolution are told with impressive simplicity, the original sources of history are laid bare, so that a real knowledge of the book is in itself a liberal education. Every one remembers the famous passage in which Gibbon concludes his work, and nothing could better illustrate the character of Bishop Stubbs than the last words of his great history: 'His end will have been gained if he has succeeded in helping to train the judgment of his readers to discern the balance of truth and reality, to rest content with nothing less than the attainable maximum of truth, to base their arguments on nothing less sacred than that highest justice which is found in the deepest sympathy with erring and straying men.'"

As a bishop, we are told, Dr. Stubbs was not altogether a success. He took a freakish delight in shocking the parochial clergy, with the result that they thought him dreadfully irreverent:

"Perhaps an elaborate procession would be arranged on the occasion of one of his pastoral visits: choir, clergy, and bishop were meant to make a stately circuit of the churchyard before entering the building. For a time all would go well. The bishop would duly bring up the rear of the procession, looking the embodiment of solemnity. Then, without a moment's warning, he would dart across the grass (pursued by vainly expostulating clerics) and dive into the church by a side door, where he would smilingly await the entrance of the procession at the west end. This kind of performance appealed to his sense of humor. But it did not gratify his clergy."

The London *Pilot* (May 4), one of the most prominent English weeklies that deal almost equally with matters of literature, politics, and religion, speaks especially of Dr. Stubbs's extraordinary accuracy. It then adds:

"But accuracy, tho it is a moral quality as well as a physical aptitude, and honesty, a virtue moral and Christian, would have been insufficient to make Dr. Stubbs the great historian he was without the supreme gift of sympathy. 'I have a good deal of sympathy but too little zeal,' he said, laughingly, in his farewell lecture as professor at Oxford. Certainly the sympathy of a wise and prudent man was the most marked characteristic of his whole life. . . . . .

"When the next age comes to rank Dr. Stubbs as an historian we have no doubt that it will place him beside Gibbon among our greatest writers. No one has surpassed him in the width and depth of his knowledge; and there are few finer passages of sustained eloquence, since Burke, than those in which he dwelt, in history or sermon, on a character or a doctrine which he knew and loved."

**Shakespeare's Family Tree.**—Probably the most considerable contribution to the discussion of Shakespeare's genealogy since the publication of the late Mr. Halliwell-Phillips's "Outlines of the Life of Shakespeare" is made in a new volume entitled "Shakespeare's Family," by Mrs. C. C. Stopes. Mr. Sidney Lee has lately treated with acuteness and vigor many questions relating to the life of the poet, but Mrs. Stopes confines herself wholly to Shakespeare as "an interesting Warwickshire

gentleman," with whom, of course, the subject of genealogy is one of much importance. *Literature* (London, April 20) thus summarizes the results of her researches:

"'The net outcome of solidly established information with regard to the family relationships of Shakespeare, before his own generation, is as small as it can be. The name was of the commonest in Warwickshire during the sixteenth century, and it is next to impossible to determine the one out of a score of villages from which the bailiff of Stratford-upon-Avon and his son sprang. Like Mr. Yeatman, Mrs. Stopes has a romantic affection for the idea of a 'gentle Shakespeare':

"'By the Spear-side his family was at least respectable, and by the Spindle-side his pedigree can be traced back to Guy of Warwick and the good King Alfred. There is something in fallen fortune that lends a subtler romance to the consciousness of a noble ancestry, and we may be sure this played no small part in the making of the poet.'

"Mrs. Stopes does not actually demonstrate nearly as much as this. On the Spear-side—it was really a Mattock-side—Shakespeare can claim a father with certainty, and a grandfather, in a small tenant-farmer at Snitterfield, with fair probability. Beyond that it is impossible to go, and in particular the claim made by the father and son, when applying for a grant of arms from Heralds' College of an ancestor 'advanced and rewarded with landes and tenementes' by Henry VII., can not be verified, and may be mere heraldic magniloquence. On the Spindle-side there was a great-grandfather, one Thomas Arden, whom Mrs. Stopes connects with the well-known family of Arden of Parkhall, and so with the glories of Guy of Warwick and the good King Alfred, by argumentative processes which we can not approve. Perhaps our skepticism in the matter is assisted by the fact that we do not agree with Mrs. Stopes in finding 'the consciousness of a noble ancestry' amongst the stuff of Shakespeare's poetry."

## THE NEW POETIC DRAMA.

MR. W. D. HOWELLS is a friend of the drama, but not of "the stage," which he calls "that arch-enemy of the drama." In a recent article he gives his views of two prominent contemporary exponents of the romanticist school, Rostand and Stephen Phillips, contrasting them in a striking passage very unfavorably with his especial favorites, the realistic school of Ibsen, Hauptmann, and Pinero. For Rostand he has few words of praise, and apparently regards him as little better than a clever pretender. Of the main plot of "Cyrano de Bergerac" he says: "One is ashamed to state a situation so artistically puerile, so morally atrocious, as if one became *particeps criminis* in confessing one's knowledge of it." He continues (in the *North American Review*, May):

"The setting of a nature so misshapen as Cyrano's is a gaudy and extravagant theatricism, full of bold bloodshed and swagger picturesqueness; with the coming and going of loosely relevant figures, full of the Period in their costumes at least; and with a company of Gascon cadets risen from the dregs of Dumas's musketeers. The whole concludes in a sort of Thackerayesque after-glow (fifteen years after), with the widowed Roxane embroidering in a convent garden, and Cyrano coming periodically to visit her. Against a tree, opportunely dropping its autumnal leaves, he props himself on the occasion of his last visit; and, in reading to Roxane one of her husband's letters, involuntarily betrays that he, Cyrano, was the writer of it, and of all poor Christian's letters. Then he dies in the act of meeting death with a drawn sword, while his bandaged head reveals his death-wound, a lackey, bribed by one of his many enemies, having dropped a billet of wood on him from an upper window, as Cyrano passed. . . . The carpentry is indeed admirably perfect; but what fills one with despair for the human race is that carpentry should still be the acceptable thing with it. In a world which has had Shakespeare for three hundred years, and in an age which has seen the simple sublimity of living growth in Ibsen, carpentry is still overwhelmingly the preference of the theater—and its public. . . . . .

"One suspects something more of conscious depravity in the falsehood of 'L'Aiglon,' as if the author had taken counsel from the theater for his aberrations from taste in the treatment of the poor little Duc de Reichstadt. A curious point in the psychology of the piece is that, intellectually, it is of the measure of a boy whose mind has been so dwarfed that, at eighteen, he has only a precocious child's conceptions and ideals of life. The play is as if imagined by the son of Napoleon dreaming, in the tutelage of Austrian diplomacy, of restoring that French empire which his father created and destroyed, while he amuses his inexorable captivity with the toy soldiers which he is scarcely allowed to pretend are French soldiers. He pervades it with his puerility so thoroughly that M. Rostand seems to stand in abeyance, and leave it to the limited personality which he has constructed, and which in turn apparently constructs the other personalities. There is a Marie Louise, motived and characterized as the severe morality of a brilliant child would have her; a bad, bad Metternich, as the poor boy would have seen him; a beautiful and magnanimous countess and cousin, as he would have had such a kinswoman; a much-masquerading old French grenadier, of like origin and texture; a good Fanny Ellsler, sent to corrupt the young dreamer, but really abetting him in his designs of escaping and returning to France; and so on. It is all very curious; and, if the piece were narrative and told in the boy's own person, it would be even important; but in the dramatic form, it seems to give the measure of the author's mind as well as the creature's.

"It leaves one without any doubt that M. Rostand is a deft and skilful playwright, but with question whether he is so much more as to be a dramatist of great promise. His prime gift appears to be lyrical; and it is his lyricism which compensates the sentimentalism of 'Cyrano de Bergerac' and dignifies the puerility of L'Aiglon. . . . L'Aiglon triumphed on our stage, not because it was powerful, but because it was Napoleonic; and not through the Bonapartist history, but through the Bonapartist tradition, which was and will always remain alive in the popular heart."

Of Stephen Phillips's two poetic dramas Mr. Howells thus writes:

"Mr. Phillips's 'Paolo and Francesca' affects me like a dramatic poem, written as independently of the theater as if the theater had not existed. One may say that, for the purposes of the stage, it has the vices inherent in such a poem, but its vices, if not Shakespearian, are Elizabethan. They are of the 'spacious times,' and he has in everything Englished the pathetic Italian story. This had been done more than once before, notably by Leigh Hunt [in 'The Rimini,' published in 1816], who cast it in narrative form; and I mean nothing depreciative, but wholly the contrary, in saying that Mr. Phillips's tragedy reminds one of the heroic couplets of Leigh Hunt, rather than the *terze rime* of Dante Alighieri. It could not be Italian any more than it could be medieval; one civilization is not possible to another, as one age is not possible to another. We can conceive of the heartrending story on medieval and Italian terms if we read it in Dante, but if we read it in Phillips we conceive of it on actual and English terms. It will not do to say how near to the mood of his savage time is the stoic anguish of the poet who heard Francesca tell her piteous story in that whirl of Hell where he saw her rapt with Paolo. But one may safely say that the dramatic poem of Mr. Phillips, like the narrative poem of Hunt, is interfused with the sympathy of a race whose heart has grown tenderer in the six hundred years elapsed since Dante's nature lost its iron self-control in his swoon of compassion. It is English and modern, and the better for being English and modern; for the world is now abler to feel all the exquisite implications and extenuations of such a story than ever before.

"On the literary side of tragedy, which does not touch the theater or is farthest from it, I am afraid I can not find 'Herod' much more promising of remembrance. It affects me as artificial in treatment and conscious in origin; and, so far as I can see, it contributes to literature no new and interesting characterization. The 'Paolo and Francesca' did do this in one instance, if in no other. Lucrezia degl' Onesti is a personality added to one's associations with the original group of actors in the tragic fact.

"So far as M. Rostand and Mr. Phillips have possessed themselves of the theater, they have taken it back to the time when it was still believed that the theater must be literary. But it must

not be supposed that they are reforming the stage. The stage was already reformed. As poetry, Mr. Pinero's 'Notorious Mrs. Ebbsmith' is greater than Mr. Phillips's 'Paolo and Francesca,' and a more heart-breaking tragedy than his 'Herod' is the 'Hännele' of Herr Hauptmann. *Un Drama Nuevo* of the Spanish dramatist, Estebanez, is a nobler melodrama on the romanticistic lines than 'Cyrano de Bergerac'; and one hour of Ibsen in 'Ghosts' or the 'Wild Duck' or 'Little Eyolf,' or 'Hedda Gabler,' is full of more ennobling terror, more regenerative pathos, than all that both these poets have done. But, in remembering their betters, we must not depreciate the work of these poets. Perhaps in them the drama has usefully come to its literary consciousness, and, if it is now more boldly than ever before insisting upon recognition as literature, it is to the advantage, not only of the future poets, but of the present poets, whose work has sometimes seemed too good for the stage."

## RECENT DANISH LITERATURE.

FOR the first time in its history the literature of Denmark is said to be showing signs of inspiration from English sources; and since English and American writers are beginning to study Danish, it seems not unlikely that the bond of kinship between the two, so close ethnologically, will be drawn closer. An English student of Danish, Miss Margaret Thomas, writing in *Literature* (London, April 20), gives a sketch of the chief living writers of this little kingdom. She says:

"When a German dynasty was established on the throne of Denmark in the fifteenth century, the German tongue and German thought obtained predominance in the little kingdom. The language used by the court and the upper classes was German; the poet Klopstock, subsidized by Christian VII. to reside in Copenhagen, became the leader of the literary movement. It was a literature of giants, which could boast a Oehlenschläger, a Madvig, a Kjerkegaard, a Heiberg, a Paladan-Muller, and many another writer of genius almost, if not quite, their equals.

"But with Dr. Georg Brandes (b. 1842) a reaction, the importance of which it is impossible to overestimate, and which owes its inception exclusively to him, set in. A critic of singular acumen, and having the faculty of his race (he is a Jew) for assimilation rather than for creation, he succeeded in awakening a burning enthusiasm for literature in the youth of Denmark, and in founding a school of writers who derive their inspiration from French sources. . . . It is too soon to form a definite appreciation of Brandes's work. His last word has not yet been spoken, and he is still in the prime of a life spent in the midst of fierce and heated controversies. So far the greatest result of his labors is this—he has taught people to think for themselves rather than accept the *dictum* of others, and he has aroused a new and ever-increasing enthusiasm for literature in his native country. Nevertheless, he has shared the common fate of reformers, who are often carried against their own will further than they originally intended to go. He tried to remove the accumulated dust of ages by rudely breaking the windows of the chamber. The strong blast of fresh air which he thus let in has perhaps only whirled the dust up to let it settle again. In his zeal for reform he has acted like the servant who, in arranging a study, throws away all the loose papers she finds, and thus destroys, perchance, her master's best treasures—his records of his memories, his thoughts, and his dreams. Such was assuredly not Brandes's intention, but in the excitement he aroused it was inevitable."

Among the most powerful Scandinavian prose writers of recent years, says Miss Thomas, was J. P. Jacobson, the inventor of the Danish psychological novel. Another popular novelist is Amelie Skram, who has been named with Zola as one of the "only two genuine and honest naturalists" in Europe. Holger Drachmann she characterizes as "the greatest of living Danish poets," and "one of the most striking personalities of Denmark." Beginning life as a marine painter, he has lived for years among the sailors and fishermen of Skagen, a desolate point of land where the North Sea, the Skager Rack, and the Cattegat meet. Novels, dramas, essays, and "some of the finest lyrics ever writen in the Danish tongue—and the Danes are past-masters of lyric poetry"—testify to his genius. Miss Thomas continues:

"All our [English] classics are, I believe, accessible to the Danes in their own tongue; they know their Shakespeare much better than the average Englishman does. They particularly appreciate Dickens and Kipling, and I was surprised to find them familiar also with the latest productions of Ouida and Marie Corelli; while we remain in crass ignorance of the whole of a literature of which Mr. Gosse justly remarks, 'There is not another of the minor countries of Europe that can point to names so illustrious in their different spheres as Oersted, Oehlenschläger, Madvig, and H. C. Andersen.' Of these four, the name best known to us in England is that of the writer who has peopled our nurseries with elves and fairies and filled our schoolrooms with romance, forging an everlasting link of sympathy between the children of the two countries—Hans Christian Andersen. He was the darling of his own countrymen; in the streets of Copenhagen every one who knew his appearance touched his hat and said 'God bless you!' Mrs. Browning's last lines were written to him, as he never tired of telling his friends."

**A Library of Funny Books.**—Librarians are often asked to recommend amusing books for invalids and for workers who desire relaxation. The London *Library World* has compiled such a list, which, altho not very complete, as *The Academy* remarks, will serve as a useful basis for the collector of the humorous and funny. The books recommended are as follows:

ADELER.
Elbow Room.
Out of the Hurly-Burly.
Random Shots.
ALDEN.
Among the Freaks.
Told by the Colonel.
ALLEN (F. M.).
From the Green Bag.
ANDOM.
We Three and Troddles.
Martha and I.
ANSTEY.
Black Poodle.
Tinted Venus.
Vice Versâ.
BRADLEY.
Verdant Green.
BURNAND.
Real Adventures of Robinson Crusoe.
COCKTON.
Valentine Vox.
DAUDET.
Tartarin of Tarascon.
Tartarin on the Alps.
DICKENS.
Pickwick Papers.
DRURY.
Bearers of the Burden.
HABBERTON.
Helen's Babies.
Other People's Children.
JACOBS.
Many Cargoes.
Master of Craft.
Sea Urchins.
Skipper's Wooing.
JEROME.
Three Men in a Boat.
JERROLD.
Caudle Lectures.
MARSH.
Amusement Only.
PAIN.
In a Canadian Canoe.
SHANNON.
The Mess Deck.
SMOLLETT.
Humphry Clinker.
STERNE.
Tristram Shandy.
THACKERAY.
Yellowplush Papers.
TWAIN.
Huckleberry Finn.
Tom Sawyer.
ZANGWILL.
Celibates' Club.

## NOTES.

AT a recent London gathering, Mr. Coulson Kernahan, in the course of a lecture on "The Confessions of a Literary Adviser," related the following story anent the opening lines of Keats's 'Endymion,' said to be among the most quoted passages in nineteenth-century poetry: "One gentleman wrote to a firm of publishers to say that he had made a deep study of Mrs. Browning's poems and was going to give a lecture on the great woman poet, but he could not find the poem that had in it the line, 'A thing of beauty is a joy forever.' 'Every one who knows Mrs. Browning,' he said, 'knows she wrote it, but they can not tell me where it is to be found.'"

THE death of Mr. George Smith, the eminent English publisher, head of the firm of Smith, Elder & Co., has brought forth many warm appreciations of his good work for literature. He will be remembered as the trusted friend of Charlotte Brontë, Mrs. Gaskell, George Eliot, Thackeray, Ruskin, Browning, and Matthew Arnold, but even more as the projector and publisher of the great "Dictionary of National Biography," which he carried through to success by a generous financial backing in spite of many discouragements. In 1860, he founded *The Cornhill Magazine* and in 1865 *The Pall Mall Gazette*. The kindly impression he made upon every one is shown in the case of the painter, Sir John Millais, who on his deathbed, when no longer able to speak, wrote on a slate: "I should like to see George Smith, the kindest man and the best gentleman I have had to deal with."

A BULWER-LYTTON society for the revival and study of Lord Lytton's works has been proposed in London. This furnishes the literary editor of the New York *Tribune* with a text for a rather extraordinary tirade against Robert Browning, such as will doubtless be a joy to the anti-Browningites and a grief to his followers. The writer says: "The Browning societies ought to serve as a perpetual warning to mankind. They have given pleasure to thousands of people, no doubt. But that they have helped to strengthen the poet's place in English literature has yet to be demonstrated. Indeed, it is perhaps not unfair to contend that these societies have done almost as much as Browning himself to keep him in a position below the first rank. He buried his few jewels in a bog of gluey thought and glueier language, and over the mess a steady stream of obfusticating twaddle has been poured by the self-elected guardians of his fame. Decidedly it will be a sad day for Bulwer when a society takes to battening on his grave."

# SCIENCE AND INVENTION.

## A NEW INTERNATIONAL SCIENTIFIC BODY.

THE first session of the International Association of Academies, a permanent body consisting of delegates from the world's greatest scientific and literary societies, was held in Paris on April 16 last. Representatives were present from eighteen learned societies, including the academies of Amsterdam, Berlin, Brussels, Budapest, Copenhagen, Leipsic, London, Munich, Paris, St. Petersburg, Rome, and Vienna. The delegate from our own National Academy, Prof. George L. Goodale, of Harvard, was detained in Geneva by illness. In the opening address of welcome by M. Darboux, the perpetual secretary, the speaker gave the following particulars of the aims of the association. He said:

"Science . . . nowadays concerns herself with all things, and academics and universities are not sufficient for her. . . . Her conquests are incessant and the problems whose study is forced upon us by her progress have reached such an amplitude that they can no longer be solved by a single nation, no matter how powerful or how active, and can be attacked only by a combination of civilized peoples.

"This combination has already been accomplished in the case of a certain number of special questions, and it is unnecessary to recall to you at length the services rendered by institutions such as the International Bureau of Weights and Measures, the International Geodesic Association, the Association for Constructing a Map of the Heavens, and others which I pass over for the moment. One of them, however, merits special mention, because it has played an important part in the formation of our association. I speak of the International Catalog of Scientific Literature, which is due entirely to the initiative of the Royal Society [of London]. . . . This international cooperation, which has already proved its value in the cases where it has been adopted, it is the aim of our association to assure in a durable, normal, universal manner. . . . In constituting under a visible and permanent form this Universal Academy, which was dreamed of by Leibnitz . . . our association will render to civilization and science a service whose value can not be exaggerated. By its means the scientist who has devoted his time to the most delicate or the most abstract investigations will cease to feel that he is isolated, while he will preserve the independence that is the first need of the investigator."

M. Darboux was chosen president of the association. The honorary presidents include Mommsen, the German historian, Sir Michael Foster, and Berthelot, the French chemist. Moissan, the isolator of fluorin and the successful maker of artificial diamonds, is one of the secretaries. Some idea of the type of questions that will come up before the association may be gained from the following lists, which are quoted from the same report in the *Revue*. The association has been divided into two sections, one of science and the other of literature.

*Section of Science.*

"Report on the question of the extension of the geodesic arc along the 30th meridian (proposition of the London Royal Society).

"Proposition relating to the control of physiological instruments, presented by the Paris Academy of Sciences (report from M. Marey).

"Proposition presented by the Royal Academy of Sciences of Saxony, looking toward the appointment of a special commission for the study of the development of man and animals, and for the study of the anatomy of the brain.

"Communication of the London Royal Society relative to the International Catalog of Scientific Literature whose direction it has undertaken.

*Section of Literature.*

"Proposition of the Royal Bavarian Academy of Sciences relating to the publication of a list of Greek documents, medieval and modern.

"Combined proposal of the Academies of Leipsic, Vienna, and Munich, entitled: 'Plan for the Publication of an Encyclopedia of Islam.'

"Study of the proper methods of preparing and publishing a complete edition of the works of Leibnitz (presented by the Academy of Moral and Political Sciences of the Institute of France).

"Examination of the civil status of foreigners in different countries (proposed by the same academy).

"Proposition concerning the publication of the Mahâbhârata by the International Association of Academies (presented by the Imperial Academy of Vienna).

"Plan for a list of pagan and Christian mosaics up to the eleventh century, inclusive (presented by the Academy of Inscriptions and Belles-Lettres of the Institute of France)."

## THE PLAGUE IN SAN FRANCISCO.

THE existence of the bubonic plague in the Chinese quarter of San Francisco, which has been asserted and strenuously denied during the past year, now seems to have been established beyond doubt. The history of the disease is remarkable on account of the attempt of the state authorities, following the plan of the legendary papal bull against the comet, to quiet apprehension by legislative denial of the presence of the disease, and even to threaten those who should venture to disagree with them. The subject is thoroughly ventilated in a leading editorial in *Science* (May 17), from which we quote a number of paragraphs. According to this, the first case of plague was discovered in the spring of 1900, and was immediately followed by other cases, all of which were promptly reported by the health authorities. The diagnosis was objected to by a number of local physicians, and on this basis the existence of the disease was at once denied by most of the city press. The events that followed, which are both curious and interesting, are thus described in *Science*:

"Fearing that the State Board of Health might quarantine the city and that other States might quarantine the city, or even the State, to the vast injury of public and commercial interests, the commercial interests of the city solicited the establishment by the city board of health of a quarantine of 'Chinatown,' the portion of the city occupied by the Chinese in which all the reported cases had occurred. This request was acceded to, and the quarantine was established. . . . The public was given to understand that plague was a disease of frightful contagiousness and rapid spread, and that this quarantine was necessary to prevent the spread of the disease through the entire city. The quarantine, tho inadequately enforced and obviously ineffective, was quite naturally obnoxious to the Chinese residents of the quarantined area, and they sought relief in the courts.

"In the opinion rendered upon the case, Judge Morrow decided the establishment and maintenance of the quarantine illegal, but marred what was, under the laws, a correct decision by the prejudicial and unwarranted statement that no cases of plague had existed in San Francisco. That the quarantine was, in the light of our knowledge of plague and in the light of the Oriental experiences with the disease, an unwarranted and mistaken procedure is obvious. As a rule, plague is not a personal infection, it is a house infection; the best evidence of this fact is the statement of one of the European commissions that about the safest place in Bombay is the plague hospital. . . . As stated, the public of San Francisco had been led to believe that plague was a disease of frightful contagiousness; when, then, the quarantine was raised, and the Chinese population was allowed to go where it chose in the light of the afore-stated information, the disease was expected to spread at once through the city. It did, of course, nothing of the sort. And naturally the general public at once lost confidence in the local board of health and in the correctness of the diagnosis."

Matters dragged on, we are told, until the opening of the State legislature. In his message, Governor Gage denied the existence of plague in the State and passed severe strictures upon the surgeon of the Marine Hospital Service. A motion was passed by the legislature requesting the national Government to recall

the surgeon, Kinyoun, who demanded an investigation of the hygienic state of affairs in San Francisco. The Treasury Department thereupon sent to San Francisco a special committee composed of men of international reputation. Upon their arrival, bills were introduced into the legislature making it a criminal offense for any one to report the existence of plague without the confirmation of the State Board of Health, and prohibiting the handling of cultures of the *bacillus pestis* as prejudicial to the public health. These bills did not pass, but they serve to illustrate the peculiar mental attitude of some of the legislators. It had been charged that bacteriologists had intentionally infected with the *bacillus pestis* the bodies of Chinamen dead of other causes, in order to bolster up their diagnoses. The special commission, after spending several weeks in San Francisco, and studying six cases of plague, presented a report confirming the existence of the disease in the city. A committee of citizens then went to Washington, and agreed with the national authorities that the city of San Francisco and the State of California should bear the expense of cleaning and disinfecting Chinatown under the supervision of an officer of the Marine Hospital Service. This disinfection is now in progress. The writer goes on to say:

"That now, one year after the trouble began, the State is compelled to do what it all along refused to do, undertake the hygienic renovation of 'Chinatown,' is an obvious proof of the correctness of the frank and open course. Had the Chinese section been promptly and effectively cleaned one year ago, the disease would have been stamped out at little cost, and the episode would have been ere this forgotten. At present the pall still hangs over California, and there is a general distrust of her on the part of the other States. We trust that the present measures will prove effective, and that the State has escaped the occurrence of a serious epidemic; but this escape will have been purely accidental, and in matters like these a community has not the right to trust to the fortune of chance.

"Conditions have apparently not been favorable to the immediate spread of the disease. This is, however, an old experience; in many places and at many times the plague has dragged along for a long while, only to suddenly flare up into an active epidemic. The recent experience in Cape Town is a fresh illustration. The plague has been present and dragging along in Cape Town for eighteen months; on account of the military situation, its effective eradication was neglected, and now the disease has roused into active form. It is this risk which San Francisco has been running, and this risk no community has the right to assume."

## ELECTRICAL DETECTION OF DISTANT THUNDER-STORMS.

THE principle of the coherer, the device used as a receiver in wireless telegraphy, has recently been applied in the detection of atmospheric electrical discharges or storms, even when these occur at great distances; and an Italian physicist, Signor Tommasina, has devised an instrument for the purpose, which he calls the electroradiophone. The "coherer," as our readers will remember, is a tube filled with filings of metal, which, when an electric wave strikes it, cling together and form a conductor. Some time ago, we are told in an editorial article published by *The Scientific American*, another Italian scientist, Prof. Boggio Lera, used the coherer for this same purpose in combination with a series of relays of different sensitiveness, and the effect of the distant electrical discharges was recorded upon a registering apparatus. Says the writer:

"The relays acted in greater or less number according to the conductibility acquired by the coherer under the action of the discharges, and the apparatus traced a series of lines, long or short, according to the intensity of the phenomenon. M. Tommasina utilizes in his new instrument the principle of the 'autodecoherer' discovered by him, in connection with a telephone receiver. This form of coherer consists of a glass tube containing two cylindrical carbons, nearly touching in the center; between the carbons is a small quantity of carbon granules, and this combination, under the action of electric waves, forms a coherer which has the unique property of returning to its original state after the waves have ceased, without any external action. This coherer, placed in circuit with a battery and telephone receiver, is thus a very good detector for electrical waves; and M. Tommasina has applied it with success in detecting far-off electrical disturbances of the atmosphere or distant storms. . . . .

"In carrying out the experiments, this arrangement was used at the same time as the electric registering apparatus of Professor Lera, and the experimenter states that during the time that the discharges of the distant storm were registered, he heard a corresponding series of sounds in the telephone, and the hearer has the illusion of being transported to the actual place of the storm and of listening directly to all its phases; he was thus enabled to hear and study the phenomena of storms when they were at such a distance that no trace was observed on the horizon. In one case he observed a storm twelve hours before it passed over Intra, in Italy, where he had installed his apparatus. Owing to its great simplicity and absence of regulation, there is no doubt that the 'electroradiophone' will render great service in detecting the approach of storms, especially on shipboard."

## THE HUMAN BODY WITHOUT MICROBES.

HAVE the millions of microbes infesting the human organism and causing it disease and often premature dissolution any legitimate function in their present habitat? Are they necessary to the processes of life, or useful, or even an inevitable evil? Is it possible to get rid of them, and with benefit to the body? These and allied questions were discussed recently by Prof. I. I. Metchnikoff in a lecture at Paris. From a report of the lecture in the French press we condense the following account:

Man is full of microbes—within and without. The microbes are not animals, but vegetables; this parasitic world living in and on the human body is a flora, not a fauna. We are born without it. But with the mother's milk and the air the child breathes, whole legions of these guests invade its body through mouth and nose and settle in the throat, bronchia, etc., and especially in the intestines. They are at home in the skin, too. About seventy species of these microbes inhabit our bodies; but they are not evenly distributed. Some organs or parts are inhospitable to and safe from them. The lungs are free from them, and the stomach has but few in a normal state. But they thrive and luxuriate in the intestines, especially the large ones.

What is the function of this human flora? The bacteria of the skin are of no utility whatever, and are probably harmful in case of scratches and wounds, preventing speedy healing. The internal bacteria, according to certain experiments, are of some benefit, resisting the development of the bacteria of disease. A very difficult question is that regarding the influence of the bacteria on the digestion and assimilation of food. We know Pasteur's hypothesis that the microbes are essential to digestion; but the demonstration of it is by no means complete. We have reason for thinking that even without the aid of microbes animals could absorb and assimilate their food.

In fine, the utility of the human flora is at best highly problematical. On the other hand, their harm to the human body is certain and serious, even under normal conditions. Particularly injurious are the microbes of the large intestines. Thence they penetrate into the blood and impair it alike by their presence and the products they yield—ptomains, alkaloids, etc. The auto-intoxication of the organism and poisoning through microbes is an established fact. To them are attributable several forms of psychosis. Arterial sclerosis is also due to them.

We thus are justified in concluding that the human body would be far better off without these parasitic guests. Nay, more: the large intestines themselves, with their absurd, superfluous adjunct, which provide so hospitable a soil for the bacteria, are also superfluous. Medical science knows of many cases in which the large intestines were greatly reduced in length with positive advantage to health and life.

How, then, are we to account for these intestines? They are simply a survival, an anachronism, so to speak, inherited by us from a state of lower development. It is a verified fact that the

shorter the large intestine the longer the life of the organism. The rule is that the more bulky and substantial the organism the longer its span of existence ; yet the parrot attains to the age of one hundred, while the ostrich does not live beyond the thirty-fifth year. The cause of this difference is to be sought in the viscera.

But what becomes of the principle of natural selection? If the large intestines are unnecessary, even harmful, why does not the process of selection do away with them? The answer is that the process is a slow one compared with our intellectual growth and consequent changes of the habits of life. In time we shall get rid of the large intestines and the microbes. Meantime, our problem is this—Can we aid nature, reenforce her labors by artificial means directed against the injurious human flora? Can we sterilize the intestines and expel the microbes from them?

Formerly, it was held that the method of doing this had to be antiseptic; that is, that the microbes had to be killed. But we are now realizing that the real and successful method is indirect. We must produce in the organism antimicrobic secretions or ferments destructive of the antitoxin of the bacteria.

According to Professor Metchnikoff, this method of fighting microbes will, when systematically applied, double the period of youth and raise the maximum of the normal span of life to ninety and one hundred years at least. This trenched on his alleged discovery of an "elixir of life" which has been exploited in the sensational press; but he was not ready to go into its details.—*Translation made for* THE LITERARY DIGEST.

## THE LARGEST STATIONARY ENGINE.

WHAT is asserted to be the largest stationary engine ever built in this country has just been completed in East Pittsburg, Pa., by the Westinghouse Machine Company for the New York Gas, Electric Light, Heat and Power Company. Seven others of equal size are to be built for the same company. These engines are rated at 6,000 horse-power each, but on occasion they will be capable of delivering 10,500 horse-power. We quote below part of a description contributed to *The Iron Age* (May 2) by its Pittsburg correspondent:

"Some idea of the proportions of this monster engine can be obtained when it is said that more than 10,500 separate pieces of different kinds of metal were used in its construction, and that the whole engine completed weighs more than 1,500,000 pounds. The following are the dimensions: Height from floor line to the top of the cylinder, 37.25 feet; width across front, 41 feet; width from front to rear, 23 feet; diameter of fly-wheel, 23 feet; weight of main shaft, 136,000 pounds; diameter of shaft, 26 to 29½ inches. For shipping, the engine will require 30 cars. The base of this engine, cast in three pieces, weighs 100 tons. Upon this base are set the three A-frames, with irregular flange-tops, upon which are set and bolted the cross-head guide-frames."

Circumscribing the engine frame are three iron platforms, connected with each other by spiral iron stairways, and to the ground by means of a stairway descending from the lowest platform. There are one high-pressure cylinder, 43½ inches in diameter, and two low-pressure cylinders, each 75½ inches in diameter. The stroke is 60 inches and the speed 75 revolutions per minute. The engine is condensing and a vacuum of 26 inches is maintained at all times. We quote again:

"The main shaft is of open-hearth, fluid compressed, hydraulic forged steel, the connecting rods are of the same material, and both were supplied by the Bethlehem Steel Company. The shaft is 29½ inches in diameter at the fly-wheel pit and 26 inches diameter at the bearings; it has a 10-inch hole through the center of that portion located between the bearings and a 9-inch hole at the bearings. The total weight of the main shaft is 136,000 pounds.

"The fly-wheel center is of air-furnace iron, the arms and rims of cast steel. The central portion is cast in five segments, each consisting of two arms and 72 degrees of the rim. These are jointed by I-links shrunk into pockets in the sides and are bolted to the hub, making a cast-steel fly-wheel 23 feet in diameter. The rim is strongly reinforced in such a way as to give practically three rings running together, each self-supporting as to centrifugal force. . . . . .

"Tho this engine is somewhat more powerful than either of the two recently built for the Bay Ridge Station of the Kings County Light and Power Company, the fly-wheel is considerably smaller, a construction possible in this case because the cranks are arranged in the best position to give an even turning moment—cranks being separated by 120 degrees—a condition that is not possible to attain in any two-cylinder engine."

## IN DARKEST CANADA.

THERE is no need that adventurous travelers should sail for Africa or even for South America in order to find regions yet unexplored, if, as the director of the geological survey of Canada asserts in his last report, practically nothing is known of one-third of the Dominion of Canada. He says, as quoted in *The Scientific American Supplement*, that there are more than 1,520,000 square miles of unexplored lands in Canada out of a total area computed at 3,450,257 square miles. Even exclusively of the inhospitable detached arctic portions, 954,000 square miles are for all practical purposes entirely unknown." The writer goes on to say:

"A careful estimate is made of the unexplored regions. Beginning at the extreme northwest of the Dominion, the first of these areas is between the eastern boundary of Alaska, the Porcupine River, and the Arctic coast, about 9,500 square miles in extent, or somewhat smaller than Belgium, and lying entirely within the Arctic circle. The next is west of the Lewes and Yukon rivers and extends to the boundary of Alaska. Until last year, 32,000 square miles in this area was unexplored, but a part has since been traveled. A third area of 27,000 square miles—nearly twice as large as Scotland—lies between the Lewes, Pelly, and Stikine rivers. Between the Pelly and Mackenzie rivers is another large tract of 100,000 square miles, or about double the size of England. It includes nearly 600 miles of the main Rocky Mountain range. An unexplored area of 50,000 square miles is found between Great Bear Lake and the Arctic coast, being nearly all to the North of the Arctic circle. Nearly as large as Portugal is another tract between Great Bear Lake, the Mackenzie River, and the western part of Great Slave Lake, in all 35,000 square miles. Lying between Stikine and Laird rivers to the North and the Skeena and Peach rivers to the South is an area of 81,000 square miles, which, except for a recent visit by a field party, is quite unexplored. Of the 35,000 square miles southeast of Athabasca Lake, little is known, except that it has been crossed by a field party en route to Fort Churchill. East of the Coppermine River and west of Bathurst Inlet lies 7,500 miles of unexplored land, which may be compared to half the size of Switzerland. Eastward from this, lying between the Arctic coast and Black's River, is an area of 31,000 square miles, or about equal to Ireland. Much larger than Great Britain and Ireland, and embracing 178,000 square miles, is the region bounded by Black's River, Great Slave Lake, Athabasca Lake, Hatchet and Reindeer lakes, Churchill River, and the west coast of Hudson Bay. This country includes the barren grounds of the continent. Mr. J. B. Tyrell recently struck through this country on his trip to Fort Churchill, on the Churchill River, but could only make a preliminary exploration. On the south coast of Hudson Bay, between the Severn and Attawapishkat rivers, is an area 22,000 square miles in extent, or larger than Nova Scotia; and lying between Trout Lake, Lac Seul, and the Albany River is another 15,000 square miles of unexplored land.

"South and east of James Bay and nearer to large centers of population than any other unexplored region is a tract of 35,000 square miles, which may be compared in size to Portugal.

"The most easterly area is the greatest of all. It comprises almost the entire interior of the Labrador peninsula or Northwest Territory, in all 289,000 square miles, or more than twice as much as Great Britain and Ireland. Two or three years ago, Mr. A. P. Lowe made a line of exploration and survey into the interior of this vast region, and the same gentleman also trav-

eled inland up the Hamilton River; but with these exceptions the country may be regarded as practically unexplored.

"The Arctic islands will add an area of several hundred thousand square miles of unexplored land."

## HUMAN ELECTRICAL MACHINES.

EVERY one knows that certain animals, such as the torpedo and the gymnotus, or electric eel, are capable of generating large quantities of electricity at will, in some cases using this power to kill their prey by the shock. It appears to be well established that human beings occasionally show a similar power. In the case of the fishes, the electricity is produced by a special organ. In electrical men or women the phenomena seem to be simply an exaggeration of those that are frequently observed on dry days in winter, and to be connected with an abnormally dry state of the skin. Some well-authenticated cases of the kind are cited by Dr. H. Delaunay, professor in the School of Poitiers, France, in an article in *La Science pour Tous* (Paris, May 5). Says this writer:

"In 1777 Cassini, in a note to the Academy of Sciences, spoke of a Russian nobleman who possessed electrical properties similar to those of an electric eel. Similar facts are found in Humboldt's 'Description of Galvanism' (Paris, 1799) and in the treatise on 'vapors' or nervous maladies by Loyer-Villermay in 1816. This latter cites the case of a hysterical lady who emitted electric sparks at the slightest contact.

"The case related by Dr. Girard in the *Gazette des Hôpitaux* (1866, p. 413) is interesting because the patient became electric at the same time that she entered a neuropathic state. The observation is as follows:

"A woman of thirty-six years, who was not of nervous temperament, suddenly changed her character; the smallest thing worried her and even made her beside herself. She had neuralgic pains at the top of her head and shooting pains, often very sharp. When she combed her hair in the dark she heard a crackling noise, and saw a bright instantaneous light, several centimeters long, separated by dark lines corresponding to the teeth of the comb. The flash became more brilliant the longer she combed. When the fingers were passed over the roots of her hair, a crackling was heard and a prickling was felt at the finger-ends. The ends of the hairs, when the comb had passed, stood up and separated one from the other. The passage of the comb through her hair gave her a disagreeable sensation and made her feel sleepy. . . . Mussy and Hosford, in *The American Journal of the Medical Sciences* (1837, p. 377), relate two cases that are nearly the same as this.

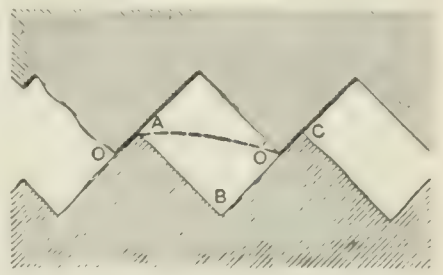
"But the most complete and really scientific observation is that of Dr. Féré (*Société de Biologie*, January 14, 1888). The case was that of a neuropathic woman who, about the age of fourteen years, noticed that her hair crackled and gave off sparks. At the age of twenty-seven years the phenomenon began to be more intense, her fingers attracted light bodies, fragments of paper and ribbons; her hair not only gave off sparks, but became difficult to arrange because of its tendency to rise and separate. When her clothes approached her skin, there was a luminous crackling, and then the clothing adhered to her body, sometimes so much as to interfere with her movements. The moral emotions increased the electric tension and the intensity of the phenomena.

"Moist weather diminished these phenomena and produced a sensation of lassitude and fatigue, while dry weather increased the electric tension and brought on a general excitation, a clearly noticeable activity. The phenomena were most marked on the left side, where sensorial troubles exist. M. Féré observed in 1884 a swelling of the lower limbs and various troubles of the circulatory system which disappeared under the influence of static electricity. The skin was extremely dry, as could be noted with a special form of hygrometer. The electrometer was spontaneously deviated to the right, and this deviation increased with the slightest friction. The patient's son, eleven years old, presented the same peculiarities.

"The important fact in all these cases is dryness of the skin produced by vasomotor troubles. It would be interesting to investigate this phenomenon further, for it appears to be accompanied by a peculiar nervous condition. Besides this, it may possibly afford an explanation of the legends that tell of aureoles around the heads of certain persons."—*Translation made for* THE LITERARY DIGEST.

**Why Friction Lessens at High Speed.**—The following explanation of why friction is less at high than at low speeds is due to Captain Galton, who gave it in connection with the Galton-Westinghouse brake trials in England in 1879. *Railway and Locomotive Engineering*, in a discussion of the subject (April), calls it the clearest explanation yet given. Says the writer:

"It should be borne in mind that any two surfaces which are placed in contact are not perfectly smooth surfaces, but have small inequalities or roughness upon them. The figure shows in a very exaggerated form what two surfaces in contact may be supposed to be like. When the surfaces are at rest relatively to each other, the hills of the upper surface will fit closely into the hollows of the lower one. But if the surfaces are in rapid motion past each other, the upper surface will not have time to fit itself into the lower, but would take a position like that shown in the figure. Then any point at O of the upper surface would first be dragged up to the vertex A, and would then fly across the space A C, till it struck some point O on B C. As the speed was greater, the distance through which O would fall in the passage would be less; consequently the distance O C would be less, and the work of dragging O up to the vertex C would be less also. Hence it might be seen how the actual work done per foot-run of service, or, in other words, the apparent coefficient would be less as the speed was greater."



## SCIENCE BREVITIES.

ROUGHLY speaking, the world's consumption of sugar in the last fifteen years has doubled, while in Great Britain it has trebled per head in forty years, says *The Spectator* (London), referring to a recent article by Dr. Willoughby Gardner. "The English and Americans stand easily at the head of the list as the sugar-eating nations. Dr. Gardner establishes the fact that sugar is a potent creator of energy and maintainer of stamina. This, he contends, is not only proved by laboratory experiments, but by the case of the date-eating Arabs, the fine health of the sugar-cane-eating negroes, and the results obtained by Alpine climbers, Arctic explorers, athletes, and German soldiers fed on a special diet. Dr. Gardner's general conclusion is that the increased height and weight and the improved health of the English people in the last half-century are largely due to the increased consumption of sugar."

IN a recent lecture at the Royal Institution, London, Sir W. Roberts-Austen said, according to *The American Machinist*, that metals might be burned for the sake of the light and heat they produced. "The use of magnesium for light is familiar and may greatly extend. A shell of magnesium might be fired, and the light from the burning metal be utilized in illumination for war purposes, for the placing of guns, etc. The use of metals as fuel assumed magnificent proportions in the hands of Sir Henry Bessemer. The Bessemer process of making steel was alone rendered possible by the burning of metals as fuel. In the case of aluminum burning in oxygen, combustion could be started by a minute fragment of charcoal. By experiments he demonstrated how beautifully the welding of metals could be effected by the oxidation of aluminum, remarking that it was impossible to foretell what in the future might not be accomplished by this process in the way of industrial art. The welding of steel rails for tramways had been successfully made by this process."

"THE key which transmits the Morse signals to-day is practically the same used by Thomas A. Edison, Andrew Carnegie, and other telegraphers thirty years ago," says *Electricity*. "The twentieth-century telegraph-key, designed by a prominent official in one of the large telegraph companies, is intended to increase the speed of the operator, and to prevent telegraphers' paralysis. It is a radical departure from the one now in use. It consists of a handle that may be grasped by the whole hand or operated by the touch of any finger or part of the hand. It is unnecessary to retain a firm hold upon this handle, and the fingers may be shifted as desired during transmission. It can be turned completely around at will, so that any desired position may be secured instantly. It is the cramped position of the fingers on the familiar key-knob that causes paralysis of the operator's wrist, or at least great distress. This instrument has been in use on the *Journal-Examiner* leased wire, working direct from New York to San Francisco, a distance of 3,500 miles, a speed of 3,000 words an hour being maintained."

# THE RELIGIOUS WORLD.

## REVIVAL OF THE OLD HEBREW CONCEPTION OF THE UNIVERSE.

ONE of the most fertile fields of speculation since the beginning of human records has been that of cosmology. Among the many ancient cosmologies the Hebrew conception of the world, as found in the book of Genesis, is of particular interest to us because of the light it throws upon many passages in the Old and New Testaments. Like all the cosmologies which prevailed up to the time of Copernicus, who was a contemporary of Luther, the Hebrew conception was not heliocentric, but regarded the earth as center of all things visible and invisible. In a recent book by the Rev. Elwood Worcester, named "The Book of Genesis in the Light of Modern Knowledge," a cut is given illustrating the old Hebrew idea, which, he says, was responsible for many of the traditions afterward crystallized in the stories of Genesis. In this cut the earth appears as a level plain, above which is the firmament like a solid wall, extending in a semicircle, while below is "Sheol," the abode of the dead, and below this the "great abyss."

The whole forms a figure not unlike a hollow cell, and it is interesting to note that the conception bears some striking points of resemblance to the extraordinary "Koreshan Cosmology," proposed of late years by Dr. Cyrus Teed, of Chicago, and defended by him and his many followers by arguments drawn from the sciences of geography and optics. Dr. Teed, who bases his argument chiefly on an occult interpretation of the Bible, claims that the whole universe is a stationary hollow cell only eight thousand miles in diameter, the map being laid out on the inside instead of the outside of the shell, so that the people in New Zealand, for instance, might look across to the people in Europe except for the sun, moon, planets, and stars which form an inner

nucleus of the cell, less than four thousand miles away. All life is cellular, he says, beginning with the protozoa and ending with the universe-cell. This theory possesses a certain serious value, in the opinion of some thinkers, for the reason that it brings to mind with startling force a realization of how little the general public actually knows at first hand of astronomy or cosmology, and how much is still taken on faith from our scholars, just as it was taken less than three hundred years ago, when the greater part of mankind still held to the Ptolemaic theory, and believed that sun, moon, and stars coursed daily about the earth. Even Milton, in writing "Paradise Lost," halted between the Ptolemaic and the modern Copernican theory. His view, a compro-

mise between these two theories, may be studied from several charts in Masson's life of Milton, showing that he regarded what he terms "the world" as a crystal sphere or cell suspended by a golden chain from the semi-disc of "heaven" above, and "hell" as another semi-globe below the abyss of "chaos."

## A NEW ANALYSIS OF TOLSTOY'S RELIGION.

INTEREST in Count Leo Tolstoy still appears unabated throughout Europe and America. The *Revue de Paris* (May 1) contains a long and minute analysis, by Ivan Strannik, of Tolstoy's religious principles as set forth in his writings, many passages of which are quoted. Speaking of the excommunication of Tolstoy, the *Revue* says that excommunication, in Russia, formerly carried with it a loss of temporal as well as religious privileges. Excommunicated persons were outside the pale of the law. They could be robbed with impunity, nor had they the right to kill a burglar caught in the act. Excommunication, however, was long a dead letter, and when it was revived and directed against Tolstoy the ban pronounced was purely ecclesiastical; in fact, merely a recognition of the open rebellion against the church in which Tolstoy had been engaged for years. He left the church before the church expelled him. Even if the protection of the law had been withdrawn from him, he would merely have been forced to rely on his own expressed principles, which do not recognize the authority of magistrates of any sort.

The Holy Synod, in its reply to Countess Tolstoy, has admitted the truth of her charge that last year, when Tolstoy was very ill, the Synod decreed that Christian burial must be denied him if he died without having become reconciled to the church. Excommunication was contemplated then, but deferred because Tolstoy's death, which would have made it unnecessary, was momentarily expected. When he recovered, the church decided that it was time to act. After waiting so long, the Synod seems to have chosen an unfavorable time for publishing the decree. Coming in the midst of the university troubles, it has created great excitement; and the Government is as much embarrassed by its friends, the conservative clericals, as by its liberal opponents.

One journal was compelled, on pain of suspension, to discontinue a series of articles hostile to Tolstoy.

The attempted assassination of the procurator, Pobiedonostzeff, while a poor example of Tolstoyan non-resistance, testifies to the exasperation of enlightened Russian youth.

The writer in the *Revue* continues in the main as follows:

The man whom the Orthodox Church has placed under its ban is essentially religious. Religious unrest has filled his life, it appears in all his works. It is customary to divide both life and works into two parts, the first purely worldly, the second evangelical; and Tolstoy in condemning his past as man and author admits this distinction. It is true that at a certain epoch Tolstoy embraced his faith; but he had long been seeking it, and the story of his life and his earliest works give evidence of the moral anguish which had always tormented him. As a schoolboy he speculated freely and boldly on religious and philosophical subjects, and began to doubt the existence of the material world. He noted with surprise that people seemed ashamed to practise everything enjoined by their religion, and the non-practical character of religious instruction troubled him. Hence the moral problem which haunted him ever after—to find a rule of conduct and to obey it. At nineteen he left the university and retired to his estates to better the condition of his peasants. The experiment failing, he entered the army and, later, traveled abroad. In France he witnessed an execution. The sight affected him deeply and caused him to lose faith in civilization.

"Tho men and civilization seek to prove that this punishment is salutary," he says in "My Confession," "for me my own heart is the sole judge, and I shall always deny it."

Freed from every prejudice and conventional authority, he gave himself to his chosen life with bitter pessimism. Literary success, tho doubtless agreeable, was yet a source of disquieting reflections. Why, for whom, do men write? He wished to do good to his fellows. But what is good, or evil? He knew not. He confided his doubts and troubles to his book, "War and Peace" and "Anna Karénina" are filled with them. His heroes struggle with moral and religious difficulties. One of them, Peter Besoukhof, does not find truth until he learns to know a man of the people, a simple and affectionate soldier ("War and Peace"). Levine, in "Anna Karénina," does not find peace until he has recognized the vanity of logic and the necessity of putting faith in the good above reason.

Tolstoy himself underwent a similar experience. He devoted his life to action, to community of thought and work with peasants. He had sought in vain from learned men the answers to the questions that tormented him; at last he turned, for the explanation of the reason of life, to the simple and ignorant. Before this, at one period, he had been very near suicide. Learning from the people that faith is the indispensable condition of life, he attached himself to the Orthodox religion. He did not yet see the radical difference between the teachings of the church and those of Jesus, which so greatly shocked him afterward. To the discrepancies which he did see "he tried to shut his eyes" ("My Religion"). But he found at last that there could be no compromise, that he must "deprive himself of the greatest happiness conferred by religion—the communion of man with his fellows," and definitely break with the church. This he did after discovering that the popular Orthodox tracts breathed a spirit directly opposed to the Sermon on the Mount. Then he sought an independent basis for his Christianity in the study of the Scriptures.

The Synod asserts with truth that Tolstoy rejects the following orthodox dogmas: the existence of a living, personal God; the divinity of Jesus; the immaculate conception; the virginity of Mary; the future life; the dispensation of rewards and punishments after death; the manifestation of the Holy Ghost in the sacraments; the doctrine of the eucharist.

It would be easy to find clear and formal denials of all these in his works. In "My Religion" there is no mention of a Creator. Elsewhere he says: "No one has ever seen, nor can know, an external God, hence the object of our life can not be to serve such a God." The denial of the divinity of Jesus necessarily follows. Tolstoy regards Jesus as a man who uttered some truths so profound that people took him for a God. He was called Savior because of the saving virtue of his doctrine, but he was not a Redeemer in the churchly sense. Man's fall through Adam's transgression and his redemption through the Son of God incarnate are among the fables which have crept into the Gospel ("The Gospels").

Of the future life, Tolstoy says in "My Religion": "According to all the Gospels, Jesus never affirmed individual resurrection and individual immortality; but whenever he encountered this superstition, which was introduced into the Talmud at that epoch, and of which not a trace appears in the Hebrew prophets, he invariably denied it."

Tolstoy opposes the church doctrine that the earthly life, being vain and impure, should be sacrificed to the life to come. "True life has nothing to do with past or future; it is the life of the present" ("The Gospels"). If the earthly life has no meaning, he says in "My Religion," what need we do but "live evil lives and pray to the good God"? Yet Tolstoy does not consider that death ends all. To do so would ignore the distinction between personal life and the life of humanity, which distinction is the very essence of Christianity. "The true life is that which adds something to the good accumulated by past generations, which increases this heritage and bequeaths it to the generations to come" ("My Religion"). In the same work he says that the memory of his brother, whose early death had deeply affected him, is the more durable because of the character of that brother's life. "This memory is not a mere idea, but it acts upon me precisely in the manner in which his life used to act. . . . Christ has long been dead, but his life of reason and love still exerts its power upon millions of men."

For hell and paradise, Tolstoy has nothing but derision. The idea of punishment inflicted by God seems to him contradictory to one of the fundamental principles of Christianity, and especially revolting if the divinity of Jesus be admitted. For how can we conceive that God punishes while a divine Christ proclaims forgiveness and preaches non-resistance to evil? As for rewards, no doubt happiness accompanies the practise of virtue. but it is not virtue's reward. There is no causal connection. Happiness is the perfect knowledge of the true sense of life, and this knowledge comes to him who lives rightly.

The sacraments, of course, are meaningless to Tolstoy. Marriage consists in "putting on metal crowns, taking a drink, turning thrice around a table to the accompaniment of hymns, and believing that thereby the carnal union of this man and this woman will be holy and quite different from others" ("Salvation is Within You"). Of baptism, confession, and the eucharist he is equally contemptuous. The veneration of images and relics he deems sheer idolatry.

But Tolstoy's hostility to the church is directed chiefly against the spirit of the church, which he defines as the literal acceptance of secondary dogmas and the complete oblivion of the essence of Christianity. It calls to its aid the brutal power of government, and the child brought into the church before he knows its errors is retained by fear of persecution. "The Government maintains the lie and the lie maintains the Government's power." Hence the sophistical and common belief that conformity is everything and virtue nothing. "The doctrine of Jesus, as expounded by the church, is that faith assures salvation, despite an evil earthly life" ("My Religion"). So we find the infanticide Matronia in "The Power of Darkness" baptizing her victim and hanging a cross about its neck. The church has fallen into the error of the Pharisees. One must choose between it and true evangelism, for one can not serve both God and Mammon. The Christian's first act should be to leave the church.

Tolstoy's religion is not a system of cosmogony. He regards the church story of creation as he does the theories of scientists, and science is to him mere unhealthy curiosity. His religion is positive and practical, not a mystical revelation deriving its force from the divine nature of its founder. It is a human invention approved by experiment which every one can make for himself. Try to live by the rules of the world or the philosopher or the church, and you will feel that your ilfe is incoherent. With the principles of Jesus as your guide, your life will be good. Tolstoy seems to follow the positivists in distinguishing the knowable from the unknowable. The latter includes the eternal and absolute God and the creation of the world. It does not concern us; let us neglect it. Human life, on the contrary, is knowable and the only thing of interest, and to live well we need fixed principles of easy and general applicability. So Tolstoy is not only a positivist, but a utilitarian. He has no sympathy with those dogmatists who would do violence to human nature. He claims that his religion conforms with the true thought of

Jesus as it appears in the Gospels when divested of apocryphal matter. He can not accept the Orthodox belief that the gospels in their present form are the unaltered product of revelation. Jesus neither wrote a book like Marcus Aurelius nor transmitted his doctrine to educated men as Socrates did. "He offered it to rude and ignorant men whom he met in his wanderings, and not until about a century after his death did men appreciate the great importance of his words and conceive the idea of reducing them to writing" ("The Gospels"). "The Russians are now the only people in the civilized world who, thanks to the censorship, ignore the results of the historical criticism of the past century and preserve the naive belief that the gospels of Matthew, Mark, and Luke were written as we have them, separately and each as a whole, by the authors to whom they are ascribed" ("The Gospels"). Yet the church does not attribute equal importance to every passage. Having no other *raison d'être* than the elucidation of mystic dogmas, it lays stress on the most obscure passages, in the attempt to trace back its authority to Christ. It selects what ought to be disregarded and neglects the essential part. It has committed this error of set purpose and with wonderful thoroughness.

Tolstoy's method of interpretation differs from that of the historians as well as from that of the church, for he does not regard Christianity either as a pure revelation or a simple historical development. The Gospels contain a practical doctrine, and are not to be treated as literary documents, but are to be compared with life. Reality is the touchstone by which the true text must be distinguished from the false. We see Tolstoy, then, alone "with his heart and the mysterious book" ("My Religion"). He compares himself to a man examining a bag of pebbles among which are a few rare pearls ("The Gospels"). He is prepared to distrust everything except the pure doctrine of Jesus. He even goes so far as to distrust Jesus himself. Profound philosopher tho Jesus was, he might have been mistaken now and then. As a matter of fact, Tolstoy finds that his errors were neither many nor serious; but he makes this remark concerning a point of minor importance: "That Jesus said and meant this can not be doubted—but was he right?" ("My Religion"). In any case the truth of a precept does not rest upon the personal authority of Jesus, but solely upon the character of the precept. "The law of gravitation is not true merely because it was announced by Newton. On the contrary. I know of Newton only because he discovered it, and I am grateful to him for having shown me this law." ("Work").

Tolstoy endeavors, then, to bring to the study of the Bible a mind like a child's, free from prejudice and false doctrine, and to discover truth, not by comparing texts, but by ignoring every sort of commentary. These are the principles of his exegetic method:

1. The problem is to separate the true Christian doctrine from other matter in the Gospels. The unsophisticated reader can not go astray, for the true principles are striking in their clearness and convincing force. The reader at once sees their accordance "with the inmost feelings of every seeker after truth" ("The Gospels"). Thus of chapters v., vi., and vii. of Matthew, containing the Sermon on the Mount, and the exhortations to turn the other cheek, to give up one's cloak, to be at peace with the world, to love one's enemies. The criterion of authenticity is the immediate perception of truth. What makes the Sermon on the Mount exceptional is the fact that "Jesus nowhere expresses himself so solemnly, or gives clearer, more intelligible moral precepts or any which find a stronger echo in the human heart. Nowhere does he address a larger number of common people" ("My Religion").

2. These elements being established, the rest takes care of itself. Every verse that agrees with them or logically flows from them is to be accepted. Jesus demanded, not sacrifice, but love; therefore every passage enjoining love and charity or forbidding hatred is authentic.

3. All passages which contradict the law of universal love are to be omitted. Tolstoy applies this criterion to the text on which the church bases its claim of divine origin. Tolstoy says: "The word church occurs twice in the Gospels . . . meaning merely an assemblage of people. But Christ could not have founded the church as we know it to-day with its sacraments, hierarchy, and pretension of infallibility, for none of these things is in accordance with Christ's teaching" ("Salvation Is Within"). Tolstoy does not obstinately refuse to employ the historical method; but he maintains that it should never dominate, but only be used to confirm moral exegesis.

The point of departure of Tolstoy's whole system is the principle of non-resistance expressed in Matt. v. 38–39, which he insists should be taken literally. His is therefore a religion of universal love. It is comprised in the five commandments of Jesus: To injure no one; to live chastely; to make no oath, promise, or engagement; to suffer and not resist evil; to love one's enemy as oneself. Tolstoy points out that non-resistance has nothing in common with the ascetic mortification of the body as a means of salvation. Future reward has no place in his religion, the object of which is to increase the sum of earthly happiness. It is in this that the morality of Jesus is at variance with the orthodox "Christian Talmud," which is a medley of Jewish and Christian ideas. St. Paul, who "never understood the true doctrine of Jesus" ("The Gospels") introduced ideas taken from the Pentateuch. But Jesus was not content with improving the old law; he abrogated it altogether.

Tolstoy's religious activity is not condemned by all Russian priests. One of them, Petroff, said recently: "The point for me to consider is not Tolstoy's behavior toward the church, but the attitude which the church should assume toward him. His teaching has been called Buddhist nihilism, as well as Darwinism. On the contrary, he is purely Russian. He recalls the peasant heroes who built the empire, and his wish is to build the kingdom of God on earth. . . . The laymen are not of my fold. They will not listen to the voice of a priest. It is here that Tolstoy appears. He leads you to the Gospel, his book of *all* hours . . . . For this he deserves profound gratitude."

Tolstoy's growing popularity annoys the Government. He has been ordered to retire to his estate of Yasnaia Poliana, where he and his are kept under police surveillance. A decree of banishment is even spoken of.—*Translation made for* THE LITERARY DIGEST.

## THE NEW UNITARIANISM.

THE modern Unitarian movement, which originated in a revolt of certain Congregational churches under Channing early in the last century, has generally been regarded as standing mainly for protest against current orthodoxy, particularly against the doctrine of the Trinity and the vicarious atonement. It has even been spoken of as merely "negative," and "coldly intellectual." Now, however, after a period of controversy and reconstruction, a somewhat marked advance in denominational organization has been noted during the past decade. The spirit of this new Unitarianism is thus described by an editorial writer in the Boston *Transcript* (May 11), who has the advantage of studying Unitarianism in what is sometimes called its "holy city":

"The Unitarians of the first generation or two were almost universally undenominational, and most of them would have said with Channing: 'I am little of a Unitarian.' One of the leading ministers in Boston, Nathaniel L. Frothingham, said in his pulpit that he had never alluded there to the Unitarian controversy or used the sectarian name. It was under the sharpest protest that this party of independents accepted the Unitarian name as their own; and it is only within the last generation that they have made it their special possession. Channing predicted that there would grow up a Unitarian sect, because he saw that all religious parties breed in and in, spiritually and intellectually. What he prophesied has in a measure come to pass, in the growth of denominational unity amongst Unitarians, and in the gradual development of a willingness to work together for the promulgation of their faith. Fifty years ago the leading Unitarian churches gave nothing for the spread of Unitarianism. That day has quite passed away, and the giving is now liberal, if not enthusiastic, to all denominational purposes.

"In the early days of Unitarianism the spirit of independence was very strong in the churches, and they would not be bound by any outside authority of conference or general convention. A 'Handbook for Unitarian Congregational Churches,' just issued by the American Unitarian Association, shows how wide has been the departure from that attitude. That these churches can be marshaled without question into ecclesiastical ranks, and submit themselves to presbyter or bishop, is very far from being the

case; but the change that has come about in the last quarter of a century is very considerable. Such a book would have been scorned and rejected forty years ago, but now it is accepted as a helpful aid in organizing and managing churches. It has no authority whatever, it must be understood, not being mandatory in the slightest degree. What is recommended by a committee, four men and two women, three ministers and three laymen, will be very widely accepted in the spirit in which it is offered. It does not seek for ecclesiastical control, but to bring to the individual church the results of the experiences of others. The committee condemns and approves, and in that way is helping to bring about a uniformity that once was wholly out of the question. It says that the traditional system of church organization 'is discredited,' and that 'it should never be reproduced in new churches.' Very cautiously this committee recommends the abolition of the private ownership of pews, and it also tentatively advises the discarding of the pew-renting system as not being democratic or wisest in administration. Such advising seems to be of the most gentle sort, and yet there has been much of change or it could not have been given to the churches in print. Even a greater advance has been made as to advising churches in regard to the selection of ministers. These changes are slight, but they are in the direction of unity, system, and denominational strength. That Unitarians will ever submit to ecclesiastical domination is not to be expected; but they have grown to be more denominational, to wish to actively propagate their faith, and to have a zeal for the name they bear. In fact, there has come to be a new Unitarianism, that has something of missionary earnestness and a real spirit of religious unity."

---

## DR. GILBERT AND THE LATEST "HERESY" PROBLEM.

THE case of Dr. George H. Gilbert, which has been attracting attention among Congregationalists for the past two years, has at last been officially settled, and various opinions are expressed as to the decision. Dr. Gilbert, who for many years has been professor in the Chicago Theological Seminary, began to be an object of concern to his brethren in 1898, when he published an article in *The Biblical World* expressing a firm belief that those things which Jesus Himself did not plainly teach could not be regarded as essentials of Christian belief. The following year he read a paper before the Chicago Congregational ministers in which he endeavored to show that much of our theological thought regarding the death of Jesus had been drawn from Pauline sources rather than from the Synoptics (the first three Gospels). Shortly after this, Dr. Gilbert published a volume, "The Revelation of Jesus," in which he asserted that some articles of Christian belief, such as what he calls the "metaphysical union of Christ with God" and the "preexistence" of Christ, are not so plainly taught in the Gospels as to warrant insistence on them as among the essentials of belief. Immediately the floodgates of theological controversy were opened, and his views found both opponents and defenders. At a meeting of the directors of the seminary in 1900, a year's absence was allowed Professor Gilbert, in which to devote further study to the New Testament; and it was ordered that "unless the accord hoped for should appear, Dr. Gilbert should resign from the faculty." After a year of study at Dorset, Vermont, Dr. Gilbert found himself still of the same mind, and on May 8 he presented his resignation. Altho it is said that his suspension for heresy had already been determined upon by a majority of the board, a compromise was finally agreed upon, and his resignation was accepted without any reflections upon his orthodoxy.

Among adverse comments on the seminary's action is that of *The Outlook* (May 18), which says:

"Dr. Gilbert's resignation was accepted, so the board declares, not because of any theoretical or practical unfitness for the position, but 'because it is for the best interest of Professor Gilbert and of the seminary.' The board even warmly commends Dr. Gilbert's 'eminent ability in the line of study which he has made his own, his reverent and devout spirit, his unaffected piety, his whole-hearted devotion to his work, his conscientious loyalty to the truth as it is given him to see the truth, and the sweet and gracious spirit which has marked all his relationships with his students, his associates in the faculty and the board of control.' Even a secular newspaper can appreciate the situation—which would be ludicrous were it not so portentous—and naively remarks: 'The board declared Professor Gilbert the possessor of all those qualities which are usually supposed to make a man eminently fitted for such work as he has been doing for fifteen years past'—and yet accepted his resignation. In this inconsistent and unenviable position have the directors placed themselves. . . . After fifteen years of faithful, reverent, scholarly teaching, Professor Gilbert has been forced to step aside, because, tho he himself accepts the creed of the seminary, he does not find that the teachings of Jesus alone or by themselves emphasize as essential Christ's real preexistence or His metaphysical union with the Father. Here is left vacant a position which can be filled only by one who will not only believe the creed but will find it fully wrought out and emphasized in the teaching of Jesus. Who will care to occupy it?"

One the other hand, the Chicago *Advance* (Cong., May 16) supports the directors. It says:

"The final action of the directors of Chicago Theological Seminary in accepting the resignation of Professor Gilbert will, we believe, be generally approved. It is a subject for gratitude that the decision was unanimous, and that it was reached after such wise, charitable, and considerate treatment of a very difficult and delicate question. The seminary is a Congregational institution, and was founded and has been supported for the purpose of training young men for the Congregational ministry, and according to the doctrines which are commonly believed by the churches. It was not only so understood by the churches and the public, but was so declared in the articles of belief adopted and proclaimed by the institution. On this understanding the seminary appealed to the churches for support, and the churches cheerfully and generously responded. And upon the same understanding its professors have accepted positions in the institution as teachers. . . . . .

"The directors have also taken wholesome action respecting dangerous theological tendencies. How destructive some of these tendencies are has appeared from recent publications. The criticism which began with the Old-Testament prophets has extended to the Great Prophet Himself, Jesus Christ. All that is supernatural in His birth, in His life, is being eliminated. That a line must be drawn somewhere on these tendencies is apparent to every one who has any concern for the Christian faith. The directors have felt it necessary to draw the line at teaching which cast doubt upon the supernatural element in the history and person of Christ."

*The Congregationalist* (Boston) appears to think both sides are to be commended. It does not believe that the directors "have sacrificed the interests of genuine liberty to a desire for peace and a way out of a difficult situation"; and yet it thinks Dr. Gilbert's main points of Biblical interpretation, as set forth in his letter of resignation and carried out in his books, are in general accord with the views of a large number of modern Christian scholars." The difference between the new and the old methods of interpreting the Scriptures, it says, constitutes "a serious and trying feature of the church-life of to-day."

---

REFERRING to the newly adopted creed of the Maplewood Congregational Church, of Malden (THE LITERARY DIGEST, April 13), and to several other new creeds, including the celebrated creed of "Ian Maclaren," *The Universalist* (April 27) points out that none of these contain, even by implication, the doctrine of a future life. It says: "We take it that in neither case was there any design to leave out so vital a part of the Christian belief. But its omission is noticeable and remarkable. The particularity of each of these creeds makes the failure to specify a cardinal doctrine more glaring. Except for the prominence given in them to the name of Jesus Christ, either of these formulas, with several more that we have recently noticed, might be used by Frederic Harrison to institute his churches of the Religion of Humanity."

# FOREIGN TOPICS.

## ENGLAND'S ALARM OVER THE MORGAN-LEYLAND "DEAL."

IS the whole British empire to be bought up by American millionaires? This is the question which agitates the London *Daily Telegraph* to the extent of three columns. The occasion of its uneasiness is the purchase of the Leyland line of steamships through the agency of Mr. J. Pierpont Morgan. It would be idle to blame British concerns for wishing to sell at a good price, says *The Telegraph*, and it adds:

"But the very fact that American syndicates can buy in our most prosperous interests upon terms irresistible to ourselves, and can still see their way to make their own money, is the really serious matter for thought in this sensational deal. After the sweeping *coup de main* by which one of the most important of our merchant fleets is about to be transferred in a mass to transatlantic ownership, we may well ask ourselves what position on the whole field of British commerce can be considered secure from the enveloping strategy of the Napoleon of finance. The organizer of the steel trust must be admitted after his latest feat in a series of colossal transactions to have acquired a better claim to the title of the Bonaparte of trade than any other figure who has appeared in modern industry."

*The Telegraph* can not extract much comfort from the fact that the Union Jack will continue to fly from the staffs of the Leyland steamers. It says:

"America has superseded our agriculture, beaten our coal output, left us far and away behind in the production of iron and steel, passed us at last in the total volume of exports. She has only commenced her final onslaught upon our carrying trade, and with these beginnings we may wonder, if such things are done in the green tree, what shall be done in the dry?"

Mr. Morgan's purchase, *The Outlook* (London) points out, was effected at the psychological moment:

"The United States is 'booming' in every department of her national life. Within a few years she has become a colonizing power, and from her watch-chain, so to speak, dangle the Philippines and the Isle of Cuba as mementos of the conquest of Spain. She has assumed first place as an exporting country, dispossessing Britain, and her national sentiment swells daily. Not a whit behind this general growth is the expansion of her industries by the efforts of individuals, deliberately calculated to obtain control of the world's trade. . . . In this operation [purchase of the Leyland line] (apart from its financial aspect to-day) we can probably see the beginning of the inevitable maritime competition of the United States with Britain. We are challenged by our children as we never have been hitherto. The United States views the prospect exultantly, and Mr. McKinley has commenced a triumphant progress of no longer unjustified spread-eagleism through thirty States of the Union. In fact, the world generally resounds with the American whoop."

*The Guardian* (Manchester) thinks that the Morgan-Leyland "deal" is chiefly remarkable as an illustration of the fatuity of American shipping laws. Here, it says, are American citizens anxious to invest a couple of millions or so in ocean steamers, and they are driven by their own country's laws to buy shares in foreign ships. "The United States lament the insignificance of their mercantile marine, but the truth is that the American mercantile marine is now to be looked for under alien flags."

*The St. James's Gazette* (London) tries to laugh off the whole matter. In an editorial under the title, "Guten Morgan," it gaily remarks:

"We shall soon want a Morgan daily newspaper—the 'Morgan Post,' or something of that sort. There is a rumor that the multimillionaire is looking over Paris, and will decide this week whether he wants it or not, and another that he will shortly take over the Bank of England and the houses of Parliament. Of course, we have no objection to American millionaire philanthropists distributing their money indiscriminately in England, or American heiresses financing our aristocracy by what are already sometimes called Morgan-atic marriages. Nor can we complain at being offered for our steamship companies considerably more than we ask for them, and being promised improved London locomotion at half the present prices. Yet there is a feeling of '*timeo Americanos et dona ferentes.*'"

*The Mercury* (Liverpool), on the other hand, declares that "there is something mortifying in the thought that the acquisition of so important a part of our shipping is, in the eyes of this financial magnate, only a chapter of a larger scheme with which we are not concerned."

## CLERICALISM IN EUROPEAN POLITICS.

BEGINNING in a few sporadic religious incidents in several European countries, the battle between clericalism and its enemies has widened into a campaign which is now agitating the continent of Europe from Lisbon to St. Petersburg. In France, Italy, Spain, Portugal, and Austria-Hungary, the contest is progressing simultaneously. It is even now exercising a profound influence on continental politics, declares *The St. James's Gazette* (London). The French anti-associations bill (which makes illegal in France any association whose head or superior officer resides abroad) has passed the Chamber and is now before the Senate, with about even chances, so the news despatches tell us, of being rejected. A fierce journalistic and pamphlet war has been going on while the bill has been in the Chamber (see THE LITERARY DIGEST for January 26 and February 9), and the discussion continues with increased bitterness. To Englishmen, says *The Saturday Review* (London), the game of the French Government in this is as clear as day:

"It is to unite all sections of its supporters on the one basis they have in common—enmity to the church. We have had no demonstration in the debate of any real dangers to the existing régime that can be proved to flow from the machinations of any religious order. As we before pointed out, if it could be proved that any particular order or orders had been employing their members or funds to promulgate sedition, the government in self-defense might reasonably order their dissolution and confiscation of their funds. But we have had nothing of the kind. The supporters of the measure have talked much about mortmain and the criminal tendencies of religious vows; but beyond such vague declamations we have found few or no arguments."

The policy of hostility to the church inaugurated by the present republican government, concludes *The Saturday Review*, can not fail to have serious results for France:

"In order to consolidate a majority for the moment, they are imperiling the influence of France abroad and the stability of order at home. In the near and the far East and in Africa the great preaching and teaching organizations have been and are the promoters of French influence, and have taught native converts to look to the French Government as their protector. This will soon be so no longer."

Clerical organs are insisting that the attitude of the Waldeck-Rousseau ministry will result in the abdication by France of her position as protector of Christianity in the Orient. This, declares Juan de Reza, in *España Moderna* (Madrid, April), would mean a new triumph for the Germanic races, the apotheosis of brute force, and the admitted decline of the Latin peoples. The *Viedomosti* (St. Petersburg), on the other hand, declares that France is engaged in a justifiable Kulturkampf, and warns Russia that she may also be called upon to begin a campaign against clericalism. The more conservative French journals believe that the discussion over the religious orders will have a beneficial effect, even if the anti-associations bill fails in the Senate, as a distinct and growing reform sentiment looking to a more equitable adjustment of ecclesiastical and secular relations may be seen in the work of the moderate wing of the French Clericals. Paul

Potter, writing in the *Nouvelle Revue* (Paris, May 1) suggests the formation of a liberal Catholic party which would tend to harmonize the clerical and nationalist views.

*The Spectator* (London) contends that the only way of combating clericalism is by liberalism, "by applying to the clericals the principles which they refuse and reject, and which they admit that they would not apply to liberals if they had the power." It continues:

"We dislike the [associations] bill because we believe it will strengthen what we so greatly detest, the extreme form of clericalism in the Roman Church on the Continent. It will tend to destroy the beginnings of liberal reform within the Roman Church, and will still further strengthen the influences which are placing the destinies of that church in the hands of the ultramontanes. . . . The true way to meet clericalism is by the preaching and practising of a nobler and higher creed, both in the political and in the spiritual world."

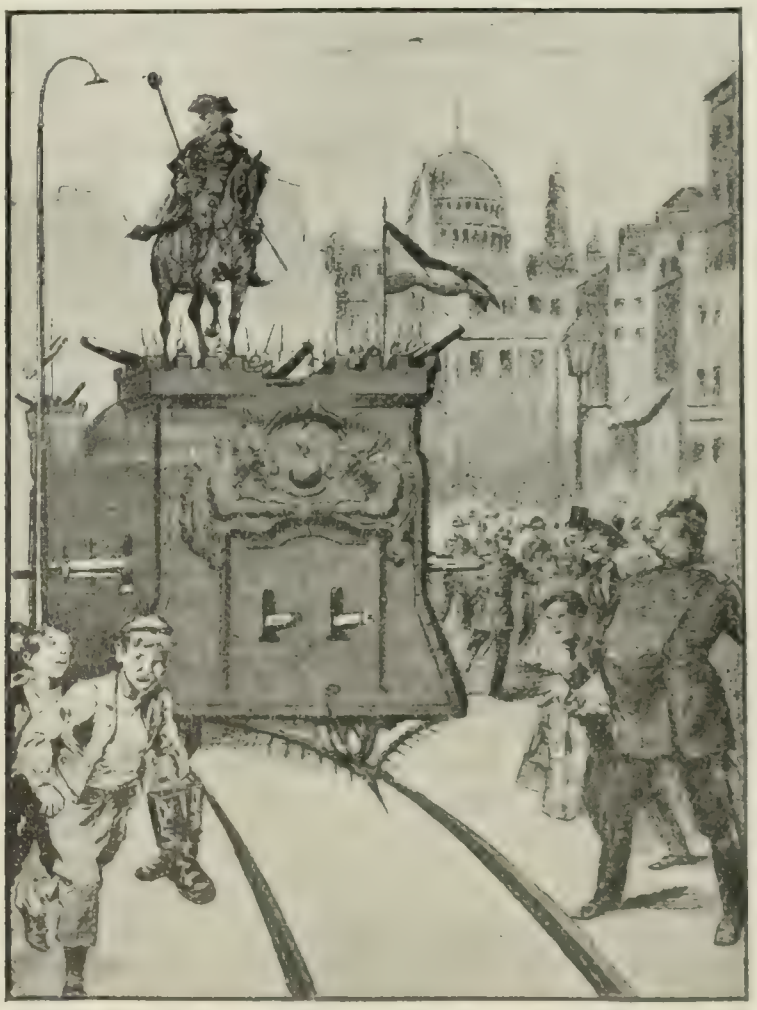
Altho there has been much heated comment on the recent action of the Austrian Archduke Ferdinand, heir-apparent to the throne of the Dual Monarchy, in accepting the presidency of the Catholic Schools Association and promising it his active support, the conservative press of Europe generally regards this action as merely one of "indiscreet good nature." The whole "*Los von Rom*" ("Away from Rome") agitation, however, has been given a new impetus by this incident. Nevertheless, the clerical press is jubilant. The *Vaterland*, official organ of the Austrian clerical party, publishes a long article congratulating the clericals on having secured the "advance adherence" of the next Emperor to their polity. The *Hlas* (Brünn, Moravia, published in Bohemian) declares: "The Catholic population has long been prepared and is only waiting for a leader. Now that it has found one, the emancipating force of Christianity will soon rid the whole empire of all the diseases of liberalism and radicalism." The *Steyrer Zeitung* (Styria) says: "'Long live Ferdinand the Catholic' should be the solemn, sincere, and joyful echo throughout our Catholic country." The *Neue Freie Presse* (Vienna) rebukes the archduke, and says: "The Austro-Hungarian monarchy is such a complicated organism that the prince who is called upon to rule it has more need than any other sovereign in the world to avoid all partiality and prepossession." The *Tageblatt* (Vienna) declares that, "inasmuch as Protestantism and its propaganda are stigmatized as high treason, the basis is provided whereupon the equality of all religious faiths is to be annihilated and the supremacy of the papacy is to be assured in all directions." The question assumes a grave political significance, in the opinion of *The Spectator* (London), as the clericals have a strong influence over the Slav peasantry, while the anti-clericals are openly looking to Germany for inspiration and aid. The foreign policy of the empire, says *The Spectator*, "collides with the ultramontane idea." It continues:

"If the clericals could trust Russia, an alternative combination would be possible, and might be tried; but can the papacy rely upon a heretical power, which has for one of its first objects the conversion of all its subjects to the Holy Orthodox Church? Rome does not love Greek Christians or make concessions easily to the Czars. Then there is the struggle of races. The clericals sway toward the Catholic Slavs; and the Germans, seeing that, regard ultramontanism with suspicion, declare that altho Catholics they will not be governed from Rome, and even in places threaten that, if the question is to be one between their race and their creed, they will in a body march over to the Protestant side. Small groups of pan-Germans have indeed done this already. We take that threat to be for the majority of Austrian-Germans a mere outburst of rhetoric; but it is always wise in considering tendencies to listen for the utterances of extreme men, and the movement alarmed, as well as shocked, great Catholic dignitaries."

The well-known French political writer, Alcide Ebray, declares (in the *Journal des Débats*, Paris) that the archduke's

PREPARING FOR THE RETURN HOME.

LIEUTENANT (to Waldersee): "Is the sabre blood-stained enough, your excellency?" —*Kladderadatsch, Berlin.*



THE NEW ZEPPELIN ELECTRIC ARMORED TRAIN FOR THE PROTECTION OF ROYALTY AND THE PUNISHMENT OF DISLOYAL CITIZENS. (A satire on the Kaiser's recent speech.) —*Der Wahre Jacob, Stuttgart.*

GERMAN POLITICS IN CARTOON.

action and speech were merely intended as a patriotic rebuke to the *Los von Rom* agitators, represented by the pan-Germans. He says:

"This [*Los von Rom*] agitation is but one of the many phases of the great struggle between Austro-Germanism and Austro-Slavism, or, in other words, the two ethnic elements which exist side by side in Austria and dispute the leadership. The Catholic hierarchy has plainly made common cause with the Slavic party, and, in politics, with the forces of conservatism. Therefore, and we believe no one will dispute this statement, the Austrian Germans accuse the church of manifesting 'anti-national' tendencies, because, in their view, the national character of Austria is naturally and essentially Germanic. This is the animus of the *Los von Rom* cry. But, as it is very difficult to detach an entire people from one church without causing it to adhere to some other church, Austria's rupture with Rome really means Austria's conversion to Protestantism. And so the origin of the movement has been more political than religious."

*Los von Rom*, concludes this writer, really involves the break-up of Austria and the incorporation of her German provinces with the German empire, and the future Emperor (the Archduke Ferdinand), in his patronage of the Catholic Schools Association, was "merely rebuking separatist tendencies which might be dangerous in the future state."

Hungary also has its clerical problem. The Hungarian religious associations have always been enthusiastically national and but little given to proselyting. The recent ultramontane attempt to reinstate the Jesuits (who were expelled by the Emperor Joseph II.) has precipitated much discussion and even rioting. The order of the Piarists, in Klausenburg, in refusing to admit Jesuits to their teaching staff, altho ordered to do so by their presiding bishop, has raised the question of the religious orders in the kingdom. The *Reichspost*, the ultramontane organ in Vienna, warns the orders throughout the empire that trouble is in store for them. Eventually their property will be seized, says this journal, which then continues: "May the Catholics and the religious orders themselves take an example of activity from the Free Masons and the Jews. It is good to pray, it is useful to publish devotional and ascetic tracts; but what is at present chiefly necessary is to circulate explanatory and instructive popular literature of all kinds."

The anti-clerical movement in Spain is closely allied to the revolutionary. The Protestant view of this movement as given by a writer who claims to have been for nearly a generation a resident of Spain. His account, as published in the Leipsic *Kirchenzeitung* (November 15), is substantially as follows:

There is really an "Away-from-Rome" movement in Spain as well as in Austria and France; but it is of a different character and serves different purposes. No reports can be made of a change of religious basis on the part of the greater number of the clergy or laity. The agitation is rather against the political policy pursued by the Vatican and its advisers. The movement, as at present represented by clergy, nobility, citizen, and peasant, is substantially the propaganda of the ultramontane ideas of Carlism, which the Pope and his cardinals, out of political foresight, will not sanction. Only recently the chief representative of the Pope in Spain, the Archbishop of Toledo, experienced the displeasure of the Catholics on this account. He would not attend the Spanish Catholic Congress at Burgos because of his fear of Carlism, and his absence not only called forth sharp comment, but he was actually censured by his church subordinates.

To what degree this spirit will display itself was seen in an article recently published in the *Siglo-Futuro*, by Peter Montano, who is the religious teacher of King Alfonso XIII. In the course of this article, the writer condemned in the most unqualified terms all the achievements of modern progress, such as freedom of the press, religious freedom, parliamentary governments, etc., all of which he declared to be mortal sins. Then he compared the policy of Leo XIII. with Pius IX., and subjected the former to sharp criticism. This article aroused such an agitation in parliament and press that the Queen was compelled at once to dismiss the writer from his high and influential position, and he no longer has charge of the spiritual instruction of the young King.

On the other hand, several manifestoes have been issued recently by the new Minister of Education, De Romanones, which are reproduced in the Munich *Allgemeine Zeitung*. The first starts out with an unequivocal declaration in favor of the principle of freedom in scientific research, and demands this for the university teachers. It is directed against the so-called "free" faculties, which had been established in recent years by the ultramontane party, and over which the state has had no right of supervision. The minister declares that henceforth these faculties must be placed on an equality with the institutions of the state, otherwise the work of the former will not be recognized and they will receive no assistance from the public treasury. The standing of a university teacher must henceforth be determined solely by his scientific attainments.

The religious troubles in Portugal are believed to be the result of long-standing discontent with the legal influence of the religious associations, which was brought to a climax by the alleged abduction of a young girl who was placed in a convent against the wishes and without the knowledge of her parents. The Government has just issued a decree, which is given, from the Lisbon *Official Journal*, by the correspondent of *The Times* (London) as follows:

In addition to secularization, the conditions essential for such associations to secure a legal status include the following: (1) They must devote themselves to works of benevolence, charity, education, and teaching, or to the propagation of the faith and civilization; but in the latter case their activity must be confined exclusively to the colonies; (2) the supreme direction of each association must be in the hands of Portuguese citizens, unless the association is composed exclusively of foreigners. It appears from several clauses of the decree that a period of six months is allowed for the secularization of existing congregations.

Almost all the members of the proscribed Portuguese associations (Franciscan, Jesuit, and Benedictine), says this correspondent, have departed for Austria, encouraged by the recent action of the Archduke Ferdinand.

Many of the Italian and German papers contain bitter attacks on the religious associations and on the Vatican itself, the *Tribuna* (Rome) and the *Kreuz-Zeitung* (Berlin) making some of the most violent of these attacks. *The Outlook* (London), in commenting on the recent papal consistory, says of the Pope himself:

"It is not Leo's mere teachings, but rather his practical success in their application, that lends luster to his life and will fashion the future of the papacy. In many lands he has held the balance between the people and their crowned and uncrowned rulers. So deftly has he poised the scales on every occasion that not one murmur has been heard from prince or proletariat against the equity and soundness of his ruling."

In the United States, continues *The Outlook*, the movement of "associations" is "against 'the bloated capitalists and companies,' and the Pope's one notable intervention there has been in favor of the workman." In all America, North and South, it concludes, "while supporting popular rights the Pope is well regarded by the various governments, and his highest representatives in the United States are on cordial terms at Washington." *The Spectator* (London) regards the action of the consistory in maintaining the ascendency of Italy in the Sacred College as "unwise from a political standpoint." The steady adherence to Italians, it says, "helps the tendency of Roman Catholicism to become the creed of the Latin world and of no other."—*Translations made for* THE LITERARY DIGEST.

---

**The Canal System of Austria.**—While the Prussian Government is having considerable difficulty in persuading its parliament to accept its proposals for improving the internal communications of the country by means of canals, popular en-

thusiasm in Austria for a canal scheme is pushing the authorities faster than they evidently care to move. The Austrian canal scheme will make a magnificent series of connections between the chief waterways of Central and Eastern Europe. The junction of the Danube with the Oder and the Vistula will permit of navigation right up to the Russian frontier, and will eventually form part of a grand connecting link between the Baltic and the Black Sea. Another connection will be between the Danube and Elbe, similarly forming a navigable road from the North Sea to the Black Sea. Finally, these two series of canals will themselves be joined, and the whole will form a superb network of waterways, which, says *The St. James's Gazette* (London), can not fail to be of immense benefit to the whole of the Austrian empire.

## AUSTRALIA'S FIRST PARLIAMENT.

THE press of the entire British empire is unanimous in congratulating the new Australian commonwealth on the auspicious opening of its first parliament. The great dominion at the Antipodes, says *The Chronicle* (London), is "a Britain forged without the hammer of a Vulcan or a Thor and molded without the blood of internecine conflict." *The Daily News* (London) also comments on Australia's peaceful entrance into the family of nations:

"The rivets that hold that nation together were forged by peaceful discussion, and were driven home by the will of the people constitutionally expressed. No war, with all its horrors and miseries, has been necessary to weld Australia's states into one commonwealth. The new nation has now set out on its political career amid all the signs of prosperity and harmony. There are parties, but no factions. No section of the people stands sullenly apart weighed down by a bitter sense of oppression, but all join in loyal unison to acclaim the great state that they themselves have created."

Without a particle of jealousy, with pride and hope, says *The Times* (London), we watch this new constitutional development. "Let the genius of a young and virile race have full play, and let the son surpass the father in their common aims." The Australian is much better off than the American, declares *The Tribune* (Winnipeg). He has "a larger income, has more voice in the government of the country, is freer, better educated, and better off in other ways, than the average man in the United States." Political independence is also more real in Australia than in the United States, in the opinion of *The Tribune*, which says further:

"In the United States 'labor' votes for one or other of two machine parties. Australia is the land of victorious labor parties; in the United States they do not exist. There the workingman seems content to be the political tool of partizan machines, that, in turn, are the tools of corporations and financiers. In the one country he is the political ruler, in the other he is in the political power of the Rockefellers, Hannas, and Crokers."

The Melbourne *Argus*, which favors free trade, in speaking of the problems which face the parliament, says:

"The wonder of these latter days is the manner in which science is swiftly annihilating distance, and allowing the surplus of one spot to be used to remedy the deficiency of another. And the pitiful spectacle of these same wonder-working days is that of befogged high tariffists fighting against science in their vain effort to kill international exchange, even as Dame Partington struggled with her mop against the inrushing Atlantic Ocean."

**Björnson's Characterization of the French.**—A rather interesting opinion of the French people and their relation to the rest of the world is given by Björnstjerne Björnson, the Norwegian writer and political leader. In an interview with a representative of the *Revue Hebdomadaire* (Paris), he said:

"As for the French people, I will avow frankly that I am utterly incapable of understanding them. They do not understand us; we do not understand them. . . . You speak of the influence of Scandinavian dramatists on the younger school of French dramatists. Why, it has no influence whatever. You say that Curel and Brieux show signs of that influence? Not the least in the world. They know nothing of Scandinavian drama; they understand nothing of it, and, what is more, they never will understand anything of it; and the same may be safely said of the French public.

"You see, in our old continent there are two distinct races. On the one hand the United States of Europe—cosmopolitans, if you like; on the other hand is France, quite alone, as if shut in by a Chinese wall. In fact, for a long time I have thought of the French as the Chinese of Europe. The better I learn to know them the more I am confirmed in my opinion. Travel about Europe and come in contact with Norwegians, Germans, English, Austrians, and Italians, and you will find that you have many points of interest in common. You understand each other, often with half a word. Many of your ideas are the same, and your ways of looking at things. When you have to do with a Frenchman it is entirely different. You are up against a Chinese wall at once. I do not wish to institute any damaging comparison, or to disparage French culture. Nor do I wish to give the impression that I think that they ought to change. It is the best for them. All the same, they are as set as a bronze figure. Everything passes by without making the slightest impression. But why should it not be so? French culture is of the highest grade; in many points it is most admirable. But to us outsiders, it is entirely beyond comprehension. We Scandinavians and other cosmopolitans have no right to sit in judgment on the French, simply because we can not understand them and are therefore not capable of judging justly."—*Translation made for* THE LITERARY DIGEST.

## WHY RECENT FRENCH HISTORY IS PROHIBITED IN FRENCH SCHOOLS.

THE circular recently issued by the French Minister of Education to all the colleges and lycées in the republic forbidding instruction in French history later than the year 1875 has called forth much adverse comment. An article in the *Courrier des États-Unis* (New York) shows that the terms of this circular prescribes that instruction in the domestic history of France must hereafter end with the adoption of the new constitution in 1875. Even in tracing the effects of remote events, such as the great revolution, the minister specifically directs that the process shall stop at 1875. Moreover, all books not in conformity with this program are prohibited, both as text-books and as library books, and the rectors are enjoined to see that the students have no access to such works. Hitherto instruction in French internal history has been carried down to within quite recent years.

Those who favor the measure claim that current history has been frequently distorted by political bias, and declare that the measure was rendered necessary by the attempts of politicians to gain a university following. The minister, they hold, being unable to insure the impartial presentation of facts, did well to secure the "neutrality of ignorance." The bulk of the criticism, however, is to the effect that it is absurd to graduate young men who have no knowledge of the internal history of their country during the past quarter of a century. The *Courier* says, by way of comment:

"As this fateful date of 1875 does not apply to foreign affairs, these young men will learn of the conquest of Egypt by England without learning why France had no share in it. They will learn that in 1885 there was a Franco-Chinese war which overthrew the Ferry ministry, but why or how will be concealed from them. It has been asserted that the measure is really due to the imprudence of a few university professors who were permitted to take part in the Dreyfus agitation. Others claimed the same privilege, and great confusion ensued. Now the ministry of public instruction, which, by its laxity, is responsible for the whole trouble, has gone to the other extreme."—*Translation made for* THE LITERARY DIGEST.

## MISCELLANEOUS.

### HOW JACOB A. RIIS BECAME A NEWSPAPER MAN.

MANY who read the books and magazine articles of Jacob A. Riis—who has told the more fortunate half of New York City "how the other half live"—may not know that Mr. Riis is the head police reporter on the New York *Sun*, and that he has been a reporter for nearly thirty years. In his autobiography, now running in *The Outlook*, he says that his father had hoped that he would follow some literary pursuit, but that he himself was determined to be a carpenter. So, in the ancient town of Ribe, on the north coast of Denmark, where he was born and brought up, the young man followed the carpenter's trade until, disappointed in a love affair, he left Denmark and came to America. He wandered about New York State and Pennsylvania, working at odd jobs, often with too little to eat, until the outbreak of the Franco-Prussian war. Now, thought young Riis, is the time to help humiliate Prussia, the old foe of Denmark; and he tried to get passage to France, but without success.

An article in *The Sun* on the subject led him to apply to Charles A. Dana, the editor, for a chance to get into the war. Dana smiled and explained that an editor and a recruiting agent are not the same thing. The narrative continues:

"I turned to go, grievously disappointed, but he called me back.

"'Have you,' he said, looking searchingly at me, 'have you had your breakfast?'

"No, God knows that I had not; neither that day nor for many days before. That was one of the things I had at last learned to consider among the superfluities of an effete civilization. I suppose I had no need of telling it to him, for it was plain to read in my face. He put his hand in his pocket.

"'There,' he said, 'go and get your breakfast; and better give up the war.'

"Give up the war! and for a breakfast. I spurned the dollar hotly.

"'I came here to enlist, not to beg money for breakfast,' I said, and strode out of the office, my head in the air, but my stomach crying out miserably in rebellion against my pride."

After further experience with the inhospitality of New York that brought thoughts of suicide to his mind, then a trip to friends in Philadelphia, and a fairly comfortable winter in Jamestown, N.Y., he went to Buffalo, where he found work with a builder, who discharged him, however, after a rather warm argument on religious matters. To quote again:

"It was about this time I made up my mind to go into the newspaper business. It seemed to me that a reporter's was the highest and noblest of all callings; no one could sift wrong from right as he, and punish the wrong. In that I was right. I have not changed my opinion on that point one whit, and I would rather die a good reporter than a millionaire. The power of fact is the mightiest lever of this or of any day. The reporter has his hand upon it, and it is his grievous fault if he does not use it well. I thought I would make a good reporter. My father had edited our local newspaper, and such little help as I had been of to him had given me a taste for the business. Being of that mind, I went to *The Courier* office one morning and asked for the editor. He was not in. Apparently nobody was. I wandered through room after room, all empty, till at last I came to one in which sat a man with a paste-pot and a pair of long shears. This must be the editor; he had the implements of his trade. I told him my errand while he clipped away.

"'What is it you want?' he asked, when I had ceased speaking and waited for an answer.

"'Work,' I said.

"'Work!' said he, waving me haughtily away with the shears; 'we don't work here. This is a newspaper office.'

"I went, abashed. I tried *The Express* next. This time I had the editor pointed out to me. He was just coming through the business office. At the door I stopped him and preferred my request. He looked me over, a lad fresh from the ship-yard with horny hands and a rough coat, and asked:

"'What are you?'

"'A carpenter,' I said.

"The man turned upon his heel with a loud, rasping laugh and shut the door in my face. For a moment I stood there stunned. His ascending steps on the stairs brought back my senses. I ran to the door and flung it open. 'You laugh!' I shouted, shaking my fist at him, standing half-way up the stairs, 'you laugh now, but wait—' And then I got the grip of my temper and slammed the door in my turn. All the same, in that hour it was settled that I was to be a reporter. I knew it as I went out in the street."

Selling extension-tables and flat-irons was the occupation by which young Riis next made himself useful to the world, after which he was again found in New York City. While attending a school of telegraphy he saw an advertisement in a newspaper offering the position of city editor on a Long Island City weekly to a competent man.

"Something of my old ambition stirred me. It did not occur to me that city editors were not usually obtained by advertising, still less that I was not competent, having only the vaguest notions of what the functions of a city editor might be. I applied for the job, and got it at once. Eight dollars a week was to be my salary; my job, to fill the local column and to attend to the affairs of Hunter's Point and Blissville generally, politics excluded. The editor attended to that. In twenty-four hours I was hard at work writing up my then most ill-favored bailiwick. It is none too fine yet, but in those days, when every nuisance crowded out of New York found refuge there, it stunk to heaven.

"Certainly I had entered journalism by the back door, very far back at that, when I joined the staff of *The Review*. Signs of that appeared speedily, and multiplied day by day. On the third day of my employment I beheld the editor-in-chief being thrashed down the street by an irate coachman whom he had offended, and when, in a spirit of loyalty, I would have cast in my lot with him, I was held back by one of the printers with the laughing statement that that was his daily diet and that it was good for him. That was the only way any one ever got any satisfaction or anything else out of him. Judging from the goings on about the office in the two weeks I was there, he must have been extensively in debt to all sorts of people who were trying to collect. When, on my second deferred pay-day, I met him on the stairs, propelled by his washerwoman, who brought her basket down on his head with every step he took, calling upon the populace (the stairs were outside the building) to witness just punishment meted out to him for failing to pay for the washing of his shirts, I rightly concluded that the city editor's claim stood no show. I left him owing me two weeks' pay, but I freely forgive him. I think I got my money's worth of experience."

Book canvassing was next adopted, with the result that on more than one day he had nothing to eat. One evening, after two such days had happened to come in succession, young Riis and his dog "Bob" were sitting on the steps of the Cooper Institute when the principal of the telegraph school, passing by, happened to spy him, and remembered that the manager of a downtown news bureau had asked him to find him a bright young fellow whom he could break in. The pay was to be ten dollars a week. The next morning early Riis made his application to the manager of the bureau:

"He looked me over a little doubtfully, but, evidently impressed with the early hours I kept, told me that I might try. He waved me to a desk, telling me to wait until he had made out his morning book of assignments; and with such scant ceremony was I finally introduced to Newspaper Row, that had been to me like an enchanted land. After twenty-seven years of hard work in it, during which I have been behind the scenes of most of the plays that go to make up the sum of the life of the metropolis, it exercises the old spell over me yet. If my sympathies need quickening, my point of view adjusting, I have only to go down to Park Row at eventide, when the crowds are hurrying homeward and the City Hall clock is lighted, particularly when the snow lies on the grass in the park, and stand watching them a while, to find all things coming right. It is Bob who stands by and watches with me then, as on that night.

"The assignment that fell to my lot when the book was made out, the first against which my name was written in a New York editor's book, was a lunch of some sort at the Astor House. I have forgotten what was the special occasion. I remember the bearskin hats of the Old Guard in it, but little else. In a kind of haze, I beheld half the savory viands of earth spread under the eyes and nostrils of a man who had not tasted food for the third day. I did not ask for any. I had reached that stage of starvation that is like the still center of a cyclone, when no hunger is felt. But it may be that a touch of it all crept into my report; for when the editor had read it, he said briefly:

"'You will do. Take that desk, and report at ten every morning, sharp.'

"That night, when I was dismissed from the office, I went up the Bowery to No. 185, where a Danish family kept a boarding-house up under the roof. I had work and wages now, and could pay. On the stairs I fell in a swoon and lay there till some one stumbled over me in the dark and carried me in. My strength had at last given out.

"So began my life as a newspaper man."

## CURRENT POETRY.

### Sonnet.

By WILLIAM WATSON.

[Written in Sidney Lee's "Life of Shakespeare."]

Lee, who in niggard soil hast delved, to find
What things soever may be known or guessed
Of him that to the ages gives no rest,
The world-watched secret peak of human mind;
Thy choice was well, who leav'st to fools and blind
All visionary, vague, fantastic quest.
None to the Presence hath more nearly pressed,
Nor hast thou him dis-served to serve mankind.

'Tis said of certain poets, that writ large
Their somber names on tragic stage and tome,
They are gulfs or estuaries of Shakespeare's sea.
Lofty the praise; and honor enough, to be
As children playing by his mighty marge,
Glorious with casual sprinklings of the foam.

—In May *Fortnightly Review* (London).

### Convicted.

By EDWIN L. SABIN.

"There is no God!" he, mocking, said. "Behold,
Honor have I, and happiness, and gold.
Abundantly from day to day I live.
What more, I ask you, has your *God* to give!"
And so he went his way—until that night
Which comes at last, when all our fancied might
From out our clutch like running water slips.
"Oh God!" he prayed, between his bloodless lips.

—In June *Chautauquan*.

### Night in the Desert.

By CLINTON SCOLLARD.

With star-dust scintillant the vault is sown;
But the vague vastitude of lower air
Is as a purple shroud about the bare
And billowy sand-waste ominously lone.
Heavy with sleep, no more the camels moan;
Slumber has sealed the pious pilgrim's prayer;
And, save the lion, loping from his lair,
There is no wanderer in this desert zone.

The silence quivers if one starts from dreams,
But not with sound. The rigor of suspense
Were broken could a bird or brook but sing.
But ah! the stillness that so breathless seems!
The awful solitude, the imminence
As of some unimaginable thing!

—In June *Smart Set*.

## PERSONALS.

**"Two Wandering Boys."**—"Stage Notes, No. 9," one of a series of interesting articles written by Clara Morris for *The Critic*, appears in the May number of that magazine. The following incident is narrated:

"The late John E. Owens, while acting in Cincinnati, had a severe cold, was feverish, and, fearing for his throat, which was apt to give him trouble, he had his physician—an old friend—come to see him behind the scenes. The doctor brought with him an acquaintance, and Mr. Owens asked them to wait till the next act was over to see how his throat was going to behave.

"It's always a dangerous thing to turn outsiders loose behind the scenes, for if they don't fall into traps or step into paint-pots, they are sure to pop on to the stage.

"Mr. Owens supposed the gentlemen would stop quietly in his room; but not they—out they wandered on discovery intent. A well-painted scene caught the doctor's eye. He led his friend up to it to take a better look—then, as only part of it was visible from where they stood, they followed it along.

"Mr. Owens and I were on the stage. Suddenly his eyes distended. 'What in the devil!' he whispered. I looked behind me, and at the same moment the audience burst into shouts of laughter—for right into the center of the stage had walked, with backs toward the audience, two tall gentlemen, each with a shining bald head, each tightly buttoned in a long black overcoat, and each gesticulating with a heavy cane.

"I whispered to Mr. Owens, 'The two Dromios,' but he snapped out, 'Two blind old bats!'

"When they heard the roar behind them they

# PIANO Do You Want a Genuine Bargain in a Piano?

We have hundreds of Upright Pianos returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our salesrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Uprights as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. Every piano warranted exactly as represented. **LYON & HEALY, 46 Adams St., Chicago.**
*The World's Largest Music House.*

turned their heads, and then a funnier, wilder exit I never saw than was made by these two dignified old gentlemen—while Owens added to the laughter by taking me by the hand, and, when we had assumed their exact attitude, singing 'Two Wandering Boys from Switzerland.'"

**Personality of the Chinese Dowager-Empress.**—The Dowager-Empress is not as black as she has been painted, if we are to believe Lady Macdonald (wife of Sir Claude Macdonald, former British ambassador to China). In *The Empire Review* (London, April), Lady Macdonald declares that the Dowager-Empress is a woman of great strength of character, but "genial and kindly and well liked by her immediate surroundings." Of her personal appearance, Lady Macdonald says:

"Tho over sixty she is still a young-looking woman with jet-black hair and kindly dark eyes; in repose her expression is stern, but when she smiles it lights up and all traces of severity disappear; her face is not of the ordinary Chinese or Manchu type, and she might in another part of the world pass for an Italian peasant. In stature she is short and slight, but wearing the Manchu shoe adds at least three inches to her height; her hands and feet are small and well formed, the greatest disfigurement, from our point of view, being the two gilt nail protectors three inches long, which she, in common with all the princesses, wore on one hand to protect the nails beneath from breaking. She was richly dressed in a yellow brocaded coat lined with fur, and blue silk embroidered petticoat down to her feet, her hair being dressed *à la* Manchu in two big bows showing on either side of her head from which dangled pearl ornaments, and a bandeau with graduated pearls, the largest as big as a chestnut, encircled the front of her head. Her face was entirely unpainted, differing in this respect most markedly from all other court ladies."

## MORE OR LESS PUNGENT.

**A Good Bookkeeper.**—"It takes Tom a day and a night to tell a story." "He'd make a good bookkeeper, I should think." "Why?" "Never short in his account."—*Yale Record.*

**Strong-Willed.**—KIND LADY: "It must be hard to get along without working?"

TRAMP: "Indeed it is, M'am; yer have no idea how strong de tem'tation ter go to work is, sometimes."—*Brooklyn Life.*

**Better Days.**—BEGGAR (preliminarily): "I've seen better days."

BUSY MAN: "So have I; looks as if it had set in for an all-day drizzle. Confoundedly unpleasant. Got to take 'em as they come, tho. Tra, la, la."—*Tit-Bits.*

**The Proper Age.**—HE: "What do you think is the proper age for girls to marry?"

SHE: "Oh! about nineteen."

HE: "Indeed! And how old are you?"

SHE: "Oh, about nineteen."—*Tit-Bits.*

**She Was Speaking.**—NURSE GIRL: "I lost track of the child, mum, and——"

ALARMED MOTHER: "Good gracious! Why didn't you speak to a policeman?"

NURSE GIRL: "I wuz speaking to wan all the toime, mum."—*London Fun.*

**When Women Rule.**—"Have you been able to catch the speaker's eye?" asked the first lady legislator. "Have I?" rejoined the second legislator. "Well, rather. I wore my navy blue bengaline with the heliotrope sleeves, and the speaker couldn't keep his eyes off me."—*Tit-Bits.*

**Funny.**—Wu Ting Fang, the Chinese Minister, on being asked the other day if there were any Chinese humorists, replied that there were some very good jokes in Chinese literature. "Tell one," said his visitor. "Well," said Mr. Wu, "this is a famous Chinese story: There was once a traveler who stopped at the house of a friend for refresh-

ment. He asked for a cup of tea. The friend had no tea, but said he would send his son to borrow some from a neighbor. The wife put a pot of water on the fire to boil. The son did not return, and several times it became necessary to add cold water to that boiling in the pot. Finally the wife said: 'Inasmuch as the tea does not seem to be forthcoming, perhaps you had better offer your guest a bath.'"—*The Philadelphia Record.*

**Testing His Temper.**—"A year or two ago," said a young man to a friend, "I spent a few weeks at south coast watering-places. One day I saw a machine which bore the inscription, 'Drop a penny in the slot, and learn how to make your trousers last.' As I hadn't a great deal of money I thought an investment of a penny to show me how to save the purchase of a pair of trousers would be small capital put to good use, so I dropped the required coin in and a card appeared. What do you suppose it recommended as the way to make my trousers last?"

"Don't wear 'em, I suppose."

"No."

"What did it say?"

"Make your coat and waistcoat first."—*Tit-Bits.*

## Current Events.

### Foreign.

CHINA.

May 21.—In a statement to the British House of Commons, Lord Cranborne declares that Chinese affairs are entering on a more pacific stage; that three high-placed delinquents were recently executed, three more were permitted to commit suicide, and that the powers demanded the punishment of 170 provincial culprits.

May 22.—General Chaffee and the Ninth Infantry leave Peking; the Chinese natives petition the American troops to remain.

May 23.—The proposition of the American Government to secure a reduction in the war indemnity demands on China from $337,000,000 to $200,000,000 is unanimously rejected by the other powers.

May 26.—Emperor Kwang Su sends orders to his agents in Peking to prepare the imperial palaces for occupation by the court on the departure of the foreign troops; friction between the allied soldiers leads to the shooting of a German soldier by an American sentry; the German squadron in Chinese waters is ordered home.

SOUTH AFRICA.

May 20.—General Kitchener reports fighting during the past week in South Africa, showing considerable losses by Boers in killed, wounded, and captured.

May 23.—Martinus Pretorius, first President of the South African Republic, dies at Potchefstroom, Transvaal.

May 25.—The Boers attack a British convoy in the Transvaal, killing four and wounding thirty men.

OTHER FOREIGN NEWS.

May 20.—Andrew Carnegie gives $10,000,000 to establish free education for Scottish pupils in four Scottish universities.

In the second trial of speed of Sir Thomas Lipton's new challenge yacht, *Shamrock II* beats *Shamrock I* by about a minute in a triangular course of seven miles.

May 22. *Shamrock II* has all her spars carried away in a hard breeze off the Solent; King Edward, who was on board the challenger, narrowly escapes death; the accident will probably delay the race for the cup.

The new Russian loan is largely over-subscribed at Paris banks; plans to connect the Black and Caspian seas are laid before the Russian Minister of Finance.

May 23.—Sir Thomas Lipton asks the New York Yacht Club to postpone the date of the Cup contests until the first week in October.

Gaetano Bresci, the assassin of King Humbert, commits suicide in San Stefano prison

The volcano of Keloet, Java, bursts into eruption, and great loss of life is reported.

May 24.—An explosion in a Welsh colliey in the Rhondda Valley entombs eighty-three miners; five bodies are recovered, and there is little hope of saving the others.

Sir Alfred Milner arrives in London from South Africa, and is received with special honor, the King raising the high commissioner to the peerage.

The score of Henry Purcell's opera, "The

Fairy Queen," lost for two hundred years, is found in London.

May 25.—Mgr. Chapelle, Papal Delegate to the Philippines, discusses the religious problems in the islands with the Pope.

M. Altschensky, of Kharkoff, a financier of great prominence in Russia, commits suicide because of financial embarrassment.

A fire in a Prussian mine causes the death of twenty-one miners.

May 26.—The elections in Spain result in the return of 120 Ministerialists and 30 members of Opposition.

The Spanish village of Esparragosa is almost destroyed by a storm.

## Domestic.

DOMESTIC NEWS.

May 20.—Continued improvement in Mrs. McKinley's condition is reported, but the President decides to curtail his trip, as previously announced.

About fifty thousand machinists in various parts of the country go on strike for a nine-hour day with ten-hours pay; many firms grant the demand of the men.

The Pan-American Exposition is formally opened at Buffalo; speeches are made by Senator Lodge and by Vice-President Roosevelt.

May 21.—The President reviews and addresses a great parade of school children in San Francisco.

Five cadets of the graduating class at West Point Military Academy are dismissed, and six suspended, for insubordination growing out of the attempts by the cadets to continue the practise of "hazing."

Governor Allen, in his annual report to the President, suggests plans of colonial administration for Porto Rico.

The cup defender *Constitution* makes a first and very satisfactory trial in Narragansett Bay.

May 22.—The President attends a reception given in his honor by the Knights Templar of San Francisco.

Vice-President Roosevelt and party are entertained at Niagara Falls and at the Pan-American Exposition.

Several lives are lost in floods in the rivers of Eastern Tennessee.

May 23.—The President reviews the troops at the Presidio of San Francisco, and attends several receptions.

The machinists' strike continues orderly and peaceful; the number of men on strike is reduced to about 35,000 by employers' concessions; a conference between masters and men takes place in New York.

The Presbyterian General Assembly continues its sessions in Philadelphia, and discussion on creed revision is opened.

May 24.—President O'Connell of the Machinists' Association removes strike headquarters from Washington to Toronto, and recommends anine-hour day strike in the railroad system of the country.

May 25.—The President, Mrs. McKinley, and party leave San Francisco for Washington.

Senators Tillman and McLaurin, of South Carolina, resign as United States Senators after a joint debate, and both go into primary for reelection.

Mr. T. W. Lawson sends a message to the New York Yacht Club saying that he is willing to charter his boat to a member in order to make her eligible as a cup defender.

The Presbyterian Assembly, by a vote of 271 to 234, refuses to adopt a minority report on creed revision, opposing the formulation of the doctrines held by the church.

AMERICAN DEPENDENCIES.

May 20.—*Philippines:* General MacArthur, in celebration of the surrender of Generals Mascardo and Lacuna, releases a thousand Filipino prisoners.

*Cuba:* The Cuban constitutional convention receives the majority and minority report of the committee on relations with the United States, but adjourns without action.

May 22.—*Philippines:* Captain Barrows and Lieutenant Boyer, of the Commissary Department, are sentenced to dishonorable discharge and imprisonment.

May 24.—It is announced that Aguinaldo expects to visit the United States in the fall.

# Modern Fables

"*That's one comfort,*" said the Old Stocking, with a sigh, as she gazed at a large hole in her heel.

"*What's* a comfort," snapped the Rat Trap from the corner.

"Why, that 'it's never too late to mend,'" answered the Stocking.

"Stuff and nonsense!" exclaimed the Trap, "I used to live in an Insurance office, and one day a man came in smiling, and got off that same old joke to the Agent. But after a while he went into the Doctor's private room, next door, and when he came out he looked very grave, and I heard him mutter, '*Too late! Too late!*'" *

The trouble was probably Bright's Disease or Diabetes—nine times out of ten that's the case.

Perhaps you know by experience.

The Tompkins-Corbin Co. can cure these diseases. We have no patent medicines to sell. Drug stores cannot supply our remedy.

If you are afflicted, you need us more than we need you.

**NOTE** If you will send us your name and address, we will send you instructions and make necessary analysis ABSOLUTELY FREE OF CHARGE.

We will gladly send you our book of testimonials; it contains the names of prominent persons who will be glad to tell you what they think of our treatment.

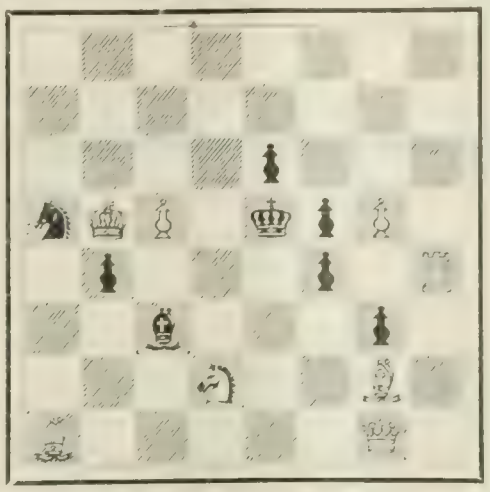
### Problem 562.

By W. H. GUNSBY.

Black—Eight Pieces.



White—Seven Pieces.

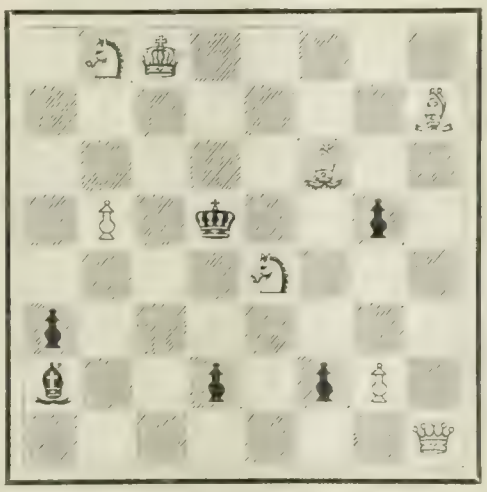
White mates in two moves.

### Problem 563.

By A. F. MACKENZIE.

First Prize Three-mover, *Brighton Society* Tournament.

Black—Six Pieces.



White—Eight Pieces.

White mates in three moves.

The Problem-editor of *The B. C. M.*, who was one of the judges in this tourney, calls attention to the "most singular coincidence, that the first prize-winner in each section should be similarly afflicted—they are both deprived of sight." (Lane's problem appeared last week, No. 561.) Another singular fact is that Mackenzie had only "honorable mention" in the two-move section and Lane received the same in the three-move section.

## Chess-Nuts.

LASKER recently played twenty strong players in the Franklin Club, Philadelphia, winning 13, drawing 5, and losing 2.

WE have received the prospectus of a new book called "Chess Digest," by Mordecai Morgan. This work, in two volumes, gives the opening moves of over fifteen thousand games, arranged according the openings, and representing the great masters of the last fifty years. We have seen the first volume. It strikes us as a magnificent addition to real text-books on Chess.

IN referring to the fact that the composers of Problems 561 and 562 are blind, it is worthy of notice that Helen Keller, the wonderful blind, deaf, and dumb student now in Radcliffe College, is also a Chess-player. We do not know of Miss Keller's ability as a player, but that she can play Chess at all is almost marvelous.

IT is said that the oldest Chess-player in the world is Dowager Lady Carew, who was born in 1776.

GENTLEMEN: — The GOODFORM Trousers Hanger is made of fine, specially rolled spring steel, heavily nickel-plated on copper. The parts in contact with the fabric are wide and the edges rounded. It operates automatically. "You press the button," and the keeper does the rest. Sample by mail, 35c.; 3 for $1.00; 6 and a closet loop, $2.00. All express prepaid. **This is what you want if you want the best.**

Sold by Hardware and Furnishing stores, or prepaid for the price. Remit to the maker.

# The Literary Digest

VOL. XXII., No. 23 NEW YORK, JUNE 8, 1901. WHOLE NUMBER, 581

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**VACATION NOTICE TO SUBSCRIBERS.**

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

## TOPICS OF THE DAY.

### THE PRESS AND THE SUPREME COURT DECISION.

AMID the discussion, somewhat confused, of the different lines of reasoning by which the various justices of the Supreme Court reached their conclusions in the insular cases, one fact stands out clear to all, namely, that the court has decided that the tariff clause of the federal Constitution does not cover Porto Rico. Most of the newspapers infer from this that the Constitution does not cover new territory until Congress extends the Constitution over it. So the decision, while it seems to deny to the people of new territory any constitutional right to participation in our general government and to enjoy free access to our markets, on the other hand is thought to safeguard the people of the States from being ruled, in part, by the ballots of distant and semi-civilized peoples, and from their unrestricted labor competition. The court says of the inhabitants of the islands, however, that "even if regarded as aliens, they are entitled, under the principles of the Constitution, to be protected in life, liberty, and property." The views of the American newspapers regarding these conclusions are classified herewith by sections.

#### New England.

In Boston, *The Transcript* (Rep.) believes that the decision "authorizes the establishment of a 'colonial system,'" and it says that "there can be neither escape from nor evasion of the conclusion that Congress can set up a colonial system for our new possessions, enacting for them such tariffs as may in its judgment be best for their interests and those of the United States." *The Herald* (Ind.) says that the decision, "in the deep-rooted meaning of the term, is imperialistic, in contradistinction to democratic"; but *The Journal* (Rep.) rejoices that "the last hope of those foes of the Administration policy who would have us scuttle out of Porto Rico and the Philippines" is demolished. The Springfield *Republican* (Ind.), one of the leaders in the fight against expansion, thinks that the question of holding subject peoples is not settled yet, and it adds that "the singular cross divisions of the court by which the result was reached, and the entire absence of any clear, united, and commanding argument leading up to the result, do not and can not serve to enhance the public respect for this great tribunal." The Hartford *Times* (Ind.), another anti-expansion paper, says that "it has been the political talk of Washington for two years past that by and by it is going to be necessary for the United States to acquire, own, and possess a section of China, and it is that project which these five justices undoubtedly have in mind in rendering a decision in the Porto Rico cases which shakes the very foundations of our Government." The Hartford *Courant* (Rep.) observes that some of the "antis" are talking of an appeal from the decision of the court to the people, and it remarks that "we heard something about an appeal to the people last November, and we noted its results."

#### New York and Philadelphia.

In New York City *The Tribune* (Rep.) declares that the court has won a victory for the nation, and says that the talk of the court's critics "about recent degeneracy of the court is not creditable to their own intelligence." *The Sun* (Rep.) says that "we should rejoice in the wisdom of the Supreme Court no less than in the triumph of our arms in war," and *The Times* (Ind.) thinks that the court "sustained the position taken by the great majority of the American people, that this is a Government of sovereign powers, clothed with all the attributes of sovereignty." "The country can take a long breath and think of what it escaped," remarks *The Journal of Commerce* (Fin.), and *The Press* (Rep.) calls the decision "matter almost for fervent thanksgiving." *The Evening Post* (Ind.) believes that the power conferred upon Congress by the decision includes power to set up independent governments in our new lands, and it remarks that "that is a judicial platform good enough for the advocates of Philippine independence to stand upon." *The Herald* (Ind.) declares, however, that "the more the majority decision in the leading insular case, with the ambiguous and conflicting opinions of its supporters, is examined, the more absurd and mischievous it appears," and it expresses the opinion that it will some day be reversed. *The Journal* lays emphasis on the fact that the supreme power over subject territory is given to Congress, not to the President, and this, it believes, "makes it certain that every step of our progress will be taken in an orderly, lawful way, with the consent of the representatives of the people and not by arbitrary executive decrees issued by a President assuming the powers of a dictator." The Buffalo *Express* (Ind. Rep.) says on this point: "There is far less peril in the principle of the right of Congress to exercise imperial power over dependent territory than in the right of the President so to do. But there is, at the same time, far less efficiency in it. A body more unsuited to such a task than the Congress of the United States hardly could be devised, and unless it should develop that Congress has the right and is willing to delegate this power to the President absolutely, as has been attempted by the Spooner Philippine act, it will be found that Congress must in self-protection either permit these territories to govern themselves or admit them as States."

In Philadelphia, *The Public Ledger* (Ind. Rep.) says that "it is unlikely that any abuses will be committed under this principle" laid down in the decision, "but it is a principle that admits of the abuses of despotism." *The North American* (Ind. Rep.) says: "In effect, the court has laid a broad and solid foundation for the extension of a world-wide colonial system ab-

WANTED—ONE MORE TRIBUNAL.

UNCLE SAM (to his Supreme Bench): "Say, ain't there some other court that can explain what you fellows are driving at?" —*The Chicago News.*

solutely controlled from Washington. Henceforth the question of expansion will be one of political expediency, not of constitutional law." It seems to *The Record* (Ind. Dem.) that the court's ruling involves a "grave change in the character of our Government," and that "henceforth we are to have two kinds of a country"; but *The Press* (Rep.) thinks that the "pregnant words" of the majority opinion "end the sophistry which sought to find in the Constitution the instrument to thwart, instead of to promote, national development." *The Inquirer* (Rep.) makes the suggestion that in view of this decision Cuba can be annexed without the necessity of admitting its sugar and tobacco free of duty.

### Chicago and the Middle West.

The *Record-Herald* (Ind.) suspects that the political predilections and sectional habitat of some of the justices may have had an unconscious influence on their opinions, and that "the constitution of the court had more to do with the decision than the Constitution of the United States." *The Chronicle* (Dem.) declares that "the new doctrine which is set up by the court is revolutionary and fraught with the gravest danger," but *The Tribune* (Rep.) believes that the matter "has been decided as the administration and the great majority of the American people wished to have it." *The Inter Ocean* (Rep.) disagrees diametrically with the contention of *The Record-Herald*, just quoted, and says that "the fact that there were Republican and Democratic justices on both sides of the controversy as to the powers of Congress over the territories removes any suspicion of partizanship from the Supreme Court's decision." *The Journal* (Ind.) calls the decision "a step forward," and says that it "is in line with the historic cases in the same great court, which has developed the Government of the United States from a weak and discordant confederacy of uncertain powers into a great and dominant nation, containing in *posse* every element of sovereignty that may inhere in its nature." But *The News* remarks: "That such a hair-splitting decision, formed by the narrow margin of one vote—the court being divided five to four, and one of the number himself being apparently not completely convinced—should be regarded as entirely satisfactory by the American people can not be expected."

The Pittsburg *Dispatch* (Ind. Rep.) remarks that the court's decision "presents a slight resemblance to the compromise verdict of a petit jury," and the Pittsburg *Post* (Dem.) says that under this decision it expects to see Congress "enter on magnificent and corrupting schemes of colonization, brimful of jobbery, peculation, and the high art of stealing. Other republics have been wrecked in that way." The Cleveland *Plain Dealer* (Ind. Dem.) thinks that "there is apparent excuse for those who assume that the majority of the court was more anxious to bend the Constitution to the sinuosities of the 'Administration policy' than to keep the Administration and Congress to the straight line of the Constitution." The Cleveland *Leader* (Rep.), commenting on the fact that it was Justice Brown's opinion that decided the De Lima case against the Administration and the Downes case in favor of it, says that "it must be conceded that the tenor of the two decisions written by the Michigan jurist indicate, when they are studied together, that in the last and most important case he was influenced by what seemed to him to be national needs of a political nature." "All the Supreme Court has done," says the Toledo *Blade* (Rep.), "is to give the highest judicial sanction, for the first time in our history, to a principle that has been consistently followed by the Government from the ordinance of 1787 to the present time." The Indianapolis *News* (Ind.), however, notes that the reasoning of the minority justices is "vastly simpler and clearer" than that of the majority, and it adds that "it would not be surprising if, in the future, as has happened in the past, the opinion of the minority should become the real opinion of the court." The Indianapolis *Sentinel* (Dem.)

UNCLE SAM: "After your fight with that fellow you look like a bunch of waste paper." —*The St. Louis Republic.*

goes so far as to say of the decision: "If this be not imperialism realized in all but form, what could be?" The Detroit *Journal* (Rep.) thinks that the court's decision may some time be reversed, but it believes that "what, finally, is more certain than even that the opinion will stand is that Congress may be depended on to legislate for the islands within the limits of the Constitution for the most part." It seems to the Detroit *News* (Ind.) that it is a "great decision for the sugar and tobacco trusts," and that "the court saved the day for the trusts and at the same moment sounded the death-knell for the high hopes of our island possessions."

### The Northwest.

The Milwaukee *Wisconsin* (Rep.) notes that the principle of the decision "has really been the policy of the Government for one hundred years," and it predicts that this ruling "will produce tranquillity and peace in our new possessions, and will strengthen the prestige of the great republic throughout the world"; but the Milwaukee *Journal* (Dem.) says of the decision that "if that is not imperialism, there is no such thing." The Minneapolis *Journal* (Rep.) agrees with several papers previously quoted that the division of the court "suggests a remote possibility of reversal in the future." The Minneapolis *Times* (Ind.) says: "There be those who will see in this ruling a breaking down of constitutional limitations, boding ill to our system of government; but the average citizen will be more optimistic, believing that the temper of the American people is and ever will be such as to preclude the possibility of any reversal of our organic law that will impair or abridge the rights of citizens, states, or organized territories." The St. Paul *Pioneer Press* (Rep.) thinks that the ruling sustains the only principles upon which the governments of our new possessions can be administered consistently with their best welfare and that of the people of the United States. The St. Paul *Dispatch* (Rep.) thinks that the decision is unfortunate in its probable political effects. It

says: "One need but recall the universal revolt against the position taken by Congress in rejecting the President's admonition of 'our plain duty' to anticipate the effect in the congressional elections next year of having it made a party issue."

### The South.

Turning now to the South, one finds the Baltimore *Sun* (Ind.) expressing a doubt as to "whether Congress can be trusted to exercise its discrimination wisely" in using the great power the court has entrusted to it. The Baltimore *News* (Ind.), referring to the disputed scope of the term "United States," remarks that "if the broad right to hold dependencies subject to the control of Congress upon principles quite different from those obtaining within the States of the Union be conceded, it would be absurd to tie down the action of Congress in one particular, by force of the result of a purely verbal dispute as to the literal meaning intended by a body of men more than a hundred years ago, when they wrote certain two words in the Constitution, not intending them to apply in the least to such question as that now involved." The Baltimore *American* (Ind.) thinks that the decision "ought to put an end to further controversy concerning the Government's policy in its new possessions, so long as that policy is honest and directed to the welfare of the inhabitants." The Washington *Post* (Ind.) similarly says: "We do not understand the court as giving any license for oppression, nor do we believe the Government of the United States capable of adopting a cruel policy toward any people under its authority." The Washington *Star* (Ind.), too, believes that "the Supreme Court has decided the insular cases in such manner as to promote the welfare both of the Union of States and of our new island possessions." The Washington *Times* (Dem.) thinks the opinions handed down by the various justices "appear like a crazy quilt made from shreds of the Constitution and remnants of the flag," and "considering that the decisions fix the power of Congress

THE STRING TO THE CONSTITUTION.

It will "follow the Flag" when Congress says so.

—*The Boston Herald.*

above the Constitution, and that it only requires a little ordinary legislation to establish that power, the trusts have reason to be pleased and satisfied." "Well," says the Atlanta *Constitution* (Dem.), "if they have to be colonies, they are lucky in being American colonies"; but it demands that trade with our new possessions shall be free from tariff barriers. The Columbia *State* (Dem.) believes this ruling "will bring our highest court into discredit, and it will not determine for long the attitude of the American people toward the policy of colonialism." The Macon *Telegraph* (Dem.) feels that its opinion is now confirmed that "since the Civil War the United States is a limited empire governed by Congress." "The somewhat hazy argument of the court," says the New Orleans *Times-Democrat* (Dem), "seemed to be in a great measure intended to let the Government out of a difficult situation," and the New Orleans *Picayune* (Dem.) similarly observes that the maxim that the Constitution does not follow the flag "is necessary to enable the great republic to start out on a career of conquest of people who are entitled to no rights of any sort, save what Congress in its grace may choose to confer." The Nashville *American* (Dem.) declares, in spite of the decision, that "there should be no tariff on articles produced on American territory and shipped into other sections of American territory, no matter whether the territory comprises States of the Union or islands in distant seas." "The only comment allowable after this," exclaims the Mobile *Register* (Dem.), "is to admit that 'we've done expanded, shore!'" The Jacksonville *Times-Union* (Dem.) notes that we still have the privilege of giving constitutional rights to our new possessions, even tho we are not compelled to do so, and the Houston *Post* (Dem.) observes that "the insular question, in fact, is still left as an open political question by these very unsatisfactory and conflicting opinions of the court." The Louisville *Post* (Dem.) believes that Congress, in its legislation for the islanders, will aim "by broad and liberal enactments gradually to develop among these people a new sense of security and a new conception of liberty," and, it remarks, "there is no imperialism in this."

### West of the Mississippi.

Looking farther west, one finds the St. Louis *Globe-Democrat* (Rep.) observing that "as the decision is for the benefit of the islands as well as of the United States, it will please the country," but the St. Louis *Republic* says: "Our Federal Supreme Court tells us that our Government can exist half republic and half empire. It is a lie. Our children will reproach us for accepting it as a truth. For its acceptance as the truth means that they will be subject to empire, not sovereign in a free and self-governing republic. And it is we who are betraying them to empire." The Kansas City *Journal* (Rep.) agrees with *The Globe-Democrat* that "if the Supreme Court had studied to please the country with its decisions in the Porto Rico cases it could hardly have succeeded better," but the Kansas City *Star* (Ind.) thinks that free trade with the islands would be the better policy, for "the best interests of the colonies and of America demand their industrial development." The Topeka *Capital* (Rep.) believes that Justice Brown, who handed down the majority opinion, arrived at "a safe and sound conclusion," but that his reasoning was "illogical," and "will never take its place among the historic decisions of the great jurists of the Supreme Court." "It is not unfair," the Omaha *World-Herald* (Dem.) believes, "to say that the decision is a political one," and the Denver *News* (Ind.) remarks: "Hereafter we shall have the right to shoot and bayonet 'liberty' into all benighted persons sitting in darkness." The Denver *Republican* (Rep.), however, calls imperialism "only a bad dream," and expresses confidence that "the judgment of the Supreme Court will receive the earnest and hearty commendation of a vast majority of the American people." The

UNCLE SAM: "Now I can do what I please with 'em."

—*The Detroit Journal.*

Salt Lake *Herald* (Dem.) thinks that "with so evenly divided a bench and with the majority voicing so many conflicting opinions, there is as good reason to believe that the minority was right as there is to put implicit confidence in the finding of the majority." "It strikes us," says the Salt Lake *Tribune* (Ind. Rep.), that "the decision should meet with general approval, because in no other way can the business with the islands be carried on unless they be declared Territories and come under the general jurisdiction of Congress, the same as Territories, undisputed and complete."

The San Francisco *Chronicle* (Ind.) says that the decision "deprives the islanders of the only right which is both valuable and in danger. Nobody desires to interfere with the personal liberty of the islanders, the free exercise of their religion, or the freedom of oral and written speech. The country is full of people who desire to interfere with their liberty of trade." "Imperialism, with all its disastrous possibilities," declares the Sacramento *Bee* (Ind.), "is fully sustained." The Seattle *Post-Intelligencer* (Rep.), thinks, however, that the court's conclusion is "happily final as to our future dealings" with the new possessions as well as "to our own security and to their prosperity and progress." The Tacoma *Ledger* (Rep.) believes similarly that the court has done well in giving the nation "the right to expand," for "there is no intent to oppress, but to free; no intent to crush, but to uplift." *The Philippine Argonaut* (Manila), in a comment anticipating the court's decision in regard to the Philippines, a decision not yet rendered, refers to the oath taken by the surrendered insurgents to support the Constitution of the United States, and asks: "If the Constitution doesn't apply to the Philippines, of what avail is the oath of allegiance?"

## A PLEA FOR THE NEGROES OF ALABAMA.

A STRIKING incident during the course of the Alabama Constitutional Convention, which opened its sessions in Montgomery on May 21, and which, it is generally admitted, was called for the purpose of disfranchizing the majority of the negroes of the State, was the presentation of a memorial signed by Booker T. Washington and twenty-three other colored men, appealing for conservative action toward their race. "Your petitioners are not stirrers-up of strife between the races," run the opening sentences of this document; "each of us, in some calling, is a hard-working, tax-paying, and, we trust, law-abiding citizen, and we believe that we represent in a large measure the feelings and desires of the masses of our people in the State." The memorial continues (we quote from the Montgomery *Advertiser*):

"We beg of your honorable body to keep in mind in dealing with the problems that grow out of our presence, that, as a race, we did not force ourselves upon you, but were brought here, in most cases, against our will; but, nevertheless, we recognize that since being here, we have been vastly benefited. We have gotten habits of industry, the English language, and the Christian religion, and at the same time we have tried, in an humble way, to render valuable service to the white man in clearing the forests, building the railroads, cultivating the lands, working the mines, as well as in many forms of domestic service and in other activities. Our fathers and mothers have helped nurse you and your children, and when the male members of the family were away from home fighting in war that might have meant our continued enslavement, we remained at home, working your farms, supporting and protecting your helpless wives and daughters. When we have been called to perform any duty of citizenship, whether fighting a foreign foe, working the public roads, or any other duty, we have tried to do our best."

"There are those among your petitioners," declares the memorial, "who have persistently urged the negro to learn to trust his future with his Southern white neighbors, and that when the supreme test came he would receive justice at their hands." It concludes:

"We know the task before you is a delicate, trying, and perplexing one. In this connection, we desire to add that, in our humble opinion, while there may be doubt and uncertainty in many directions, one thing is absolutely and unmistakably clear, that nothing that is not absolutely just and fair will be permanently successful.

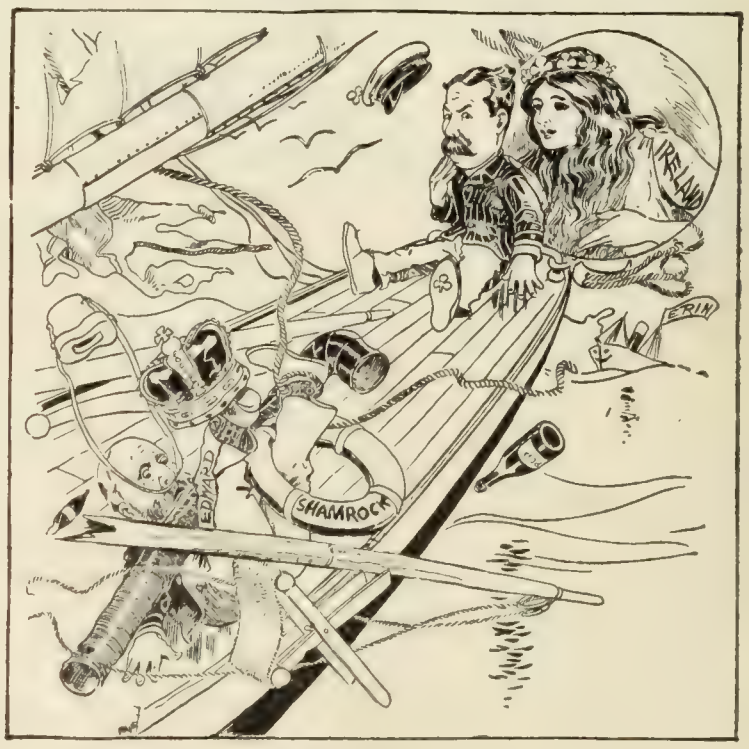
"Any law which will merely change the name and form of fraud, or can be interpreted as meaning one thing when applied to one race and something else when applied to another race will not, in our opinion, improve our present conditions, but may unsettle the peace and thrift of our people and decrease the wealth and prosperity of Alabama."

Just what effect this appeal will have upon the result of the convention remains to be seen. The consideration accorded, however, to Senator Morgan's radical proposals, which prohibit any negro from holding office and leave the voting qualification in absolute control of a court of three registrars in each county, shows that extreme measures are contemplated.

AMUSING, ANYWAY.

"We would be fools if we shut our eyes. We must prepare for war against all nations of Europe."—Senator Lodge, in his Boston speech.

—*The Cincinnati Post.*



NOW WILL HE BE GOOD?

IRELAND: "Demand home rule, Tommy, while we've got him down."

—*The Chicago News.*

## CURRENT CARTOONS.

## SOUTHERN PRESS ON THE PROSPECT IN SOUTH CAROLINA.

THE radical disagreement between Senators Tillman and McLaurin, of South Carolina, as to whether the Democratic Party of that State shall hold to the principles of Mr. Bryan or accept those of President McKinley, is thought by many papers to be a significant symptom of disorganization on the part of the Democratic Party the country over, and of widely opposite views held in the South by men who vote the same ticket at the polls. The opinions of the Southern press quoted in our issue for November 24 showed that there is a strong feeling in the South against the principles advocated by Mr. Bryan, but none of the Southern papers holds out any hope to Senator McLaurin at this time that the appeal to the people will result in his favor. Several papers think that the resignation of the two Senators, one whose term had just begun, the other whose term was nearly over, was totally uncalled for, and the hope is freely expressed that the people of the State will retire both of them to private life and send two new men to the Senate. Governor McSweeney has notified the two Senators that he will not accept their resignations, as he believes that the quarrel does not justify the expense and turmoil of a special state campaign. Senator McLaurin seems inclined to accept the governor's view of the matter, but Senator Tillman declares that the governor does not have the right to decline the resignations. The Philadelphia *Ledger* (Ind. Rep.) and several other papers think that the willingness of Senator McLaurin to postpone the contest to a later date, and the unwillingness of Senator Tillman to do so, show a belief that Senator McLaurin's cause will grow in strength the longer it is before the people. If Senator Tillman's view, that the governor is bound to accept the resignations, is correct, the people of South Carolina will decide the contest between the two Senators in the fall. Mr. Bryan has declared in *The Commoner* that he "hopes and expects to see Senator Tillman win a sweeping victory," and the New Orleans *Times-Democrat* (Dem.) believes that "it can be counted on as certain that Senator McLaurin will be defeated." The Charleston (S. C.) *News and Courier* (Dem.) says:

"The fact that all the Republican newspapers in the country have applauded McLaurin's course in voting consistently for Republican policies, and the fact that he is 'very near the Republican Administration' would seem to leave no doubt as to the quality of his 'Democracy,' and the question which the voters will have to decide is not whether McLaurin bluffed Tillman or Tillman bluffed McLaurin, but whether South Carolina shall be represented by Republican Senators or Democratic Senators.

"Tillman was reelected to the Senate at the last session of the legislature for 'the long term,' and his offer to resign his seat shows that he has not lost faith in the people of the State. It was a very bold thing for him to do and a very safe thing, we believe. It is possible that he might be defeated, but, as things look now, the resignation of McLaurin marks the close of his career as a political force in this State."

BENJAMIN R. TILLMAN.

JOHN L. McLAURIN.

GOV. M. B. McSWEENEY

SOUTH CAROLINA LEADERS.

The Columbia (S. C.) *State* (Dem.) remarks that "the squelching of McLaurin a year ahead of time is certainly something to be thankful for, tho we hardly think it worth an off-year campaign," and adds:

"The situation, with all its complexities and possibilities, is the direct result of Tillman's overweening egotism. McLaurin's issue was not with him specially, but with the Democracy of South Carolina. To that Democracy he had proved faithless. He had not proved faithless to Tillman—for he was elected to the Senate in spite of Tillman and mainly by Tillman's opponents. Tillman, however, chose to narrow down the issue to a personal one and to make it appear that the reelection of McLaurin would be a reflection upon him. Having done this and having brought on an exchange of taunts as to their courage and confidence in the positions they had assumed, it was almost inevitable that the issue should have been joined between them in the way it was. Each is now seeking 'vindication.' We do not think it at all necessary to the political well-being of South Carolina that either should be 'vindicated.' We can not consider McLaurin's amiable personality without considering his political treachery, and we can not consider Tillman's good votes without taking into account his evil words and his ugly record in this State. Our people have the right to demand, and we think they will demand, a wider choice—one candidate, at least, who has sound principles combined with a clean record. The issues are too important to the Democracy of South Carolina to be degraded into a mere personal contest between two men, neither of whom can have unqualified indorsement."

The Macon (Ga.) *Telegraph* (Dem.), another paper of wide influence in the South, and one that has been leading the campaign against Mr. Bryan's influence over the Democratic Party, says: "Now, if the people of South Carolina will in turn give these gentlemen a surprise by retiring both to private life and returning Hampton and Butler to their former seats, that true Democracy of the country which is neither Republican nor Pop-

THE THEATER OF WAR HAS BEEN MOVED.
—*The St. Louis Republic.*

ulistic will turn out and celebrate. Tillman is essentially a Populist. McLaurin is essentially a Republican. There is a good chance now to make a stand in the Palmetto State for genuine Democracy." The Memphis *Commercial Appeal* (Dem.), too, declares that "the hope that South Carolina will do away with Tillmanism and McLaurinism altogether is quite universal," and the Nashville *American* (Dem.) agrees that "it would be to the State's credit if it turned both Tillman and McLaurin down and elected two genuine Democrats." The Nashville *Banner* (Ind.) predicts that as a result of the contest "the differences between the two elements claiming to be Democratic will be emphasized not only in South Carolina, but throughout the whole country." The Louisville *Post* (Dem.) believes that Tillman's triumph would "undoubtedly encourage the radicals throughout the country to more determined opposition to the plan of the reorganizers." The Mobile *Register* (Dem.) thinks that Senator McLaurin may gather a respectable following; but remarks that he "does not appear to the Southern Democrats as precisely the Moses for the occasion." The Baltimore *Herald* (Ind.), however, says: "McLaurin may not win—not in South Carolina—but the progressive ideas for which he is fighting will, in a few years, control the situation in the South, as certainly as that section's development will continue."

## CUBA AND THE PLATT AMENDMENT.

THE rejection by the President and Cabinet of the modification of the Platt amendment, adopted by the Cuban Constitutional Convention on May 29, is viewed as a very unfortunate development in the relations between Cuba and the United States. The Platt amendment (the full text of which is printed at the close of this article) was accepted by the Convention by a majority of 15 to 14, but various appendices and "explanations" were added to it, which, it was claimed, embodied Secretary Root's authorized interpretation of the amendment in his recent conversations with the Cuban commissioners in Washington. For example, the power of military intervention on the part of the United States, as given in the third clause of the amendment, is so far modified, in the light of Secretary Root's alleged statements, as to admit only of intervention in cases where "independence is endangered by outside powers or grave interior disturbances creating anarchy." Moreover, such intervention is not to be understood as supposing either "protectorate or suzerainty." Another important modification of the Platt amendment relates to the cession of coaling and naval stations, as embodied in the seventh clause. This clause is amended to prohibit the United States from using the stations for intervention in the government of Cuba and to restrict their use to the protection of adjacent American and Cuban waters from foreign attacks. The Cubans also demand that provision be made for a reciprocity treaty between the island and the United States. All of these features, it is said, met with the disapproval of the President, as did also the Cuban statement that the action of the United States in this whole matter is "an amplification of the Monroe doctrine."

JUAN GUALBERTO GOMEZ, OF SANTIAGO,
Leader of the Radicals in the Cuban Convention.
Courtesy of *Harper's Weekly*.

Disappointment is expressed by papers of every political belief at this unexpected development, which, it is believed, will have the effect of postponing for some time to come any satisfactory settlement of the Cuban problem. But the New York *Tribune* (Rep.) says:

"The United States has a deep and legitimate concern in Cuba. It has had such concern, for natural causes, for three-quarters of a century. In not a few years that concern has been intensified to acute anxiety, involving heavy costs. In one year it caused us to engage in a most portentous and expensive foreign war. After such experience the United States does not propose to take needless risks for the future. It wants to effect a settlement which will stay settled. The question is not how quickly our control of Cuba can be withdrawn, but how satisfactory and substantial a native control can be put in its place. And no settlement can be lasting and no native control can be satisfactory, unless established upon the sure foundation of those principles for which this country intervened in Cuba three years ago. The Memorial Day which we have just been celebrating should have brought to every heart a renewal of the resolve 'that these dead'—the dead of the Spanish war as well as of the Civil War—'shall not have died in vain.' And the only way in which that high resolve can be fulfilled and the duty of this country in respect to Cuba can be discharged is in inflexibly insisting upon a satisfactory completion of the task for which the President on April 11, 1898, asked congressional authority, and for the performance of which task this country accepted a few days later the dreadful gage of war with Spain. That task is 'to secure in the island the establishment of a stable government capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens as well as our own.' That is the task for which we went into Cuba, and it is to be performed according to our own standards and to our own satisfaction."

The Democratic papers take a very different view of the issues involved. The Kansas City *Times* (Dem.) describes America's conduct in Cuba as a "policy of promise-breakers"; and the Philadelphia *Record* (Ind. Dem.) says: "The true policy of the United States should be, first of all, to redeem the promise recorded in the Teller resolution. Let us do our own duty and

CUBA MAKES A DISCOVERY.
"Why, this isn't a collar, after all; it's a life-preserver."
—*The Minneapolis Journal.*

leave Cuba to do hers. If Cuba shall prove recreant, the responsibility will not be ours, and we shall stand at liberty, under the Constitution and the law of nations, to take whatever measure our safety or our interests would seem to require." The New York *Journal* (Dem.) adds:

"The Cubans have complied with all the requirements [of the Platt amendment], altho they might well have stood on the original promise to which we pledged our honor at the beginning of the war with Spain. They have gone even farther than Congress demanded. They have accepted the Platt amendment not only 'substantially,' but literally, word for word. They have merely salved their pride by adding a little explanatory comment for the benefit of their constituents, putting on record the assurances given them by Secretary Root. If we make that an excuse for refusing to recognize their Government, we shall simply give the world the right to say that we never intended to keep our promises."

The text of the Platt amendment, which was passed by the United States Senate on February 27 and by the House on March 1 is as follows:

That in fulfilment of the declaration contained in the joint resolution approved April 20, 1898, entitled "For the Recognition of the Independence of the People of Cuba," demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect, the President is hereby authorized to leave the government and control of the island of Cuba to its people as soon as a government shall have been established in said island under a constitution which, either as a part thereof or in any ordinance appended thereto, shall define the future relations of the United States with Cuba, substantially as follows:

1. That the Government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes or otherwise, lodgment in or control over any portion of said island.

2. That said Government shall not assume or contract any public debt to pay the interest upon which and to make reasonable sinking fund provision for the ultimate discharge of which the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

3. That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba.

4. That all acts of the United States in Cuba, during its military occupancy thereof, are ratified and validated, and all lawful rights acquired thereunder shall be maintained and protected.

5. That the Government of Cuba will execute, and as far as necessary extend, the plans already devised, or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the southern ports of the United States and the people residing therein.

6. That the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba and the title thereto left to future adjustment by treaty.

7. That to enable the United States to maintain the independence of Cuba and to protect the people thereof as well as for its own defense, the Government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points to be agreed upon with the President of the United States.

8. That by way of further assurance, the Government of Cuba will embody the foregoing provisions in a permanent treaty with the United States.

---

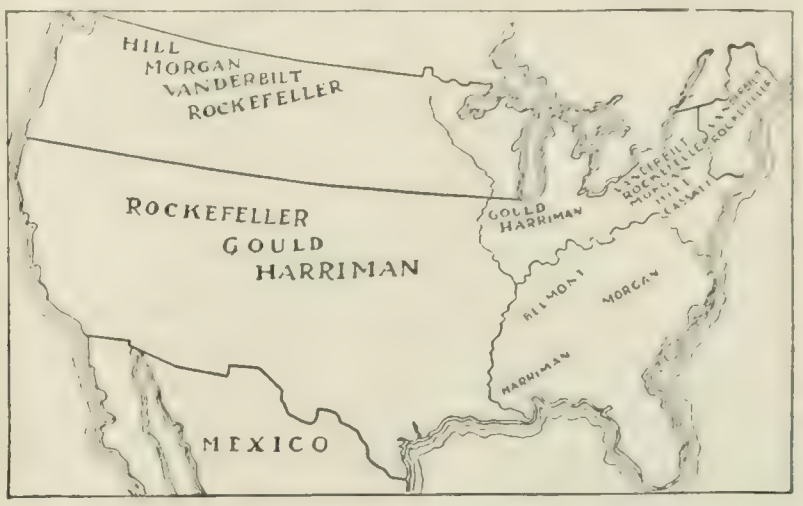
**Trolley Roads as Freight Distributors.**—Surprise has been expressed that the managers of the trolley systems throughout the country have made so few attempts to develop the freight-carrying possibilities inherent in their machinery. "Towns and cities must be fed," remarks the New York *Iron Age*, "and the trolley road, which now connects every city with its suburbs, often for many miles in every direction, offers just the facilities needed for cheap, easy, and frequent communication." It continues:

"The Cleveland and Eastern Railroad, an electrical railway connecting Cleveland with certain populous suburbs, is probably the first to demonstrate the value of a freight traffic as an important source of revenue to a trolley system. It operates about sixty miles of track, and was originally designed exclusively for passenger service. It first discovered an advantage in rendering the people along its extensive lines a service in taking milk to the city and returning the cans. A freight-car for milk was built and run at night. It paid so well that another was added. Then combination cars were built, with passenger accommodations at one end and compartments at the other for light freight and express matter. The requirements gradually grew to include the carriage of coal, agricultural implements, fertilizers, groceries, and general merchandise one way, and milk, vegetables, and all kinds of farm and garden produce the other way. The system is still new, but about one-third the earnings of the line come from its freight service. Incidentally it is benefited by the increase of its passenger traffic both ways. The suburbs it reaches are building up rapidly, and it is making its franchise of great value by rendering the public an invaluable service."

*The Iron Age* predicts that this successful experiment will be widely imitated, and believes that the expansion of the trolley system "will bring about great economic changes of benefit to all classes of society."

## RAILROADS GROUPED BY OWNERSHIP.

A MAP of the United States showing the owners of two-thirds of its railway mileage is given in *The Common Carrier* (April). This paper shows that owing to an understanding or agreement, verbal or written, generally the latter, half a dozen financial leaders control two-thirds of the railway mileage of the



A COMMUNITY OF OWNERSHIP MAP OF THE UNITED STATES.

United States and thus maintain rates. The article, as abstracted in *The Railway Digest*, gives the names of seven or eight men who thus control 108,404 miles of road, and the table of roads, grouped as controlled, is given below. Says the latter paper:

"The writer further remarks that community of ownership will not mean low wages or high rates. Under private ownership men of ability will be well paid. It is the Government that pays modest salaries for responsibility. Railway owners believe with Andrew Carnegie, 'There is no price too dear to pay for perfection.'"

## WILL THE PAN-AMERICAN FAIR BE A BAD THING FOR BUFFALO?

SOME of the Chicago papers, in commenting on the opening of the Pan-American Exposition in Buffalo, express the opinion that the Buffalo business men, who have been so enthusiastic in getting it up, will meet bitter disappointment. The Chicago *Tribune*, for example, remarks that the exposition "reflects credit on the energy, artistic taste, and liberality of the citizens of Buffalo," but adds:

"It does not reflect equal credit on their powers of observation and their business sense. For an exposition is a speculation which never pays the city where it may be held, however much it may benefit those who attend it. For that city it means a few months of feverish excitement and jubilation, and then a reaction and long-continued deadly dulness. A year hence the Buffalonians who are up in a balloon now will be down on the ground, meditating on the unprofitableness of expositions.

"Jealousy does not prompt this prediction. Chicagoans would like to see the Buffalo show a success in every respect. But bitter experience has taught them something. They have had their exposition spree and subsequent headache. They expected that the great doings of the World's Fair year would lift up the city to unwonted and continued prosperity. They have found out their mistake, and, as may have been noticed, they seldom brag of 1893.

"After the World's Fair the real estate market, which had been so lively, suddenly collapsed, and is just beginning to revive. When the crowds of visitors departed, some regions of the city took on the appearance of a deserted village. The 'To rent' signs blossomed out everywhere in the windows of stores and apartment houses. Since 1893 the amended litany of Chicago real estate men has read: 'From panics and from world's fairs, good Lord, deliver us.'

"Chicagoans sinned against the light a dozen years ago, for they had before them the experience of Philadelphia, whose progress was retarded, not accelerated, by the Centennial Exposition. But there are some things apparently which one city can not be taught by the sad experience of others. Unmindful of what Chicago suffered, Omaha had an exposition to advertise and build up that city. The result was just what might have been expected—stimulation, followed by depression.

"While Omaha, in sackcloth and ashes, was sitting amid the ruins of its exposition Buffalo began planning to have one. Nor is that city alone in its unwisdom. Charleston is to have an exposition this winter, and St. Louis is to splurge two years hence.

"Expositions are of value to real estate owners who can sell their holdings at top-notch prices and collect the money. They are not locally useful otherwise. They excite a brief unnatural and unwholesome activity, followed by painful nervous prostration."

### Nearly Four Thousand American Millionaires.

—According to the New York *Herald*, there are 3,828 millionaires in the United States, and in a recent issue it presents a detailed list of their names, classified according to the States in which they live. It says:

"One two-hundredth part of one per cent. of the population of the United States, or one person out of every 20,000, controls about one-fifth of the nation's wealth; that is, 3,828 millionaires out of a population little in excess of 76,000,000 own $16,000,000,000 of the $81,750,000,000 at which our entire property is fairly valued.

"In the first quarter of the century just closed there were not more than half a dozen millionaires in the land, and two only—John Jacob Astor, in New York, and Stephen Girard, in Philadelphia—had sufficient wealth to make them particularly conspicuous. Now we are nearing the 4,000 mark. . . . . .

"In 87 per cent. of the cases our millionaires have built their own fortunes, very many from the very bottom, and a large number on foundations laid by fathers or grandfathers.

"The millionaires have come from all of the great industries—19 per cent. from manufacturing, 16 per cent. from merchandizing, 13 per cent. from real estate, 13 per cent. inherited, 12 per cent. railways and steamships, 10 per cent. banking, 6 per cent. mining, 6 per cent. farms and cattle, and from all other industries 5 per cent."

The Nashville *American* finds the *Herald's* list incorrect, and declares that it would be very difficult to compile an accurate list, for the reason that "men of wealth are not in the habit of informing the public of the amount or value of their holdings." The Kansas City *Star* comments in similar vein, emphasizing the popular tendency to exaggerate the income of a wealthy man. "In considering the income of the very rich," it adds, "it must be remembered that there has been a great multiplication of men in comfortable circumstances. . . . It is only by recognition of the fact that his wealth is a means for social service that the coming billionaire will find safety. If he should attempt to use his power solely for arbitrary and selfish ends, he would make himself an active factor in bringing about a social revolution."

## LETTERS AND ART.

### GEOGRAPHICAL DISTRIBUTION OF OUR SIX THOUSAND AUTHORS.

IT has been said again and again that American literature down to comparatively recent days has been largely the product of foreign writers residing in America or has been confined almost wholly to a little coterie of authors living on the North Atlantic seaboard. In order to decide this question, Mr. George H. Warner, associate editor of Charles Dudley Warner's "Library of the World's Best Literature," has summarized the investigations of Mr. Oscar Fay Adams in the latter's recent "Dictionary of American Authors," covering all the writers from the seventeenth century to the year 1895. Mr. Warner finds that, exclusive of writers of monographs, occasional poems, and magazine and newspaper articles, there have been 6,500 authors of definite books; and that of these only about seven hundred were born in foreign lands—about eleven per cent. of the whole number. This eleven per cent., he says, includes for the most part the writers of the colonial age, who were nearly all born in England. Mr. Warner gives the following statistics (in the New York *Times*, May 11):

"Of these 700 foreign-born authors, England contributed 227, Scotland 86, Ireland 95, Wales 12, and Canada, tho properly American, 45. Other British colonies and possessions furnished only 10. . . . The Scandinavian countries, Denmark, Sweden, and Norway, contributed 15; the Germanic countries, including Austria, 51; Russia 6, Poland 2, Livonia 1, Holland 7, Belgium 4, France 28, Spain 2, Portugal 1, Switzerland 9, Italy 13, Hungary 6, and Greece 3. There are also from Turkey 9, Asia Minor 3, Burma 1, China 1, Ceylon 1, Persia 1, the Philippines 1, and Senegal 1, these latter 9 being suggestive of American origin and transplantation through missionaries or diplomatists or consuls residing in those countries. There are to be accounted for in other ways, 1 from Brazil, 3 from Cuba, 4 from the East Indies, 10 from the West Indies, 4 from Hawaii, and 4 from British Guiana in South America.

"Some of the States have not given birth to a single author, for the very sufficient reason that they have not been organized long enough to do so, and it is also true that literary productiveness is most to be found in settled communities where some leisure from the more material vocations is possible. The six New England States, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, have given birth to some 2,360 authors, or about 37 per cent. of the whole number upon which these figures are based. The five Middle States, New York, New Jersey, Pennsylvania, Maryland, and Delaware, have 2,000, or 30 per cent. of the whole. After having taken out the proportion of foreign-born and those of unknown nativity, we have about 87 per cent. to divide among the States. The New England and the Middle States together have 57 per cent., so that we have left 30 per cent. to be divided among the 34 Southern and Western States.

"Of the Southern States along the seaboard and gulf there are, as might be expected, most in Virginia, some 235 authors of books, and in South Carolina 118, while North Carolina has 71, Georgia has 56, Alabama 28, Mississippi 19, Louisiana 21, and Texas has but 3. In the interior South, Tennessee has 34, Kentucky 70, both being in some respects extensions of Virginia, while Missouri has 26 and Arkansas has 3.

"Of the Western States, Ohio takes the lead, with 174 authors, while Indiana has 55, Illinois 47, Michigan 36, and California 6. All the others combined have 37. The District of Columbia, or the city of Washington, has 42. Before leaving this branch of our subject it may be interesting to observe that of the New England States Massachusetts has 1,243, or within a fraction of 20 per cent. out of the 37 per cent. in the whole six States, tho that State lost a large number of the writers of her early period by the loss of Maine and New Hampshire, once a part of her territory, and which in a perfectly definite statement would remain to her account. But it is a curious fact that, tho Boston was long the literary city of the United States and Harvard College the radiating center of literary life, it is the State of Connecticut that has the credit of having had born within her borders the largest number of writers, in proportion to her population, of any State in the Union, with her 430 authors to (at the present time) 750,000 people.

"The State of New York had 1,060 writers born to her, making 17 per cent. of the total in the country, and nearly as many as Massachusetts; but her population is three times as many, and, compared with Massachusetts, her authors' birth-rate would be only about one-third as large, and only about half as large as that of New England considered as a whole. New York is now the largest publishing city, and no doubt the place of greatest literary activity and productiveness.

"Pennsylvania comes next in the production of literary men, with 613 names, nearly 9.5 per cent of the total. The population of Pennsylvania is four-fifths that of New York State, so that the proportion of authors is much smaller, notwithstanding the fact that in the early part of our history the city of Philadelphia was the first and largest publishing center, and by far the largest republishing center of the country, more English books having been printed there than in any other city until at length Boston became the principal publishing city, only recently yielding to New York in that respect. It may be remarked in passing that Chicago is a printer of immense quantities of books, tho not, generally speaking, of the first literary class."

### TENDENCIES OF CONTEMPORARY ANGLO-AMERICAN LITERATURE.

GENERALIZATIONS concerning current literature are somewhat the fashion of the hour; but on account of the ease with which they are made by the literary novice, mere ripples upon the surface of public taste are not unlikely to be taken for new and deep currents of human thought. A more cautious and penetrating consideration of contemporary tendencies is given by the editor of *The Dial* (Chicago, May 16), who has spent a lifetime in close touch with literary interests. In referring to the misleading inductions often drawn from the numerous "epoch-creating books," so familiar during the past few years, and notable chiefly for their great sales, the writer says:

"It is not so very long ago that the American public was reading and talking 'Trilby,' with such frantic enthusiasm that one would have thought a new literary era had dawned. Many were the seeming-wise reflections of which this entertaining story was the innocent provoking cause, many were the hopes, or the fears, for our literary development that took their starting-point from the vogue of this particular piece of fiction. All this discussion was the work of the amateur, and we now realize how absurd it all was. The novel in question is clean forgotten to-day, and with it the whole argument based upon its success. Any one can see now what the practised critic saw all the time, that there was no more significance in the astonishing vogue of 'Trilby' than there had been a score of years earlier in the equally astonishing vogue of 'Helen's Babies.'

"In point of fact, when the philosophical student of literature confronts the question of literary tendencies, he sees two things with absolute distinctness. One of them is that the study of tendencies, of movements, of the transformations of a nation's idealisms, is the most important thing about the history of any literature, the only thing, indeed, that invests a literature with real significance for the history of culture. If he can not discern the evolutionary process at work, he misses all the salt and savor of his subject, and his conclusions are empirical or merely subjective. The other thing is that this process of development, this history of movements and transformations, requires for its proper observation a considerable period to be taken into survey, and a considerable detachment, in point of time, from that period. The one wellnigh impossible task is to trace the direction of the evolutionary process in one's immediate surroundings, or to make any prophecies for the future save those that are the logical outcome of some tendency that has been in operation long enough to become clearly discerned. . . . . .

"A few generalizations, however, concerning the tendencies and characteristics of our contemporary English literature it seems reasonably safe to make, and one of them is that we are living in a critical rather than a creative period. As the few

great survivors of the earlier age one by one pass away, we feel acutely conscious that the places are left unfilled. The season of analysis and introspection is clearly upon us. In such a period as ours, versatility, good taste, and excellence of workmanship, and the number of good writers, as distinguished from the great masters, is astonishingly large. Sometimes they spring up in the most unexpected quarters, and anticipation flutters at the thought of a possible resurgence of the creative impulse. But we must not deceive ourselves into thinking that our bustling literary activity is swelling to any appreciable or noticeable extent the stock of the world's masterpieces. Our literature of today is various and entertaining, it has taste and even distinction, but it is not a literature adorned by the opulent blossoming of genius. If we may venture, after the preceding disclaimer, to indicate any distinct tendencies in the English and American literature of the past few years, we would say that it has moved, and is still moving, in the direction of artistic freedom, of cosmopolitan interest, and of broadened social sympathy. It no longer suffers, for example, under the reproach of being produced with an exaggerated deference to the Young Person. To place under the ban whole tracts of human life, to refrain from dealing with whole groups of the most important of human relations because their treatment gives offense to immature minds, is a procedure not justified by the larger view of what literature means. This lesson we have learned of recent years. If we take into account the newest of new women and the youngest of emancipated young men, it may seem that the lesson has been too well learned; but, on the whole, our literary art has gained strength with its newly acquired freedom. Our literature is also measurably freed from its old-time provincialism of outlook. We have seen established for the mintage of the mind a broader compact than any Latin union; if an idea have but intrinsic value, its currency does not now need to be forced in other countries than that of its origin. This, too, is a great gain, and will make the next creative period all the easier of approach. But the greatest gain of all, to our thinking, is the awakening of the new social sympathy that characterizes our recent literature. We hear a good deal of 'democratic art,' and much of what we have thus far got is distressingly crude and dull with didacticism. But the future of our race belongs to democracy, and literature must make the best of this inevitable movement. That it will eventually learn how to shape the idealism of democracy into forms of convincing beauty we make no doubt, and the signs are not wanting that such an issue is near at hand. . . . The writings of Count Tolstoy, or, to be more exact, the earnest attention which they have received during the past few years, offer impressive example of the power of the social motive as embodied in the forms of fictive art to make itself felt as a force in literature. Here is a writer whose whole genius is spent in an impassioned appeal to purely democratic sympathies, and, as the years go on, his figure assumes grander and grander proportions, and his utterance seems to become more and more invested with the attributes of prophecy."

---

**Mr. Goodwin as Shylock.**—The leading New York dramatic critics are not at all enthusiastic over Mr. Nat C. Goodwin's new ambition to leave the comic muse and to impersonate Shakespeare's great Jew. Mr. William Winter, however, gives him the credit "of having tried to do an ambitious and difficult thing, and to lift himself to a higher plane than he has ever yet occupied." Mr. Winter writes (in *The Tribune*, May 25):

"His performance served to show that he lacks self-knowledge and has incorrectly estimated his powers; but, to present 'The Merchant of Venice' is to set forth an exceedingly beautiful play—charming in story, deeply passionate in feeling, potent in dramatic suspense, wonderfully harmonious in the adroit blending of pathos and humor (the tragical and the comical), exceptionally clear and direct in action, and glorious with poetic eloquence—and the wish is both earnest and general that his enterprise may be rewarded with practical success. Great acting is not expected from Mr. Goodwin or Miss Maxime Elliott, and, even with an inadequate Shylock and a superficial Portia, Shakespeare's vital, spontaneous, radiant, and exquisite comedy is heartily welcome. . . . . .

"Mr. Goodwin did not rise to the tempestuous height of Shylock, and his achievement gave no indication that he ever can rise to it. Some questions are settled by nature, and it is not injustice to the actor, while honoring his worthy ambition, to record this judgment. For it is one thing to 'get through' the part of Shylock, and another thing to act it. Experience has shown that no actor can really embody Shylock who is not, primarily, qualified by the possession of stalwart and impressive individual character, predominant and commanding force of fiery intellect, and great inherent power of tragical expression. Among the anecdotes of Napoleon there is one which declares that a person who had concealed himself in a picture gallery for the purpose of shooting that warrior was so much frightened, on beholding his terrible countenance, as to become temporarily paralyzed. There must be something authoritative and formidable in the man himself who would impress the beholder as Shylock. No person of weak constitution, slender fiber, finical makeup, and puny manner can ever create an illusion in this part."

*The Sun*, comparing Mr. Goodwin with the two most memorable Shylocks—Edwin Booth and Sir Henry Irving—remarks that by contrast the new attempt at the part was "faint, dim, barely discernible." "Of course," the critic continues, "Mr. Goodwin could not rise to Booth or Irving heights, but it did seem strange that he did not rise at all, except to melodramatic noisiness."

---

## LITERARY DINNERS AND THE "HAPPY FAMILY" OF AMERICAN AUTHORS.

THE prevalence of dinners and banquets given to well-known American authors by their admiring fellow craftsmen during the past winter has attracted some attention among literary meteorologists. Mark Twain, Mr. Edmund Clarence Stedman, Mr. Hamilton Wright Mabie are among the well-known writers who have been wined, dined, and fêted, and have heard their praises sung by enthusiastic friends. The contrast between all this and the spirit of jealousy, abuse, and libel which has prevailed in other times among literary men is thus rather wickedly commented upon by an editorial writer in the New York *Commercial Adveriser* (May 14):

"Never before was there anything like this outburst of mutual affection among authors. It looks more like a literary movement than most of the doings critics call by that name, and there ought to be some sort of a lesson in it. The guests of honor have differed somewhat in appearance and quality, but there has been no difference whatever in the kind of remarks that were made to them. 'Gentlemen, we have with us to-night one who,' and thereupon followed in every case the language that most men have to die to deserve. And the guest, instead of capering around the room with the joy of it, would disingenuously arise and disclaim it all, and retort with a counterblast of praise for all his praisers. This would draw to their feet six more men, mighty in eulogy, indefatigable men with lynx eyes for new beauties, who ceased not till every virtue the size of a pin's head had been comforted. And they praised him and praised each other and the presiding officer praised them all. It was the way the Augustan poets should have talked to one another. Only they did not. It ought to have happened in the age of Pericles, but there is no record of it. And this is the class of men they used to call jealous and irritable! . . . . . .

"It may not be a good thing for the art itself, but it brings peace and prosperity to the artists, and on the moral side of it is exemplary. The highest contemporary honor is within the reach of any man who will be persistently good and kind, irrespective of natural endowments. It may not be so entertaining to us outsiders as if there were an occasional squabble; or as if once in a while they talked of each other as Ben Jonson of Shakespeare or Carlyle of Coleridge and Charles Lamb. But we ought to be thankful that our authors are better men if not so talented. As a morally minded people it is our plain duty to be glad that rewards are bestowed for qualities of the heart rather than for the mere intellectual graces. And as criticism dies away and the volume of praise increases, and as the bonds grow thicker and the mutual affection more miscellaneous; and as the time draws near when the literary man will have to do nothing at all but advance from dinner to dinner, we should try and think it is

all for the best. Family affection is beautiful, tho from an outside point of view it sometimes seems as if they were overdoing it."

## SCOTTISH UNIVERSITIES AND MR. CARNEGIE'S GIFT.

MR. ANDREW CARNEGIE'S princely gift, first reported as $10,000,000 and later as $7,500,000, for the purpose of promoting higher education in Scotland, has attracted attention to the important but little-known university system of that land. A writer in the Boston *Transcript* (May 22) gives the following account of this system:

"It may seem surprising that a university which antedates Harvard by two hundred and twenty-five years should be in any need of endowments; but the University of St. Andrews, which dates from 1411, led for years little more than a mere nominal existence. The times of the disestablishment of the Roman Catholic Church, which founded it, were not favorable to the growth of higher educational institutions. In 1512 it was spoken of as almost lying extinct. Alexander Stewart, the natural son of James IV. of Scotland, was appointed archbishop of St. Andrews in 1510, and altho only eighteen years of age, he had just turned his brilliant mind to the development of the university when he was called away and went down by the side of his father on Flodden Field. Even so late as 1773, in Dr. Johnson's 'Journey to the Western Isles,' the University of St. Andrews is spoken of as 'pining in decay and struggling for life,' and while Dr. Johnson says that no one would have been the worse if the university had died two hundred years before, he laments its condition at that time as a melancholy and pathetic spectacle. It must not be inferred, however, that the present condition of the four universities of Scotland, St. Andrews, Glasgow (founded 1450), Aberdeen (1494), and Edinburgh (1582) is anything akin to poverty. Splendid buildings, considerable endowments, fairly liberal scholarship, and government support have made the universities great educational institutions. St. Andrew's receives from Parliament about $54,000 per annum; Glasgow, $108,400, and the University of Edinburgh, $129,350."

Why, then, it may be asked, should Mr. Carnegie's gift be necessary? The writer replies that there are two reasons; first, that in Scotland private endowments are not large, while the expenses of a university education are somewhat higher than in the United States; second, that most boys and girls in Scotland must work their own way, and will be ill-spared from home. The writer continues:

"In Scotland the boy who goes to college from some country town goes because his local tutor has prevailed upon the boy's parents, after much persuasion, to make the sacrifices necessary to provide their son with a liberal education. Likely enough he is some 'Geordie Hoo' who has stood 'feirst in the hoomanities' in his home school, and who is the apple of his tutor's eye. And how many pathetic sacrifices the giving of a college education to such a boy entails? Longer hours of work for father and mother, older clothes for them that their boy may appear not too badly before his fellows in college, the raising of the necessary sum to pay his tuition, the final long and earnest service of prayer, the tearful 'God be wi' ye, lad,' the last handclasp, and the boy is off to college, determined to win his scholarship that the sacrifices at home may not be too great. Once launched upon his university career, the poor Scotch lad must show the stuff that is in him. There are no great dormitories; there is no Memorial Hall, with its cooperative system of reducing expenses. The lad goes to a boarding-house, where he gets a room for maybe four shillings a week with some roommate, this sum including the cooking but not the providing of meals by his landlady. His food is bought by the landlady and served, cooked, in his room. For breakfast he has oatmeal porridge with syrup, or, if he can afford it, with milk and sugar, bread and butter, and a cup of tea. At noon he has a meat soup with perhaps a rice pudding, sometimes fresh herring and potatoes, but more likely 'collops.' This dish is made from the scraps of beefsteak left in cutting, chopped fine, and cooked and served with potatoes. At night he has bread and butter with a cup of tea, and if he is not too poor, a bit of jam is furnished with his bread. There is a pathetic story of a Scotch boy who went to one of the universities with a trunkful of home-raised oatmeal, leaving at the end of the term with an empty trunk, but with a scholarship in his pocket. Of such stuff are heroes made. . . . . .

"It is perhaps one of the most significant events of the opening century that the private benefaction of one man should open a new era for education in an entire country. Strong indeed must be the ties which bind one who has risen to fame and fortune in another country to the land of his birth so strongly as to make him the leader of such an educational revolution. And the best of the gift is that its permanency is assured, and it will go on gathering force as it rolls through the ages, stimulating the universities to renewed activity, broadening their work, and placing the advantages of the highest educational culture within the reach of the lowest aspiring lad of 'the land o' cakes.'"

## UNIQUE VALUE OF THE FIRST FOLIO SHAKESPEARE.

THE announcement of a new photographic facsimile edition of the famous First Folio of Shakespeare (printed in 1623, and the first collected edition of the plays) has attracted world-wide interest. This new edition is to be brought out by the Clarendon Press of Oxford, and the preface, which is to be written by Mr. Sidney Lee, author of the recent "Life of Shakespeare," is to contain a complete "census" of all the known extant copies of the First Folio. In connection with his appeal to all owners of this precious volume for information concerning their copies, the London *Daily News* says:

"At present there is no precise assurance of the exact number in existence. In 1623 Isaac Jaggard—whose name thereby attained an immortality to which his other deeds scarcely entitled him—struck off five hundred copies of the first collected edition of Shakespeare, under the shadow of old St. Dunstan's Church, in Fleet Street. Most of them have perished. Some have gone the natural way of popular books, being literally thumbed to death. Is it not Steevens who has recorded the pleasure with which he used to find flakes of pastry between the leaves of the First Folio? No doubt the cynic is gratified to think that our ancestors read Shakespeare over their breakfast tables, where their degenerate children are content with the daily papers; but such usage does not tend to a book's longevity. Nowadays we are more careful; even Wordsworth would hardly have ventured to use the butter-knife on a First Folio, if he had owned one, tho we know of a living man of letters who underlined all the favorite passages of his own copy in red ink. Perhaps the commercial instincts of the average Briton will save future copies from such indignities; there is no trifling with a book that has been known to fetch £1,700—tho Mr. Quaritch confessed how that price was engineered—while even the somewhat damaged copy which was on view this week in that fascinating window in the Strand was ticketed at 300 guineas.

"It may seem odd to the modern reader that Mr. Lee should be so anxious to make a list of all existing copies of the First Folio. The truth is, of course, that they are all of interest to the student of texts, and it is important to know where they are to be seen and collated. Nowadays each copy in an edition of 500 is expected to be an exact reproduction of all the others. But in the seventeenth century printing was a much slower and more tricky, as well as more artistic business, and nearly all the copies of the First Folio—as of other contemporary works—present slight differences from one another. The press worked slowly, and alterations were often made in the interval between pulling one set of sheets and the next; some errors were corrected, others crept in. Binding was done haphazard, and the probable result is, as the Cambridge editors point out, 'that no one copy exactly corresponds with any other copy.' As the First Folio is not only the sole original authority for seventeen plays, but the best guide to the text of nearly all the rest, these trifling differences become as vital as they would be—to compare great things with small—in a modern 'Bradshaw.' The First Folio itself is out of most students' reach. It was twice reprinted '*verbatim ad literatum*,' tho even Booth's edition is hardly trustworthy

enough for final appeal. Staunton made a photographic reproduction which is now so scarce, while that of Halliwell-Phillips is so unreadable, that we hope that the Clarendon Press will make the number of their edition large enough, and the price sufficiently low, to satisfy at least the next generation or two of Shakespeare students, 'from the most able to him that can but spell.'"

## THE "COUNTY LIBRARY."

THE surprising extension of the public library movement in America is commonly regarded as one of the most striking and important phenomena of the past half-century. In *The Forum* (May), Mr. E. I. Antrim, a young American writer, gives some remarkable figures of this growth. He says:

"Fifty years ago, after an existence of one hundred and eighteen years, the American library had made comparatively little progress. In the middle of the century just closed there were only some 600 libraries, most of them leading a precarious existence, and with an aggregate total of not many more than 2,000,000 books. The glaring contrast between the early fifties of the last century and the present day is manifest when we mention the fact that America has to-day four libraries which have more books than had all the libraries of the country half a century ago. To-day we can boast of nearly 8,000 libraries, many of which are models of architectural beauty and skill; and the number of volumes contained in these 'secular temples' is almost 50,000,000. Besides, we have, at the beginning of this new century, two flourishing library journals, each of them a product of the last fifty years; three well-equipped library schools with courses ranging from one to three years, and already having 500 graduates; two national and many State and district library associations; library commissions in seventeen States; traveling libraries, the outcome of a movement scarcely a decade old, in forty-two States; and traveling pictures. Other innovations, all of comparatively recent origin, are special rooms to accommodate children and the blind, library advertising, cooperation of librarians with teachers of the public schools, access to shelves, cooperative cataloguing, and interlibrary loans and exchanges."

But of all the great developments of the library extension movement, one of the most far-reaching in its social effects, thinks Mr. Antrim, is a recent experiment that has been made in Ohio. In 1898, the legislature of that State passed an act which made it possible for the heirs of the late Mr. J. S. Brumback to set aside a portion of his estate to be used in the erection of a "county library," which the county commissioners are to bind the county to maintain by public taxation. The Brumback Library, dedicated and opened to the people of Van Wert County, Ohio, on the first day of the new century, is America's first county library. "That other counties of Ohio and the counties of other States will imitate the example of Van Wert County in the establishment of county libraries," he says, "seems certain from the very great interest that the Brumback Library is awakening in the county." He continues:

"The admirable feature of the Brumback Library is the fact that it is a county library, its privileges being extended to the people of the country and of the town and city alike. If we look into the history of the philanthropies of our nation, we shall find that they have almost exclusively benefited the people of the town and city. 'Who has done anything to make life happier, better, and sweeter on the farm? The reports of our recent decennial census inform us that during the past decade thousands of people have migrated from the country to the town and city. What has been the result? Unhappily it has been that many of the best farm districts to be found anywhere in the country have to-day fewer people than they had ten years ago, altho our nation has made, during the past decade, a gain of over ten millions. . . . . .

"The method adopted by the Brumback Library to bring its books to all parts of Van Wert County is easily explained. The library itself—which represents a value of $50,000, receives an annual income of fully $6,500, and has a stack-room capacity, when all available room shall be used, of 100,000 volumes—is located in the city of Van Wert, the county seat of Van Wert County. Fortunately, this city is located in the center of the county, which contains in round numbers 275,000 acres and has a population of nearly 35,000. Besides the central library there are ten branch libraries, which are so situated that every resident of the county is within easy access of the library itself or of one of its branches. The ten branches have a unique feature in the form of what may be called a traveling-library system, and are also in direct communication with the central library. The ten branch libraries are placed in the more important stores or offices of the villages of the county, where they are excellently managed, by virtue of the fact that those having charge of them are given nominal salaries.

"To start the traveling-library system, the library trustees purchased 1,000 books, most of them entirely new, which were sent to the ten branch libraries, 100 to each branch. After keeping its 100 books two months, each branch sends them to one of the other nine branches, and receives a second 100 from one of its neighbors to take their place. So the books pass from branch to branch until each branch has had the thousand books, when they are returned to the central library, and catalogued. In the mean time, another 1,000 books have been purchased and put in readiness to repeat the experience of the first thousand.

"I have already said that the branch libraries are in direct communication with the central library. By this I mean that all persons securing books from the central library through any of the branches are subject to no other rules than those imposed by the central library. Cards can be had from the central library only; but persons holding cards may secure books anywhere in the county. The more important papers of the county have published lists of all the books contained in the library, and continue to publish the titles of new books as soon as they have been catalogued.

"During the few months since the Brumback Library opened its doors to the people of Van Wert County it has been conclusively proved to be a very gratifying success. Unusual interest is manifested, and books go every day to readers in even the most remote townships."

## NOTES.

GERMAN book publications in 1900 numbered 24,792, according to the *Hochschule-Nachrichten* (March). The largest increase is in works on jurisprudence and political science (from 2,313 to 2,599), due largely to the new code introduced in January of last year. Publications on natural sciences and mathematics have increased from 1,233 to 1,390. In all the other classes increases are noted except in works on military science and "sundries."

A NEWSPAPER story has lately gone the rounds to the effect that the celebrated Correggio frescos in the church of San Giovanni Battista, in Parma, were almost ruined. Thousands flocked to the church and found that the frescoes, which represent the Transfiguration, were more distinct and beautiful than ever. We translate from *The Staats-Zeitung* (April 7) the following explanation of the canard: "In repairing a crack on the dome it was discovered that the frescos were covered with smoke and dust. An expert was therefore engaged to clean them. Now in Parma, there lives an art critic who has written volumes on Correggio and who pointed out that the peculiar shadow which covered the 'Transfiguration' was due to Correggio's method of preparing the surface. He was naturally indignant on seeing a vulgar restorer rub off this precious shadow with a piece of bread. He telegraphed to the minister of fine arts and wrote to the journals of Rome and Parma about the destruction of the frescos."

IN the death of Dr. Fitzedward Hall, an American by birth, but for the larger part of his life a lecturer in an East Indian university and a resident of England, it is generally admitted that both England and America lose one of the most learned modern English philologists. Dr. Hall is chiefly known here through his frequent and lengthy communications to *The Nation*, in which he poured forth the vast stores of his erudition in reference to the history and use of English words. Mr. Ralph Olmsted Williams, one of the leading American philologists and lexicographers, thus writes of Dr. Hall in *The Dial*: "It is not necessary to enlarge on Dr. Hall's attainments, his enormous industry, the breadth of his reading, the acuteness of his perceptions, the subtlety and truthfulness of his distinctions. Nobody, I suppose, has ever examined his printed work in English without astonishment at the mere labor that produced it. Its solid value is unquestionable,—in fact, incomparable. Dr. Hall was the first to show how questions of good and bad English (to refer to a single line of his pursuits) must be studied in order to reach safe conclusions. If anybody ever got a slight and temporary advantage over Dr. Hall in discussions of this kind, it was because he had learned the art from his master, Dr Hall himself. It is no wonder that Dr. Hall's authority became almost papal. I have spoken of his acuteness and subtlety. He did more than anybody else,—more perhaps than all others,—in bringing to the attention of American readers obscure, unsuspected differences in sense between American and British uses of the same words."

## SCIENCE AND INVENTION.

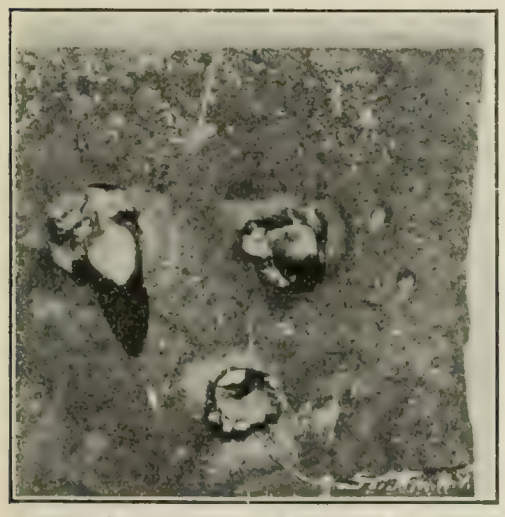
### A REMARKABLE EXPLOSIVE.

GOVERNMENT tests of a new high explosive—Maximite—have brought out during the last month facts of great importance and significance. "No such results," says *The Scientific American*, in an editorial comment, "have hitherto been obtained at any proving-ground, either here or in Europe." The

TWELVE-INCH ARMOR-PLATE AND SUPPORT, BEFORE FIRING 12-INCH ARMOR-PIERCING SHELL, WITH FUSE, CARRYING 23 POUNDS OF MAXIMITE.

new explosive, we are told, is far more powerful than wet gun-cotton, has an explosive value equal to that of nitrogelatin and picric acid, and not only can be fired from powder guns at the highest velocity with safety, but will withstand the far greater shock of penetrating any armor-plate that the projectiles themselves can get through. These are qualities that may enable it to revolutionize warfare. The inventor, Mr. Hudson Maxim, has already claimed great things for his explosive, as readers of these columns will remember, and his claims now seem to have been by no means groundless. We quote from the paper already mentioned some additional particulars of the tests:

"The Maxim system, which is named after the inventor of the new explosive, Hudson Maxim, seeks to provide a high explosive which can be loaded into a service armor-piercing shell, and, on account of its insensitiveness to shock, can be carried through any thickness of armor that the shell can penetrate, and be exploded by a time-fuse at the rear of the plate.

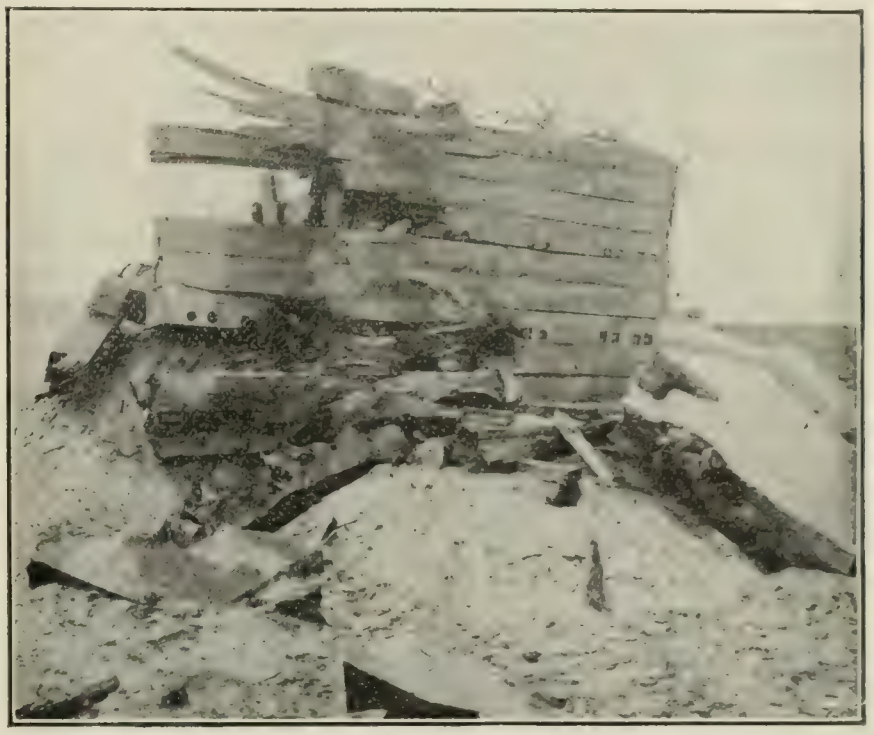


3-INCH PLATE WITH 6-POUNDER SHELLS EMBEDDED WITHOUT EXPLODING.

"The accompanying photographs show results of tests with Maximite, which have been going on for about a year at the government proving-grounds at Sandy Hook. The most important of these results have been attained during the last three weeks, and this is the first time that the data have been given to the public. Altho the exact composition of Maximite is a government secret, we may say that it is a picric-acid compound, consisting mainly of a picrate. Its products of combustion are almost entirely gaseous, and as the heat developed on detonation is very great, it possesses, as the result of its high gravity, a very high explosive value. Some of the qualities of the new compound are remarkable. It may be fused at a temperature considerably below that of boiling water, namely 174° F., as against 252° F., the fusion-point of picric acid. If heat be applied to the explosive, it first melts and then evaporates, until the whole of it has disappeared. A valuable feature is that it is impossible to heat Maximite rapidly enough to produce an explosion. Set on fire in the open, it burns like pitch."

The tests as described in this article showed that an armor-piercing projectile containing Maximite can be fired completely through a twelve-inch nickel-steel armor-plate without explosion by shock, and that when such a projectile is fitted with the proper fuse it can be caused to explode precisely when it is passing through the plate, thus blowing the latter to flinders. The trouble with high-explosive shells has usually been that they explode by shock on the face of the armor, thus doing little damage. The following quotation shows the difference between the old and new explosives:

"Something like half a dozen six-pounder armor-piercing shells filled with Maximite and without a fuse were fired, in competition with shells similarly filled with fused picric acid, against plates of varying thickness. The picric acid detonated on impact when fired at a plate 1.5 inches in thickness, while the Maximite shells, of course, did not explode. The Maximite



WRECK OF 12-INCH PLATE AFTER PENETRATION AND EXPLOSION OF 12-INCH SHELL.

shells were then fired at a plate three inches thick, some of them passing through and others striking in the plate. The accompanying photograph shows the points of two of these shells, one just through the plate, and the other about half-way through. None of the Maximite shells explode, and they still remain in the plate, filled with the explosive."

The value of an explosive that will not explode when and where we do not wish it to explode, and that can be exploded with violence when and where such a result is desired, is evident. If these tests are to be regarded as conclusive, the United States Government is to be congratulated.

---

**The Fate of Niagara.**—The news that the Niagara Power Company is to develop its work on the Canadian side of the Falls has called forth expressions of disapproval from those who would leave the cataract without the touch of human industry. These persons are rebuked by *The Electrical World and Engineer* in an editorial note. It says:

"As a matter of fact, there is an awful exuberance of rhetoric over the 'destruction of the Falls,' and those who are trying to reclaim part of the energy that has been wasted for years have

to endure no small amount of obloquy. It is, of course, true that some of this utilization is unnecessarily and sinfully ugly; but it is not worse than nature often wreaks on her own domains. Of the later plans for getting power from Niagara, away from its finest scenery, it can only be said that they are both scientific and preservative of her beauty. In reality, a stiff wind up the gorge does more to keep the Falls dry than man will be able to do in the next fifty years; and God Himself in one frost does more to break down the cliff over which the river plunges than man can do in a thousand years. The present work, indeed, by diverting part of the water, is tending to preserve the Falls, a view of the subject we venture to commend to *The Outlook* and its contributor, Miss Hartt, to whom we venture to deny a love of natural grandeur and scenic beauty in anywise superior to our own."

*The Electrical Review*, discussing the same subject, says:

"It has often been asked lately whether the people of the United States and Canada can afford to support Niagara Falls as a spectacle, or whether it is not better to utilize all of the water of the great cataract for power purposes. This is a question that will doubtless answer itself in time. But to the engineer looking ahead and seeing the prospective wants of a great and increasing population and viewing the waste of nature's energy at Niagara there can be but one answer. For to-day, at least, we have both the cataract in its practically unimpaired beauty and the power-house and factories. Who knows but that our descendants of no remote generation may see only the power-houses?"

---

## THE METHOD OF EVOLUTION AND THE NEW THEORY OF HEREDITY.

THERE are two very different questions connected with the problem of organic evolution, the question of fact and the question of method. If we conclude that present species have descended from earlier species, we must then endeavor to learn what laws and forces have been involved in the process. In a recent work on "The Method of Evolution," Prof. H. W. Conn, of Wesleyan University, tells us that there is very little disagreement over the first question among scientists to-day. Almost all biologists and geologists believe that our modern species of animals and plants have been derived from earlier species by descent. But while there is this unanimity upon the question of fact, it appears that upon the question of method there is to-day greater uncertainty of opinion and greater confusion than at any previous time. The latter, however, is, we are told, the really important and significant question. Says Professor Conn:

"If, therefore, we are to find the method of the origin of species, and thus explain organic evolution, we must discover some force or forces which may fill the place held by human intelligence in the designing of a piece of mechanism—the photographer's camera, for example. The laws of optics and physics no more explain the origin of the eye than they do the origin of the camera. Intelligence explains the adaptation of the parts in the one machine. What accounts for the same phenomena in the other? Every animal and plant is a complicated machine with many parts delicately adapted to act in harmony. Intelligence manipulates natural forces to build a steam-engine. What directs these same forces to build the natural machine which we call the organism?"

One answer to this question was offered by Lamarck at the beginning of the present century. He advanced the theory that by use animals could strengthen any part and increase the size of that part. Conversely, if the part were not used, it would diminish in size and efficiency. He assumed that these effects were inherited by subsequent generations, and *use* and *disuse* became the great factors in producing the evolution of organs. A more comprehensive attempt was made to answer the question by Charles Darwin. Upon his theory, known now as that of natural selection, is based all later discussion of the method of evolution. The theory is a chain of five links, each fundamental to it and lying at the bottom of all attempts to determine the method of evolution whether in accordance with the views of Darwin or with those of later scientists who have tried to solve the problem. These links are the Prodigality of Nature, or reproduction; The Struggle for Existence; Variation, or the impossibility of finding two individuals of any species that are exactly alike; the Survival of the Fittest; and Heredity. Of the laws and forces controlling each of these links (discussed at length in the book) those governing heredity have in recent years led to conclusions which are interesting and distinctly revolutionary. They are conceptions of a kind to greatly modify our ideas of morality. Many theories have been advanced to explain heredity, but the one that has made the greatest impression upon science is that suggested by Weismann in 1883:

"It consists essentially in the supposition that the basis of heredity is a material substance which is handed down from genation to generation, and which is named *germ plasm*. This material is carried from age to age in the reproductive organs of the individual. The individual is only the result of the unfolding of the potential powers of a bit of this germ plasm, and, once developed, he carries the rest of this precious material around with him to hand it down to his offspring. While in the individual, the germ plasm increases in amount, but he can not change its character. It is entrusted to his keeping, but no peculiarities which he may develop can affect it, and hence acquired characters can not be transmitted to his offspring. . . . The environment of the individual, since it affects the body but not the germ plasm, can not affect inheritance, and hence plays no direct part in evolution. . . . Lastly, it is seen that this theory has especial effect upon our conception of *human* evolution, forcing us to assume that man, so far as concerns his innate character, is not advancing by civilization and education, and thus requiring a very considerable modification of our previous conception of man's relation to education and moral responsibilities."

The deductions arising from the acceptance of the Weismannian theory, and the full consequences of it, are startling. It is much more than a simple theory of heredity, since it involves the whole law of progress:

"Holmes has tersely expressed that belief in the oft-quoted expression that a child's education ought to begin one hundred years before he is born. By this is, of course, meant that, in order to produce a child with proper inherited characters, his parents must begin training for it, and even his grandparents, and, unless they live the proper kind of life and become properly educated, the inheritance of the child will suffer. But plainly, in accordance with Weismannism, this does not follow at all. Such an education of the ancestors would simply produce in them certain acquired characters, and, since these are not inherited, this previous training would not in the least affect the child, except so far as it might cause the parents to lead a different kind of life and make them likely to give the child a better education. The child's education begins only *after* he is born, and the education of his parents has no effect upon the characters which they transmit to their offspring. . . . We have taught that if a man acquires an appetite for alcohol he is likely to transmit that appetite to his later-born children. But this again is a mistake, if this new theory of heredity is correct. An acquired appetite is an acquired character, and can not be transmitted by heredity."

In still another line do we see this theory resulting in surprising conclusions. Most of us have tacitly assumed that civilization has elevated man, and that under its influence we are slowly but surely gaining, not only greater intelligence, but greater mental attributes.

"But here, too, we find that the new theory demands a complete modification of our views. Civilization and education are external and not internal, extrinsic and not intrinsic forces. . . . Civilization has changed man's surroundings, but has it changed the *man*? . . . Of course Sitting Bull was inferior to Lincoln. But if you could have given Sitting Bull the advantage of Lincoln and had required Lincoln to grow up in a savage community with only a savage education, who would venture to say that the intelligence of the Indian would not have shown forth as the

statesman, while Lincoln would have been simply a savage chief? Was not the difference between them one of tools and opportunity rather than one of actual mental power. . . . In accordance with the new theory of heredity, it would be impossible to produce variations in the germ plasm which would give rise to larger brain power by simply training the brain of the individual who is carrying this germ plasm as a trustee for future generations. Nor would it make any difference whether you educated his brain for a single generation or for a thousand generations. If acquired characters are not inherited, no amount of education could by any possible means affect the brain power of the offspring. If, therefore, the brain power of man has developed during the growth of civilization, this has been due to natural selection and not to the direct effect of civilization or education."

## EDISON'S NEW STORAGE-BATTERY.

TRAFFIC by land and water is to be revolutionized, so we are told, by the new storage-battery just invented by Thomas A. Edison. This battery is much lighter than any form hitherto known, and, as the principal objection to the use of the storage-battery has been its weight, it is claimed that the new battery may alter the entire application of electric power to vehicles and boats. The distinctive feature of Mr. Edison's invention is said to be the use of iron and nickel-oxid plates in a solution of potash, instead of the old-time lead-zinc and sulfuric acid process. In an interview with a reporter of the New York *Sun*, the inventor is quoted as saying (May 23):

"The storage-battery has at last become a recognized adjunct to direct current central stations; but it has limitations which seem to withstand further attempts toward improvement. Of recent years hardly any success has been met with in the direction of reducing its weight for a given energy storage capacity, without detriment to endurance, and this weight is the great drawback of the storage-battery in electric storage traction, and has been the principal obstacle to its advance in this direction for the past twenty years.

"I have been experimenting for the last two years to produce a battery which would be without the defects alluded to, and I think I have succeeded. The present types of storage-batteries deteriorate very rapidly. In the experiments I have made with the new battery there has been no evident deterioration. Another advantage is, technically speaking, its large storage capacity per unit of mass. In other words it is less cumbersome, and yet promises greater power. Lead batteries weigh from 125 pounds to 180 pounds per horse-power hour. The weight of my battery is only 55 pounds per horse-power hour. Again, the old battery takes from four to five hours to charge. The new battery can be charged in half that time, and, moreover, can also be discharged with greater rapidity than can the old batteries. The fault with the lead types is that when you want more power, when you are climbing a hill, for instance, in an automobile, you can not get it without great deterioration. This trouble I have obviated.

"Careless treatment will not affect my invention. As a general rule the public do not understand how to care for batteries. In the case of the existing batteries it requires electrical knowledge to understand them. I realized that a practical battery must be one which the average individual could easily manipulate. All you have to do with the new cell is to fill it with water.

"As regards cost I believe that after factory facilities now in course of progress have been completed I will be able to furnish the cells at a price per horse-power hour not greater than the prevailing price of lead cells. This will really mean a great reduction in expense, because while the lead batteries will only carry a vehicle about thirty miles the new one will go seventy-five to one hundred miles with one charge. Practically, therefore, it means that you will be able to travel the longer distance for the same price as it hitherto cost to go about thirty miles."

TYPE OF METALLIC CELL USED WITH THE EDISON STORAGE BATTERY.

The battery was completely described in a paper read by Dr. A. E. Kennelly before the American Institute of Electrical Engineers at its annual meeting, and printed in *The Electrical Review* (May 25). In the same issue, this paper says, in a leading editorial:

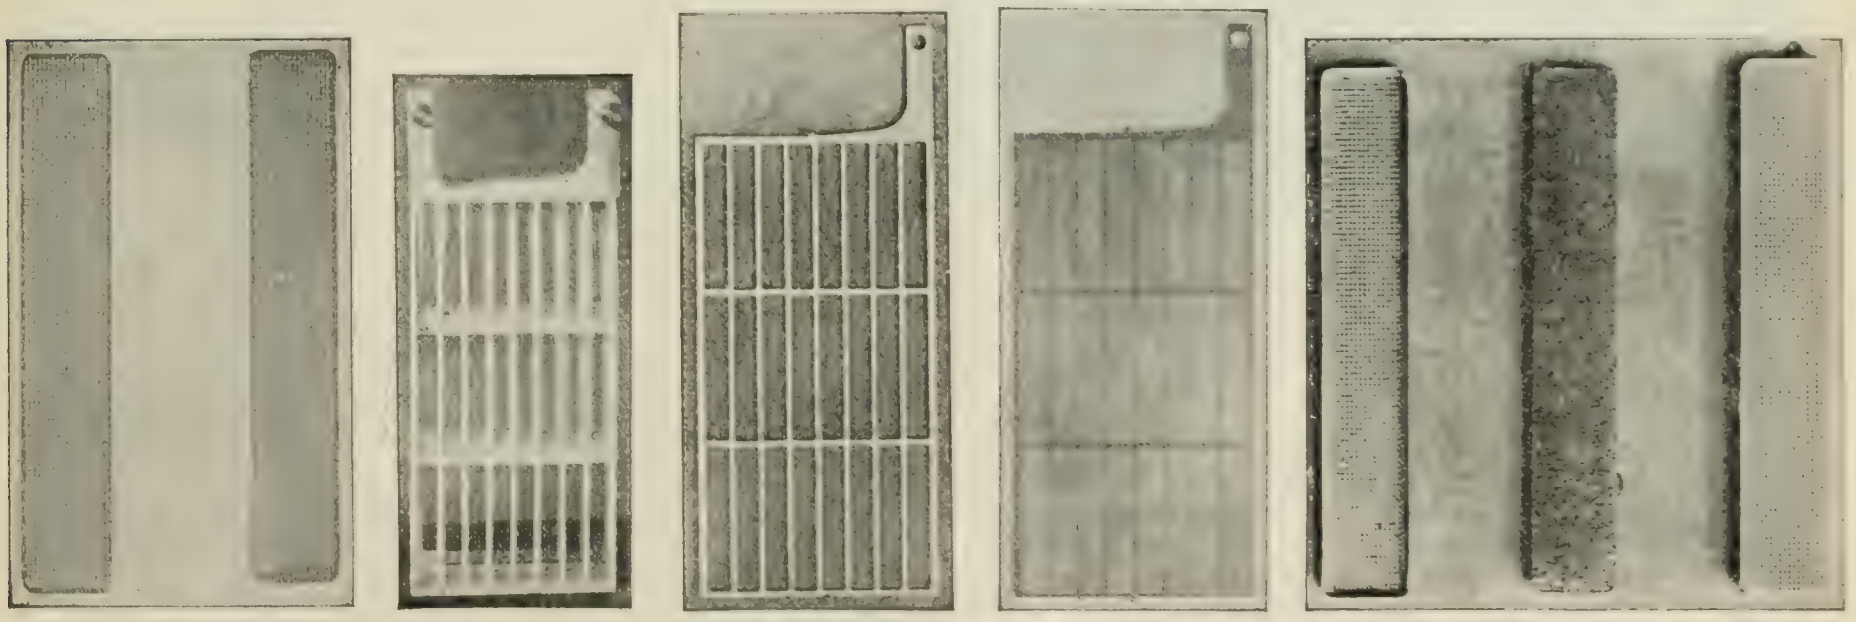
"And this method has been almost under the hands of investigators for twenty years, yet has remained undiscovered!

"To put it in plain English, this means that for the same weight the new storage-battery should do two and one-half times as much work as present types. In addition to this signal achievement, the veteran inventor has also announced a battery having a high discharge rate, an insignificant depreciation, and a low first cost.

"Mr. Edison has produced no invention of broader utility in the electrical field since incandescent lighting was evolved from the busy brain of the same pioneer of industry. It is hard to foresee all the meaning of this improvement. But we may look a little way and see the noiseless city, the suppression of the horse, and the automobile a factor of economic importance in general transportation. The perfected battery means the solution of many difficult traction problems, the betterment of electric lighting, and the foundation of the new art of electric navigation. Electric tugboats will give new life to our canals, and with electric ferry-boats will revolutionize our harbors. Electric torpedo-boats of swiftness and secrecy will make present naval armaments of doubtful protection.

"The invention gives electricity a new foothold in its career of industrial conquest."

Some comment is a little more cautious. It is pointed out editorially in the New York *Tribune* that while the new combina-



VARIOUS TYPES OF BRIQUETTES AND PLATES USED IN THE EDISON STORAGE BATTERY.

tion is undoubtedly lighter than the old lead battery and will probably better stand cold and rapid charge and discharge, it is not so certain that it will not deteriorate. Says the writer:

"The soundness of the hopes which have been entertained on this score are not susceptible of direct demonstration by a few automobile trial trips. In the nature of things, months, if not years, will be required to establish the facts. Again, those who are familiar with the many different styles of storage-battery which have been invented and tried in the last fifteen or twenty years remember only too well certain painful surprises that both inventors and buyers have experienced. Experiments in propelling street-cars would be undertaken under the most favorable auspices. Everything would go well for a time. Then the battery would break down from one unforeseen cause or another, and it would be necessary to choose between a costly renewal or a more costly abandonment of the whole system. Even if the Edison battery should not fail at any of the points suggested in the discussion of Dr. Kennelly's paper, therefore, the history of accumulators alone excuses, if it does not absolutely demand, a little skepticism just now concerning the durability of the new device. Should it prove eventually that Mr. Edison has been a trifle too sanguine, it would not be the first time that such a thing has happened in the history of invention, nor would it be an occasion for reproach."

## GENEROSITY AND BUSINESS.

IT has frequently been noted that whereas European manufacturers carefully conceal their methods from the public, Americans seem to be glad to display theirs to the whole world. *The Electrical Review* (New York) recently expressed the opinion that we must mend our ways in this respect and begin to "exercise more judicious care" in the admission of visiting strangers to our factories. This utterance does not meet with the approval of the New York *Times*, which asks editorially:

"Will not the generous disdain of secrecy that has permitted us to overtake the foreign competitor also serve for keeping up with or passing him?"

In answer to this, *The Review* remarks that probably we have succeeded so far rather in spite of our generous disdain of secrecy, than on account of it. It goes on to say:

"Certainly we can not afford, in view of the fierceness of the competition that the next few years will bring, to go out of our way to grant advantages to our adversaries. It would be pleasanter, perhaps, if we could be generous, but it is an open question whether or not we can afford to be generous, and to give away to the world at large the secrets and methods that are rapidly making us preeminent in manufacturing. Indeed, we feel that a reiteration of this advice to the manufacturer is not out of place. We are so proud of our industrial establishments that we are tempted to make them places of entertainment for visitors who come, not only to see and learn, but to return home and copy. The practise of admitting visitors of this character is peculiarly American, and such courtesies are not returned to those of us who visit European workshops. It may be true that we can afford to show our hand, but if conditions arise that make competition keener this very fact of our willingness to tell other people how we do it may prove the deciding factor against us in the struggle for commercial supremacy."

**Electric Analysis of Mineral Waters.**—A method of determining at once, by means of the electric conductivity of a specimen of mineral water, whether it is of normal composition, and to detect natural or artificial dilution, is reported to the Paris Academy of Sciences by M. T. Muller. Says *Cosmos* (May 11) in a notice of the session of that body for April 29: "The composition of mineral waters is far from being invariable; it varies with the seasons, often from year to year, and sometimes with some simple meteorological event—a heavy rain, for instance. The result is that chemical analyses, both qualitative and quantitative, made at a given time, may not be true at all for another time. M. T. Muller proposes an easy and rapid method of recognizing these variations. He uses electric conduction. . . . The experiment is made promptly by means of alternating currents in conjunction with the telephone. The only precaution to be taken is to operate always at the same temperature. The conductivity of a water . . . defines the liquid in the same manner that the melting-point defines a chemical substance; the conductibility depends on the nature and quantity of the dissolved substances, which in a potable water are almost exclusively electrolytes. Doubtless two waters taken haphazard, which have the same conductibility, will not have the same composition, any more than two substances that have the same melting-point will have the same chemical constitution; but for following the variations of composition of a definite source, the method is irreproachable, at least except for compensations that can not be foreseen."—*Translation made for* THE LITERARY DIGEST.

**Church Hygiene.**—The Italian bishop of Fano, reports *La Science pour Tous* (May 5), has sent out to the priests of his diocese the following circular:

"1. In all churches, immediately after feast-days on which there have been very large congregations, the floors must be disinfected by means of wood-sawdust soaked in a one-tenth-per-cent. solution of corrosive sublimate. On ordinary days they must be frequently swept, after sprinkling them with water so as to raise no dust.

"2. Every week, and even oftener, the pews and confessionals must be cleaned with sponges and cloths moistened with pure water.

"3. Every week, and oftener if necessary, the grills of the confessionals are to be washed and polished.

"4. The holy-water receptacles must be emptied every week, or oftener if necessary, and washed with hot water or a solution of corrosive sublimate."

The same journal comments as follows:

"That the provisions of the circular may be carried out, the bishop has instituted a service of inspection, and requires the payment of fines into the diocesan treasury for transgression of any of these hygienic rules. It is to be desired that the Bishop of Fano's example should be imitated by church authorities in other countries."—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

"A SANITARY officer, who has been on duty for some months in Porto Rico, reports," says *Modern Medicine*, "that the terribly high death-rate of that country, which has attracted not a little attention, is unquestionably due to the almost utter neglect of sanitation. There, animal as well as human excreta are thrown directly into the rivers, which are also used as the common washtub for the adjacent population, for bathing, and as a depository for filth of every description. Pig-pens are built on the edge of the stream or near it. Out of these same rivers the supply of drinking-water is obtained."

"FROM the New York Quarantine Station to a point off the island of Nantucket is a distance of about three hundred and ten miles—a distance which is covered by the modern express transatlantic steamship in something like fourteen hours," says *The Electrical Review*. "All of these vessels pass within easy wireless telegraph range either of Siasconset or of Nantucket Shoals Lightship, No. 66, which is anchored some fifty miles to the southeastward of the island of Nantucket. The value of an information service concerning incoming steamships which might be distributed a full twelve hours before their arrival at their ports is too great and evident to require argument. The expense of installing a wireless telegraph system for this purpose is so small in comparison with the benefits that would be derived from it that it seems strange that it has only lately been undertaken. The New York *Herald*, with admirable enterprise, has just undertaken the establishment of such a system."

SIR HARRY JOHNSON, special commissioner to Uganda, reports the established existence in the Semliki forests of a peculiar ruminant thought to be long extinct, says the New York *Sun*. "Fossilized remains of this animal have been found plentifully in Greece, and it has been called hitherto helladotherium. A complete skin and two skulls are now on their way to England for the British Museum. The natives call this animal the okapi. It is a giraffe-like creature, and is closely akin to the ox in size. The neck is a little longer, proportionately, than that of a horse; the ears like those of the ass, with silky black fringes; the head tapir-like, and the nostrils like those of the giraffe. The forehead is a vivid red, and the neck, shoulders, stomach and back a deep reddish-brown. Parts of the animal are almost crimson and others blackish in hue. The hind quarters and legs are boldly striped in purplish-black and white. The animal is hornless, altho there are traces of three horn-cores."

# THE RELIGIOUS WORLD.

## THE WORLD WAVE OF ANTICLERICALISM.

THERE appears to be abundant evidence, as stated last week, that the religious conflict between the clerical and anticlerical parties is growing keener the world over.. For the most part it is not a dispute about doctrine, but about the political and sacerdotal influence of the clergy. Almost every important country has experienced something of this conflict. In England, Mr. Kensit represents a bitter and militant protest against the growing claims of the High-Church clergy, reflected in their resumption of Catholic usages and beliefs. In Portugal, in France, in Italy, in Austria, in Russia, in the Philippines, still more bitter conflicts are going on. Even in America during the past year a well-defined contest between the growing Catholic party in the Anglican Church and the Protestant party took place over the Fond du Lac consecration. A candid consideration of this widespread movement appears in the London *Weekly Register* (Rom. Cath., May 3). It says:

"It is remarkable that hostile feeling has been concentrated on religious orders, and especially on them as cosmopolitan organizations. Now, the comparative apathy of the religious public in the countries which are the scenes of anticlerical action may be partly due to a real or imaginary antagonism of interest. The Archbishop of Rouen, according to *The Daily Chronicle*, admitted to a correspondent that in France the parochial clergy had interests diverse from those of the religious [*i.e.*, the orders]. On the side of the state, of course, a great corporation spreading over several continents, with a strong central administration, is inevitably from time to time an object of distrust to a secular ruler, if for no other reason than that it is difficult for him to get at it; because any particular function or individual that he attacks is easily removed out of his jurisdiction. Merely as being obnoxious to the civil power, no Catholic could sympathize with the attack on religious orders. For it is only by workers, living under the sway of the Evangelical Counsels, that the church is enabled to educate her children, that the propaganda of the faith is maintained, that the national are prevented from obscuring the universal attributes of the church.

"At the same time, centralization has defects of its qualities, and with all its breadth of view and tolerance and caution, it may now and then run counter to national feeling in such a way as to provoke reprisals. It would certainly seem that, in Spain, the Jesuits have taken a line lately which has had this result. So, too, in France, the Dreyfus case has left, we may be sure, a fund of ill-feeling which is yet unexhausted. The facts with regard to French education are not altogether ascertained; but the line of those in power is evidently to construe them as tho the orders engaged in education used their influence to inoculate the young fellows whom they pass into the army with discontent at the present republican *régime*.

"Another cause may very possibly be found in a certain aggressiveness on the side of the church party in Catholic countries. In Austria, for instance, the action of the Archduke was trumpeted abroad with sundry flourishes by the Catholic press, before it was taken up by the other side. So, too, the antisemitic agitation has found far too much favor in some clerical circles. That people hit back is a principle very insufficiently reckoned with amongst those whose convictions are stronger than their knowledge of human nature. And the Jews are as cosmopolitan as the orders; and, tho suffering might be their badge, it does not exclude effective retaliation. The resentment caused by mere Catholic activity, apart from its being directed here and there into channels formed by zeal rather than discretion, has unfortunately been favored by unexpected events. The death of the King of Italy, and, in a less degree, of our own Queen, has brought into relief the endless and necessary antagonism between church and world; and if the antagonism has been sharpened through the frailties of human nature, the world commonly pays debts of that sort with interest. So, too, in Austria the instability of parliamentary institutions, perhaps the unfitness of the country for constitutional government, has enabled the Protestant section of the population to make more noise than under normal conditions it was entitled to.

"To this view there is one striking exception. In Germany there is a strong Catholic party well knit together, with a tradition of victory and now holding the balance of power, which nevertheless does not provoke the resentment that stronger parties, dealing with more insignificant adversaries, excite elsewhere. Perhaps, the explanation is that in Germany the antithesis has not precisely lain between regulars and seculars, or between clerical and lay forces, but a united front in face of a common enemy has been maintained with a party composed, indeed, of diverse elements, but under lay management. Whether, when the clerical element is prominent in politics, the attacks of opponents fasten on it as defenseless, or whether they hate it more bitterly, from the difference of training and temper, out of which the fiercest animosities arise, does not clearly appear; but the fact that in Germany Catholics make themselves felt in a way one would suppose was specially exasperating without provoking resentment, whilst elsewhere there is far more irritation with apparently much less reason, is very remarkable, and not yet satisfactorily explained."

## GREAT GROWTH OF RITUAL IN THE ENGLISH CHURCH.

THE recent enthronement of the Rt. Rev. A. F. Mannington Ingram at St. Paul's Cathedral as Bishop of London appears to mark the commencement of a new epoch in the Church of England. After over half a century of strife against the Tractarian or "Catholic" Party, in which rectors, vicars, and curates

AT THE ENTHRONEMENT OF THE BISHOP OF LONDON—ST. PAUL'S CATHEDRAL, APRIL 29, 1901

The Bishop is in the act of pronouncing the Benediction. The Very Rev. Dean Gregory, D.D., is serving as Deacon, and the Ven. Archdeacon Sinclair as Sub-Deacon.

Courtesy of *The Illustrated London News*.

have at times even been subjected to imprisonment for their use of ceremonies and vestments not in common use in the church, Dr. Ingram, one of the most pronounced "Catholics" of the higher English clergy, has been appointed to the most important see in England, and has just been enthroned in the historic St. Paul's with ceremonies so imposing in their dignity that the London

*Guardian* says that "never in the history of the present building has it witnessed so impressive a scene"; while the London correspondent of the New York *Churchman* says that "in ceremonial it marked an advance upon all post-Reformation precedents for London." Yet, he adds, "the new departure occasioned no protest from clergy or laity."

Except for the absence of incense, and for the necessary ritual differences between an enthronement and a consecration ceremony, there appears to have been no noticeable difference in ritual elaborateness between this ceremony and the Fond du Lac consecration last winter, which attracted such a storm of criticism in this country. It is noteworthy that altho the same episcopal vestments were worn at St. Paul's and a similarly ornate "high celebration" performed there as at Fond du Lac, with many acts and ceremonies not specifically commanded in the Book of Common Prayer, yet the Philadelphia *Church Standard*, which spoke of the Wisconsin ceremony as "the Fond-du-Lac circus," and the New York *Churchman*, which called it "ritual anarchy," have thus far reported the London ceremony without comment.

The enthronement is thus described in *The Churchman* (May 25):

"Except in the small section on the north side of the choir, where seats had been reserved for the city corporation, every available space was occupied before the beginning of the service. In the Consistorial Court, in the southwest chapel, the new bishop was met by the dean, canons, and other clerical and lay officials. The chapter clerk read aloud the Archiepiscopal Mandate, the dean administered to the bishop the oath in Latin. This part of the ceremony could not be seen from the choir, or from beneath the dome, where some four hundred of the clergy were gathered, but the pealing of bells indicated its completion; then a procession was formed, first the choir singing in plainsong 'Blessed City, Heavenly Salem'; then the canons and prebendaries; then the canons residentiary; then the bishop walking with the archdeacon and dean, and attended by his resident chaplain, and the examining chaplains, one of whom carried the pastoral staff and another, on a cushion, the ivory miter, which had been given to Dr. Creighton [by the bishops of the Eastern Orthodox Church of Russia] at the same time with the cope worn by the bishop. The suffragan and assistant bishops walked in front of the diocesan. This, too, was a change in established custom. They were robed in scarlet. On reaching the choir the cathedral clergy and the lord mayor took their accustomed stalls; the suffragan and assistant bishops sat at the extreme east of the south side; the Bishop of Dover preceded Bishop Ingram to the episcopal throne, which was at the eastern end of the choir on the south, and, having caused the bishop to sit there, said, standing on the steps of the throne: 'I, William Walsh, Doctor of Divinity, Archdeacon of Canterbury, do, by the authority to me committed, induct, instal, and enthrone thee, the Right Reverend Father in God, Arthur Foley, by divine permission Lord Bishop of London, into the Bishopric and Episcopal Dignity of London. The Lord preserve thy going out and thy coming in, from this time forth for evermore; and mayest thou remain in justice and sanctity and adorn the place to thee delegated by God. God is powerful, and may He increase in you His grace.'

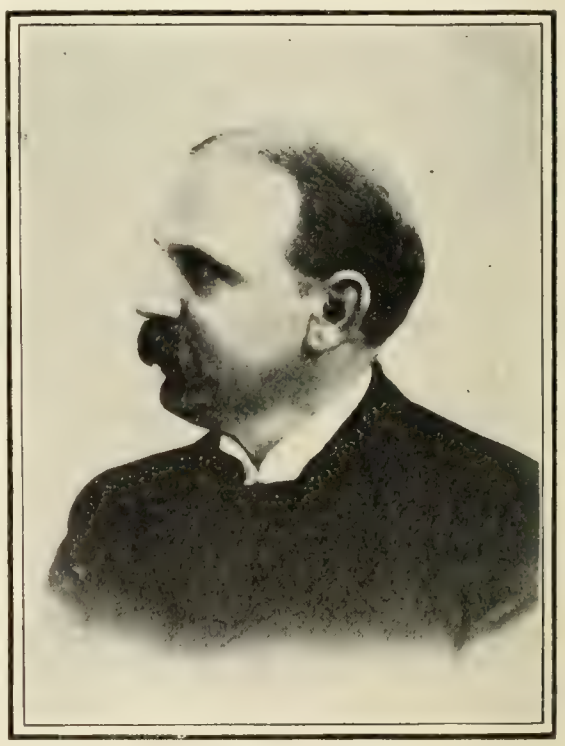
"Then Bishop Ingram put on his miter, and the choir sang from Mendelssohn's 'Elijah' the anthem, 'For He shall give His angels charge over thee,' while the dean and archdeacon conducted the bishop from his throne to the episcopal stall in the middle of the choir; thence a procession was formed to the sanctuary. The bishop, in cope and miter, holding his pastoral staff, stood on the topmost step before the altar, while, opening out on either hand, ranged down, stood the dean and canons, the assistant bishops, prebendaries, minor canons, in magnificent array. The choir sang Sir George Martin's Jubilee 'Te Deum,' the dean read a prayer for the bishop, who then proceeded with the Communion Office. The Communion was confined to those about to make the promise of canonical obedience. At the close of the service the bishop assumed his miter and pastoral staff for the benediction. After the ablutions Psalm cl. was sung. Then the procession in reversed order, the bishop leading, went to the Consistorial Court, where the oath of obedience was taken to the bishop by all on the cathedral staff."

*The Living Church* (May 25), the only American Episcopal paper which has thus far commented editorially on the ceremony, can not restrain a little fling at its Low-Church or Conservative newspaper rivals. It says:

"If anything more was required to put the seal of absurdity on the allegation that copes and miters are vestments illegal or disloyal in the Anglican communion, it is certainly now at hand in the report of the service of enthronement of the Bishop of London, in the premier cathedral of this communion. The illustration of that event printed herein, and the excellent account of our London correspondent, show that however tenable may be the objection that these vestments *ought* not to be in use—which may be held by any one in perfect good faith—the statement that they *are* not is on a par with that of the man who denied that street-cars could be moved without horses. The allegation that these vestments, or either of them, are 'Roman Catholic vestments,' may now only give rise to a quiet smile at the expense of the rash ones who made and reiterated such a statement, and who have thus distinguished themselves in somewhat unenviable fashion."

## THE PRESBYTERIAN GENERAL ASSEMBLY AND CREED REVISION.

THE General Assembly of the Presbyterian Church (North), which convened in Philadelphia on May 17, has been of more than ordinary importance because of the question of "Creed Revision," or restatement of certain predestinarian doctrines in the Westminster Confession of Faith, which came up for decision this year. The election of the Rev. Dr. Henry Collin Minton as moderator of the Assembly on the opening day was widely taken as an indication that the subject of revision would not be dismissed, and this surmise was justified by the subsequent action of the Assembly. After several days given to matters of no special public interest the Assembly took up the question of creed revision. Altho the debate, lasting three days, at times showed considerable warmth, final harmony prevailed, and the Assembly, on May 27, decided unanimously to reappoint the revision committee of last year, instructing it to prepare and submit to the next General Assembly—to meet in the Fifth Avenue Presbyterian Church, New York, in May, 1902—for such disposition as may be then judged wise, a brief statement of the reformed (Calvinistic) faith in untechnical language, this statement to serve as an explanation of Presbyterian belief, not as a substitute for the Westminster Confession. Of this committee, Dr. Minton, the moderator of the assembly, was made chairman.



REV. DR. HENRY C. MINTON.

This action is taken by many, tho not all, as in the nature of a compromise and as indicating that the church desires further time to prepare for a final consideration of creedal revision. After this

decision had been taken, Dr. Minton is reported (New York *Tribune*, May 28) to have said:

"The Assembly's action should be gratefully welcomed by the entire church. It is no compromise. No one has forsaken his ground or repudiated his convictions. The decision reached is a victory for no one, but for all. The statement of the faith of the Presbyterian Church, to be prepared by the committee of twenty-one, is not to be regarded as a new constitutional confessional formula. It is to be an official pronunciamento, to which no one, however, is to declare allegiance in ordination vows. It is to be popularly didactic. If any one wants to know what the Presbyterian Church believes, this statement will answer his inquiry. In addition to this the committee is to prepare a declaratory statement explaining and removing difficulties growing out of infelicitous forms of statements in the Confession of Faith. And if this method of relief be thought insufficient by the committee, it is authorized to report to the Assembly in New York certain changes in the way of textual revision of the confession itself."

The Rev. Dr. Charles A. Dickey, of Philadelphia, moderator of last year's Assembly, is thus quoted:

"The final action of the Assembly should gratify the whole church. It means that the church may expect peace and progress during the coming year. Only good will and great blessing could be expected as a result of such magnanimity and unanimity. The action of the Assembly manifested mutual confidence. Without dissent the Assembly determined to go forward, and distinctly marked out the way for the forward movement."

Dr. Herrick Johnson, professor in McCormick Seminary, Chicago, said:

"It must be seen that our church is formally and constitutionally put on the road to an actual change in her doctrinal standards. The next battle, if there is to be a battle, will be in the next Assembly, when this committee now appointed and instructed shall make report of its work. On the whole, the action on this subject seems to me to be wise and eminently commendable, and I am heartily in favor of the same. It puts us on the road to constitutional change by constitutional methods. It settles for the time being at least some agitating and vexing questions. It promises to take some stumbling-blocks out of our existing creed. It promises to furnish us a brief, clear statement of doctrine that will make future misconstruction less possible. It secures a most happy and surprising unanimity of action. And if it issues in success I most confidently and joyfully believe it will set our church forward with high hope and joyful agreement to a great work of evangelization and conquest for the good of man and to the glory of God."

Dr. George D. Baker, of Philadelphia, the leader of the Conservatives, said:

"I am content. The brief statement of the essential doctrines of the Presbyterian Church for distribution among the people will meet a great and growing demand, and the declaratory statement with reference to some misunderstood and misinterpreted phrases in the Confession of Faith ought to, and I think will, set at rest disturbed minds. The assembly, in my judgment, has reached in the end a most wise conclusion, while still holding on tenaciously to the old Westminster symbols."

The following explanation of the committee's work is given by Dr. George T. Purves, of the Fifth Avenue Presbyterian Church, New York, a moderate Conservative:

"The results reached finally by the assembly conserve the Confession of Faith to a far greater extent than the votes of Friday and Sunday led many to fear. The statement of doctrine which the committee is directed to prepare and submit is intended for the information of people, and is not to be either a substitute for nor an alternative of the Confession. The amendments also to the Confession are to be put, so far as possible, in the form of a declaratory statement, so that the text of the Confession will be changed, in all probability, only in a few unimportant points. Thus the final issue of this great debate is one in which moderate conservatives can unite, even tho they may have preferred the dismissal of the whole subject."

The clauses of the Westminster Confession which chiefly have caused this debate are the following (formulated by the Presbyterian Assembly of Divines meeting at Westminster, England, from 1643 to 1649):

III. 3. "By the decree of God, for the manifestation of His glory, some men and angels are predestinated unto everlasting life, and others foreordained to everlasting death.

III. 4. "These angels and men, thus predestinated and foreordained, are particularly and unchangeably designed; and their number is so certain and definite that it can not be either increased or diminished.

. . . . . .

X. 3. "Elect infants, dying in infancy, are regenerated and saved by Christ through the Spirit, who worketh when, and where, and how He pleaseth; so also are all other elect persons who are incapable of being called by the ministry of the Word.

X. 4. "Others not elected, altho they may be called by the ministry of the Word and may have some common operations of the Spirit, yet they never truly come to Christ, and therefore can not be saved. Much less can men not professing the Christian religion be saved in any other way whatsoever, be they never so diligent to frame their lives according to the light of nature, and the law of that religion they do profess; and to assert and maintain that they may is very pernicious, and to be detested."

There is also a clause referring to the Roman pontiff as "anti-Christ," "that man of sin, and son of perdition," which is regarded by many Presbyterians as out of place in a religious statement representing the belief of present-day Christians.

The secular press, for the most part looking upon the Assembly's action as to some extent a "compromise," accepts it nevertheless as an important step forward. The New York *Evening Post* (May 28) says:

"The final harmony and unanimity of the Presbyterian Assembly in agreeing to the preparation of a brief and untechnical creed for use in the churches could scarcely have been looked for by one who had observed the warmth of the debates of last week. What secured general acquiescence was the amendment setting forth that the new declaratory creed was not to be a 'substitute' for the Westminster Confession, or an 'alternative' to it. That is, the Confession will remain the official and judicial standard. Yet it is apparent that it can not long remain so, in practice, after the new creed gets into use. It is the latter which, in effect, and with the hearty assent of the great body of Presbyterian laymen, will come to be taken as the authorized expression of Presbyterian faith; and the Confession, having visibly waxed old as doth a garment, will more and more tend to vanish away."

*The Tribune* (May 28) says:

"The meaning of this is that there will be a statement of the faith which, even if it is adopted next year, will not be a summary of the Confession, and will not be an authoritative substitute creed. For those who are satisfied with the old Confession, that venerable instrument will continue to hold the place of authority with its integrity unimpaired by any modern gloss, while those who for any reason object to it will be able to lay the emphasis on the new statement. Tho technically not an authoritative creed, they will practically make it such. And in fact it may easily come to be such in the popular consciousness. For a creed becomes authoritative in the last analysis not so much by the approval of a council as by the fact that people come to believe it. If the proposed statement, however, shall express the belief of the church more truly than the Westminster Confession does, it will inevitably take the place of that symbol in spite of all restrictions.

---

**A New Agnostic "Sect."**—Recent newspaper reports from Cincinnati indicate that the great Middle West still continues to be fertile in new religious movements. The latest "sect" is composed of agnostics, and is said to be based on the teachings of the late Robert G. Ingersoll. A ritual for agnostic marriage ceremonies, for "the dedication of infants to agnosticism," and for "the confirmation of children" in "the belief of the

non-existence of God" is reported to have been prepared, altho the latter statement is hardly in harmony with any definition of agnosticism at present recognized. Mr. Charles Sparks, a Cincinnati lawyer, is one of the leading spirits in this organization. A despatch to the New York *Sun* (May 21) gives the following account of the new marriage code prepared by him:

"The marriage pledges administered to agnostic brides and grooms are novel, especially in their provisions on divorce matters. Sparks declares it is the duty of mismated couples to get divorced. In part the pledge is as follows:

"'I desire to make said contract, and do hereby solemnly promise that I will do all in my power to make my wife happy, and that when I find that she is irritated from any cause I will not cross or quarrel with her, but will endeavor by tender and loving methods and kind words to soothe and restore her peace of mind; that I will abstain from drunkenness; that within three months, if possible, I will have my life insured, making my wife the beneficiary; and that should our marriage prove to be happy and we are blessed with children, I hereby bind myself to ever treat them with the utmost kindness and consideration and pledge myself to send them to the agnostic Sunday-school and to give to them all the educational advantages within my power.'

"The wife's pledge leaves out all provisions of the husband's which do not properly apply to the wife. It contains the further provision:

"'Should I discover that we are uncongenial or mismated, I hereby pledge my sacred word of honor that I will not bring children into the world not born of affection, and I hereby further promise that should I find, after I have exhausted every effort to make it otherwise, that we are uncongenial or mismated, I will not insist upon our living together.'

"After swearing to these pledges, wife and husband are to sign them, each presenting his pledge to the other before the nuptial knot is tied by a magistrate."

---

## THE FOND DU LAC CONSECRATION AND THE BISHOPS' TRIAL.

THE storm raised in the Protestant Episcopal Church last winter by the consecration of Dr. Weller as coadjutor-bishop of Fond du Lac, with elaborate High-Church ceremonies and vestments, continues from time to time to give forth some rumblings. Two days after Easter, this spring, the seven Western bishops concerned in the consecration published a letter in which they assumed all responsibility for the alleged irregularities, and denied the right of the presiding bishop to any jurisdiction in the case, especially his right to the title he had used of "presiding bishop of the church," which, they said, implies an illegal claim of universal jurisdiction over the whole church and the stealthy growth of a new papacy. The letter, which was very gently but firmly worded, closed with an expression of their willingness to undergo trial at the hands of their "peers," by which is meant the House of Bishops of the Protestant Episcopal Church.

*The Church Standard*, the leading antagonist of the seven bishops in this quarrel, says on the subject:

"We published in our Easter number a carefully considered article in which we gave our reasons for thinking that restrictive legislation and aggressive prosecutions of alleged offenders against the law of the church would be no effectual remedy of the evil of controversial disturbance with which the church is troubled. We adhere to that opinion firmly, and, as we believe, immovably. If, therefore, the proposal of the seven bishops had been made 'in a spirit of challenge,' or if it were to be accepted in a spirit of partizan rancor, we should say, first, that in the former case the overture itself, and in the latter case the acceptance of it, would increase the evil; and second, that, since any judicial decision to which it might lead would be received in the same partizan spirit in which it had been sought, it would prove to be no remedy, but rather an aggravation of existing troubles. The offer of the seven bishops is so blameless in temper and so faultless in form that, on their side at least, there lies no impediment to the acceptance of their proposal, nor can there be any doubt of their frank and loyal acceptance of the decision of a competent court in case it should be adverse to their claim. We should be reluctant to think that there is less good temper or a less sincerely loyal disposition on the other side; and if the proposed investigation should be entered into without one particle of personal animus, or one scintilla of partizan feeling, but, on both sides, with a hearty and sincere desire to have the law of the church authoritatively settled in certain matters to the intent that controversy on those matters might be ended, we should say that *such* a procedure, so conducted on both sides, ought to result in great advantage to the church. . . . . .

"At this point a second question presents itself: What will be the inference and effect, if the overture of the seven bishops is not accepted? The general inference will unquestionably be this, that those who hold the ceremonial and other interpolations in the consecration of a bishop at Fond du Lac to have been made in violation of the rubrics of the church are afraid to put their assertion to the test of a judicial investigation; and thus the moral effect will be little short of an adverse judicial decision. Nor is that quite all; for the moral effect upon the public mind will be wholly favorable to the side which, boldly, but courteously, offers to submit to a judicial censure, if lawfully pronounced. To the side which charges lawlessness, but recoils from a judicial investigation of the charge, public opinion will not be favorable. Using the expressive slang of the day, the man in the street will hold himself justified in saying: 'This thing is *up* to you; you don't stand up to it; I infer that you can't.'"

*The Living Church*, organ of the High-Church Party, confines its attention chiefly to the main point raised by the bishops' letter, namely, the danger of a "new papacy" in America. This fear is ridiculed by the other church papers as absolutely groundless and even childish, and they point out that the disputed title used by Bishop Clark has been frequently employed before, and that it even occurs in the text of the new canons to be submitted to the General Convention at San Francisco next October. Upon this point, however, *The Living Church* says:

"We should not be inclined to lay great stress upon the title assumed by the Bishop of Rhode Island, if that assumption stood alone. The title 'Presiding Bishop of the *American* Church,' tho indeed less open to criticism than the style used in this letter, has often been used in popular phraseology, without intending to imply anything more than the constitutional title, 'Presiding Bishop,' further explained in the canons as 'of the House of Bishops.' It is so used, for instance, in *The Living Church Quarterly*. If the Presiding Bishop had not in the identical document in which he assumed the title which had once been canonically repudiated as suggesting a 'Primus, Metropolitan, or Patriarch,' claimed powers over his fellow bishops that are at least metropolitical, we should not have suggested anything beyond a technical impropriety in his use of such a title in what purported to be an official document. The issue would then be only technical; it is now very much more. A similar instance of how an etymologically harmless word may become exceedingly dangerous, is found in the word *pope*. This august title (Latin, *papa*) is nothing more than the fond household word lisped by the child to his father in his earliest speech. *Papa*, a father; *father*, a title applied in our own ordinal to all our bishops; *ergo*, every bishop a *papa*, or pope. But when one bishop arrogates to his see certain fixed powers of universal jurisdiction which he claims as *pope*, we perceive the necessity of discriminating between the harmless word in its etymological sense and the harmful word in its acquired significance. None of our bishops, therefore, tho addressed in the ordinal as *father*, may use the term *pope* in its ecclesiastical sense. The application is plain. So long as 'Presiding Bishop of the American Church' meant only an abbreviation of 'Presiding Bishop of the House of Bishops of the Protestant Episcopal Church in the United States of America,' it was harmless. Drop the word *American*, however, and use the phrase 'Presiding Bishop of the Church' *in connection with distinctly metropolitical claims*, and we have the same evolution which made the Italian *Papa* of the third century the *Pope* of the twentieth."

It has even been reported that Bishop Clark would be brought to trial before the House of Bishops next autumn for his alleged assumption of illegal powers; but more trustworthy reports from ecclesiastical sources deny this and characterize the assertion as mere newspaper gossip.

# FOREIGN TOPICS.

## CANADA'S RELATIONS WITH UNCLE SAM.

CANADIAN journals are just now devoting considerable space to discussion of the relations between the Dominion and the United States. The relations of Canada to her southern neighbor, declares *The Commonwealth* (Ottawa), are important in themselves, and still more important as part of the much larger subject of Anglo-American relations. *The Commonwealth* reviews the history of Canada's attitude toward the United States and the latter's "ungenerous" treatment of the Dominion for over a century. Constant encroachments have been made upon Canadian rights and territory, continues this journal:

"Criminal frauds have been practised by American statesmen and officials by which we have suffered; hostile, and frequently menacing, legislation has been aimed at our freedom of commerce and even at our right to control our own internal industrial development. The large and generous spirit shown by Great Britain toward the United States and the friendly advances of Canada have drawn forth no response in kind. This has been largely due not only to American greed, aggression, and unscrupulousness, but to the ignorance, apathy, and weakness of British diplomacy in dealing with Canadian interests. It is not to be wondered at under these circumstances that a strong feeling of resentment and dislike should exist in the Dominion toward the republic to the south. It will never be otherwise until we find the attitude of the United States toward Canada marked by a higher sense of justice and honor."

*The Commonwealth* fears that the "Americanizing" of Canada will continue, and dreads the day when all Uncle Sam's public lands have been taken up. Then, it concludes, immigration must flow from the Western States into the northwest territories of Canada, and consequently the tide of population is "likely to impart an American bias to Canadian sentiment in that part of the world."

*The Globe* (Toronto) points out that the United States would get better results by treating Canada fairly than by attempting to open up South America to trade. This journal declares that the American tariff is particularly one-sided, and concludes by saying:

"We warn our neighbors that, unless they show a little more liberality in their tariff arrangements, they may lose a large part of the trade of an excellent customer; and we are by no means certain that this feeling may not grow. Of course we would not injure ourselves by taxing raw material which is the basis of some of our own industries; but, apart from this, it is likely that an increase of the tariff on some American products would be at least a popular move."

Some day, says *The Herald* (Montreal), the apparently illimitable elasticity of the British market for American exports must see an end, and then where will the American turn? This journal concludes:

"The manufacturers of New England, as their present activity in advocating Canadian reciprocity shows, are rapidly coming to the same pass that those of Manchester, Sheffield, and Birmingham found themselves in half a century ago. Their facilities for meeting a demand for their products are practically unlimited; the demand itself, in the home market, is absolutely limited by the slow growth of population. To be enabled to reach out they must have greater freedom of trade, and when this has been conclusively demonstrated by a period of low dividends, as it shortly may be, they will do just as their English forerunners did, go in for buying in the cheapest market and selling in the dearest."

*The Free Press* (Ottawa), *The Daily Tribune* (Winnipeg), and *The Daily Witness* and the *Patrie* (both of Montreal) express similar sentiments. The *Patrie*, the most influential French paper of the Dominion, strongly advocates a treaty of reciprocity with the United States.

Whenever our friends across the border, observes *The World* (Toronto), do not feel sure of themselves or of their position as a world power, they "get up and chatter the Monroe creed." But they really do protest too much, continues *The World*; "if the Monroe doctrine is any good in international law, why don't our neighbors let it rest at that? They can't make it any stronger or any more binding by declaring it from the housetops." This journal refers to a recent editorial in the Detroit *Evening News*, which pointed out that the Monroe doctrine is a good thing for Canada, guaranteeing her from attack by any ambitious European power. *The World* thinks that there can be no possible danger to Canada from Europe, and concludes by saying: "As far as Canada is concerned, she does not anticipate trouble from any quarter, except from the country that is so chivalrously espousing her cause and so generously undertaking to defend her from invasion. . . . She would have no reason to anticipate trouble on this continent if her next-door neighbor would only act neighborly, honorably, and consistently."

## THE IRISH "LIBEL ON THE KING."

THE seizure, in Dublin, by the police, of an entire issue of *The Irish People* (organ of the United Irish League), for publishing an attack on King Edward which the leader of the House of Commons characterized as "a foul, obscene, and seditious libel," has provoked much bitter comment in the English and Irish press. Most of the English papers maintain that the proceeding was necessary for the preservation of public decency and morality. Attacks on the person and honor of the crown, says *The Morning Post* (London), are an offense in the eyes of every loyal subject. The *Post* continues:

"They are an injury to the whole public, to whom the crown and sovereign are a precious possession. They are a cruel injustice inflicted on the sovereign himself, for while his upright character raises him above such low and scurrilous attacks, yet his position prevents him from taking the measures which any among his subjects would assuredly take. They are an injury to the nation, which is humiliated before the gaze of Europe by having these cowardly and insulting slanders published abroad. The good sense and feeling of the country will resent and punish such attacks on a sovereign whom the inhabitants of the empire are accustomed to regard with affectionate loyalty."

The point is not whether "mere words of vulgar abuse amount to sedition," says *The St. James's Gazette*, but "whether obscenity may be circulated with impunity." *The Daily News* holds that the seizure was both illegal and foolish. Perhaps justifiable, but certainly unwise, is the comment of *The Spectator*, which continues:

"No very great and terrible harm has been done, we admit, even tho a false importance has been attached to a very trumpery affair. When a man, say a candidate or a local celebrity, is driving through the streets, and a dirty little boy in the gutter calls him vulgar names, his friends, if they are wise, do not yell out at the top of their voices that the dirty little boy is saying the most terrible things. They do not force the whole town to realize the fact by jumping out and giving him a licking. Instead, they remain severely oblivious of the boy in the gutter."

The Manchester *Guardian* condemns the publication and admits the provocation to seizure, but questions whether "the national executive ought to wield such a power as that of suppressing, at its own discretion, any statements in a newspaper that it may choose to consider objectionable."

Irish journals, in general, while not excusing the objectionable statements, condemn the seizure as a violation of constitutional privileges and "still another evidence of coercion." This attempt to garrote a newspaper, declares *The Freeman's Journal* (Dublin), will recoil on the garroters. If the policeman is "a licensed brigand," says *The Evening Telegraph* (Dublin), "how can the burglar be logically assailed for practising his

trade?" The whole proceeding was illegal, declares *The Telegraph*, which concludes by saying: "If the Secretary of Ireland takes the law into his own hands, other people may do so, too; and if a policeman gets his head broken in trying to carry out some illegal order, the responsibility will lie at the door of the Chief Secretary and his advisers in the thuggery department of Dublin Castle." *The Examiner* (Cork) says: "This business of entering offices and shops and seizing property without apology or explanation has about it something uncanny and sinister in the last degree. Mr. Wyndham and his advisers and colleagues will assuredly have cause to regret this seizure. . . . The Chief Secretary and his advisers have taken the very best means in their power to insure that the [scandals] shall be rescued from oblivion." *The Irish Times* (Dublin) severely condemns *The Irish People* for publishing the article in question, and defends the seizure as a vindication of decency and fair play. *The Evening Telegraph* (Belfast) declares that "the whole business was intended for American consumption, and is part of the general scheme for obtaining dollars from the Irish republicans and Clan-na-Gael men in the United States."

## ENGLAND'S SOUTH AFRICAN POLICY AND ITS CRITICS.

IN the absence of "big news" from the Transvaal, the European journals and reviews continue to philosophize upon the general situation and to lay down the reasons for Britain's lack of final success against the Boers. For the past year, almost all the British reviews have apparently made it a fixed rule of their editorial policy to "lead off" each month with an article on some phase of the South African war. The newspapers also give most of their attention to the Transvaal campaign.

The unexpected staying qualities of the Boers are attributed by *The Daily News* (Liberal, London) to the "martyr idea." "If you make the object of a campaign the extermination in your enemy of some fundamental idea you increase the difficulty of your task indefinitely, and lend him an indefinite reserve of power." This fundamental idea in the case of the Boers is freedom.

If we want the real solid results from our victory, concludes *The News*, we can take them now. "If we insist upon symbols as well we may get these much later on—but let us make no miscalculation as to the price we shall have to pay for the symbols."

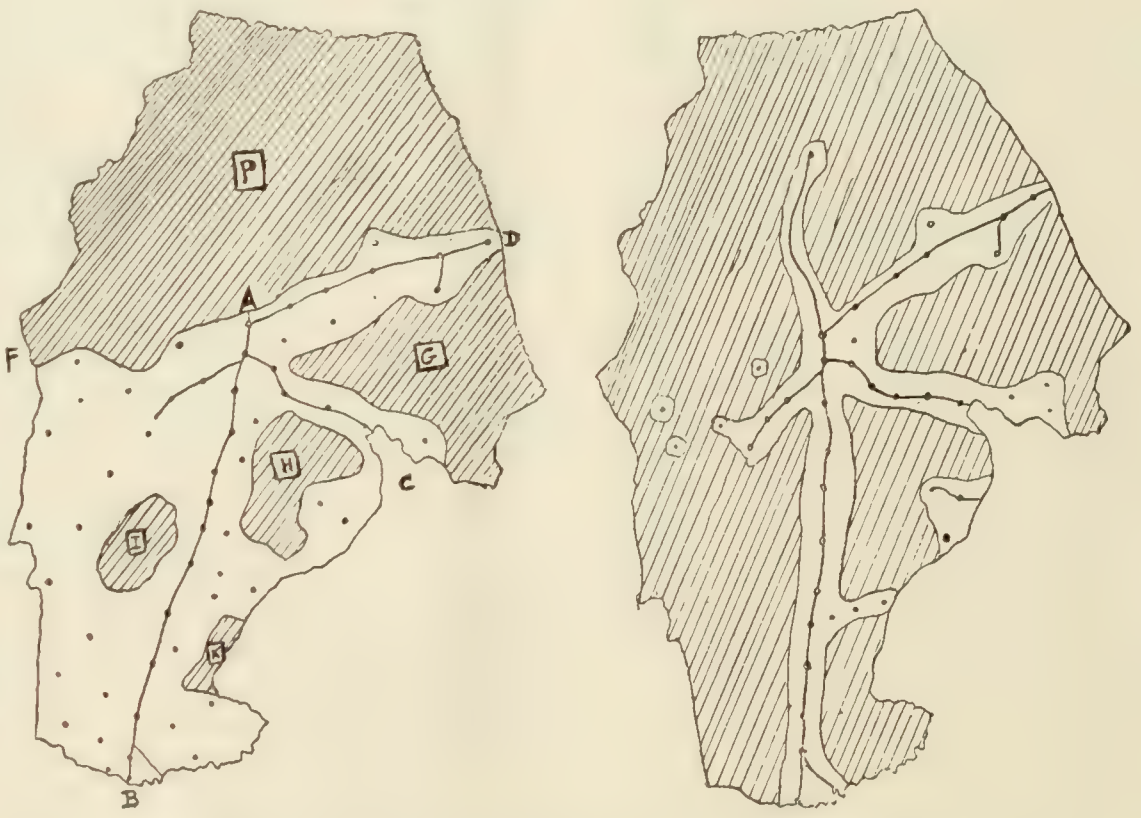
A writer signing himself "Tyro" gives, in *The Speaker* (Liberal, London) a discouraging statement as to the territory which the British really hold in South Africa. A country is "held," in the military sense, he remarks, not by spreading men all over it as butter is spread upon bread, but by establishing centers of activity in the shape of permanent garrisons. These garrisons must be sufficiently numerous to repel attack and sufficiently near one another to afford mutual support, and to be able to pass on convoys of supplies from one to another. He gives two maps, which we reproduce, of the annexed territories, the light dotted spaces showing the parts actually "held" by British troops. The first map shows the territory held in September, 1899, and the second the territory held in the same month, 1900. The long lines indicate railways. He says in explanation:

"Any garrison within relieving distance of any one of these lines may be legitimately regarded as 'holding' the country between itself and the railway. Any group of garrisons within relieving distance of one another may legitimately be regarded as 'holding' the district they cover. The black dots, representing the posts then occupied—none of which were (as some of our remaining garrisons now are) isolated and virtually blockaded—seem to me to justify what was certainly the contention of the staff of the time—namely, that the parts left white on the map were permanently held by our forces. For every dot stands for some well-garrisoned post."

With De Wet's invasion of Cape Colony, says this writer, the policy of "concentration along railroad lines" was begun by the British, with the result that, in the fall of 1900, the condition of affairs was that shown in the second map. From this, he says, "it is evident that we [the British] hold only the railways and an insignificant stretch of territory on either side. Have we really accomplished anything during the past year?"

Europe now "loathes" England, declares F. A. White, in *The Westminster Review* (London, May), for her attempted subjugation of a Christian race. He continues:

"Whilst the subjugation of non-Christian races is still deemed as allowable as the eating of the flesh of animals, the subjugation of Christian races is as loathsome as cannibalism. No other European power holds in subjection any Christian alien races that are not at least conterminous, and after the death of Franz Josef none will do even that. For the Finlanders and the people of Nice and Corsica are only semi-aliens at most—are at least half brothers to those of Russia and France. We alone rule Christian races as utterly alien to us as possible, from Gibraltar to Cyprus. It is but a little less than a century ago (1809) since an alien Christian race has been subjugated by any European power, and that race, as I have just said, only semi-alien at most, and conterminous, and that power Russia; but we, in defiance of the irresistible high tide of European opinion, are subjugating two entirely alien Christian republics, one pure Dutch and the other Franco-Dutch, and not conterminous either, but distant from us a month's voyage round the entire semicircumference of the globe. When we come across a horde of man-eating savages we can hardly control our abhorrent loathing. Oh, that we could only see that the rest of Europe regards with the same abhorrent loathing one Christian race trying to enslave another!"



I. II.

THE TERRITORY HELD IN SOUTH AFRICA BY BRITISH FORCES IN SEPTEMBER, 1899, AND SEPTEMBER, 1900.

A bitter attack on those who advocate moderation appears in *The National Review* (London, May), signed "An Englishman." The writer calls for a more vigorous prosecution of the war, and declares that, to end it, Great Britain needs the following: "The exercise of severe pressure upon the Boer population; the real clearing of the Orange Colony; greater mobility in our columns, to be secured by the abolition of ox-wagons and by strict or-

ders forbidding an excessive amount of officers' luggage; better food and higher pay for the soldier; quicker promotion for the pick of the officers; and above all a steady stream of reinforcements." War is indeed hell, he concludes, and the quicker both sides realize it the better.

The continental journals continue to bitterly reproach England. She has violated most of the rules of international de-

WHO'S GOING TO CARRY IT?
—*Newcastle Weekly Chronicle.*

cency and all the rights of nations, says the *Revue Universelle* (Paris). The English seem to have lost all sense of right and wrong, says the *St. Petersburger Zeitung*. Apparently they will never learn that weaker peoples have rights. The *Handelsblad* (Amsterdam) unsparingly condemns the British press, which, it says, has made the British public "as bloodthirsty as a mad bull and too arrogant to see that the present war has had no parallel since the days of Nebuchadnezzar."—*Translations made for* THE LITERARY DIGEST.

**Japan's Financial Condition.**—The English papers of Japan vigorously deny that the finances of the empire are in an unsound condition, as has been repeatedly stated in news despatches from the Far East. There is a severe financial stringency, admits *The Chronicle* (Kobe), but by no means a panic. "There can be no question," it continues, "that the larger and more important banks, which do the bulk of the country's business, are in a perfectly sound position, and one reason for the failures of the small banks recently reported is the sound and conservative policy of the older institutions, which refuse to support concerns where there are signs of inherent weakness." The revenue of the empire, declares *The Japan Weekly Mail* (Yokohama) is always much in excess of the necessary expenditures; but of late years the surplus has been devoted to extraordinary expenses. The foreign critics, says *The Mail*, "speak generally of Japanese finance being in an unfavorable state, forgetting that the treasury is every year applying large surpluses of ordinary revenue to carry out enterprises which have nothing to do with the usual routine of administration, and that when these *post-bellum* undertakings are brought to a conclusion, the state will find itself with an income greatly exceeding its outlays." Japan's policy of imperialism, maintains *The Herald* (Kobe), is not a drain on her resources. It is a significant fact that "while Great Britain devotes half her national expenditure to the maintenance of her imperial position, Japan devotes only a proportionate third."

## THE AGRARIAN TRIUMPH IN PRUSSIA.

THE political crisis in Prussia, resulting in the prorogation of the Parliament and the resignation of three of the ministers, is regarded in Europe as a distinct triumph for the Agrarian Party of the empire. This powerful party has always opposed the Emperor's canal policy. The large landowners in Eastern Prussia declare that the proposed canals would benefit only the industrial population of the Rhine valley, and make it easier for importers of foreign corn and meat to compete with the German farmer. Last year the Agrarians, having a parliamentary majority, rejected the government canal bill. This year it was generally believed that the Government would succeed in buying off their opposition by raising the duty on foreign foodstuffs, despite the cry raised by German manufacturers that Russia, and probably the United States, would retaliate by tariffs on German products.

The *Vossische Zeitung* (Berlin) blames Chancellor von Bülow for not conciliating all parties sufficiently to secure the passage of the canal bill. The triumph of the Agrarians, it holds, could have been made consistent with victory for the Government. The *Hamburger Nachrichten* argues in the same vein, and declares that it can not congratulate the Chancellor upon his success as a second Bismarck. This journal comments on the new appointments and believes there is a chance for social reform. The *Wiener Tageblatt* refers to the victory of the Agrarians as a triumph of feudalism. The Agrarian opposition in the Prussian chamber, says this Vienna journal, and the political circles at the Palace in Berlin are "but different forms of the same medieval institution which is sapping the energies of the state and endeavoring to provide for its own subsistence at the public cost."

The *Independance Belge* (Brussels) declares that the crisis has proven the Agrarians to be so completely the masters of Prussia that "their interests have become the functions of government." The Prussian Junkers, says the *Temps* (Paris) have become so powerful and insolent that little short of a revolution will dislodge them. The *Journal des Débats* (Paris) reviews the history of Emperor William's canal policy and expresses the belief that he will again "return to the charge." A writer in the *Revue Bleu* (Paris) says Germany is beginning to pay the penalty for expanding faster than her resources will justify. There will be trouble, he prophesies, when the parliament is again convened. The crisis has ended in a victory for the forces of reaction, declares *The Guardian* (Manchester), which continues: "Industrial Germany is virtually ruled by a clique of landowners who are fanatical Protectionists and enemies of progress in almost every shape and form—very much as England was in the days before 1832."

The fall of the ministry was inevitable, in the opinion of *The Times* (London), which says:

"The fact is that the commercial and industrial development of Germany and the internal reactionary and repressive policy which the Emperor wishes to combine are things which can not be combined. The party on which the Government relies for its support against the Liberal and Radical elements in the state is absolutely indifferent to the industrial development of Prussia or Germany, and is only concerned with its own local and class interests. But government on existing lines is impossible without it. The existing restricted franchise in Prussia gives it a majority in the constituencies which makes a dissolution useless, while

any widening of the franchise would only bring to the top those liberal and advanced elements which the Government has made up its mind to distrust. Meanwhile, the Socialist and anti-dynastic party, to which the *régime* of reaction is a continual source of strength, laughs, like Björnson's 'brown man,' at the mistakes of the ruling classes."

The new appointments seem to *The Times* to indicate that the Emperor means hereafter to look among business men for his cabinet ministers. On this point, the "Thunderer" remarks: "The German official classes, with few exceptions, have become pitiably inferior in ability and enterprise to the Germans who are making their nation respected and influential throughout the world." *The Morning Post* (London) sums up the Agrarian agitation and the downfall of the cabinet as "a squalid squabble of interests, in which the Emperor has been worsted by the corn growers east of the Elbe."—*Translations made for* THE LITERARY DIGEST.

## THE WALL-STREET WHIRL AS IT APPEARED TO FOREIGNERS.

THE magnitude of the interests involved in the operations of the New York stock market is the theme to which special attention is paid by those foreign journals which comment on the recent excitement in Wall Street. The figures quoted in connection with the American railroad deals, says *The Daily News* (London), are unprecedented in the history of financiering. The transactions involved so much that this English journal thinks it a moral crime that so few men were able to "juggle" with them. Yet, it says, the crash was inevitable. Overconfidence on the part of American traders was becoming dangerous to the world. "Operations had become unsound and reckless, and some check was needed to remind buyers that an ultimate basis of value must be established for the securities daily changing hands in such enormous amounts." *Money* (London) is chiefly concerned about English investors. It finds, however, that, despite reports of heavy British buying, the "public here [in England] have evinced a great disinclination all through the piece to take a very active part in the Yankee gamble, and dealers have shown a desire to check the wild outburst of speculation which has been witnessed in Wall Street." This journal also scouts the idea that Mr. J. P. Morgan "saved London" by not insisting upon the delivery of shares by London "shorts." They do not transact business in Wall Street, declares *Events* (Ottawa); they simply gamble, and those who do not want or can not afford to lose had better keep out of it altogether. Is the effort to make a rapid fortune by such means worth all the anxiety and risk it entails? asks *The Monetary Times* (Toronto). In reply, it quotes the testimony of one of the successful ones: "A Toronto man of small means who went to New York to watch the stock market and operate in it did so successfully, and returned with a profit of a quarter of a million. A gentleman upon whom he called asked him if he would go back to Wall Street and try to become a millionaire. 'No,' he replied, with emphasis, 'not for all the money in the world. I am a physical wreck now, as you can see, and have to go away at once to get back, if I can, the health I have lost in those exciting and sleepless weeks.'" Heaven's last and best work, the glorious North American continent, says *The Telegram* (Toronto), "shows signs of degenerating into a mere fringe upon the edges of the New York stock market." This same journal continues:

"Humanity does not show to advantage in the throes of a craze to get money without working for it. It is not good that the interests and affections of any nation should cluster exclusively around the stock ticker. All this talk about millions during the past few weeks does not mean that one dollar has been added to the wealth of the nation. The people on the right side of the market who go to bed rejoicing that they have made money do not exceed in number the gamblers on the wrong side of the market who go to bed sorrowing that they have lost money."

# Reduced Prices
. . ON . .
# Suits and Skirts.

A FEW weeks ago a large woolen mill made us an offer of their entire stock of Summer suitings at prices which enable us to offer you:

**Suits and Skirts, made to order of bran-new materials at one-third less than regular prices—**

perfect in fashion, shape and workmanship. Nearly all of our styles and materials share in this reduction. These offerings and others:

**Suits, former price $10, reduced to $6.67.**
**$12 Suits reduced to $8.**
**$15 Suits reduced to $10.**
**$20 Suits reduced to $13.34.**

**Skirts, former price $5, reduced to $3.34. $6 Skirts reduced to $4. $7.50 Skirts reduced to $5. $10 Skirts reduced to $6.67.**

**Rainy-Day Skirts, former price $6, reduced to $4. $7.50 Skirts reduced to $5.**

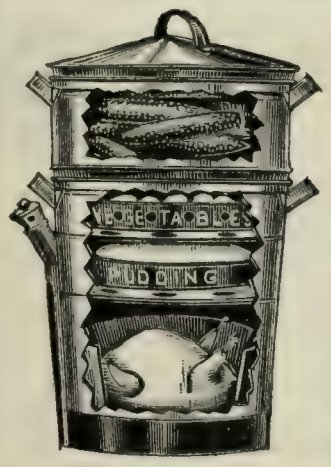
There are no reductions on Wash Suits or Skirts, but our prices are extremely reasonable.

**Wash Suits, $4 up. Wash Skirts, $3 up.**

We are also closing out Sample Suits and Skirts *at one-half of regular prices.*

Catalogue, Samples, and Bargain List sent *free* at once upon request. If any garment ordered therefrom should not please you, send it back. *We will refund your money.*

**THE NATIONAL CLOAK CO.,**
**119 & 121 West 23d St., New York.**



# The New "Ohio" Steam Cooker

Surpasses all others, by having copper bottom and sides. Cooks large meal over one burner.

This makes Summer Cooking a Pleasure. Use Gas, Gasoline, Oil or Wood Stove. Steam Whistle blows when Cooker needs more water. **Great Saving in Fuel, Provision and Labor.** Nothing can burn or dry up and waste. No steam or odor in room, they are conducted into the fire and consumed. Grand for canning fruit. We pay express and guarantee satisfaction. Special offer where we have no agents. Best seller on earth for agents during the summer. Salary and large commission given.

**AGENTS WANTED EVERYWHERE.**
Exclusive Territory—Write us to-day for terms and printed matter. Address

**Ohio Steam Cooker Company,**
**50 Ontario Building, Toledo, Ohio.**

**100 VISITING CARDS** Post paid **35c**

name and address, latest style. Order filled day received Not obtainable elsewhere at twice the price. Special inducements to Agents. Booklet "CARD STYLE" FREE!

## CURRENT POETRY.

### The Columbine.

By JOHN BURROUGHS.

I strolled along the beaten way,
Where hoary cliffs uprear their heads,
And all the firstlings of the May
Were peeping from their leafy beds,
When, dancing in its rocky frame,
I saw the columbine's flower of flame.

It filled a niche, or clung in dent,
Or did it leap from out a seam?—
Some hidden fire had found a vent
And leaped to light with vivid gleam.
It thrilled the eye, it cheered the place,
And gave the ledge a living grace.

The redstart flashing up and down,
The oriole whistling in the elm,
The kinglet with his ruby crown,—
All wear colors of thy realm;
And startling with his glowing coals,—
So shine thy lamps by oak-tree boles.

I saw them a-flaming
Against the gray rocks;
I saw them in couples,
I saw them in flocks.
They danced in the breezes,
They glowed in the sun,
They nodded and beckoned,
They were glad every one.

Some grew by the wayside,
Some peered from the ledge,
Some flamed from a crevice,
And clung like a wedge;

Some rooted in débris
Of rocks and of trees,
And all were inviting
The wild banded bees.

Nature knoweth the use of foils,
And knoweth well to recompense;
There lurks a grace in all her toils;
And in her ruder elements
There oft doth gleam a tenderness
The eye to charm, the ear to bless.

—In *Harper's Magazine* for June.

### Sonnet.

By EDITH M. THOMAS.

THE GRAVE OF KEATS.

I have beheld that grave with violets dim
In the great Cæsar's City where he sleeps
And, over it, a little laurel sweeps,
Fruited and leafed eternally for him;
Not far away, a pine, of sturdier limb,
Leaf, flower, and grass the mellow sunlight steeps,
And this dear grave! Ah, how the soul upleaps,
The breath comes tremblingly, and the eyes swim!

In dreams that bordered close the sleep of death,
He felt the blowing flowers above his breast:
This moment I behold a wondrous thing—
These blossoms, stirring in the wind's light breath,
Do not they feel (above all violets blest)
The ever-vital dust from whence they spring!

—In *Scribner's Magazine* for June.

## MORE OR LESS PUNGENT.

**Some Instances of Bashfulness.**—Ernest Blum, in his *Journal d'un Vaudevilliste*, according to the *Staats-Zeitung*, gives the following amusing instances of excessive bashfulness in actors and others:

"'Father Viennet would blush at the sight of a young woman until he was eighty years old.

"A subordinate actor was always terrified by the sight of a large audience and lived in constant fear of the day when he should be called upon to take an important part. The dreaded day came at last. All went well at rehearsal, but at the performance the actor's knees trembled and his tongue clave to the roof of his mouth. In a dialog he whispered his replies into the ear of his colleague, who was forced to repeat them aloud. The audience thought this was all in the play and very funny.

"In Brébant's restaurant there was a waiter who flushed or turned pale whenever a patron addressed him. When he had to wait on ladies he was in an agony of embarrassment. It was impossible for a woman to get any information or any desired dish from him. He stammered, confused soups with entrées, and brought spinach instead of oysters. He refused positively to serve in the *cabinets particuliers*, he dared not open the door of one of them.

"By way of breaking him in, his employer made him serve a married couple who were dining in a private room. He was so excited that he poured a quantity of soup upon the lady, and, happening to come in at the moment when the pair were exchanging a legitimate kiss, he anointed the gentleman's head with gravy.

"Blum adds that he was very bashful himself at

"REVERSIBLE" Linene Collars & Cuffs.

MANY ADVANTAGES.

one time. He met and danced with a young lady several times, fell in love with her and determined to ask her to marry him. The next time they met, he told her that he had something very important to say to her, led her to a secluded corner, blushed, stammered and finally said: 'I only wished to ask if you think it will rain to-morrow.'

"He returned to the attack on several other occasions, but never got further than the weather. The lady did not know his secret until some fifty years later when she was a white-haired grandmother. 'It was just as well that you did not say it,' she told him, 'for I should have refused you. You danced the polka so horribly!'"—*Translation made for* THE LITERARY DIGEST.

**Silent Contempt.**—HE: "Mother, Sis is always pinching me."

MOTHER: "Why, then punish her with silent contempt; that means, you must do as if you did not notice it at all."

SISTER (after a while crying): "Mother, over the table he punishes me with silent contempt, and under the table he kicks me."—*Brooklyn Life.*

## Current Events.

### Foreign.

CHINA.

May 27.—The withdrawal of the German marines to Tsing-Tan is begun, and the German quarter of Peking is handed over to the Chinese authorities experimentally for a fortnight.

May 30.—China agrees to pay 4 per cent on the indemnity of 450,000,000 taels; this, it is believed in London, removes the last obstacle to the evacuation of Peking and the return of the court.

May 31.—Preparations for the withdrawal of foreign troops from China proceed on a large scale.

SOUTH AFRICA.

May 28.—The Boer General Schoeman and his daughter are killed by the explosion of a British shell in their home at Pretoria.

May 31.—The Boers under Delarey make a determined attack on the British garrison at Vlakfontein, fifty miles from Johannesburg, but are repulsed, leaving 35 dead on the field; the British casualities number 174.

June 1.—General Tobias Smit and the secretary of Gen. Louis Botha arrive at Standerton, Transvaal colony, within the British lines, but nothing is known by the public of their mission; a severe engagement between British and Boers is reported from Vlakfontein.

OTHER FOREIGN NEWS.

May 27.—The Duke and Duchess of Cornwall and York land at Sydney, Australia; the latest census places the population of Australasia at 4,550,651.

The Venezuela supreme court refuses to allow exceptions taken by the New York and Bermuda Asphalt Company in the lawsuit pending in that country.

May 29.—Mr. Chamberlain speaks in favor of old-age pensions at Birmingham.

Nearly two hundred deaths from bubonic plague occur within a few days in Hongkong

May 30.—Queen Wilhelmina and her consort ar-

rive at Potsdam as guests of the Emperor of Germany.

An official order prohibits Armenians who are naturalized Americans or Russians from entering Turkey.

Count William von Bismarck, youngest son of the famous Chancellor, is dead.

May 31.—The entertainment of Queen Wilhelmina in Germany includes a review of the troops and an official welcome to Berlin; Emperor William bestows decorations on the French officers attending the maneuvers.

June 1.—Twenty-two Americans, members of the delegation of the New York Chamber of Commerce, visit Windsor Castle, where they are received by the King and Queen of England.

Queen Helen of Italy gives birth to a daughter.

## Domestic.

DOMESTIC NEWS.

May 27.—The United States Supreme Court decides all but two of the insular test suits, sustaining the policy of the Government; the Porto Rican tariff act is declared to be constitutional, but it is held that duties collected prior to the passage of that act were illegal and must be refunded.

The Presbyterian General Assembly, in session at Philadelphia, adopts by practically a unanimous vote a resolution providing for a committee to draft a statement of the faith of the denomination, to be presented at the next annual session of the Assembly.

The President and party cross Wyoming and Nebraska on their way to Washington.

May 28.—The United States Supreme Court adjourns until October, without deciding two of the insular test suits, which are thought to involve new phases of the questions at issue.

The Presbyterian General Assembly adjourns its session at Philadelphia, appointing New York as next year's meeting-place.

The announcement of Professor Herron's marriage to Miss Carrie Rand, on May 25, is made public in New York.

May 29.—The President, en route for Washington, makes a brief stop at his home in Canton, Ohio.

The trial of the suit of Mrs. Woodbury against Mrs. Eddy, head of the Christian Science Church, for alleged libel, is begun at Boston

The Confederate Veterans' Association at Memphis reelects Gen. John B. Gordon commander-in-chief.

May 30.—The President and his party return to Washington; Mrs. McKinley's health grows worse again, and it is feared she is sinking.

Decoration Day celebrations take place in most of the cities of the country.

May 31.—Mrs. McKinley's illness is grave; the President cancels his engagements in Massachusetts.

Governor McSweeney of South Carolina rejects the resignations of Senators Tillman and McLaurin to give them time to reconsider their action.

June 1.—W. J. Bryan gives out an opinion on the Supreme Court decision, holding that it makes the President Emperor of Porto Rico and makes Congress greater than the Constitution.

Senator Tillman refuses to withdraw his resignation, and makes public a letter to Governor McSweeney, saying the latter transcended his authority in refusing to accept it.

June 2.—Mrs. McKinley is still very weak, and her strength is said to be failing.

AMERICAN DEPENDENCIES.

May 28.—*Cuba*: The Cuban Constitutional Convention, by a vote of 15 to 14, accepts the Platt amendment, with modifications.

May 28.—Cubans generally express satisfaction with the acceptance of the Platt amendment; Messrs. Onderdonk, McClelland, and Dady bid over $13,000,000 for a contract to construct sanitary works at Havana.

May 31.—The President and Cabinet reject the Cuban modification of the Platt amendment, on the ground that both spirit and letter of the amendment were violated.

June 2.—Señor Michael Gener, candidate of the Nationalist Party, is elected mayor of Havana; the Nationalists elect eighteen members of the municipal council, the Republicans four, and the Democrats two.

**SENT FREE AND PREPAID**

To any reader of LITERARY DIGEST, a bottle of Vernal Saw Palmetto Berry Wine. Only one dose a day perfectly cures Indigestion, Constipation, Kidneys, Bladder and Prostate to stay cured. Write now to Vernal Remedy Company, Buffalo, N. Y.

# Prevention of Disease.

## Keep the Stomach Right.

It is surprising what a safeguard a healthy stomach is against disease. And again it is not so surprising when it is remembered that the only way to get pure blood, strong nerves and firm flesh is from wholesome food, *well digested.* It is the half-digested food that causes the mischief. When the stomach is weak, slow, inactive, the food lies in the stomach for hours, fermenting, forming gases which poison the blood and the whole system, causing headache, pains in the back, shoulder blades and chest, loss of appetite, palpitation, biliousness.

The safest cure for indigestion is Stuart's Dyspepsia Tablets, composed of vegetable essences, fruit salts, pure pepsin, and Golden Seal. Dissolve one or two of these tablets in the mouth after each meal. They are pleasant-tasting and mingling with the food so assist the weak stomach that the food is perfectly digested before it *has time to ferment.*

Stuart's Dyspepsia Tablets cure indigestion and increase flesh because they digest flesh-forming foods like meat, eggs, etc.

Sold by druggists at 50 cents per package. Absolutely safe and harmless.

## CHESS.

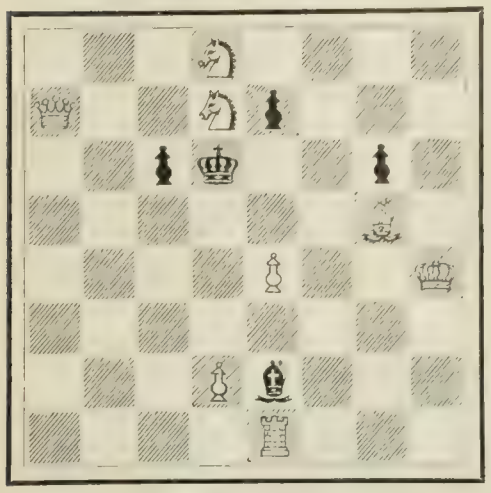
[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

### Problem 564.

BY J. C. J. WAINWRIGHT.

From *Checkmate*, Prescott, Can.

Black—Five Pieces.



White—Eight Pieces.

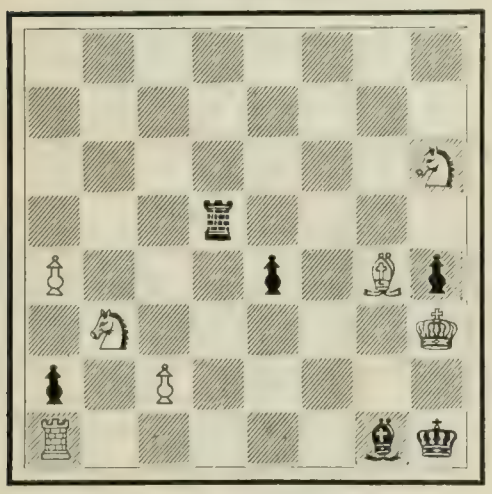
White mates in two moves.

This problem is an illustration of what the author calls the "strange evolution of a Black Pawn." He presents six problems from various authors to show the "logical development of a scheme in which the black Pawn is the hero." The problem given above is, probably, the best of the six.

### Problem 565.

By J. A. BROHOLM, SWEDEN.

Black—Six Pieces.



White—Seven Pieces.

White mates in three moves.

### Erratum.

CONCERNING PROBLEM 560.

The "correction" of this problem in our issue of May 25 is not satisfactory. Dr. Dalton makes the final correction: "Remove black Ps on Q Kt 3 and K R 5."

### Solution of Problems.

No. 559.

Key-move, R—Kt 3.

Solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; H. W. Barry, Boston; M. Marble, Worcester, Mass.; the Rev. J. G. D.; "Small, but a many-faced and beautiful diamond"—A K.; "Violates one of the first rules"—J. H. L.; "Well conceived"—H. W. F.; "Obvious key"—A. N. C.

Two solvers unfavorably criticize this problem as violating the law which says the key-move should not remove a piece *en prise*. But the key-move puts the R *en prise*, and, therefore, the law is not violated.

The solution of 560 will be held over one week, as very many solvers have not had an opportunity to try it as corrected. It is worthy of notice that several solvers corrected it, for themselves, and sent the solution.

In addition to those reported, H. W. B., T. H., W. J. L., and H. A. S., got 557 and 558; E. W. G., A. D. J., G. C. Spencer, Greenwich, Conn., 557; the Rev. A. De R. M., 558; G. P., 553.

### The Manhattan-Franklin Match.

The Manhattan, New York City, and the Franklin, Philadelphia, are the largest and most influential Chess-clubs in the United States. They also represent the greatest Chess ability; many of their members having an international reputation. It were natural that there should be a rivalry between these clubs, and the relative superiority has been for a number of years a question of interest. Five friendly matches have been played since 1895, resulting in a tie, with Franklin 35½ points and Manhattan 34½. This year, they began a series of matches for the possession of a gold cup, to be the property of the club winning three successive matches. The first match, played on Memorial Day, was of the character of a "snow-under" for the Philadelphians, as the New Yorkers beat them by the score of 10 to 6. There were 16 games; the Manhattan won 7, Franklin 3, Drawn 6.

### Another "Gamelet."

A correspondent sends us the following game, played in a match between Mr. W. L. Moorman and Mr. E. G. Glass.

### What Constitutes a Game?

By W. A. P.

Originality
With combinations deep,
A fund o' penetration
That's never caught asleep;
A concentration rare,
Astuteness yoked to skill:
These enter in the contest,
Have won, and will.

**DEER PARK HOTEL**
**DEER PARK, MD.**
MOST DELIGHTFUL SUMMER RESORT OF THE ALLEGHENIES.

Swept by mountain breezes, 2,800 feet above sea level. Absolutely free from malaria, hay fever and mosquitoes. Reached without change of cars from all principal cities via Baltimore & Ohio Railroad. Every modern convenience. Rooms en suite with private baths. Electric Lights, Long Distance Telephone, Elevator, Turkish Baths, Swimming Pools, Golf Links, Tennis Courts, Bowling Alleys, Magnificent Drives, Complete Livery Service. Annapolis Naval Academy Band. Hotel remodeled with additional conveniences. All cottages have been taken for the season. Open from June 22d to September 30th.
For rates and information address W. E. Burwell, Manager, care Queen City Hotel, Cumberland, Md., until June 1st After that time, Deer Park, Garrett County, Md.

"The Kohinoor in California's crown."
**MOUNT SHASTA.**

There is no more beautiful sight of its kind than Mount Shasta, covered with snow and glistening in the sun. Thousands have traveled across the continent to see it, and felt well repaid for their time. The way to reach it is by the

NEW YORK CENTRAL LINES

and their connections. Mount Shasta is only about four and a half days from New York or Boston, and every lover of this country should see it.
For details of rates and trains, see a ticket agent of the New York Central.
A copy of "America's Summer Resorts," will be sent free, postpaid, on receipt of a postage stamp by George H. Daniels, General Passenger Agent, New York Central & Hudson River Railroad, Grand Central Station, New York.

**FENWICK HALL**
**FENWICK, CONN.**
If you wish to spend the Summer at one of the most perfectly appointed resorts on the Atlantic Coast, offering every facility for indoor and outdoor amusements, and with a social atmosphere inviting to refined people, write for particulars to J. E. CHATFIELD, Hotel Jefferson, New York.
PRIVATE GOLF LINKS

**WOODBRIDGE HILLS** 500 feet elevation; seven miles from New Haven. Pleasant location; comfortable rooms; open fireplaces; table supplied from our dairy and poultry farm—one-half mile from house. Healthfulness unsurpassed. Personal inspection solicited. Carriage. Maple Vale, Woodbridge, Conn.

**SEE THAT CLIP?**

The Niagara Clip holds securely from the thinnest sheet of paper up to ¼ inch in thickness, and can be used over and over again. Better than pins for filing letters, records, cards, etc. Avoid unsightly pin-holes in attaching second letters, business cards, checks, drafts, invoices, etc. Put up in boxes of 100 especially for desk convenience. Sample box 20 cts. postpaid.

VOL. XXII., NO. 24 NEW YORK, JUNE 15, 1901. WHOLE NUMBER, 582

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**VACATION NOTICE TO SUBSCRIBERS.**

Subscribers desiring to receive THE LITERARY DIGEST at their vacation addresses will oblige us and save themselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

## TOPICS OF THE DAY.

### TWO IMPORTANT COMMERCIAL GATHERINGS.

INTERNATIONAL trade may be materially increased, it seems likely, as the result of two commercial conferences held last week. The one that attracted the widest notice was the dinner given to the representatives of the New York Chamber of Commerce by the London Chamber of Commerce in London; and the brisk trade rivalry between England and America that is the talk of the newspapers, magazines, and public men on both sides of the water lent a great deal of interest to the meeting. *The Westminster Gazette* suggested that the banquet might "be regarded as the friendly handshake which precedes a vigorous encounter," and added that if the Americans "are going to knock us out of time in the markets of the world, our merchants mean to take their fate in the best of spirits." The speeches were devoted principally to the exchange of international compliments and expressions of good will, and the comments in the American newspapers are mostly of a similarly platitudinous nature; but the fact of the dinner, with its manifestation of good feeling, is looked upon as auguring closer commercial relations between the business interests of the two countries. The Brooklyn *Times* says on this point:

"It was reserved for President McKinley, as quoted by Lord Lansdowne, to give expression to the real significance of the gathering. The British Foreign Secretary referred in warm terms to the great career of the American President, and gave expression to the universal sentiment that his wife might soon be restored to health, and then he uttered the keynote of the meeting in quoting McKinley's phrase: 'Commerce is the greatest diplomatist.' It is in that fact, so epigramatically expressed by the President of the United States, that the meaning and value of such reunions are to be found. Differences of opinion as to boundaries, to the interpretation of tariffs and to instances of injustice to individual citizens, are constantly liable to arise between two great nations, but the surest guarantee of peace is to be found in the mutual interests created by commerce, which will not permit the peace of the world to be disturbed for trivial cause. In this respect, as was said by one of the speakers at the London banquet, commerce is more potent than religion in promoting peace between nations, in eradicating deep-rooted national prejudices, and in creating mutual good will between long-estranged peoples.

"Commerce has its rivalries as sharp and well-defined as those of war, but there will never be any other kind of war between the two English-speaking races, if the controversy that threatens to result in bloodshed is referred to the arbitrament of the Chambers of Commerce of London and New York."

The other commercial gathering last week was the sixth annual meeting of the National Association of Manufacturers, in Detroit. The significant feature of the manufacturers' meeting was the tone of sympathy with reciprocity and tariff reduction that appeared in many of the speeches. The convention adopted a resolution affirming that the following principles should govern all tariff legislation:

"First—The object of tariff legislation should be to furnish adequate protection to such products only as require it, without providing the opportunity for monopoly abuses.

"Second—The tariff on goods of which the cost of production is higher in the United States than in foreign countries should be at least what is neccessary to compensate domestic industries for the higher cost of production."

Says the New York *Evening Post* (Ind.):

"When the National Association of Manufacturers begins to talk tariff reform, the dawn can not be far away. To affirm, as the association did at its last session at Detroit yesterday, that protection should be given 'to such products only as require it, without providing the opportunity for monopolistic abuses,' is a sufficiently explicit way of saying that there are in the Dingley tariff wholly unnecessary duties which do lead straight to trusts. The association declined to indorse the Babcock bill for the removal of duties on iron and steel, but this was only *pro forma*. The principle underlying the bill evidently met with its hearty approval. Clearly, as one of the New York delegates asserted, there are 'clouds of tariff revision in the sky,' and manufacturers must take account of their existence. The old dilemma is before them: the tariff must either be revised by its friends or overturned by its enemies. . . . How strangely times change, and men change with them, when we have lived to see William McKinley deprecating ultra-protection, and American manufacturers clamoring for lower duties!"

The Philadelphia *Press* (Rep.) says, however, that "the efforts of the free-trade newspapers to make out that the annual convention of the Manufacturers' Association held in Detroit this week was a sort of free-trade affair will not bear investigation," and, quoting the resolution given above, it goes on to say:

"No protectionist will object to that resolution, because it embraces the fundamental principles of the protective tariff. 'Adequate protection' to make up the difference in cost of production in the United States as compared with foreign countries is the beginning and end of a protective tariff. The fact that nearly one-half of all the imports into this country come in free of duty proves that the protective tariff applies 'to such products only as require it.' Some few articles were made dutiable under the

war-revenue act for revenue purposes, but that had nothing to do with the protective tariff. As to 'monopoly abuses,' so far as they may exist, the tariff is not responsible for them. The corporation that comes the nearest to a monopoly in this country is the one best known as the Standard Oil Company, and no one is foolish enough to charge that the tariff had anything to do with petroleum, which has always been on the free list."

The New York *Journal of Commerce* (Fin.) believes that the convention's favorable attitude toward reciprocity "can not fail to have some influence upon the Senate, which is holding up several reciprocity treaties under the impression that manufacturers are opposed to them; of course some manufacturers are, but the great body of them are revising their opinions in view of the altered conditions of production and commerce."

## "RIPPER" LEGISLATION, AGAIN.

THE operation of the new "ripper" laws in Pennsylvania, which, in spite of their radical nature, were sustained by the supreme court of that State, and have had the effect of substituting "recorders," appointed by the governor, for the previously existing mayors of Pittsburg, Allegheny, and Scranton, is being watched with wide interest. The decision of the supreme court awakens surprise and indignation in some quarters. In the opinion of the Chicago *Evening Post* (Ind.), the "ripper" laws are an "outrageous, impudent, and dangerous attack on home rule and representative government," and the decision of the court, so far from being a "vindication for the spoilsmen" simply shows "how defective and antiquated the Pennsylvania constitution is." The workings of the new laws up to date do not seem to have inspired much confidence for the future. In Scranton the appointment of Recorder Moir resulted in a great deal of dissatisfaction. One of Mr. Moir's first official acts was the appointment of a director of public safety who made himself obnoxious to the recorder and was removed. The choice of a new director was equally unhappy, for he too was promptly removed. Later, the Municipal League of Scranton petitioned the governor to remove Mr. Moir, with the result that he resigned, and W. L. Connell, a nephew of Congressman Connell, was appointed in his place. The Boston *Herald* (Ind.) thinks it is open to doubt whether "this way of governing cities is an improvement upon electing a mayor for a definite term and enduring him until the end of it." The Scranton *Truth* (Ind.), in much more emphatic language, declares the "ripper" laws to be the "boldest and most flagrant 'hold-up' of popular rights ever manifested in this or any other State," adding that their indorsement by the supreme court "shows how completely all the cities of the Commonwealth are at the mercy of a boss-ridden legislature." On the other hand, the Scranton *Tribune* (Rep.) views with favor the principal features of the new legislation, and believes that a strongly centralized executive power, as vested in the recorder, is just what is needed in Scranton. The Pittsburg *Dispatch* (Ind. Rep.), too, thinks that more good than harm will be accomplished by the new measures. "Paramount among the things for which the public has to be grateful," it says, reviewing the situation in Pittsburg, "are the concentration of power in the hands of the recorder and the appointment to that office of a gentleman whose ability and integrity have not been questioned in any quarter."

"Ripper" legislation in Pennsylvania is not confined to the amendment of city charters. Last week it was extended to include street-railroad legislation. The street-railway rippers, which were rushed through both House and Senate and became law a few days ago by the signature of the governor, were fathered by Senators Focht and Emery, and provided "for the incorporation and government of passenger railways, either elevated or underground, or partly elevated and partly underground, with surface rights." The favored railroad company getting the charter under this new law will have the right of eminent domain, and, in the language of the Philadelphia *Public Ledger* (Ind.), will enjoy "monopolistic control of the streets for two years." These bills, remarks *The Ledger*, "were 'sprung' upon the legislature without notice," "favorably reported" and "jammed through in hot haste," before it was possible for the very cities affected by the measures even to protest

FATHER PENN: "I can't see, my yellow friend, that I'm much better off than yourself." —*The Philadelphia North American.*

against them. "It is highway robbery of a flagrant kind," says the Philadelphia *Times* (Ind. Dem.); and the Philadelphia *Press* (Rep.) declares that "there is not the smallest effort apparent in any section of these bills to safeguard the interests of the people."

In the State of Michigan the same battle against "ripper" legislation is being fought, and the newspapers are devoting a great deal of space to this question. The Detroit *Tribune* (Rep.) enters vigorous protest against the "long list of obviously partizan and frequently dishonest ripper bills" passed during the recent session of the legislature. It says:

"These matters have only recently begun to be of real importance. Thirty years ago, when there were only ten cities in Michigan with more than 5,000 inhabitants each, the largest of them having less than 80,000 people, and their total population being less than 200,000, it was natural that such questions should be in abeyance. But the growth of urban populations since the Civil War has been enormous. To-day, with 781,405 of her 2,420,982 people living in twenty cities of over 10,000 each, and with more than half a million of these residing in seven towns of more than 20,000 each, it is evident that the time has come for Michigan to give serious attention to the matter.

"It is not alone the welfare of the cities that is to be considered. In many ways this biennial flood of municipal legislation represents a great loss to the State in both the quantity and quality of general legislation. It costs in the neighborhood of one thousand dollars per day to keep the Michigan legislature in session. The session just closed lasted 187 days. More than two-thirds of the bills introduced in both houses were local measures, and even this proportion does not fully represent the percentage of the time of the legislature that was taken up with purely local matters, of no interest to any community outside the one immediately affected in each case."

"The remedy lies in taking from the legislature the power of deciding local questions," says *The Tribune*; "there can never

be either good local government nor good state government until this is done."

## MORE REFLECTIONS ON THE DECISION.

CONTINUED examination of the Supreme Court decisions in the Porto Rico cases continues to bring out new features of interest and importance. Some expressed a belief at first that the present status of the Philippines is similar to the status of Porto Rico in the De Lima decision, and that consequently the present tariffs between the Philippines and the States are unconstitutional. The President and his Cabinet discussed last week the advisability of calling Congress in extra session to place the Philippines in the same status that Porto Rico now occupies. The case of the Philippines, however, is differentiated from that of Porto Rico by the Spooner resolution, passed at the close of the last session of Congress, vesting "all military, civil, and judicial powers necessary to govern the Philippine Islands" in the President, to be exercised in such manner as he may direct until further action by Congress. Whether this surrender of power by Congress gives the President the constitutional right to make tariff laws for the Philippines by proclamation has not been passed upon by the court, but the Administration has decided to take the risk of continuing the present governmental arrangements for the islands for the present. The following announcement was given out by direction of the President last week: "The President has determined that existing conditions do not require or warrant calling Congress together during the present summer or making any change in the policy hitherto pursued and announced in regard to the Philippine Islands." Secretary Root said: "The Supreme Court has decided some things as to Porto Rico. They may apply or they may not apply to the Philippines, or they may apply in part. For the present we shall continue practically as we have begun."

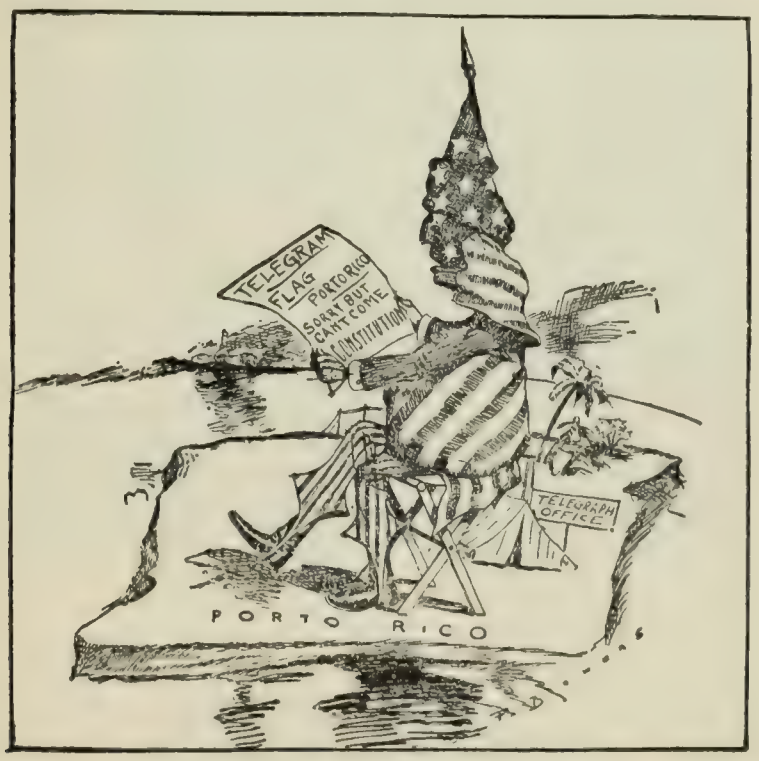
Mr. Bryan has given out a statement criticizing the Court's decision. He says that, in effect, it "declares that the people are not the source of power; it defends taxation without representation, and denies that governments derive their just power from the consent of the governed. It assails the foundation of the republic and does so on the ground of expediency." He says further: "By a vote of 5 to 4 the Supreme Court has declared President McKinley Emperor of Porto Rico, and, according to the press despatches, the Emperor has gladly and gratefully accepted the title conferred upon him by the highest judicial tribunal of the land." This last expression of Mr. Bryan's is controverted by several papers, some of them anti-Administration organs, as may be seen in the comment from the New York *World* quoted below.

**March of the Constitution.**—"One hundred and fourteen years ago all of the philosophers and statesmen of the Old World were agreed in the conviction that the written Constitution then being attempted by the newly formed United States would prove a failure. It would lack, they said, the flexibility so necessary in a growing nation under changing conditions, and it was pointed out by the English statesmen that a constitution like their own unwritten one, which would grow with the people, was the only one that promised to live beyond the generation by which it was made. And it was Carlyle, writing many years later of the French effort at constitutional government, who declared that the fatal defect with all written constitutions is that 'they will not march.'

"But the framers of the American Constitution overcame this supposititious weakness by making one that would march. Each year gives us keener appreciation of its adaptability to new issues and fresh emergencies. Time has shown that Gladstone's dictum that 'the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man' is profoundly true. It possesses the marvelous combination of preserving the spirit and intent of a democratic form of government without erecting technical obstacles which obstruct the growth and progress of the nation which it serves. It was builded in such a fashion that, without frequent recourse to the process of amendment, the people and the Government may do almost anything within certain clearly established principles involving the rights of man."—*The Kansas City Journal* (Rep.).

**How the Decision Affects the Power of the President.**—"Not the least curious phase of the Supreme Court decisions is that while Congress is clothed with full powers over our new possessions, the President's pretensions to exercise such powers are all swept away. Mr. McKinley's contentions were, first, that the Government had 'extra-constitutional' powers under which it could indulge in expansion; and second, that he himself had the right to rule without restraint in colonies until Congress should see fit to act.

"In his first contention only one justice agreed with him. The other eight, as *The World* pointed out yesterday morning, found in the Constitution itself the authorization for expansion, and, by assuming jurisdiction, served notice that all the officials of the Government must still keep within the Constitution. As to Mr. McKinley's second contention, the court dismissed it altogether. It emphatically denied that the President had any powers in the territories of the United States except such as Congress might lawfully grant him.



AFTER THE SUPREME COURT DECISION.
—*The Indianapolis News.*

UNCLE SAM: "Help yourselves, boys."
—*The St. Paul Pioneer Press.*

## THE DECISION AND THE CARTOONISTS.

"The full extent of these two signal defeats of the President has not yet been realized by the public. But Mr. McKinley is reported to be very 'uneasy' over them. The cause of this anxiety is said to be the tariff which he 'proclaimed' for the Philippines; and no doubt he has reason to be anxious on that score. A Presidential proclamation is not an act of Congress, and the Supreme Court has declared that it will not answer as a substitute for one. But may it not be that he realizes that the Supreme Court had a deeper matter in mind—the whole question of Executive usurpation and the perils that attend it when a weak Congress is willing to abdicate in favor of the Executive?

"For instance, there is the Spooner resolution by which Congress abdicated in the Philippines, turning over to the President 'all military, civil, and judicial powers necessary to govern the Philippine Islands,' to be 'exercised in such manner as the President of the United States shall direct,' the grant of complete power being 'until otherwise provided by Congress.'

"The Supreme Court has declared that only Congress has the power to take and administer colonies. It has not asserted, but on the contrary has flatly denied, that the President has any autocratic 'extra-constitutional' powers. And as it has held that the Constitution rules, how can it approve a dangerous and undisputedly unconstitutional sweeping abdication of its powers by Congress? Has not the court demolished the only plea in justification—the theory that the right to acquire and rule colonies was 'extra-constitutional'?"—*The New York World* (Ind. Dem.).

**A Remarkable Spectacle.**—"This is certianly an interesting and significant fact in the operation of the institutions of a perfectly free people. Here is a political community of 75,000,000 of blended stock from many varied sources. The chief element, the English-speaking, spring from a race sturdy, independent, inclined to be rebellious. With it are mingled refugees and emigrants from a dozen European lands, all drawn from the more adventurous and least submissive of their respective peoples. A decision of vital consequence is rendered by the vote of one man in nine in the Supreme Court—a man whose name, whichever it is, was probably unknown to nine-tenths of his countrymen when they read it in the press on the morning the decision was announced. And the decision passes not without criticism, certainly, but with authority as unquestioned as the decree of the most autocratic ruler of the Old World. It is a remarkable and a most encouraging spectacle.

"If we seek the explanation we find it chiefly in the very freedom of the people. The authority they recognize and bow to is their own. The court is a part of the system they have created for the administration of their national affairs. Its decisions are accepted because those who differ from them know that in the long run they embody the deliberate purpose of the nation. They are not imposed from above or from outside. Ultimately they are bound to conform to the operation of the national will. Respect for them is self-respect in the highest and most enlightened form." *New York Times* (Ind.).

**The Filipino and the Negro.**—"Of the binding and authoritative decision of the majority [of the Court] it may be said that it recognizes the not wholly pleasant fact that the age in which we live is essentially utilitarian. The Constitution, however venerable and venerated, was made for the people, and the people were not made for the Constitution. We of the South, who look upon the fourteeth and fifteenth amendments to that instrument as moribund and inoperative, can not with much grace complain of the Court's deviation from a purely literal and sentimental interpretation of other clauses.

"The British constitution, of which we hear so much, is happier than ours. It is a myth, like the British monarchy, and that empire has been governed fairly well, on the whole, by legislative supremacy. Constitutions are the work of human hands and brains, and as such can not be literally and servilely followed at all times, and especially when they conflict with public interest and when they fail to meet the exigencies of those who are now alive. All the rhetoric in the world can not change the supreme and adamantine fact that the people of our new possessions are not yet prepared for full American citizenship, and are not yet capable of self-government, according to the American idea, and until they are educated up to the responsibilities and duties of citizenship, common sense and common prudence must dictate a withholding of the boon from them; nor can we see much difference in denying full citizenship to the unprepared peoples of our new possessions from denying it to the unprepared colored people of the Southern States. Necessity knows no law, and necessity is as potent in one place as in another."—*The Memphis Commercial-Appeal* (Dem.).

## CONNECTICUT'S "ROTTEN BOROUGHS."

THE defeat of the Fyler amendment to the state constitution by the Connecticut House of Representatives last week calls attention to the peculiar plan of representation in the lower house of the legislature in that State. There are about one hundred and seventy towns in Connecticut, and, roughly speaking, half the towns, the smallest ones, have one representative apiece in the House of Representatives, and the other half have two apiece. This system has the merit of simplicity, but it gives rise to some curious anomalies of government. One result is that New Haven, with 100,000 population, and Union, with 428, have the same representation. Twelve towns containing cities with a population of 484,000 have twenty-four representatives, while twelve other towns, with a total population of only 8,500, have the same number of representatives, and, therefore, equal power in state affairs. Ninety-five towns with a total population of 105,000 have 128 representatives, and control the House. As Connecticut has a population of over 900,000, it is felt in some quarters that the control of the House should not be held by 105,000. The demand has been rising strongly in late years that this system, which was adopted generations ago, be reformed to suit the distribution of population; and the Republican leaders prepared the Fyler amendment, a moderate reform measure which gave seven representatives to New Haven, five each to Hartford and Bridgeport, and three each to twenty-one small cities and towns. Thirty-five little towns would have lost one representative apiece; but the small towns would still have controlled two-thirds of the House. The fact remained, however, that it was a bill in favor of the cities at the expense of the small towns, and when it came to a vote in the House, in spite of the fact that the Government, the Republican leaders, and every Republican daily paper in the State favored the bill, it was defeated by the overwhelming vote of 145 to 61. The Hartford *Courant* (Rep.) believes that this vote "has set back the whole movement for two years"; but, it adds, "it will develop then stronger than ever," for "this is not the sort of fire that dies out." The prediction is freely made, too, that the next time the matter comes up it will come in a more radical form, and that the representatives of the little towns will wish then that they had accepted the moderate measure they have just defeated. "The small towns which killed the amendment," declares the Hartford *Times* (Ind. Dem.), "have helped the very cause to which they were most opposed, and they have done it in defiance of the advice and appeal of the best leaders of the Republican Party, which has enjoyed all that could be had from the present situation." The same paper adds: "It is not a question of mere abstract right. It involves money interests in the disposition of taxes paid from the larger places while these places have little influence in determining the use to be made of the money. It involves the opportunities for political advancement. It involves other things which relate to equal opportunity under the law, and since all these causes work together to one end, that of demanding an amended system, the demand for that is likely to continue and become more urgent."

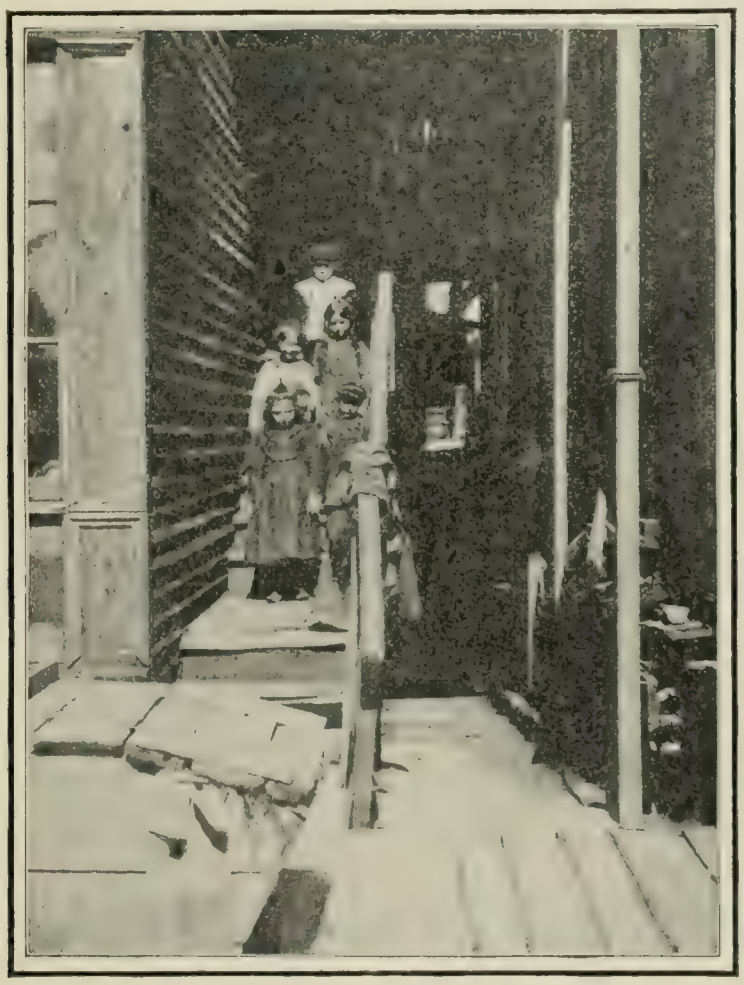
The Brooklyn *Eagle* says of the defeat of the reform measure:

"And this is in New England where the people are supposed to believe in popular government and in the rule of the majority and in the inequity of taxation without representation, and in the inherent depravity of man who will even think of government without the consent of the governed. If any one should propose

to organize a legislature in Porto Rico, for instance, in which the representatives of 100,000 of the population could outvote the representatives of the remaining 800,000, we should hear such a protest from Connecticut against the iniquity of such an arrangement as would make us wonder whether our fellows had suddenly been transformed into imps of darkness. Yet in Puritan New England in the worthy State of Connecticut, the seat of Yale University, in this year of grace, we find 145 chosen representatives of the political sentiment of the State voting in favor of the continuance of such a system, with only 61 representatives courageous enough to oppose it. And eight-ninths of the population of the State will still continue to be governed by one-ninth. The minority rules, and it proposes to hold on to its power."

## THE TENEMENT-HOUSES OF CHICAGO.

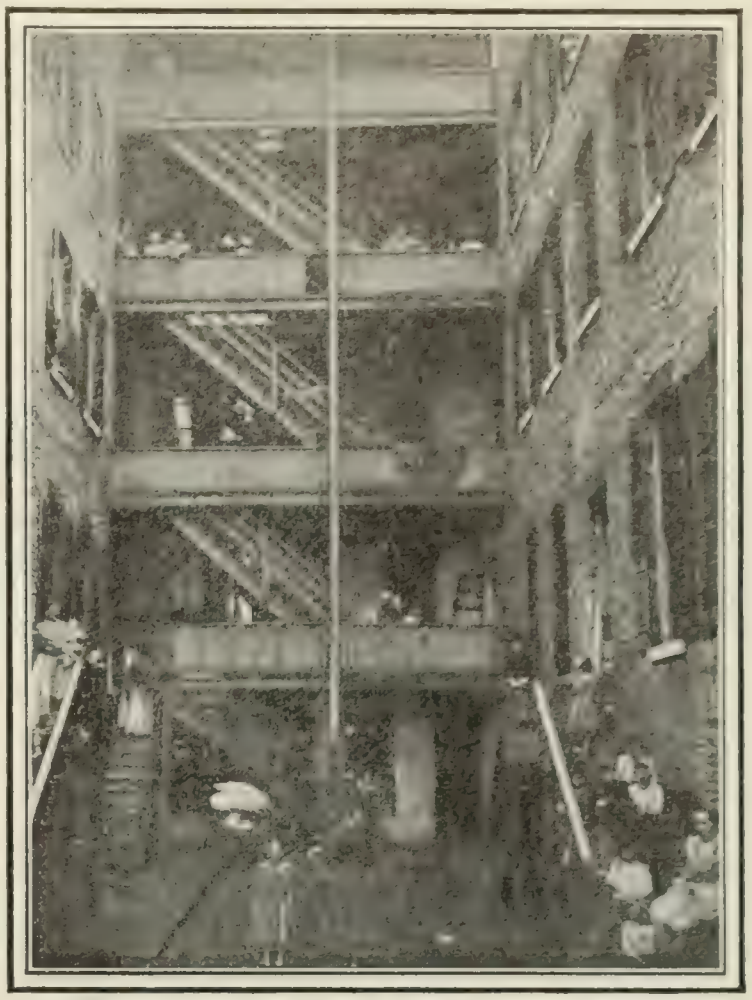
A REPORT of more than ordinary value and interest, on tenement conditions in Chicago, has been recently published by the "City Homes Association" of that city, embodying the result of an investigation made by a committee of which Robert Hunter is chairman and Miss Jane Addams and Mrs. Emmons Blaine are members. It is generally supposed that New York has the densest and most overcrowded tenement population in the world; but, according to Mr. Hunter (who writes the text of the report), "it is very probable, if we could compare the height of the dwelling and its density of population in the Jewish, Italian, Polish, and Bohemian districts of Chicago with the like in districts elsewhere, the real density would equal the worst in the world." "The density of population per acre in the Polish quarter in Chicago," he conttinues, "is three times that of the most crowded portions of Tokyo, Calcutta, and many other Asiatic cities." Conditions have been especially aggravated in Chicago by the lax building regulations. As early as 1879 New York passed a law permitting only sixty-five per cent. of interior lots to be covered by buildings; and the same legal maximum



WITHOUT PLAYGROUNDS.

has been established in Boston. Both Boston and New York have also limited the height of dwellings; but "to the shame of Chicago, no limit in height and only an inadequate one in depth has been set by the city." Mr. Hunter declares:

"The most important obstacle to reform is the slum landlord. He will vigorously protect his property interests. Indeed, this whole question resolves itself into a long struggle between the interests of the individual on the one hand and the larger interests of the common weal on the other. In Chicago the interests of the slum landlords have been thus far protected and promoted



A "BACK YARD."

by the municipality itself. But tenement-house reform means that the interests of landlords owning property injurious to the welfare of tenants and neighbors are of secondary importance. To permit landlords to build without careful municipal regulation is to encourage a tenement-house blight. For it should be understood that in the construction of houses, the relation of one house to another on the same and on adjoining lots, and the size in height and length, decide the inside conditions. In the absence of careful municipal regulation, tenements are built without uniform and adequate provision for light and ventilation. Builders of tenements, and even of many new and cheap apartment buildings, disregard all principles of good construction and erect dangerously insanitary dwellings. . . . . .

"If landlords, with greed for profits and economy of ground space, continue to erect such tenements, the city man will soon have new conditions to confront. The factory by day, the tenements by night, will be his environment. By living in the city, man has divorced himself from the soil. He must now live in rooms where the sun never enters. The air he breathes must reach him through dark passages and foul courts.. He must be content with about two yards square of earth's space for himself, for each one of his children, for each one of his thousand close neighbors, and for each one of their children. These restrictions of the crowded tenements become all the more oppressive when they are viewed in the light of the past lives of most of the inhabitants of these crowded districts. Comparing the life of the dweller in the city to that of the olive-grower of Southern Italy, or the plowman of Rumania—the ancestors of many tenement-house dwellers—the hardships of the present are more serious than those of the past; for whatever difficulties life offered, the people still had air to breathe and expanse of earth."

Mr. Hunter draws some vivid pictures of tenement overcrowding. He tells of the case of a tenement-house that came under his notice, with one hundred and twenty-seven people living in it. In one apartment of three small rooms (two of them dark) in this house, he found six adults and four children. Another apartment of two rooms had six people living in it. Another apartment of three rooms, all of them dark, housed three chil-

dren and six adults. In this tenement-house were seventy dark rooms, most of them bedrooms. As the direct results of such overcrowding Mr. Hunter traces high death-rates; a pitiful increase in infant mortality; scrofula and congenital diseases; ophthalmia, due to dark, ill-ventilated, crowded rooms; sheer exhaustion and inability to work; encouragement of infectious diseases, reducing physical stamina, and thus producing consumption and diseases arising from general debility; as well as immorality, perverted sexuality, drunkenness, and many forms of debauchery.

In considering remedial measures, Mr. Hunter points out that while undoubtedly much has been accomplished by private initiative in the improvement of tenement conditions, yet it is to the municipality and to more stringent building regulations that one must look for the greatest progress in the future. "Those cities which have suffered severely by the tenement-house problem," he says, "have all developed three lines in a protective policy. First, supervision and regulation of new tenement-house building is planned so as to permit no new building which will be injurious to the community. Second, tenements dangerous to health are demolished or altered or renovated. Third, regular supervision and inspection of tenements is carried on for the purpose of preventing conditions which endanger the public health." He concludes:

"The most serious reform question before the people of New York and London is the tenement-house problem. In both of these cities, the formation of a responsible commission of experts to control the distribution of population is perhaps the most thorough expression of the reform movement. With or without a change of administration, there have been in all cities a growing control and regulation by the city of the new buildings and of existing structures. Carefully planned building and sanitary codes, with the most explicit provisions for the sanitary construction and the maintenance of all tenements exist, in the older cities. Along with the effort to control the distribution of population goes a carefully planned scheme of dispersing the people by means of workingmen's trains; or in other words, by cheap, rapid, and convenient transportation. In all cities the movement for open spaces and baths is spreading in response to the belief that much of physical weakness, debility, and juvenile criminality are due to overcrowding. Many foreign cities are undertaking the construction of model tenements, and are themselves becoming the landlords of large numbers of working-people."

## PRESIDENT HYDE ON "ROCKEFELLERISM."

APPROVAL and disapproval in nearly equal measure mark the newspaper comment on the address of President William De Witt Hyde, of Bowdoin College, on the subject of "Academic Freedom," delivered at the Boston University commencement, on Wednesday of last week. The New York *Tribune* calls it "sane and instructive," "sound and valuable," and the Boston *Transcript* says that his "admirable statement" will "accomplish much toward clarifying opinion on the subject of academic freedom." President Hyde referred specifically to Brown University, Chicago University, Kansas State Agricultural College, and Leland Stanford University, and remarked that the troubles that have recently arisen in the faculties of those colleges are symptoms of a new issue. He said:

"The question of academic freedom did not rise so long as colleges taught Latin, Greek, and mathematics, for the simple reason that people did not care much one way or the other for what was taught about these things. Interference with liberty comes only when subjects are taught for which the people care. Now that economic and social questions have come to the front, it is in connection with them that nearly all our troubles have arisen. Theological persecution we have wherever institutions are tied to creeds; political persecution we have, spasmodically, in political campaigns; but popular interest is coming more and more to center in social and economic questions. Unless we can come to a clear understanding as to the rights and duties of the several parties to university instruction, professorships of economics and sociology will be as perilous positions in a democracy as chairs of politics ever were in an absolute monarchy or chairs of theology in the palmy days of papal power. To define the rights and duties of the parties to such university instruction, securing reasonable liberty for all and a free course for the truth, is the most pressing educational problem the nineteenth century hands over to the twentieth."

At this point, say the reports in the Boston papers, "the speaker sounded the note of warning against the spread of what he termed 'Rockefellerism' in the American college of to-day. He denounced in scathing terms the dictatorial arrogance of donors, pilloried them on the cross of his contempt and pressed in the thorns of public condemnation." But the reports fail to quote any part of the address that seems to justify this description. They do quote, however, his delimitation of the general rights of the donor to a college. Said President Hyde:

"He may give, or he may not give, but when he has given his money it should be as completely beyond his individual control as is a thrown stone after it has left the hand. A donor has no more right to dictate what views an institution shall teach than a stockholder of a steamship company has a right to direct a pilot how he shall steer the ship to which a thousand lives have been entrusted. . . . Neither may he legitimately draw up a creed or statement of opinion which the professors in the institution shall be bound to teach. To do that would be like sending a boat to sea with the tiller lashed in position, and with instructions to the sailors on no account to touch it, even tho the boat might be making straight for the icebergs or the rocks. The attempt of a donor to dictate the views which a professor shall teach is to arrogate to himself the attributes of omniscience, omnipotence, and immortality; an arrogance of which no mortal would care to be guilty. This limitation of a donor's rights may seem severe and extreme, yet it is the foundation stone on which academic freedom rests. The college must treat every donor, actual and prospective, as a certain wealthy benefactor of Harvard humorously complained that President Eliot treated him. 'He comes to me,' he said, 'for my money and my advice, and like the women in the Scripture, the one is taken, and the other left.'"

Turning from the donor to the college professor President Hyde continued:

"But a professor has no right to become an agitator in behalf of views and measures which are repugnant to considerable portions of the constituency of the institution—no right, I say, to do these things as a professor. If he wishes to do them as an individual, he of course has a perfect right to do so. But he should first hand in his resignation. In a free country every man has a right to be a martyr to any cause which he believes to be worthy of his individual sacrifice. But no professor has the right to lay the institution which he serves upon the altar of his own martyr zeal. An institution stands for the accumulated wisdom of the world. To set that wisdom forth in due proportion is its prime purpose. To sacrifice its chief function for the sake of some special view which an individual may desire to advocate is a wrong to the institution which no individual has a right to inflict.

"In placing this limit on the utterance of professors, there is involved no unreasonable restriction of liberty. As has been said, if a man feels called upon to become an agitator, he is free to leave the university, and ought to do so. More than that, every professor is at perfect liberty to give dignified and moderate expression to whatever views on political and social questions he may hold. In private conversation, in response to inquiry from the newspapers, even in a public speech, he is at liberty to set forth whatever views he holds and feels called upon to express. In doing so, however, he should never forget the dignity and impartiality and courtesy which his position as an intellectual servant of the public must always impose upon him. The question of academic freedom at this point is generally more a question of manners than of morals; more a matter of tone and temper and emphasis than of conviction. Membership in a political party and frank avowal of one's views on political and social questions are perfectly consistent with the position of a professor."

A number of papers think that President Hyde's condemnation of "Rockefellerism" casts an undeserved reflection on a worthy man. The New York *Mail and Express*, for example, says:

"'Rockefellerism' has already wellnigh abolished the miser. It has put the rich man under the necessity of justifying his wealth by good works. It has set going a movement which, as Mr. Hewitt hints, long before the end of the century may abolish ignorance, banish squalor, approximate the privileges of the poor to those of the rich, and render the lot of the manual worker more enviable than that of the millionaire, since it will be without the heartbreaking burdens and responsibilities of wealth, at the same time that it may possess itself of the comforts and the cultivation that once only wealth could buy. This may be done without destroying individual initiative, without deadening personal ambition, without reducing the race to a dull dead level, as socialism would surely do."

## MR. WHITNEY "WINS THE DERBY."

CONSIDERABLE exultation is displayed in the American newspapers over the news that William C. Whitney, ex-Secretary of the Navy and a magnate in street-railway and whisky trust affairs, "won the Derby" in England a few days ago. Upon examination of the despatches, however, it appears that Mr. Whitney did not run in the Derby race, nor any horse owned by him. What actually happened, it appears, was that Mr. Whitney has leased an English horse, Volodyovsky, for several years, and that this horse, under the care of an American trainer, and ridden by an American jockey, Lester Reiff, won the famous race. The New York *Times* observes:

"To breed a horse and run him successfully for one of the richest English stakes, and most of all, for the most famous, is a very considerable achievement of its kind. But this is by no means what Mr. Whitney has performed. He simply leased for the season the running qualities of an English horse which was already the favorite for the Derby of 1901, and was already known as the best colt in England. . . . . .

"What it does require to lease the best race-horse in England, when, by an unusual conjuncture, his running qualities for the season come into the market, is simply to outbid any one else who wants to hire them. This is the feat which the American lessee of Volodyovsky has performed. Mr. Whitney's Derby is therefore an individual achievement, which sheds no luster upon the U. S. A. The significance of it is not in the least international, but at most Metropolitan. Whoever has paid a street-car fare in New York since the system went into operation is entitled to some billionths of a share of pride and vainglory in being one of the constituents, so to speak, of a Derby winner."

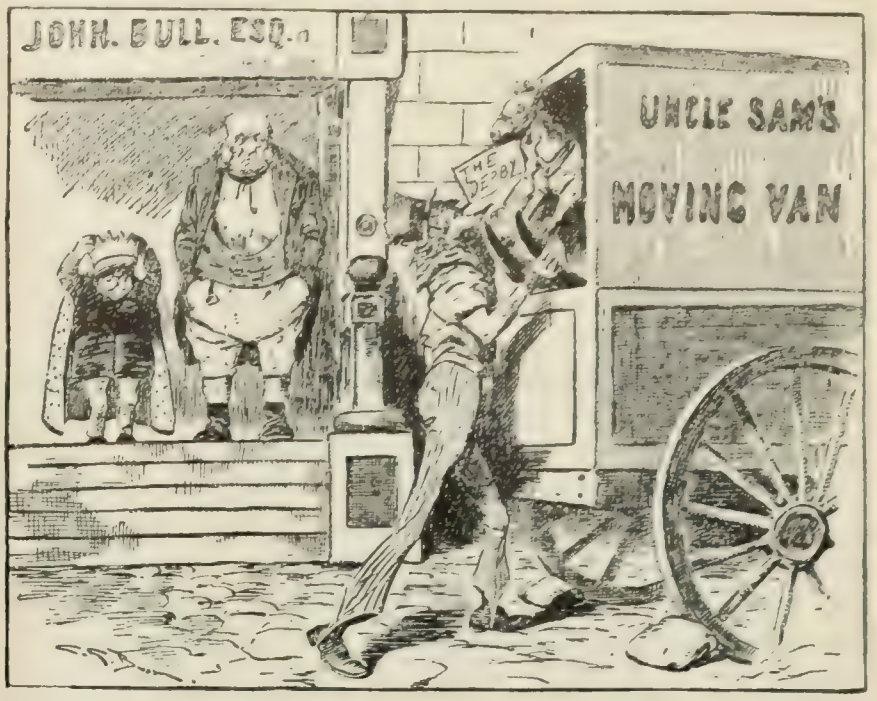
Pierre Lorillard, twenty years ago, captured the Derby ribbon with Iroquois, a horse of his own breeding; but since then no American horse has won the coveted prize, altho many have run for it. Mr. Keene, with Foxhall, an American horse, made a triumphant tour of the British tracks the same year that Iroquois won the Derby; but altho both Mr. Lorillard and Mr. Keene had American horses in the race last week, they "injured our patriotic sensibilities," as the New York *Times* remarks, "by running unplaced."

The New York *Journal* finds much to be thankful for in the victory. It says:

"The latest American victory on the English turf lacks only one thing to make it complete. The winner was handled by an American trainer, ridden by an American jockey, and raced under American colors, but the horse was English. When Iroquois won we had the victory of an American horse and an English trainer and jockey. As absolutely undiluted American triumph is still to come.

"But in one sense this may be considered such a triumph after all. This country has grown great by disregarding the accident of birth and taking the best of all lands. Alexander Hamilton was a West Indian, Paul Jones a Scotchman, and Albert Gallatin a Genevan. Andrew Carnegie is a Scotchman and Nicola Tesla a Montenegrin, but both were created to be Americans, and therefore they are Americans.

"Volodyovsky deserves to be an American horse, and therefore Mr. Whitney's money has made him one, just as Mr. Morgan's money has made the Leyland fleet an American line. And this sort of Americanizing is one of the things that are spreading terror through Europe. It is a case of sifting out the fittest. The best of everything, wherever it originates, becomes American; the worst is allowed to remain foreign. At this rate America will soon cease to be a geographical expression—it will be simply a term, as Mark Twain intimates Missourian is already, for the highest grade of everything."



JOHN BULL: "Oh, I say, Ed'ard, Ed'ard!"
—*The New York World.*

## TOPICS IN BRIEF.

MR. BRYAN has the grim satisfaction of knowing that if he can not be President he has fixed it so that no other Democrat can be.—*The Kansas City Journal.*

"Aren't you promising more than you can pay?" "Yes," answered the Chinaman. "It struck me that this fact might on occasion be offered as an excuse for not paying it."—*The Washington Star.*

"STRIPES are quite the thing this year," suggested the tailor. The alderman started nervously, but quickly recovered himself. "I think," he said, endeavoring to speak carelessly, "that something in the nature of a check would be more in my line."—*The Chicago Evening Post.*

COMMITTEEMAN: "Mr. Spudlong, we have thought you might possible consider it a privilege to add something to the endowment fund of the great institution of learning we represent." Wealthy Banker: "Gentlemen, it will afford me much pleasure. I will give you $1,000,000, provided you succeed in raising $9,000,000 more within the next three months."—*The Chicago Tribune.*

PIERPONT MORGAN has bought the splendid Maynheim collection of art antiques in Paris, but, owing to the American tariff, will take the collection to England instead of bringing it to this country. We must encourage the home manufacture of antiques at all costs.—*The Louisville Courier-Journal.*

THE train was going at the rate of 62 and 7-10 of a mile an hour. The President looked anxious. "I should like to do it so much," he said to his secretary, "but it would be extremely dangerous to make the attempt now!" "But, your excellency," said his secretary, reassuringly, "the train could be stopped." "Ah, that would give me so much relief!" Thus it came to pass that the train paused for a short season while a man emerged who, with an air of familiarity, put his sensitive, worn ear to the ground.—*The Public, Chicago.*

—*The St. Louis Globe-Democrat.*

# LETTERS AND ART.

## REVIVAL OF THE IRISH LANGUAGE AND LITERATURE.

FROM many sides come indications that the Celtic revival is likely to develop into one of the most active linguistic and literary movements of the day. The proposal lately made to revive the Irish language in the schools of Ireland appears to have added force to a movement already well under way, and now the Royal Irish Academy and the Society for the Preservation of the Irish Language have been caught in the whirl, and announce the early publication of important works on which they have been deliberating for years. Still more active is the Gaelic League, to whose efforts is due the larger part of the recent Celtic publications. Scarcely a week passes, it is reported, without a new Gaelic work or a new announcement of one.

Most of the English literary journals comment on this renaissance. *Literature* particularly gives much space to it. In the latest number (May 25) Mr. Justin McCarthy, author of "A History of Our Own Times," as well as of many well-known novels, and late leader of the Irish party in the House of Commons, gives a striking "personal view" of this revival. He says:

"The most casual stranger visiting Ireland, if only he have a mind and heart open to artistic impression, must see in the ruined castles and abbeys which meet his eye everywhere throughout the island, must hear in the legends and stories which can not but reach him on his way, must find in the mountains, the lakes, and the rivers, must feel in the very atmosphere of the island evidences enough that he is passing through a country which must have had a literature distinctively its own. If he looks for evidence of a more literal and practical order he can find it amply and even lavishly set forth in the priceless literary records which for all that has come and gone are still preserved in the Irish capital. Now I venture to think that there is no living Englishman of intelligence—Mr. Podsnap I believe has been dead this some time—who would not welcome any effort toward a revival of the study of that long-neglected literature. So far as Irishmen are concerned I think it little short of a disgrace to most of us that we should have found time and opportunity, or should have time and opportunity found for us and forced upon us, to study the ancient literature of so many other countries to the total neglect of our own."

The London *Outlook* (May 25), commenting on the recent vote of the House of Commons to allow the Irish language to be taught along with English in the national schools of Ireland wherever it is used as the common speech of the people, asserts its belief that Irish can never again be the language of the whole nation, but yet expresses sympathy with the literary aim of the Celtic revivalists. It continues:

"This is by no means the first attempt to give new life to a Celtic tongue. Professor Blackie used to wax eloquent about the poetic treasures of Gaelic literature, and exhorted the Highlanders in many a perfervid oration to preserve and extend the use of their mother tongue. But, alas! for poetry and romance, there was no word in Gaelic for 'express train,' or 'telegraph,' or 'machine-reaper,' or 'ginger-beer,' or 'drawers'; so that all these modern things, and many more, made their way into the life of the Highlander, his speech became perforce half English, and he found it to his convenience and profit to make it wholly so. He might make love in Gaelic, and surely love never had a sweeter or more varied medium; and prefer it for swearing, for to swear in a strange tongue is the linguist's last accomplishment; but he did his business in English, and early in life was made fit for the world by school instruction in English. So it will be with Erse, so also with Welsh. What preserves these languages longer than they would otherwise have lasted is their wealth of legend and fairy-story, and their beauty of phrase in all that has to do with the imagination and affections. They thus become, to those who own them as mother tongues, the objects of a deep and romantic sentiment. The Bible also has played its part as a preservative, and many of its most glorious phrases are glorified yet more in Gaelic and Welsh. But the English tourist and summer visitor have made English services in church a necessity, so that English prevails increasingly, and must continue to prevail till these ancient tongues of bards and heroes are as dead as Phenician."

In the same issue of *Literature* from which we have already quoted appears a review of a new edition of "Poems," by Mr. W. B. Yeats, one of the leaders in the Celtic renaissance. Commenting especially upon the poem called "The Countess Cathleen," which is now published with additions, the writer says:

"Many will be familiar with the tale which tells how, in old times, when famine pressed hard upon Ireland, and the folk who dwelt upon the domain of a certain rich and beautiful Countess Cathleen were dying for want of bread, there appeared two demons disguised as merchants who offered to buy the souls of the starving poor; and how Cathleen, frustrated by their wickedness in all her attempts to succor her people and unable to stay the hateful traffic, sacrificed her own soul to win their redemption, yet was herself redeemed in the end by virtue of her motive and the beauty of her renunciation. Working upon this basis of self-sacrifice Mr. Yeats wrote in 1891 a play which even in its earliest form substitutes for the profoundly moving austerity and the terrible directness of the *Antigone* of Sophocles a wild and mournful poetry which lifted it at once into a fine atmosphere of its own. At first, however, Aleel (or Kevin, as Mr. Yeats had him then) was but faintly sketched in as one whose songs 'of the dim Danaan nations in their raths' had made Cathleen long for some peaceful land of faery in which she might dwell forever and so lose the fret and trouble of the times. But in the edition of 1895 he is one of the central figures at the death of Cathleen, after which he breaks into a heartrending cry of despair and bitterness till an angel comforts him with an assurance of her salvation; and when the play was produced in Dublin two years ago it was felt that the conception now needed further development. Hence he is now represented as Cathleen's lover, and himself urges her in the new scene between them to flee from the unimaginable evils that beset her."

## JAPANESE PLAYS AND MUSIC-HALL SONGS.

MR. OSMAN EDWARDS, an English writer, in a book entitled "Japanese Plays and Playfellows," gives an account of the ever-alluring Japanese character, especially on its play-day side. In first speaking of the more serious Japanese drama, he points out that except in stagecraft no advance has been made since the eighteenth century: "No development in construction and character drawing, as we understand these terms, no change in the peculiar ethical and feudal teachings of the Yeddo period, has supervened. Enter a Tokyo theater today and you will find yourself in old Japan, among resplendent monsters, whose actions violate our moral sense, yet exhibit a high and stern morality by no means out-modeled through the advent of modern ideas." The London *Academy*, in a review of this book, thus summarizes some of Mr. Edwards's statements:

"As a rule, the only things that fascinate the tourist in a Japanese play are the quaintness of the stage arrangements and the weird unintelligibility of the acting. The stage is enormous, and the actors reach it by walking through the audience on two platforms extending from the back of the auditorium to the footlights. Properties are removed during the performance by attendants in black cloaks who are supposed to be invisible. As a rule, two long plays are presented consecutively, with a tableau between, and the performances begin at ten in the morning. You leave your shoes at one of the many tea-houses round the theater, and enter your box to find it supplied with a tobacco-box, tea, and cakes, with luncheon to come. The voices on the stage at once strike you as hard and artificial, and either too shrill or too gruff. But the reason is plain. 'The traditional *samisen*, a three-stringed guitar, follows the performer like a curse from start to finish. Unless he pitched his voice above or below its notes, he could not be heard.' There is no doubt of the effect on

the audience. Especially do the wonderful facial expressions of the actors work upon the women. A rush to the 'Tear Room' during a pathetic passage is quite common. There the susceptible playgoer may weep her heart out in comfort. As men and women are not allowed to appear on the same stage the female parts are taken by men; on the other hand, at some theaters, where the performers are all women, you may see male parts sustained by actresses. This is only one among the many conventions and restrictions which hamper the drama in Japan. Another is the extraordinary ascendency of the actor over the author. A successful actor is the darling of the people, purses are thrown at his feet as he walks toward the stage, and love-letters are sent to his dressing-room, for 'the Japanese *matinée* girl is very susceptible.' He may make £5,000 in four weeks. The author is only one member of a kind of committee which devises the play, and his remuneration is trumpery.

"When he comes to the music-halls songs of Japan, Mr. Edwards opens up the very interesting subject of 'non-literary poetry.' His contention is that what we recognize as real poetry often owes its position to extrinsic ornament, to tricks of rhetoric and conventions of sentiment to which we have been won over; whereas, he thinks, there is often more real poetry (not literature) in verse which, tho condemned as vulgar, goes to the heart and raises real emotion about real things, as distinct from secondary emotion about unreal things. Mr. Edwards's sufficiently daring illustrations are these:

"'Tennyson tells an Arthurian story, or wishes to, and his listeners are so charmed by the irrelevant embroidery of sound and simile that they do not perceive that what they obediently consider a naïf barbarian, the hero, is really a Broad Church country-parson in fancy dress. Mr. Swinburne writes an Athenian play, or attempts to, and his readers are so ravished by the splendor of intrusive rhetoric that they are in no mood to distinguish between archaic piety and nineteenth-century free thought. Thus the modern crowns his Muse with paper roses, cleverly manufactured, while the true flower blushes undisturbed, or fades in humbler keeping.'

In what keeping, then? Mr. Edwards instances Mr. Albert Chevalier's song of life-long love between husband and wife:

We've been together naow for forty year,
And it don't seem a dy too much;
There ain't a lydy livin' in the land
As I'd swop for my dear old Dutch.

Or, again, Yvette Guilbert's rendering of a prostitute's remorse as she recalls her young innocence 'is more intense, because less diffusely obtained, than by Victor Hugo in the case of Fantine.'

"With the foreigner's freshness of feeling and freedom of ear, Mr. Edwards comes to the Dodoitsu of the Japanese masses, which he declares is not so inferior to the aristocratic and infinitely elaborated Tanka or Haikai as is often assumed. In length it is intermediate, the Tanka containing thirty-one syllables, the Haikai seventeen, while the Dodoitsu has twenty-six. We need not remind the reader that brevity is the soul of Japanese poetry. Here is a Dodoitsu:

Nushi to neru toki
Makura ga iranu
Tagaï-chigaï no
Ote makura.

Mr. Edwards gives the nearest English equivalent, thus:

PILLOW SONG.

Sleeping beside thee
No need of pillow;
Thine arm and mine arm
Pillows are they.

Plebeian sentiment and every-day emotion run into thousands of such molds, the degree of literary merit varying from nil to such prettiness as we find in this Dodoitsu:

REFLECTION.

Far from each other
Yearning for union
Good, were our faces
Glassed in the moon!

The Dodoitsu is nearly always a simple statement of a fact, a situation, a preference, usually without simile or metaphor. But when similes are used they are often as startlingly modern as those of the Tanka are rigidly archaic. Thus a lover expresses his despair in the lines:

Borne in no road-car,
Endless the railway,
How shall poor I reach
Station at last?

—meaning that his love is life-long, and will last till he reaches the terminus of the tomb."

## LITERARY NIHILISM AND TOLSTOY'S DISCIPLES.

WHAT has been the influence of Count Tolstoy's recent stage of literary development on the fiction and thought of Russia? Has he any unconscious literary followers or conscious disciples, and, if so, how does that discipleship express itself in imaginativè and artistic forms?

Tho an ardent admirer of Tolstoy, the *Novoye Vremya* (St. Petersburg) answers these questions by saying that the seer-novelist has produced a school which may be described as one of literary nihilism. Gorki, the poet-laureate of the vagabonds, is called Tolstoy's literary grandson, and Anton Tchekhoff his literary son. In Tolstoy, Tchekhoff, and Gorki are seen three generations informed by the same philosophy of life; and, different as the grandson is from the grandfather, he is the logical, if extreme, representative of the psychologico-artistic tendencies of Tolstoy's literary work. Tolstoy, the paper says, honestly tries to build, to improve, to inspire; but in reality he only destroys and disheartens. We quote and condense as follows:

The great literary genius, Tolstoy, has wrought a revolution in our *belles lettres*. A child of European culture, yet thoroughly Great-Russian and semi-Asiatic in his nervous restlessness, Tolstoy has sought to discover not *by what* men live, but *how* they live. He has achieved virtuosity as a subtle psychological analyst, and he has discovered that religion, morality, habit, early education, are inadequate as an explanation of our emotional activities. With his high-strung nature, he has grasped the intangible and fastened upon the fleeting, insignificant, shadowy impressions and sensations which control human conduct. The result is an almost elemental revelation of life; but morally the end is complete negation. The literary nihilist seeks a way out of his vacuum, and in doing so becomes a philosopher and preacher; but his art refuses to conform to his ethics. He reduces everything into the final indivisible elements, and all attempts at recombination and synthesis fail. He does not perceive his nihilism, and works on, confident, hopeful, bold. Intellectually, he abhors pessimism and nihilism, and as found in his art they are the product of isolation, introspection, extreme sensibility, and acuteness of vision. But in his followers there is no such dualism. To them the conclusions of Tolstoy are irresistible, unchallengeable, hopeless.

Tchekhoff sprang full-grown from Tolstoy—with all his methods, ideas, and characters. But he has gone beyond his master. In Tolstoy's heroes there is still spiritual life and struggle; in Tchekhoff's there is absolute vacancy. To him and his creatures life is empty, ugly, meaningless. Existence is a succession of petty troubles or petty diversions, and everything is mean, trivial, contemptible. Take his plots. A youthful student has yearned for love. It comes to him, and he finds it gross and low—he commits suicide in disgust. A scientist has lived for his science, which he has worshiped. But old age comes, sickness, anticipation of death, a sense of vanity and futility of things, and the scientist's mind dies in advance of his physical dissolution. Tchekhoff's characters, unlike Tolstoy's, seek nothing and hope for nothing. There are no prospects, no vistas for them, no possibility of a "resurrection."

Tchekhoff is the logical conclusion of Tolstoyism. Admiring his talent, his art, the reader positively suffers in contemplating the long procession of weak, stricken, half-dead, ghostly characters. And Tchekhoff is not alone in thus viewing life. All our imaginative literature, since the Populist craze, is pervaded with this feeling of sad, dull dissatisfaction. The condition has become intolerable. Men will to live in spite of all resignation

and profession of pessimism. They want work, movement, the sense of contact with reality; and whoever recalls them to the world of reality is sure to be hailed as a leader, healer, and benefactor. And as such a benefactor Gorki now appears.

Gorki is the literary son of Tchekhoff. He is not as much of a credit, artistically, to his father as that father is to Tolstoy. He is an unsuccessful imitator—confused, obscure, incoherent. Wherein, then, lies the secret of his apparent strength? Why is he popular in spite of his crudity? The answer is that his characters are living, real folk, not mere suffering nonentities. They are a low, vicious, scandalous set, but scandal is protest. His tramps, vagabonds, drunkards, fish-wives, are real, "strong" people. Getting drunk is "natural."

Thus, the writer goes on, we see the conclusion of the literary-moral tendency begun by Tolstoy. First searching negation, analysis, and denial; then gloomy pessimism and a profound sense of the worthlessness and aimlessness of existence; and finally a desperate, reckless attempt at emancipation, and a return to "nature" and the first principles of social life, even tho the people and conditions described by Gorki be in reality anti-social. Under-civilization seems a relief of those who have so long suffered from over-civilization. But Gorki, representing a healthy reaction, will be the beginning of a new synthesis, of a school of balanced, sane novelists, at once healthy, national, and psychologically sound.—*Translation made for* THE LITERARY DIGEST.

## CAN LITERATURE BE TAUGHT?

THE publication of Mr. Churton Collins's biting reflections upon current methods of writing and teaching literature, under the title "Ephemera Critica," has not only set the British critics agog over the question of the true function of criticism, but has started an instructive discussion as to how far it is possible to cultivate literary taste by formal teaching. In his book Mr. Collins takes the ground that the English universities fail to teach literature, but that the instructors merely haggle in the classroom about roots and etymologies, and thus spoil the English poets and prosewriters for their students. In a recent number of the London *Pilot*, Mr. Andrew Lang, with his usual lightness and humor, takes a contrary view, and contends that "literature can not be taught." His arguments may be thus summarized:

1. Mr. Lang was not taught literature, and yet knows it.
2. Shakespeare, Spenser, Milton, Herrick, Shelley, Thackeray, Tennyson were not taught literature, and yet produced it successfully.
3. Many poems written since literature has been taught are not better than those of these poets.
4. Mr. Lang's own writings are neither worse nor better because of his never having been taught literature.
5. One is born either to appreciate literature or to dislike it, and teaching makes no difference.

Another English scholar, Mr. H. C. Beeching, attacks this position. Passing lightly over the first four points, since, he remarks, practically no one claims that literature can be taught in the sense of making writers, he confines himself (in *Literature*, London, May 4) to Mr. Lang's last contention, that humanity is for the most part divided into literary incapables and literary geniuses. He says:

"The bearing of Mr. Lang's dichotomy upon the question of teaching literature will best be seen by transferring it to some other branch of human study, such as natural science, or mathematics. 'A man is born to appreciate mathematics or to detest it; and teaching can make no difference.' Abolish, therefore, all mathematical professorships, and exclude the subject from all curricula, from the board school up to the universities. The practical answer would be that teaching is required for that large section of the community who are neither geniuses nor incapables, but something between. Why should it not be so with literature?

"That there is a very large body of people with some taste for letters, but very badly in need of teaching, is shown by the popularity of certain novelists whom people whose taste has had more training find intolerable. The readers of Miss Corelli, to take an obvious instance, do not detest literature; they love it; but their love is not according to knowledge. If these persons had been taught, like Mr. Lang and Mr. Collins, in the Oxford School of Literæ Humaniores, they would know better than to pin their faith where they do. But the Oxford training, argues Mr. Lang, consisted in 'reading the best literature, and *reading for human pleasure.*' That is true enough; but were there no teachers involved in the process? When I was an undergraduate, there were teachers at Oxford to whom that generation owed more than it would be easy to acknowledge. Perhaps the very best men would have done what they did, and been what they were, unaided; but with the rank and file it was not so. And even the best men would probably own their debt to such teachers as Mr. Lewis Nettleship, Mr. Arthur Sidgwick, and Mr. Henry Butcher.

"That taste is really modified by teaching we may convince ourselves by observing what great changes in taste have come about in literary matters, and how they have come about. How did Wordsworth, Keats, Browning win their way into such popularity as they have achieved? In each case it was by the effort of a few men who took the pains to teach public opinion; who were 'fatuous' enough, in Mr. Lang's phrase, to say 'Observe, this is very fine,' and to keep on saying it. And consider how uncomfortable the position would be if teaching could make no impression upon taste; if a man was born to appreciate a certain kind of literature, and teaching could make no difference—how uncomfortable both for authors and for critics. No author who was a person of genius and left the beaten track could ever get recognition; the first unsympathetic judgment of contemporaries would remain the final judgment of posterity. And the critic's case would be even more deplorable. If his function in the commonwealth is not to teach appreciation, he has none; and if appreciation can not be taught, criticism becomes an idle plowing of the sand, which no sane and self-respecting man should indulge in. But if Mr. Lang has, as I am convinced, performed times without number the important task of forming and correcting opinion as to the merit or demerit of contemporary authors, sometimes by the despised process of saying, 'Observe, this is very fine,' why should he deny to criticism a similar function in regard to our older authors? Young students need directing to what is good; they need showing why it is good, as far as this is possible; and they want some help in realizing and revivifying the work before them, so that the impression it makes on their mind may be as near as possible to what the author intended."

In his strictures, Mr. Lang agreed with Mr. Collins that the actual methods employed to "teach" literature at Oxford and at many other universities are about as fatuous and inane as possible, and with this Mr. Beeching also agrees. The prevalent method at the universities and in editions of the English classics, he says, is to degrade esthetic and literary study to a soulless etymological "grind," and to a pitiful attempt to point out all parallelisms to the particular passage studied, whether or not this has any appositeness or reason. He remarks as follows on this "pedantry of the parallel passage":

"A typical offender here is Mr. Collins himself. Whether he was hypnotized by the Clarendon Press, or whatever was the reason, his edition of 'Samson Agonistes,' published by those bold, bad 'people at Oxford,' is about as bad a book for teaching purposes as I have seen. To give a single example of the note pedantic. Milton writes quite simply and intelligibly of the blind Samson—

> Thou art become (O worst imprisonment!)
> The dungeon of thyself; thy soul,
> Imprison'd now indeed,
> In real darkness of the body dwells.

Upon which Mr. Collins thinks it judicious to comment as follows:

"'The idea of the body being the prison of the soul was common with the Platonists of ancient times. So Vergil, Æn. vi. 733-4, thus speaks of men while in the body: "Hinc metuunt cupiuntque, dolent gaudentque, neque auras Prospiciunt, clausæ

tenebris et carcere cæco." Cf. also what Porphyry says of Plotinus, Life of Plotinus, cap. i., "*ἐφκει μὲν αἰσχυνομένῳ ὅτι ἐν σώματι εἴη.*"

Now, even allowing that the poor wretch of a schoolboy ought to be able to construe the Greek, what is Porphyry to him, or he to Plotinus? But the very sight of that piece of learning in the notes will make him give it an attention it does not deserve; and all the attention given to the notes is so much diverted from the text. The instinct, therefore, of the teacher of literature is to avoid all such irrelevancies, which both distract and disgust his pupils, by putting into their hands a plain text without notes. All words that need explanation he will explain; any parallel that is really illuminative he can supply; but he will not consider that in either of these things lies his main task. His task, when a poem or a play is before him, is to make it live in the imagination of the student as it lived in the imagination of the writer. He will never be ashamed of saying again and again—Observe, observe. And he will find that his pupils learn to use their eyes by practise in the field of literature, just as a soldier learns scouting on the veldt."

## MOST POPULAR BOOKS OF THE MONTH.

THE latest reports from the leading book dealers and librarians throughout the country, sent to *The World's Work* (June) give the following as the most widely read books (presumably for the month of April):

BOOK-DEALERS' REPORTS.

1. Alice of Old Vincennes—Thompson.
2. The Visits of Elizabeth—Glyn.
3. Eben Holden—Bacheller.
4. Quincy Adams Sawyer—Pidgin.
5. Truth Dexter—McCall.
6. The Heritage of Unrest—Overton.
7. The Life and Death of Richard Yea-and-Nay—Hewlett.
8. The Cardinal's Snuff-Box—Harland.
9. The Octopus—Norris.
10. The Turn of the Road—Frothingham.
11. A King's Pawn—Drummond.
12. Babs, the Impossible—Grand.
13. A Carolina Cavalier—Eggleston.
14. Crucial Instances—Wharton.
15. That Mainwaring Affair—Barbour.
16. Ralph Marlowe—Naylor.
17. Betsy Ross—Hotchkiss.
18. Up From Slavery—Washington.
19. The Silver Skull—Crockett.
20. When blades are Out—Brady.
21. The Making of Christopher Ferringham—Dix.
22. In the Name of a Woman—Marchmont.
23. A Soldier of Virginia—Stevenson.
24. Her Mountain Lover—Garland.
25. Eastover Court House—Boone and Brown.
26. Sky Pilot—Connor.
27. Stringtown on the Pike—Lloyd.
28. Graustark—McCutcheon.
29. Rostand's L'Aiglon—Parker.
30. A Maryland Manor—Emory.

LIBRARIANS' REPORTS.

1. Alice of Old Vincennes—Thompson.
2. Eben Holden—Bacheller.
3. Eleanor—Ward.
4. Richard Yea-and-Nay—Hewlett.
5. The Cardinal's Snuff-Box—Harland.
6. In the Palace of the King—Crawford.
7. Stringtown on the Pike—Lloyd.
8. The Life of Phillips Brooks—Allen.
9. Babs the Impossible—Grand.
10. The Life of T. H. Huxley—Huxley.
11. The Darlingtons—Peake.
12. Monsieur Beaucaire—Tarkington.
13. The Master Christian—Corelli.
14. The Redemption of David Corson—Goss.
15. Tommy and Grizel—Barrie.
16. Rostand's L'Aiglon—Parker.
17. Sky Pilot—Connor.
18. An Englishwoman's Love Letters—Anon.
19. The Gentleman from Indiana—Tarkington.
20. When Knighthood Was in Flower—Major.
21. Wild Animals I Have Known—Thompson.
22. Literary Friends and Acquaintances—Howells.
23. Herod—Phillips.
24. Unleavened Bread—Grant.
25. Napoleon, the Last Phase—Rosebery.
26. A Woman Tenderfoot—Thompson.
27. Oriental Rugs—Mumford.
28. The Visits of Elizabeth—Glyn.
29. The Heritage of Unrest—Overton.
30. Wanted, a Matchmaker—Ford.

On these lists *The World's Work* comments as follows:

"Eight books are mentioned in both lists. Five, 'Alice of Old Vincennes,' 'Eben Holden,' 'Richard Yea-and-Nay,' 'The Cardinal's Snuff Box,' and 'Babs the Impossible' are among the first twelve in each list and are, therefore, probably the most widely read books of the month. Three of these five are of American authorship. 'Alice of Old Vincennes' has replaced 'Eben Holden' as the unquestioned leader in both sets of reports. There are ten books not fiction in the librarians' list, and only two in the dealers' list."

A new feature of "The Literary and Art Supplement" of the Chicago *American* is the weekly publication of three "cable letters from London, Paris, and Berlin," giving a somewhat sketchy account of the most popular books of the hour and the chief literary happenings in those cities. The London correspondent thus speaks of the leading English sensation:

"The book of the week is 'The Seal of Silence,' written by a young Oxford man twenty-four years of age, who died suddenly after correcting the proof sheets of 'The Seal of Silence,' his first and last novel. The world of letters suffers a very serious loss in his premature removal, for Conder unquestionably belonged to that rare tribe of literary benefactors of whom W. W. Jacobs and F. Anstey are perhaps the most conspicuous representatives. He had a genuine gift for comedy, and compelled laughter by legitimate means. His outlook on life was wholesome and manly, and his observation was keen and sympathetic. Thus it comes about that he is able to reconcile us to a plot which, when stated in its bare outlines, is undoubtedly melodramatic and artificial. But the astounding success which Conder achieves in reconciling the reader to the marvelous is due primarily to his admirable power of characterization and in presenting situations, temperaments, and antecedents of dramatis personæ."

In Paris, according to the French correspondent, Max O'Rell's book, "Her Royal Highness, Woman," is having a great vogue. Says the writer: "His complimentary characterization of American women is much read. His mathematical formula for marriage is quoted everywhere: 'Man should marry a woman whose age is half his own, plus seven.' Many columns of reviews are being devoted to it."

In Berlin one of the latest events of popular literature is the publication of a volume of verses—said to be distinguished by some exceptional traits—by the Baroness von Puttkamer, the nineteen-year-old wife of a German general of fifty winters.

**"Endowment of Authors" in Norway.**—The annual appropriation for single payments and regular stipends to authors has just been passed by the Norwegian Storthing. The number of writers so aided in recent years is by no means small. Of this "endowment of authors," the New York *Staats-Zeitung* (March 31) says:

"At first only those authors received government aid who had already made a name for themselves and who had striven for the preservation of the pure Norwegian-Danish idiom. Latterly, however, both these restrictions have been removed. Subsidies are given to young writers of promise, and a yearly stipend was voted to Garbora, the most energetic opponent of the current dialect. This year's list of pensioners includes a woman, the author of a historical romance. The stipends vary from 1,200 or 1,300 kroner [$300 to $400] to 4,000 kroner [$1,100] or more in special cases where the writers have achieved great popular fame without succeeding in making a decent living by their pens. As this is generally the case in Norway, even the most successful authors depend partly upon government aid.

"The Norwegian parliament has even extended its liberality to journalists. Several years ago free passes on all government railways and steamboat lines were given to newspaper correspondents, and the Government's example was quietly followed by private companies. Now traveling scholarships are to be awarded to young and talented journalists for the purpose of enabling them to gain experience in the offices of the great continental journals. The Storthing has begun the experiment with a single scholarship worth 2,000 kroner [$536] annually, and the appropriation will be increased if the result shall seem to justify such action."—*Translation made for* THE LITERARY DIGEST.

THE facility with which American journals err in their use of English titles has often been commented on. Instances both of giving a title where there is none and of ignoring it where it exists are numerous. One of the most curious instances occurs in a recent article by Mr. John D. Barry in *The Criterion* (June), on Sir Laurence Alma-Tadema, in which the great artist is called "Mr. Tadema" whenever mentioned, altho he was knighted almost three years ago. On the other hand, *The Commercial Advertiser* (June 5) in a perfectly serious note, speaks of "Sir Alfred Austin," altho the Poet Laureate has often (it is said wistfully) denied that he is other than "Mr. Austin." Perhaps the strangest example of calling a man out of his title is that of the British ambassador, who as the most important British official in America ought surely to be correctly designated. Altho he was raised to the peerage in 1899 under the title of Lord Pauncefote of Preston, many of the leading American dailies and weeklies continue to refer to him as "Sir Julian Pauncefote." Even a metropolitan paper (the New York *Tribune*, June 6) under the caption "Sir Julian Pauncefote Sails," refers to him in the article only by this title, which has been wholly supersede incorrceus tdage by the higher designation.

## SCIENCE AND INVENTION.

### A PORTABLE BOAT FOR CAVALRY.

THE portable boat for transporting cavalry across rivers that has just been adopted in the German army seems likely to be of great advantage to the troops that possess it, giving them extraordinary mobility. It might easily turn the scale in a contest between nations, and as we can scarcely imagine that other countries will be satisfied to give such an advantage to the Germans, we may expect to see this or some similar plan adopted in other armies in the near future. The device is described in *La Science Illustrée* (Paris, May 11) by M. S. Geffrey, in an article, the translation of which runs as follows:

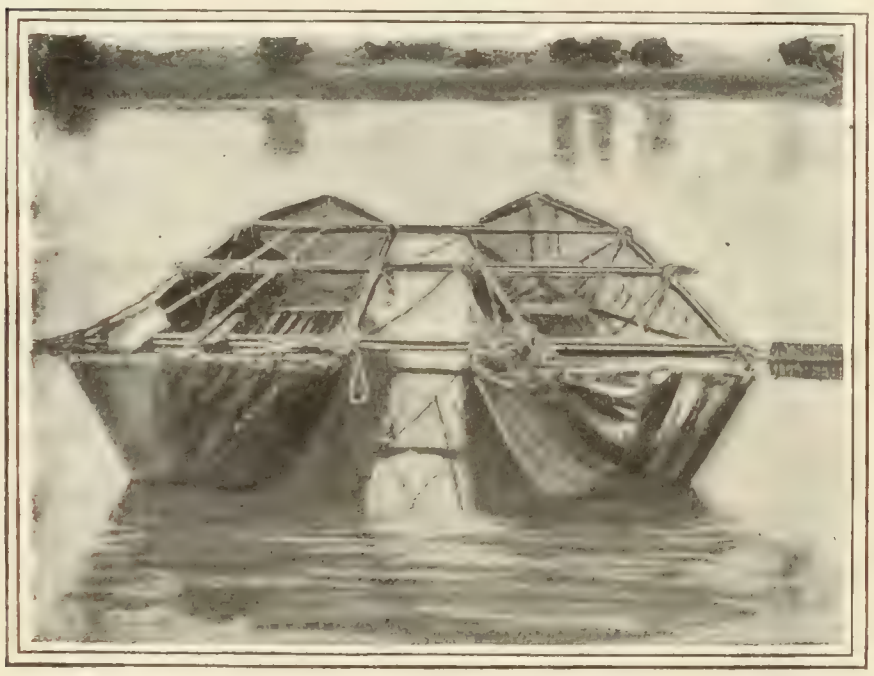
"Cavalry service is always embarrassed by the difficulty of transportation across bodies of water. Of course well-trained bodies of cavalry can swim across rivers in case of necessity, as the Don Cossacks do. But such a feat should be attempted only in extreme need, for there is always great risk in it, not only on account of the swiftness of currents, but also by reason of the excessive temperatures of summer or winter, which make it prejudicial at once to man and beast.

"This problem has been long the object of study in the German army. At first every cavalry regiment was provided with two large twin barges. But the value of these from a military point of view was almost entirely imaginary. These barges had to be transported by heavy vehicles that could follow but slowly the movements of the troops, and they were generally unavailable when needed.

"This trouble still exists in all armies except in the German cavalry, which, having learned by experience the faults of the system, at once abandoned it for a more practical one.

"The German cavalry now uses a barge that is extremely easy to transport and is always at hand. It is the 'barge of lances' invented by armorer Adolphus Rey of Bischheim-Strasbourg.

"This barge, whose hull is formed of twelve to sixteen ordinary cavalry lances, can be put together in five minutes by six men and taken apart in two minutes. Two minutes are required



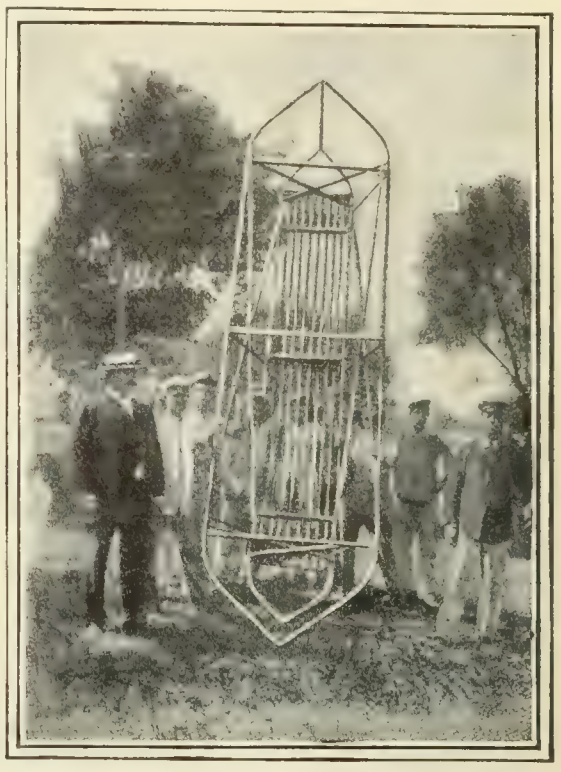
GERMAN CAVALRY LANCE BOAT (FRAMING COVERED AND FASTENED TOGETHER IN PAIRS).

to stretch over the frame a cover of waterproof material, and then the boat is ready for service.

"Other lances are transformed into paddles by a rapid process. The blade is a strip of cloth 65 centimeters long and 15 broad [26 by 6 inches], on which are sewed small crosspieces of wood. The blade and the lance are firmly fastened together by hooks and eyes. Once removed, the blade can be easily rolled up and put in the pocket. The fittings of the boat and oars weigh 20 kilograms [44 pounds]; the envelope, 12 kilograms [26 pounds]. . . . One horse can carry the material for two boats.

"We can see how this new invention modifies the military situation. Before every cavalry regiment was accompanied by a wagon bearing the barges. So long as there was a good road all went merrily; but cavalry is not always able to follow the highroad, it must often cross fields. In this case the wagon can not follow. It remains in the rear, heavily loaded, or sticks in the moist ground.

"As a general thing, after the first march of the regiment, no one knew for several days where the pontoon wagon was, and consequently the pontoons were never at hand when they were wanted. It was absolutely impossible for the wagon to traverse marshy meadows, deep and wide ditches, thickets, or forest paths. Now the one horse carrying the material for two boats can go anywhere. In a few minutes the boats can be put together in some quiet spot, hidden by woods or thickets, and the patrol can cross the river in a place where the enemy did not believe passage possible.



GERMAN LANCE BOAT FOR CAVALRY (FRAMING PUT TOGETHER).

"A squadron of light cavalry, pushing forward into an enemy's country, if equipped with such boats, need not bother itself about roads or bridges. At any instant it can send its reports swiftly and surely to its chiefs, and this even in a region where, under ordinary circumstances, the horsemen could not advance at all, the enemy having destroyed the bridges and occupied the fords.

"The invention has other advantages from the point of view of economy. The old wagons, drawn by six horses, required the services of three drivers and a mounted subaltern, that is, four men and seven horses each. Counting one wagon to a squadron, this required for the whole German army on a war footing two thousand men and three thousand five hundred horses. The introduction of the lance-boats not only gives to the cavalry a very practical means of transportation, but effectively economizes material as well as men and horses."—*Translation made for* THE LITERARY DIGEST.

**Houses of Cement.**—It is announced in the daily press that Thomas A. Edison has discovered a cheap method of making Portland cement, and that he expects this substance to take the place of stone and brick as a building material. If his expectations are realized, then, according to the newspaper prophets, an economic revolution will follow. Construction will be greatly cheapened, rents will be lowered, "small palaces will cost but $10 a month," and fire insurance companies will have to go out of business. The inventor is reported as saying, in an interview printed in *Insurance Engineering* (May 28):

"My impression is that the time will come when each contractor will have standard forms of houses, twenty or thirty varieties. The forms will be made of wood, and a contractor, using one of the standard shapes, will simply go out and 'pour' a house.

"There will probably be hundreds of designs. The contractors will put up their concrete mixer, and have their beams and forms ready. They will pour the form for the first story, and so on.

"To do that all they will require will be common labor—a few men and one boss. That is what I think will be done eventually. And such a house can be made very cheaply. It seems to me there will not be much use for carpenters then. There will

be cabinet-makers, to be sure. Why, even the floors and stairs will be made of concrete."

The inventor said that one part of cement, three parts of sand, and five parts of broken stone would be the mixture for concrete, and that broken stone was better than broken brick. In reply to a question regarding the thickness of walls in the ordinary workman's house, he said: "The bottom course ought to be of Portland cement, 12 inches, up to the first story, and 8 inches above the first story. The roofs will be of cement also."

## A REVOLUTION IN TYPE-CASTING.

A NEW method of casting type at high speed has been invented in England. This method is so swift and withal so inexpensive that hereafter it may be cheaper to make new type than to distribute the old, and type once used will go at once into the melting-pot. The invention may thus revolutionize the whole printing industry. The process, says *The Publisher's Weekly* (May 18) "reads like a fairy tale":

"Briefly, it is performed by a rotary machine capable of producing 60,000 types in an hour, as against the average 3,000 types cast in an hour by the ordinary type-casting machine now in use. While the ordinary machine casts only one letter at a time, the new machine casts a whole alphabet in proper proportion. A single one of the new machines in full operation produces half a million types a day. Distribution, therefore, becomes a waste of time. The advantage held out by the project, however, consists not merely in economy of time and money in the composition of a book or newspaper, but also in the printer's having at his disposal a perfectly clear, sharp, undamaged surface from which to obtain an impression every time he puts his work on the press. The types, we learn from another source—*The British and Colonial Printer*—'are most accurately cast and finished, and altho cast at a phenomenally high rate of speed, are quite equal in appearance and wear to any type cast in the ordinary way. . . . The prices charged are only about half what other founders charge.'

"For four centuries type has been cast singly from single molds; and, altho the product has been improved in many ways, the speed of production has left much to be desired. In every instance the apparatus used has been confined to the simplest form of reciprocating motion. The original hand mold, formed of two parts, separated from each other by the two hands, was eventually hinged together, and so hinged it is in one form or another in use to-day, side by side with machines of an advanced character invented in recent years.

"The new method, which has now come into practical operation, has been designed upon entirely new lines. The motion is a continuous rotary motion, as distinguished from the intermittent and reciprocating. The rotary type-casting machine stands in relation to the machines it is superseding precisely as the rotary printing-press stands to König's reciprocating cylinder press, with which *The Times* was printed in 1814. In both cases the machines are automatic; and in both the rapidity of production is limited mainly by considerations of prudence."

Great difficulties, from an engineering point of view, have stood in the way of arriving at this result, we are told by the writer of the notice in the London *Times*. The thousands of type used for the page of a daily paper must all be parallel and uniform in face and height. This precision of manufacture has to be maintained in the face of a heat that in ordinary circumstances would make the successful working of a machine impossible. The expansion and contraction of the metals have finally been prevented by a system of cooling that is under complete control; and the machine works easily and smoothly, and almost noiselessly. To quote further:

"The invention is the work of neither an engineer nor a typefounder, but of one who, being a journalist and wholly ignorant of typefounding and engineering, perceived a want and imagined a means of satisfying it. Mr. Wicks, who has devoted twenty years to the realization of his idea, had his attention first directed to the subject by seeing some of his own manuscript being set up at a composing-machine in *The Times* office thirty years ago, when he also became aware of the difficulties attending the distribution of type in a form suitable for the composing machines. Had he been a typefounder or an engineer, he would probably never have approached the subject on the lines he did, for those lines are diametrically opposed to all the conditions which have controlled the casting of types up to the present time; and, had he been an engineer, he would have known that tools necessary for the construction of his machine had not then been designed. The main problem of producing a disk of twenty inches in diameter capable of working on a shaft without variation at the periphery to the extent of a thousandth of an inch was enough to discourage some of the best engineering firms in the country, especially when they found the disk was to revolve within a few inches of a bath of half a ton of molten metal, and was to fit to a hair a piece of curved iron still nearer the heat. Special tools, metals, and lubricants were required, and, above all, special workmen. The result, however, has been attained, and it constitutes an improvement which may possibly revolutionize the whole system of type-casting, and ultimately the production of books and periodical matter."

## "THE QUEEREST ISLAND IN THE WORLD."

IT is proposed to make the attempt to cover Sable Island, off the Nova-Scotian coast, which is now little more than a bare sand-bar, with vegetation, the object being to make the island more conspicuous on account of its green color and so to prevent wrecks. The island is called by a writer in the London (Canada) *Daily Advertiser* (May 10) "the queerest island in the world," and he goes on to give the following particulars of the attempt to cover it with trees:

"Away out on the blue bosom of the Atlantic, 100 miles from Halifax, and 50 miles from the nearest point of the Nova Scotian coast, lies a long, low strip of bare sand. For centuries it lay thus, enveloped in fogs and beaten upon by the long North Atlantic swell, its only inhabitants the wild fowl and the dead seamen who from time to time are washed up to bleach on its shores. Three hundred years ago it was an island forty miles in length; now, so indefatigable a worker is the sea, it is a mere strip of white sand, twenty miles long and two miles wide. On every side of it, far as the eye can reach, is the dead level of the ocean, overhead is the sky, and for the greater part of the year the ghastly, impenetrable fogs that are born of the struggle for supremacy between the Gulf Stream and the icy water that comes sweeping down from Baffin's Straits. A more dismal place than Sable Island was never imagined. Yet here, through fog and sunshine, winter and summer, storm and calm, dwells a diminutive colony of brave men, who comprise an important part of the Canadian life-saving service. . . . . .

"It is to this dreary speck of land that Mr. Saunders intends to accompany his father, Professor Saunders, of Ottawa, with the object of making an experiment which, if successful, will be a remarkable achievement, and one that will cause the storm-tossed mariner to bless the Dominion Government which authorized it. Owing to its color the island is almost indistinguishable at a short distance, more especially in heavy weather; and altho the Government maintains a lighthouse and a wrecking station at either end of it, many a good ship has gone to pieces in the yeasty surf that surrounds it. Professor Saunders's plan is to completely cover the island with vegetation, so that it will stand out sharp and clear to approaching vessels. To this end a large shipment of hardy evergreen trees is now at Halifax awaiting his arrival. The work of planting will, it is expected, occupy two or three weeks, during which period Mr. Saunders, of this city, hopes to be able to make some valuable notes on the bird life of the island.

"To ornithologists the island is remarkable for being the nesting ground of the Ipswich sparrow, the most conservative bird in existence, probably. The Ipswich sparrow migrates in the fall to certain sections of the Southern States, but confines its housekeeping operations exclusively to Sable Island. Indeed, it has never been known to nest in any other spot in the world.

By what mysterious power this tiny atom of feathers is guided each year through wind and storm to one narrow ribbon of sand in the broad ocean, students of bird life have not explained."

The history of the mammal life of Sable Island well illustrates the survival of the fittest. The walrus, which, we are told, was once plentiful, has disappeared, altho seals still frequent the long reaches of sand. Some time ago, rats from a ship that went down off the island succeeded in reaching the shore, and soon multiplied to such an extent as to become dangerous to the settlers. When they had wellnigh destroyed the food supplies on the island, the settlers imported some energetic Nova Scotian cats, which kept the pest in check until a passing ship left a pair of foxes on the island. That was fatal to both rats and cats. Soon foxes overran the island in every direction. They killed not only all the rats but the cats as well, and at the present time the Government is considering the advisability of an active crusade against them."

## A RESUSCITATED FOSSIL.

DESPATCHES from Africa to the London papers tell of the discovery of a curious animal known to the natives as the "okapi," and supposed to be identical with a prehistoric creature that has been known to geologists in the fossil state. Such revivals are not unknown to naturalists, but this is probably the most noteworthy in the history of science. We quote from an article contributed to *La Nature* (Paris, May 18) by M. M. Boule, descriptions both of the fossil creature and its living African relative. The former was discovered about 1860 near Pikermi, Greece, by a French paleontologist, Prof. Albert Gaudry. Says M. Boule:

"Here, on the edge of a torrent bordered with pink laurels, in strata of reddish ochre whose formation dates from the end of the Miocene period, were found accumulations of bones belonging to all sorts of animals now extinct—enormous proboscidians, dinotheriums, mastodons, rhinoceroses, horses of the kind called hipparions, a whole series of ruminants—antelopes, giraffes, etc.—saber-toothed tigers, monkeys, and a host of others.

"For several years M. Gaudry labored to dig out a considerable quantity of these fossils, to separate them from their surroundings, and to set up the skeletons. . . . . .

"Among these fossil mammals there is one of peculiar interest. M. Gaudry has named it the 'Helladotherium,' which signifies 'the animal of Hellas' (Greece). He has described the head, a part of the vertebral column, and the fore and hind limbs, that is to say, the greater part of the skeleton.

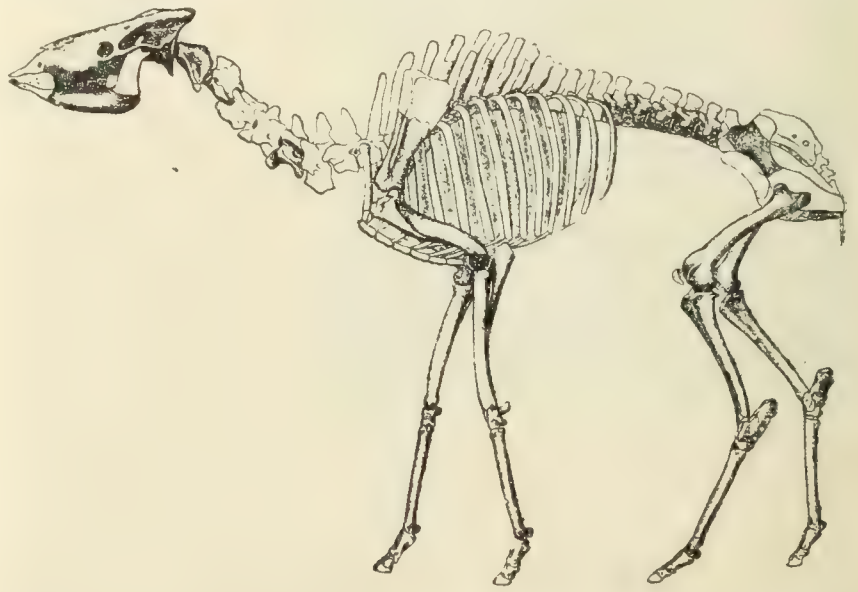
"Since that time, other remains of the Helladotherium have been found in the island of Samos, and even in France, in strata similar to those of Pikermi, at Mount Léberon, near Cucuron.

"The Helladotherium was a large ruminant that united numerous features of several modern groups. 'I seek in vain in living nature,' says M. Gaudry, 'for some animal that will give an idea of it. Its heavy head, like the ox's, but longer, carries no horns. Its huge teeth resemble those of some antelopes, except for their dimensions. Its neck probably had nearly the same proportions as that of the megaceros. The limbs were stronger than those of the oxen and the camels, and shorter than those of the giraffe, tho more robust. The front of the body was more than six feet high—somewhat higher than the rear. Altho this inequality was less noticeable than in the giraffe, it must have resulted in an appearance different from that of the deer and antelopes, whose hind legs are longer than their forelegs.'

"M. Gaudry says also that the Helladotherium was probably like the giraffe also in its mode of life, and that it must have browsed on the buds and leaves of trees.

"Now, according to *The Times* (London), the Helladotherium is still alive; it inhabits Central Africa, on the confines of the Kongo and Uganda, on the shore of Albert Nyanza; it lives in couples in the forests of Ituri and on the banks of the river Semliki.

"Stanley heard this creature spoken of; the natives called it 'okapi' and the explorer devoted a note in his book to it, without giving an opinion of its exact nature. 'Sir Harry Johnson, governor of English Uganda,' says *The Times*, 'received orders to search for this strange animal. He collected much information about the unknown mammal from the dwarfish peoples that he visited. Many warriors bore on their shields skins, or bits of skin, of the okapi. Finally, M. Eriksson, a Swedish officer in the service of the Kongo Government, who commanded Fort Mbeni for some time, sent some of his native soldiers to hunt for it, and they brought him several of the animals. The skins and skulls will shortly arrive at the British Museum. Measures will doubtless be taken by King Leopold to prevent the speedy extermination of the race.' The information that we already have agrees well with what we know of the Helladotherium of Pikermi. Like the latter, the okapi is about as high as an ox and resembles both the antelopes and giraffes. But we have besides this, information about its coat, which is very peculiar. The forehead is bright red, say the papers; a narrow black stripe follows the nose and circles the nostrils. The eyes are of a fine red, as are the neck and shoulders, with brown spots. The legs and hoofs are striped



PROFESSOR GAUDRY'S RESTORATION OF THE SKELETON OF THE HELLADOTHERIUM.

like a zebra's and have orange spots on the white stripes. The tongue, which is long and mobile, like a giraffe's, draws to the teeth the leaves on which the animal feeds."

We reproduce from *La Nature* a facsimile of the restoration of the Helladotherium made by its discoverer, Prof. Albert Gaudry.

It is suggested in *The Spectator* (London, May 11) that the part in Africa in which the okapi have been found may have still other zoological surprises in store for us. Says the editor:

"A glance at the recent maps of this little-known region shows where this unnamed survivor of the ancient world still has its being, and accounts for our absolute ignorance of its existence. The frontier post of Fort Mbeni, and the Mboga corner of our Uganda protectorate, where it is also said to exist, are, in the first place, absolutely in the heart of Africa. They are almost on the equator, west of Victoria Nyanza, but so far removed from the civilizing medium even of a great Central African lake that they have lain isolated in the uttermost darkness of the old Dark Continent as completely as if they were in the Antarctic circle. Looking at a first-class German map published in 1873, we see on this line of latitude, and for hundreds of miles on either side, one great blank nearly as large as the whole of European Russia, on which there are the names of only three conjectural tributaries of the Kongo, and the broad black line marked Equator. Even the Great Lake's shore is only dotted in guesswork. Since then this unknown land has been little penetrated and never properly explored. We have found there the strangest race of men ever yet discovered—the forest dwarfs, a large and numerous race, not a mere tribe; we have now found a survivor of the prehistoric beasts; and who shall say what will be the next addition to our knowledge of the still living races of the world, man or beast, from this lanky overgrown, sun-heated, river-pervaded land? Possibly a new and monstrous ape. The

'missing link,' which present explorers hope to find in Java, may be found feeding in the same forests as this descendant of the sivatherium. No one knows what may be the fauna haunting the forests of the Mountains and the Moon, which, veiled in their cover of impenetrable cloud by day, and only seen by the light of the moon on their snows, skirted by eternal forests, and beyond and above them by the fringe of gigantic heather, 60 feet high, may, for all we know, be the haunt of some gigantic bird, a modern roc or dodo, or browsed by some monstrous goat or ovibos or African bison, whose natural enemy still survives to prey upon them in the form of a cave-bear or saber-toothed lion or tiger."—*Translation made for* THE LITERARY DIGEST.

## RECOLLECTIONS OF AN ELECTROCUTED MAN.

UNDER this somewhat startling title, M. André Broca, a well-known French scientist, contributes to the *Revue Scientifique* (Paris, May 18) an account of his sensations while receiving accidentally a very powerful electric shock. During a time estimated at two or three seconds, a current of about 200 milliamperes passed through his body. He relates his feelings as follows:

"The phenomena were of two kinds. The subjective ones occurred during the passage of the current, and it is quite certain that I did not observe them accurately; the others, which may be called 'consecutive,' are much more certain.

"I grasped in my hands two large electrodes and therefore had no burns.

"I was thrown to the ground by a muscular spasm affecting the whole body, after having time to make a violent effort (which I at once saw was useless) to let go of the electrodes. I then thought of the experiments of Prévost and Battelli, and said to myself, 'It is an alternating current; my heart will stop beating; I am lost.' Then I tried to call out: 'Turchini! cut off the current'; but I was able only to give vent to a meaningless noise.

"Lying on the ground, I lost the sensation of the existence of my arms and hands, and my notions of the vertical direction and of color became confused. The walls of the room seemed to be inclined 45 degrees to the right and to be of an intense green. Then I lost consciousness.

"M. Turchini, having cut off the current, raised me up and I returned at once to consciousness. I had no recollection of any pain, only of the phenomena that I have just described.

"When raised, I was able to walk at once and I had the curious sensation that only my head and legs existed; I had no feeling in my arms or in the upper part of my trunk. I then tried to move my arms and found that they were completely paralyzed. . . . M. Turchini touched my hand and I had a sensation of intense cold. He pinched me violently and I felt nothing; muscular sensation was completely abolished. . . . In three or four minutes movements of the flexor muscles of the arms became possible. About a quarter of an hour later the flexors of the fingers were relaxed and I could move my fingers. . . . Interosseous action was not reestablished perfectly till several hours afterward.

"Sensibility and the muscular sense returned at the same time with motility. Abnormal sensitiveness to cold lasted about half an hour. . . . . .

"But an hour and a half later I was taken with violent pain in the heart. The pulse indicated violent palpitation, then a stoppage of two seconds, then a series of very weak, rapid beats, then a long stoppage, and then a repetition of the same phenomena. This lasted a half or three-quarters of an hour. Irregularity of the pulse lasted the next day. . . . There was no trace of the accident forty-eight hours afterward.

"The paralysis may be explained either by an action of the current on the nerve-centers, or by fatigue due to the spasm, and also to direct action of the current on the tissues. I think that the latter hypothesis is quite probable. . . . Likewise, we may suppose that the heart trouble, coming on an hour and a half after the accident, was due to the presence in the blood of toxins produced by the violent muscular irritation during the passage of the current."—*Translation made for* THE LITERARY DIGEST.

**Wireless Telegraphy in the Navy.**—Carrier pigeons are to be superseded in the United States navy by the wireless telegraph. Admiral Bradford, Chief of the Naval Bureau of Equipment, has given out an extract from the report of the board which has investigated the question of transmitting messages by the new method. This extract, according to a quotation in *The Electrical World and Engineer*, reads as follows:

"From the examination of the subject as outlined in the orders of the Department the board makes the following recommendations:

"1. That the use of homing pigeons be discontinued as soon as wireless telegraphy is introduced into the navy.

"2. That, pending such action, no new pigeon cotes be established.

"3. That wireless telegraphy be adopted by the navy for transmission of messages between distant points.

"Referring to the last recommendation, the board is of the opinion that a high degree of special electrical training is demanded for the successful operation of any system of wireless telegraphy, and it therefore suggests as necessary the establishment of two stations sufficiently far removed from each other for the training of officers and men. In its opinion this requirement would be best met by the establishment of such stations as the navy yard, Washington, and the Naval Academy, Annapolis.

"If wireless telegraphy fulfils what now seems to be its possibilities, the cadets should be thoroughly trained in it."

**Variety in Bread.**—"One of the most important facts about our relish of food," says *The American Kitchen Magazine*, "is its dependence upon a certain variety of flavors. Dyspepsia has been produced by the constant use of the same foods cooked in the same way, and cured by the mere adoption of a more varied diet. There is danger in pampering the appetite, of course, and surfeiting it with variety; but this lies principally in the pastry-cook's department. A variety of breads is much less dangerous than a variety of pies and sweets. The old Southern fashion of five daily breads for the table was a much more healthful one than the Northern fashion of unlimited cakes and pies. That number of breads is, however, excessive. One may need five breads during a month, but certainly not at any one meal. . . . Besides the many kinds of bread to be secured by the use of the different grades and varieties of wheat flour—spring and winter, high-grade and low-grade, whole wheat, graham, etc.—there are corn breads, rye breads, barley bread, and breads made from mixture of corn, rye, wheat, barley, etc. Having, then, an almost unlimited variety of breads to choose from, and bearing in mind what bread should yield to a well-considered dietary, we certainly should be unwise not to make our breads contribute, so far as possible, not only to the nourishment of the body, but also to the promotion of good health in the correction of such minor derangements of the system as may be reached by a judicious selection. A variety of perfect breads, not only breads with various flavors, but of different kinds, containing different amounts of those substances found in the wheat, would serve better than a thousand doctors to keep our country people in sound health."

## SCIENCE BREVITIES.

WHAT is said to be the longest transmission of electric power in the world is described in a despatch from San Francisco to The New York *Sun* (April 28). The electric power is generated on Yuba River and is used in the operation of street-cars in Oakland, 140 miles distant. "The power is generated by turbine wheels. The cable, 140 miles in length, is six-tenths of an inch in diameter and is of copper, with aluminum alloy, which will prevent oxidization. This cable is suspended across Carquinez Straits by a span of 4,400 feet and 300 in air. The test made on April 27 is reported to be one of the most successful in the history of electricity, a current of 40,000 volts having been transmitted the entire distance with a loss not to exceed 5 per cent."

A CHEMICALLY pure substitute for absolute alcohol, known as "synthol," is described in *The Scientific American*. "It may be used for every purpose for which alcohol is used except for internal consumption. Being chemically pure it does not have as much odor as absolute alcohol from grain or wood. It is perfectly free from color, is non-irritant to eyes or skin, and has ten to fifteen per cent. more solvent power than ordinary alcohol. As a killing, fixing, or hardening agent it is in every respect equal to the best absolute alcohol and can be used as a substitute for it in the preparation of stains, reagents, etc. As a preservative it is superior to any alcohol, as alcohol becomes tinged with color on exposure to light, while synthol retains its absolute colorlessness under all conditions."

# THE RELIGIOUS WORLD.

## THE CREED OF THE DOUKHOBORS.

CONSIDERING their smallness of numbers, the Doukhobors, the Russian sect who left Europe to settle in Western Canada about a year ago, have been occupying much attention of late. Their alleged discontent with the Canadian laws, their ill-success, and their desire to find a freer environment, altho denied *in toto* by their friends, as we have shown, nevertheless continue to form the theme of much unfavorable comment in the Canadian and American press. Aside from this apparently ill-informed newspaper gossip, the subject of the real belief of the Doukhobors has been only lightly touched upon; yet it is believed to be one of the most curious religious developments of the past century. The following extraordinary summary of their creed is given by the Comte de Gobineau in his "Nouvelles Asiatiques" (cited in "Romances of the East," pages 16 and 17):

"The enemies of the spirit believe that the sound, good, innocent, inoffensive part of man is the body; the flesh has of itself no evil instinct, no degrading tendency. To nourish itself, to reproduce, to rest, are functions which God has given it, and He appeals to them incessantly by means of the appetites. In so far as the flesh is not corrupted, it seeks simply and solely opportunities of satisfaction, which is to walk on the paths of heavenly righteousness; and the more it satisfies itself the more does it abound in a sense of sanctity. That which corrupts it is the spirit, which is of diabolic origin. The spirit is perfectly useless for the progress and maintenance of humanity. It alone invents the passions, the so-called needs, and supposed duties, which in one way or another interfering with the longings of the flesh, beget evils without end. The spirit has introduced into the world the genius of contradiction, of controversy, of ambition, and of hate. It is from the spirit that murder springs; for the flesh lives only to preserve, and by no means to destroy. The spirit is the father of folly, hypocrisy, excesses in all the senses, and consequently of the abuses and excesses which are constantly laid to the flesh—an excellent thing [the flesh], easy to entice by reason of its very innocence; for which cause truly religious and truly enlightened men should defend it by banishing with all speed the seductions of the spirit.

"For the rest, there is to be no positive religion, in order to avoid intolerance and persecution; no marriage, in order to have no adultery; no constraint upon appetite, in order to crush thoroughly the revolts of the flesh; and, lastly, the systematic abandonment of all intellectual culture, a hateful pursuit which, ending only in the triumph of wickedness, has operated coldly in behalf of the devil's power."

An account of the Doukhobors, apparently based partly on personal observation, partly on the testimony of a recent investigator, Mr. Cormie, appears in the Winnipeg *Tribune* (May 17). The writer, after remarking on one considerable merit of the colonists, particularly notable in Russian peasants—their cleanliness—and stating that in every village is to be found a public bath, "used regularly once a week by everybody," says:

"Neatness and cleanliness mark the dress of the women and the interior of their houses—and their health is excellent.

"As every one knows, they are extreme communists. They do not believe in governments or in individual ownership of any sort of property. It is said, however, that some of those who have been working out are retaining the wages they have earned instead of putting them into the common fund. Their objection to governments is based on an objection to the use of force to coerce or punish any one. Yet Mr. Cormie reports that wife-beating is prevalent among them, and that the regulations and resolutions of the community are carried out with a rod of iron. Another inconsistency is that while they object to eat meat because it is wrong to destroy life, yet they wear leather shoes and sheepskin coats, which can not all have come from animals dying a natural death.

"Their treatment of women is far from being in accord with the code of chivalry. It was only after repeated efforts that a stop was put to the harnessing of women to a plow guided by a man. On one occasion, we are told, six women were found drawing a load of wood while a man rested on top.

"'Marriage ties,' to quote from Mr. Cormie once more, 'are held very lightly. They marry young, and often after only a few years a man grows tired of his wife and sends her away while he takes another. One village passed a resolution, which is as binding upon the members as a law, that the boys should marry at sixteen and the girls at fifteen. As they have no legal marriage ceremonies, since they object to taking out a license, this may go on with impunity, and I have it on the authority of several men, who are familiar with them and in whose integrity I have full confidence, that there are many men with several wives living, having, of course, only one at a time.'"

## MRS. EDDY AND HER VIEWS.

SINCE the recent attacks on Christian Science by leading evangelical ministers in New York and elsewhere, and the (unsuccessful) suit against Mrs. Eddy for alleged libel in Boston, the widespread interest which this new faith has of late awakened has been reflected in numerous articles in the secular press. One of the most striking of these is an article from Concord, N. H., —the home of Mrs. Eddy—written by Mr. J. I. C. Clarke, to whom was granted the unusual privilege of an interview with the founder of Christian Science. Mr. Clarke gives the following account of Mrs. Eddy's personal characteristics (in the New York *Herald*, May 5):

"I saw a venerable gentlewoman of kindly face advancing with that short step of courtesy, that gentle lowering of the head in token of recognition, and that frank extending of the hand which have somehow passed out of parlor greetings—not to their betterment. It was not, however, something of the grace of the old-school *grande dame*, but the gentle air of conscious motherhood that made the meeting most agreeable. And this was Mrs. Mary Baker Glover Eddy. Her white hair was parted in wavy puffs each side of her forehead as we see in her dark-haired pictures of a younger time. The strong nose and rounded temples, the mobile mouth, the bright eyes were all as they had been. Signs of time were in the fine lining of the face, a general thinning of the flesh—a sense of frailty rather than weakness. As her thin lips parted in a pleasant smile they disclosed two sets of very white, even teeth. On her cheeks was a faint flush of color. Her hands were soft and white, and neither large nor small. She had walked erectly and now sat at ease. I observed no sign of palsy.

"It was clear that Mrs. Eddy had graced the occasion with a toilet of special brilliance. Matching the whiteness of her hair, a collarette of fine point lace, that covered shoulders and bosom, was caught at the throat by a breastpin in the likeness of a golden crown, and a little below the latter by a cross of large diamonds set in gold. Her gown, with high embroidered neck and long-cuffed sleeves, in the prevailing fashion, was of purple satin—royal purple. It fitted her slim figure closely. At her waist hung a chatelaine of gold net, in which reposed a dainty lace handkerchief. She wore on her left bosom some badges of orders in gold and enamel. Altogether it was an appealing, ladylike figure, at ease in her home and receiving a formal call, that faced me—and it was Mrs. Eddy. A little self-conscious at first—something always pardonable in a woman—my hostess soon looked her best, and the cheery flow of her talk was constantly aiding any adorning effort that might have been made to face down churlish time and make the old scythe-bearer feel ashamed.

"After a brief chat on the weather, Mrs. Eddy suggested that our talk be continued in the library; but first she would show me some of the curios of the large parlor, carpeted heavily with a whitish carpet, over which were many Oriental rugs, some very costly. One rug, made of the breasts of ostriches, was a perfect delight of creamy-white fluffiness. She pointed out with genuine pride the solid golden scroll on which was graven the offer to her of the completed building of the mother church, in Boston; also a portrait made when she was sixty-four by a German lady, a student of hers—a good bit of work, evidently catching something of her expression at the time. It looked to be the portrait

of a much younger woman than sixty-four, not a gray hair showing."

One of the first questions asked by Mr. Clarke was concerning Mrs. Eddy's views on the physical sciences, including medicine. Says the writer:

"She characterized doctors as 'false teachers looking into matter, not into mind; relying on drugs instead of on God for healing, and making their fears into laws on the subject of disease.'

"'But if, as you say, Christian Science wholly rejects the germ theory of the propagation of certain diseases, what is your theory of them?'

"'They are fears, sin, mortal illusions shared by the people in general. Cast out fear. Call in the divine Love and the diseases will be no longer infectious, for they will not exist.'

"Mrs. Eddy, however, far from counseling any sensational opposition to the State's health laws, advises submission; but in that case fervor must be doubled and more heart reliance placed on Christian Science. Medicine appears to be the only science to which Mrs. Eddy is really opposed. Healing, she thinks, may be accomplished by the most ignorant person, without the slightest knowledge of anatomy, provided the heart is sufficiently pure and the mental attitude is correct. She makes a really beautiful application of her approval of the other physical sciences, for, to her mind, they tend to lessen the handling of matter by mankind. Machinery doing so much now, man's time is by so much more free to examine the sources of Life. Science that makes living finer, more ethereal, using the finer fluids of the universe, is really bringing everybody nearer to Christian Science. Talk on this and other points of the attitude of Christian Science toward what most people consider the great sciences proved fruitless, always turning back to definitions of Mrs. Eddy's religious belief, often striking and sometimes beautiful in expression.

"'On what is Christian Science based?' I asked at last.

"'I can tell you on what I based my conception of religion and on which, so far as in me rests, I have laid its foundations, in Christian Science:

"'The Ten Commandments.

"'The ninety-first Psalm.

"'The Sermon on the Mount.

"'The Revelation of St. John the Divine.'

"The psalm indicated, it may be recalled, contains the promise of safety from pestilence and plague of those who are godly—'Because thou hast made the Lord, which is my refuge, even the Most High, thy habitation, there shall no evil befall thee, neither shall any plague come nigh thy dwelling.'

"'I am a Theist, I must confess,' said Mrs. Eddy, smiling. 'In our services,' she went on, a little reluctantly, 'we have some slight forms of ceremonial, but in conformity with the simplicity of our belief there will be a gradual abandonment of even the present slight forms.'"

On the attitude of Christian Science to social and economic reform, Mrs. Eddy was somewhat guarded:

"We are not indifferent to forms of government, but we support the best in each. A church to be universal must in many things be neutral about forms of government and at the same time support what is right to support. . . . When all men are one in the Church of Christ the perfection of life and the perfection of government under the application of the Golden Rule will come. It will all be simple, natural, without clash or combat, all over the world in a divine brotherhood."

Mr. Clarke's final impressions of Mrs. Eddy's personality and character are thus summed up:

"One would not take Mrs. Eddy for a highly educated woman, but one who has assimilated, after a fashion, a great deal of varied information. Her manner is one of sincerity in her religious beliefs. It has obviously been felt so by others. A Puritan mind, fed on Young's grim 'Night Thoughts,' and Felicia Hemans's sentimental verse, Bronson Alcott's 'Transcendental Philosophy,' with Emerson, Pope, the two Brownings, and Ruskin thrown in, might perhaps be expected to form a new religion. Such influences made an eerie romancist of Nathaniel Hawthorne; they took another turn with her. But Mrs. Eddy evidently has a harder business head than any of the writers or philosophers she has cited. Her religion, whatever she mentally bases it on, is really based on healing by mind force, and that calls for continual cleverness—a miracle a day and every day is needed. It is a religion requiring believers who will luxuriously support a church. It is a difficult task, but Mrs. Eddy does it and has done it.

"Among all who have followed her banner no one has shaken her supremacy. She is the absolute mistress, and her manner explains much of it. It is force under gentleness; alertness that seeks not to seem alert; acuteness that is veiled by mysticism; confidence born of success. Perhaps what appealed to me most was her womanliness, whether it was her gentle effort to please; her little, conscious graces; her pathetic little vanities even. Her success has naturally given wings to whatever is mystical in the bent of her mind; the all but worship of thousands kept judiciously, even necessarily, at arm's length, has given her a feeling of security in her future fame. In her book one feels that she is pointing tentatively toward herself when she points to the passage in Revelation:

"'And there appeared a great wonder in heaven—a woman clothed with the sun, and the moon under her feet, and upon her head a crown of twelve stars.'

"And all this in New Hampshire!"

A writer in the New York *Journal* (Mr. H. J. W. Dam), who is apparently an interested observer of the controversy aroused by the recent utterances of ministers in New York City adverse to the Christian Scientists, which, he says, is only "the first booming of the cannon in one of the greatest religious controversies which have ever been known in this country," gives the following sketch and analysis of Christian Science:

"In the year 1866 Mrs. Mary Baker Eddy, after many years of illness and of thought upon religious questions, gave to the world a new interpretation of the Bible. This she published in a book called 'Science and Health, with Key to the Scriptures.' Her book and her views, however, appear to have met in some way some existing need in the community. Upon the book, which she has several times revised and extended, has arisen a large and important church, which now has a membership of 1,000,000 and which claims to have cured of disease 2,000,000 persons. All existing denominations, whether Roman Catholic, Methodist, Baptist, or Presbyterian, are based upon special interpretations of the meaning of the Bible. The church of Christian Science represents Mrs. Eddy's interpretation. Upon her views and her book the whole fabric of this new denomination rests.

"It will be manifest at once to any student of social problems that a new Christian sect which in 1866 had only one member, its founder, and in 1901 has 623 churches, a membership of 1,000,000, and church property valued at $12,000,000 in this country, is a religious movement of the highest social importance. One begins to ask 'Where is it going to end?' As a simple problem in mathematics it is perfectly evident that if its present rate of progress in absorbing the membership of other Christian denominations snould continue Christian Science must before the lapse of very many years absorb them all. And it is manifestly the common sense of this danger which has given rise to the concerted denominational attack of the last few days. All the other Christian churches have seen the danger and are uniting for defense against the common foe.

"'Science and Health' takes a position with regard to Man which is undoubtedly extraordinary. Exactly as the discovery of Darwin linked Man forever and indissolubly with the animal kingdom, so this book seeks to link Man on the other side with his spiritual source, the Creator of the universe. Now in these views, there is nothing very greatly in conflict with the fundamental principles of any other Christian creed, or, indeed, of the most advanced psychological science. But Mrs. Eddy goes much further than this. It is in her very extreme views with regard to matter and force and the physical senses that she becomes extraordinary. She declares that there is only one force or power in the world; that this force is what we call thought, and that it is really the 'God-thought.' That what we call 'evil' is unknown to God, is not a divine creation, but a purely human creation, a creation of human or 'mortal thought.' That matter does not exist, as matter, or as it appears to our five senses. That the entrance of any disease into the body and its obtaining a foot-

hold in the body is due entirely to a false mental or spiritual condition of the consciousness, and that if this false or untrue or unnatural condition of the consciousness be replaced by the right, the true, and the natural condition, disease will be prevented from entering the body, or, if it has already entered, will be forced to disappear. That, in short, we are actually spirits; that only our spiritual selves are enduring or eternal; that our bodies are temporary and therefore not the real entities which represent us, and that the true and only proper course of life is to live as spirits; fix our minds upon spiritual rather than upon material laws; rely upon spiritual rather than upon material laws for the fulfilment of all our hopes and desires, and view all things, including our bodies and the world about us, from a spiritual rather than from a material standpoint.

"She says, for instance, 'Matter does not exist.' Strictly speaking, no statement could be more absurd. To predicate anything of matter assumes its existence, and the subject and the predicate in this sentence are flatly at war. But Lord Kelvin, the late Lord Armstrong, and many great leaders of science have recently said that matter does not exist as matter; as it appears to us, a vehicle of energy; but that from all the evidence it is probably energy itself, a mode of motion or a manifestation of energy. Mrs. Eddy, unlike these gentlemen, is not writing an essay on matter. She is striving to express a new view of man in his relation to his Creator, and starts with a premise which she explains. When one inquires what she means by this absurd statement, 'Matter does not exist,' one finds that her view is strangely akin to the most advanced views of physical science, and that her dogmatic, concise mode of expression is the most expedient way in which she could state her view, fix the attention of her pupil, and arouse his interest in her explanation.

"Altogether the most surprising thing about Christian Science, to an unprejudiced investigator, is the astounding cleverness of its adaptation to a popular propaganda. This is revealed at every point, and the rapid growth of the new system of belief no longer appears surprising."

## MODERNIZATION OF THE HOLY LAND.

A FEW years ago it was said that if one of the Hebrew prophets had returned to the scenes of his earthly activity he would have seen few changes to surprise him. Now the American consuls in Palestine report that vast changes are taking place on all sides. The Washington correspondent of the New York *Evening Post* (May 22) writes:

"The railway from Joppa to Jerusalem, at first an experiment, has been put upon a paying basis, and other lines which will connect it with points of interest up and down the valley of the Jordan have been projected or are actually in course of building. In Jerusalem there are now electric lights, telephones, phonographs, sanitary plumbing, modern stores, houses built with 'a. m. i.,' and, in short, most of the comforts of civilized life. Trolley lines are talked of to connect Jerusalem with Bethany, Bethlehem, the Lake of Galilee, Samaria, Jericho, Nazareth, and other places made familiar through Bible history. With the introduction of these insignia of modern activity, the Palestine of the past will vanish.

"It is related that an American traveling salesman recently went to Jerusalem and Beirut, and in one day sold merchandise of an up-to-date type to the amount of $3,800. Commission houses for the handling of American goods have been opened in nearly every city and town of importance in Palestine and Syria, and in many instances they are conducted by wide-awake American business men. In a single month this year one of the houses imported American leather to the value of $700. Another has established a market for American flour, and predicts that in a few years the people of the Holy Land will be good consumers of this staple. Cheap American watches are in demand, and have been sold to scores of the natives, who regard them with increasing favor.

"More than 200 phonographs were recently sent there, one-half going to Damascus and the rest to Jerusalem and near-by places. The best customers for talking-machines, it is said, are the Moslems of Beirut, Jerusalem, and Damascus, who buy them for their harems. One commission house at Beirut has bought, according to G. Bie Ravndal, the American consul, a $350 windmill from an Illinois firm, and will erect it on the Bakaa plain. This firm is confident that there is to be an important market for wind-mills in Palestine and Syria, and for irrigation machinery of all sorts. Rich foreigners are figuring to secure control of some of the once fertile valleys of the country, and should they succeed there will be an attempt to make them again a 'land flowing with milk and honey.' These foreigners in most instances are Jews, who are leaders in the 'Back to Jerusalem' movement which has been preached so eloquently by Israel Zangwill and others."

As a climax to all this, the consular reports state that "American beer" has made its way into the Holy Land.

## THE RELATION OF JUDAISM TO ART AND PURITANISM.

IT is generally admitted that the second commandment of the Jewish Decalog has had a strong influence in discouraging the cultivation of the pictorial and plastic arts among the Hebrew race. In view of the splendid Oriental imagination of this race, capable in religion of the sublime conceptions of Isaiah, Job, and the Apocalypse, it has been thought that the highest attainments in sculpture and painting might have been expected but for the apparently sweeping and unbending command, "Thou shalt not make unto thee any graven image, nor the likeness of any form that is in heaven above, or that is in the earth beneath, or that is in the water under the earth." Still, these arts have been cultivated among the Jews, even in the service of religion, to a wider extent than had been generally supposed, notwithstanding the Mosaic tables and the thunders of Sinai. *The Jewish Chronicle* (London, May 3) says:

"In the Tabernacle and the Temple the Ark was ornamented with Cherubim—winged figures with the faces of human beings. The remains that have been preserved of a Jewish coinage indicate that the art of sculpture was not altogether neglected by Jews in ancient times. Coming down to a later age, sculptured dados are still to be seen in the medieval synagog of Toledo, now converted into the Church of San Benito, which attest the use of sculpture in Jewish places of worship. Nor are mural paintings in synagog unknown. They are to be found in many an old place of worship in the East and the South of Europe. And the illumination of Jewish manuscripts, Bibles, and devotional books is another branch of art to which Jews gave attention all through the Middle Ages. The designs in these illuminations consisted not only of conventional patterns but also of natural forms. There are extant numberless Megillas of Esther upon which are given illustrations of scenes recounted in the story, with graphic portraits of the King and Queen, Haman and Vashti, and so on. Jewish ecclesiastical art is a big subject, some features of which, as Mr. Spielman pointed out, were illustrated at the Jewish Historical Exhibition of 1887. Jews have always employed the decorative arts in the service of religion, both in the synagog and at home."

The relation of Judaism to Christian Puritanism is closely connected with the attitude of Judaism to art. That Judaism has much in common with Puritanism is granted by all, yet it is rather with the other pole of the religious spirit—Catholicism—that its affinity is closest, according to *The Jewish Chronicle*:

"Puritanism builds upon the Old Testament, and it was a Puritan England that welcomed back the Jews as the people of the Old Testament. Puritanism is an echo of the Jewish protest against all forms of idolatry. But it is on its dogmatic side that Judaism resembles Protestantism. On its ceremonial side there is very little in common between the two religions. Judaism—that is, traditional Judaism—favors an elaborate and ornate ritual. Its worship is based upon forms and ceremonies, it is characterized by all those features against which the Puritan mind protests. The Puritan loves a simple, modernized form of worship, he acknowledges no authority but his own conscience, he makes light of forms and ceremonies. If there is a party in Ju-

daism with which he is in sympathy, it is the Reform party, who, like the reformers of the Christian church, rebel against traditional forms and ceremonies, and prefer a simple ritual to anything elaborate and ornate. One could instance any number of forms that are common to the Orthodox synagog and the Church of Rome—such as the covering of the head, orientation, genuflexion, ecclesiastical vestments, the separation of the sexes, intoning the service in a foreign tongue, and abstaining from meat on certain days—to show that, on its ceremonial side, Judaism resembles rather ritualism and sacerdotalism than Puritanism. Nor is it quite correct to say that the Puritan Sunday is, in spirit, the Jewish Sabbath. On the contrary, the Jewish Sabbath is essentially a cheerful institution—and much insistence was laid by the rabbis upon preserving the עונג שבת, the Delight of Sabbath—while the Puritan Sunday has always been dominated by a note of sadness which is alien to the Jewish religion."

## "THE NEW RITUALISM" IN EVANGELICAL CHURCHES.

THE tendency toward greater ornateness and ceremonial in the Evangelical Protestant churches has been frequently noted during the past few years. *The Advance* (Congreg., May 30) gives some striking recent instances of this movement. It says:

"Central Congregational Church, Brooklyn, has a service which takes up exactly one hour before the sermon is reached. Much of it is borrowed from the old liturgies. A Baptist church in Pittsburg confines its music wholly to English composers. Presbyterian congregations in all parts of the country are elaborating their forms, and the number of vested choirs among Lutherans is now so great as to excite no comment. In New York the third vested choir has been introduced into Methodist churches. The last one is in Calvary, the largest Methodist congregation in New York in point of membership, and one of the largest in America. The vestments worn are exactly like those worn by choristers in Episcopal churches, and there are the same processional and recessional hymns. The Fourth Presbyterian Church, New York (the Rev. Dr. J. Wilbur Chapman, the well-known evangelist pastor), is to introduce a chancel into its auditorium during the coming summer, in order to admit a boys' choir, and there is talk of putting vestments upon them. Some favor it, including, it is said, the Rev. Dr. Chapman; but as yet the vestments have not been consented to by the session."

In Scotland it is well known that ritualism has been making considerable progress for some years. The extent to which this is the case, however, is far beyond anything dreamt of in this country if the recent statements of the Rev. Jacob Primmer are to be believed. In a letter to the various presbyterial and synodical clerks of the Established (Presbyterian) Church of Scotland he says (we quote from *The Evangelist*, New York, May 23):

"In our church lawlessness reigns. The most awful popery is defiantly published by her ministers. The inspiration of the Scriptures and the atonement are blasphemously denounced. In a church in the presbytery of Glasgow I have witnessed the mass in masquerade, including the elevation of the chalice; also a church full of images, pictures, and pagan symbols, with the choir arrayed in scarlet cassocks and short white surplices. In the presbytery of Dundee I have seen a popish altar with different colored frontals and vestments, with large brass cross, vases, and flowers, and two large candles. Three of my friends have witnessed the performance of the mass in this church with lit candles, genuflections, the celebrant most of the time turning his back on the congregation, who had to kneel at the altar rail to communicate. In St. Giles's Church, in connection with the General Assembly, an utterly illegal and high ritualistic performance takes place. Baptismal regeneration, the real presence, prayers for the dead, etc., are openly and unblushingly taught. We have seen how the General Assembly has illegally and tyrannically interfered with the right to appear by petition before that court, and the right of the public to enter a parish church. Nothing can show better the present awful crisis than the fact that leading ministers of the Established, Free and United Presbyterian churches, on the invitation of the Prelatists, have entered into a foul conspiracy to seek to lead over their respective churches to prelacy, and thus undo the Revolution Settlement, and bring Scotland once more under the cruel dominion of prelacy. We ask, in all earnestness, is our nation and national church to remain Protestant, or are we to be brought under the cursed dominion of Rome? If all redress is to be denied our outraged people, be assured of this, that ere long the nation will arise and put an end to these popish abominations as our forefathers did."

## A PROTESTANT THEOLOGIAN ON ROMAN CATHOLICISM AND THE JESUITS.

THE history of theological controversy, which in its long course has presented many anomalies, has not shown many more singular cases than that of Mr. Charles C. Starbuck, a former Evangelical minister, now a convert to the Protestant Episcopal Church, who under the title "Considerations on Catholicism by a Protestant Theologian" has been contributing a series of articles in exposition of the Roman Catholic system to *The Sacred Heart Review*, a Boston Roman Catholic weekly. Mr. Starbuck, who is a warm champion of his own church and rejects the exclusive claims of the Roman see and apparently many Roman Catholic doctrines, has nevertheless made a prolonged study of the Roman system, with which he appears to be almost as well acquainted as is a trained Roman Catholic theologian. Believing that Protestants and Roman Catholics have innumerable and gross misapprehensions of each other's faith and practises, to be noted constantly in sermons, common talk, and the religious press of each party, he has definitely set himself the task of clearing up these misunderstandings so far as they exist on the side of Protestantism, and of presenting the subtle and in many respects easily misunderstood system of Roman Catholicism to his fellow Protestants exactly as it is received by its adherents. The extent of the work he has already accomplished is indicated by the number of his latest article, which is one hundred and forty-two. In this article (May 18) he endeavors to present a fair view of that *bête noire* of Protestant belief—the Jesuit—and incidentally to show, as the non-Catholic Mallock has done in "Is Life Worth Living?" that neither the Jesuits nor Roman Catholicism generally denies God's grace as existent in Protestantism, or the possibility of salvation to those that hold it in "good faith." He writes:

"As I have already said, we know that the long contest of Rome with Protestantism, tho by no means confined to the Jesuits, has been representatively conducted by them. Their manner of controversy has not been pleasing to all Catholic schools, but we know that, on the whole, it has been eminently satisfactory to the Holy See. Those Catholics who have disliked their manner of controversy seem to have been principally displeased with their mildness and charitable temper toward the Protestants. The Jansenists, in particular, could not away with the Jesuit disposition to find evidences of divine grace in Protestant souls. They endeavored to counterwork this by arguing that 'grace is not given out of the church,' a proposition which, in 1713, was solemnly condemned by Rome. The Old Catholics severely reproach the Jesuits (meaning the reproach to be reflected upon the Holy See) that in their centenary volume, published in 1640, they declare that the society had always entertained an implacable hatred against heresy. Certainly. They regard heresy as a deadly evil, and were therefore bound to hate it implacably. Yet that they did not mean this of 'a fierce hatred' of *heretics*, appears by the fact that not long after this memorial publication they began to admonish Catholics, and with abiding effect, that they must be very careful not to extend their hatred of Protestantism against the persons of Protestants.

"We know that from the beginning they had instructed their younger members to be very shy of using the term 'heretic' where Protestants were numerous, allowing them to use it as much as they would in countries where it would stir up no one's

religious passions. . . . Not long after 1650 a learned Jesuit (unluckily I have not noted down names here) published a work designed to prove that by that time there was probably not a single formal heretic in Germany, that is, not a single man who, holding the *matter* of false doctrine, and being, therefore, a *material* heretic, had *formed* his error into real heresy by a depraved intent. Anything more thoroughly calculated to mitigate the fierceness of religious hatred could not well be conceived. The work seems to have given great satisfaction to the order, and to have been well received of the Catholic world in general, always excepting the Port Royalists. I am a great admirer of these Calvinists of Catholicism, but could wish that their rigorous views of election had not been so stubbornly confined to the visible limits of the Roman Catholic Church. A learned Italian Jesuit answered the work of his German brother, but his general would not suffer him to publish the answer. It was published six years after his death by his friends. This prohibition of the general was hardly fair to his countryman, but it shows what prevalence the milder view had gained in the society.

"The French Jesuits appear to have led the way in these charitable presumptions concerning the Protestants. Indeed, for a while they went to extremes from which it is to be presumed that they afterward receded. For instance, Cardinal Le Camus, the Port Royalist bishop of Grenoble, complained that when he asked the Jesuits to help him in winning over the Huguenots of his diocese, they airily put him off with the answer, 'Oh, if a man only believes in Jesus Christ he will be saved in any church.' However, this first exuberance of charitable presumption finally settled down into a more guarded consideration of probabilities. The Jesuits, however, especially in France, steadily opposed themselves to the prevalent habit of regarding the Protestants, in the mass, as standing outside the covenant of salvation. One of them, returning from missionary work in England, assures the French Catholics that it was a great mistake to imagine all the English Protestants to be heretics, or even schismatics. A great many of them, he declared, tho burdened with many false opinions, the results of their education, and kept by their government alienate from the Holy See, were in intention Catholic Christians, of whom no small number gave evidence of never having forfeited baptismal grace. The French Catholics in general (to judge from Döllinger and Reusch) seem to have received these cheering assurances with the satisfaction which was becoming to Christians. However, the Jesuits were far from stopping here. They maintained that a Protestant might grow up in a Catholic country, and might even exercise the ministry for many years, and yet might never, through his whole life, have once fallen into mortal sin. True, they thought that such a degree of sanctity would probably be crowned by the gift of explicit Catholic faith, but they held this only as a presumption, not as certain truth. Good Father La Quintanye, indeed (if I have spelt his name right) thought this was going much too far, and complained bitterly to the general, but was sharply rebuffed. The general does not say whether he agreed with his French brethren, but he signifies that their opinions are no matter of complaint."

---

**The Vogue of Christian Science in England.**—According to the London papers, Christian Science is all the vogue among people of wealth and fashion in England, particularly in the metropolis and the two ancient university towns. *The Daily Express*, putting the matter somewhat profanely, remarks that "Christian Science is essential for the complete outfit of the forthcoming season; to attempt to ignore it would be as utterly Philistine as it was a few seasons ago not to have serious views on Theosophy." The writer continues:

"Some seasons since, psychical research with a spirit-rapping accompaniment and hushed *séances* in darkened rooms, was the vogue. The next season slumming came in again, with special missions. Every one remembers with a reminiscent shudder for its spent terrors the simultaneous outbreak of Ibsenity in every London drawing-room. Last season telepathy and the use of the crystal globes was perhaps the mode. A knowledge of the subtleties of bridge, or dexterity in the acrobatics of ping-pong will not alone carry society's votary through the coming season, valuable as these accomplishments may be. Christian Science fills the void. There is no mistaking the signs of the times. The cult is debated at eclectic tea-parties in awed whispers. It is the staple of conversation when the scandal of the moment has run out at the most exclusive dinner-tables. It is debated in subdued whispers in the stalls of the playhouse; and when fashionable society begins to discuss a topic in the playhouse, that topic has to be taken seriously."

The London correspondent of the Philadelphia *Church Standard* (May 25), who quotes this statement, adds:

"From a very different quarter comes the statement that Trinity College, Cambridge, seems favorable to the growth of Christian Science. In a letter to a friend, Mrs. Butler, wife of the Master of Trinity, remarks that she has often taken her children to a dentist 'trusting to Christian Science to overcome any pain or fear,' and gives details of successful experiments in this direction. Another disciple, also from Trinity College, testifies to the efficacy of this cult as applied to chilblains."

---

## A SCOTTISH VIEW OF "THE ENCYCLOPEDIA BIBLICA."

THE land of Knox has for many years contained not a few representatives of advanced theological thought, and one of the two chief editors of the new "Encyclopedia Biblica" is the son of a well-known Scottish divine. This example of modern critical research, however, does not meet with approval from all Scotchmen. The Edinburgh *Evening News*, in a recent review of the work, says of it:

"Long ago, in commenting upon the havoc played by the higher critics with the orthodox conception of the Old Testament, we predicted that the New Testament would be subjected to a similar process. Relegate, we said, the first Adam to the region of legend, and the second Adam, the second person in the Trinity, will follow into the same region. Again and again we have remarked that the destruction of the early chapters of Genesis and the Mosaic revelations in the Pentateuch would mean the destruction of Protestant Christianity. The Gospels, we predicted, like the Pentateuch, would dissolve into legendary mist. How true is the prediction is seen in the article 'Gospels' in the new volume of 'The Encyclopedia Biblica.' The article is in two parts, the one by Professor Schmiedel, to which we have already referred, and the other by Dr. Edwin Abbott. Professor Schmiedel all but wipes out the Gospels; he leaves as genuine a few sayings of Jesus. Dr. Abbott, tho not so sweeping, reduces Jesus to the ordinary dimensions of humanity. Dr. Abbott finds four elements at work in the compilation of the Gospels—history, prophecy, exaggeration, and metaphor. Round a historic germ the other elements seem to have worked till they wove a supernatural halo round the figure of Jesus. The effect of prophecy is seen in the accounts of the miraculous birth of Jesus. The Old-Testament references to the Messiah were utilized as a supernatural starting-point. In dealing with the miracles, Dr. Abbott wants to infer that they are largely the result of a literal interpretation of metaphorical language. Thus the miracles of raising the dead are explained by the Gospel writers taking literally sayings about those who were spiritually dead being brought back to life. Those who were dead to God were spoken of as dead, and we are left to infer that what is meant by Jesus raising the widow's son is that he was raised from spiritual death. The narrative of the raising of Lazarus is dismissed as mainly allegorical.

"Next we come to the cornerstone of Protestant Christianity, the Resurrection. The appearances of Jesus after He had risen are handled very gingerly by Dr. Abbott, who suggests doubt about the earthquate and the rolling away of the stone from the grave. In regard to the statement that some of the disciples had handled Christ's body, Dr. Abbott thinks this may have arisen from literalizing the words used by the early Christians about participating in the Eucharist, and therein handling Christ's flesh. The upshot, according to the article, is that the Gospels are unreliable as history, that Jesus Christ was a man of great personality, around whose memory and fame were woven a halo of the miraculous. Thus at one blow the whole structure of Protestant Christianity falls to the ground. And in an Encyclopedia containing such views Protestant professors appear as contributors. Men like Professor Cheyne and Professor Davidson, New College, Edinburgh, who are both identified with the work, might just as well be contributors to *The Freethinker*. Or, to put it another way, disciples of the late Mr. Bradlaugh would be in their proper sphere as contributors to 'The Encyclopedia Biblica.'"

## FOREIGN TOPICS.

### RUSSIA IN PERSIA AND THE NEARER EAST.

IN her long and patient search for an ice-free port, Russia has never taken her eye off the Persian Gulf, from which her actual possessions are now distant less than five hundred miles. By means of loans, railroad concessions, and other more direct methods, she is gradually, so the English and German press repeatedly declare, absorbing Persia. The appointment of Russian consuls to most of the large Persian cities and the establishment of a subsidized line of steamers to run from Odessa to ports on the Persian Gulf are the latest moves, and these are regarded with great alarm by the London press. It is more than a mere trading venture, says *The Saturday Review*, referring to the inauguration of this steamship line. It continues:

"It is a step forward in the Russian policy, so often foreshadowed in these columns, to establish a naval-station on the gulf, and menace the sea route of England to her Eastern possessions. The representatives of Moscow firms who accompany the enterprise may be trusted not to limit their vision to mere commerce. We shall next hear of coaling-stations and Russian cruisers to protect the protected commerce, and then a fortified position at Bunder Abbas or elsewhere, when England's embarrassments give the necessary opportunity."

For two centuries, continues this same writer, Russia has patiently sought an outlet to the Indian Ocean, and she will probably get it sooner or later. He quotes Peter the Great's injunction to his statesmen to hasten the decay of Persia: "Provoke war with her; reestablish the ancient trade of the Levant; advance upon India," and says:

"The conversion of the Caspian into a Russian lake, and the subjugation of Central Asia, have laid Persia open all along her northern frontier. The Trans-Caspian railway has cast its arms about her borders, and the garrisons along the line from Kizil Arvat to Khushk stand ready to replace diplomatic dominance by military occupation whenever the occasion arises. That the occasion will arise whenever Russia requires it is not a prophecy but a commonplace. Everything has been carefully prepared. Russian trade, sedulously fostered, has surveyed and opened the roads of advance, and furnished at each step a reason or a pretext for fresh interference. Russian officers command the most disciplined section of the Persian army, and Russian diplomacy, backed by irresistible force, has transcended, it might almost be said has excluded, all other influence in the Persian court. The right of railway construction in Persia has passed into the hands of the Czar. To crown all, only a year ago Russia succeeded in establishing a financial control over the Persian Government which practically gives her the command of Persian revenues and finances, as well as of the commercial and economical development of the country. This last coup, which must inevitably enable her to control the whole policy of Persia, cost the ridiculously small sum of about three and a half millions, well secured as an investment. Not the least mortifying part of their business is that this advantage, or something like it, might have accrued to England if she had had the resolution and enterprise to seize it."

British policy toward Persia, *The Saturday Review* declares, has always been "weak in conception and calamitous in results," and it is no wonder that "the despairing Persian has sunk under the control of the power that never wavers and never recedes." Persian statesmen fully understand the peril which threatens, but Persia is too weak and senile to resist.

This decay of the once powerful Persian empire is graphically described by Robert E. Speer, secretary of the Presbyterian Board of Foreign Missions, in a recently published volume on "Missions and Politics in Asia." Persia, says Mr. Speer, is a "wreck, a ruin, a memory of far-distant greatness." We quote further:

"There are no schools, save here and there chattering groups around a village priest, or worse than medieval groups around a mesjid and a mujtahid. The few schools of the Government in Tabriz and Teheran are chiefly opportunities for officials to eat up public revenues. Charitable institutions are practically unknown. Prisons are mere places of torture until the demanded money fine is paid. Houses of permanent detention or reformation for evil-doers do not exist. Death or payment or torture are the ends of the law. The courts, half civil, half ecclesiastical, are irregular, with no written codes, no jury system, no pleading, no testimony, save the eloquence and evidence of bribes."

The postal system, we are told, is a "despair":

"The couriers lounge along the road, taking often a week to go 200 miles, while postmasters take letters from the mail when they please and are the tools of government. The telegraph system is yet more of a farce. Whole sentences were omitted from

THE RUSSIAN BEAR IN VARIOUS RÔLES.

In Manchuria, Greedy. In Finland, Cruel.
To the Students, Barbarous. To Europe, the Cavalier.

— *Ulk, Berlin.*

our messages. The posts lie on the ground with the wires under the feet of the caravans. Telegrams are often as long on the road as letters, and the senders frequently arrive before their messages. The roads are mere trails. One or two were built once, but they are falling into ruin. The post-houses and caravansaries are tumbling down. Bridges are no concern of the Government, and are cared for only by those who absolutely need them. The army, with wages of two cents a day and pay a year in arrears, tattered and sickly, is too sad a sight to be ludicrous. Villages are owned by proprietors usually living in some distant city, and bleeding them through ravenous collectors. All enterprise is throttled by taxation. The land lies smitten and in despair. Offices are bought and sold, and each purchaser squeezes at once every dollar possible out of those placed in his power, to reimburse himself for his bribes, and to prepare for his removal, which may come at any hour. The village homes are as poor as well can be, and the villager fears prosperity as the sure promise that fresh tax levies will pinch him more than before. Saddest of all is the decadence of religious perception, the want of moral stamina, the prevalence of deceit, falsehood, and general rottenness of life."

There is no hope for Persia, Mr. Speer believes, "save in Russia or England." John Kimberly Mumford, for some years a resident of Persia, declares (in *The World's Work*, New York, May) that Persia is already Russian:

"It is a long and perplexing road that the Russian has had to

travel on this side of Asia, to arrive at his present vantage-point on the way to the Persian Gulf. Over a portion of it he has been compelled to journey more than once, but, observant of a schedule made long ago, he has made haste slowly, watching, waiting, keeping the peace, and winning most of his later victories by the rouble—or, some say, the franc—and by his colossal vigilance and patience. The forward movement in the West in its present stage is still, but it is ceaseless, and more rapid by far than when the chief agencies were powder and the sword. One need be in Persia only a little time to discern the Russian predominance. Persia is Russian. It is manifest in the conditions of trade, the management of the military, and the incessant increase in the number of Russian subjects and the volume of Russian commodities in the bazars, and it is recognized by the populace. More eloquent than all other indications is the custom, arisen of late among the Persians—some of them the foremost in wealth and influence—of adding the Russian termination 'off' to patronymics as old as Iran itself."

A Russian writer in *The Contemporary Review* (London) protests that England has always opposed Russian expansion, while Russia has always rejoiced "when England occupied, in any quarter of the globe, a country originally populated by savages or barbarians." This writer (J. Noviców, of Odessa) says that, if England now has no friends in Russia, it is her own fault. In the second half of the century just closed, England has never lost an opportunity of interfering with Russian ambition. The writer proceeds:

"It was the English who let loose upon Russia the horrors of the Crimean war. The Emperor Nicholas I. had accepted the famous Vienna note, which regulated the points at issue between Russia and Turkey. It was Lord Stratford de Redcliffe who induced the Sultan to reject it, thereby rendering inevitable a war which cost Russia 630,000 men and ruined her finances for many years. In 1878, when Russia was at the gates of Constantinople, when she was about to destroy the evil work of Mahomet II., and to put an end to the barbarous rule of the Osmanlis, when, in short, she was on the point of accomplishing her historic mission in Europe, it was England who robbed her of the fruits of her victory."

The idea prevalent in England that Russian and English interests are always and inevitably opposed to each other, this writer characterizes as absurd and as the "outcome of England's worn-out policy based on the routine and tradition of the old diplomacy. He advocates a cordial understanding between the two nations, and closes by stating that England would gain by dividing Persia and Afghanistan with Russia. England and Russia, he holds, are "natural allies, inasmuch as they have a common task to accomplish—the civilization of Asia."

The much-discussed mission of the Tibetan Government to ask Russian protection was purely voluntary, according to the *Novoye Vremya* (St. Petersburg). Russia, this journal states, did not even suggest it. The proceeding was natural enough, it asserts, because Russia has "gained great renown by her treatment of Central Asian peoples." The *Temps* (Paris), in referring to the same mission, says:

"China is evidently at her last gasp. The immense edifice totters, and it is its wings that are the first to crack. . . . Russia, which practises a policy of condescension and kindness to China in dealing with the very heart of the empire, has no scruples in gently detaching, like the leaves from an artichoke, the extremities of this immense organism. Her soldiers in Manchuria and her diplomats in Tibet are carrying out, with a marvelous unity of design, a wonderfully premeditated work."—*Translations made for* THE LITERARY DIGEST.

**The Pardon of Arabi Pasha.**—An incident "absolutely devoid of importance to Egypt except as a welcome sign that, in the judgment of the ruler of the country and of his advisers, the established system is now strong enough to disregard its former enemies"—such is the comment made by *The Times* (London) on the amnesty granted by the Khedive of Egypt to Arabi Pasha. *The Times* characterizes the former leader as follows:

"He is a supremely ignorant Egyptian peasant, quite unworthy of esteem and equally unworthy of condemnation were it not for his callous Oriental cruelty. Weakness and inordinate vanity are the characteristic features of his nature, and it was upon these qualities that men like Ali Roubi, and afterward Mahmud Sami, successfully worked when they exalted him into the head of military insurrection."

For the benefit of those whose memories are short, says *The Westminster Gazette* (London), it may be recalled that Arabi Pasha, who was born about 1837, was an Egyptian officer, who organized the National Party of Egypt in opposition to the Anglo-French control. He became Minister of War in 1882, and his withdrawal of budgets from the English and French controllers led to the bombardment of Alexandria. Arabi was defeated and captured at Tel-el-Kebir on September 13, 1882, and afterward exiled to Ceylon, where he has remained ever since. *The Telegraph* (London) comments on the changes which have taken place in Egypt since Arabi was exiled. It says:

"When the former Egyptian leader returns from Ceylon he will find a new heaven and a new earth. Gone is the koorbash, gone is the corvée, gone the corruption of the courts of law. Instead of a country ever tottering on the brink of bankruptcy he will find a nation whose financial credit is better than that of many European powers. In a sense which reflects very little honor to himself, he might adopt Wren's proud epitaph for his own. Had there been no Arabi there had been no protectorate, as, indeed, had there been no Great Fire of London there had been no site for the masterpiece of Wren's genius. Still, tho he deserves no gratitude, few will grudge Ahmed Arabi the Egyptian the satisfaction of seeing with his own eyes the regeneration for which he rebelled, but which he could never have accomplished."

The *Figaro* (Paris) calls Arabi a patriot and claims that even now England would not consent to his return if he were not so shattered in health as to be no longer an enemy to be feared.—*Translation made for* THE LITERARY DIGEST.

## FOREIGN VIEWS OF OUR DUTY IN THE PHILIPPINES.

THE capture of Aguinaldo continues to furnish the theme for a great deal of advice, admonition, and condemnation of the United States by foreign journals. The *Independance Belge* (Brussels) believes that the President and his advisers are in despair because the submission of the Filipino leader has not resulted in the immediate collapse of all resistance. It is the awakening from a cruel deception, we are told; but the Filipinos can not be blamed. It continues:

"The Filipinos have proven that they are fully conscious of their rights and their duties. Their revolt was well organized and sustained with a courage and intelligence to which even their adversaries have been compelled to render homage. They deserve to have the local administration confided to their care, they should be accorded that autonomy which the great modern powers no longer deny even to their colonies which are still barbarous in a moral and material sense. The United States has less right than any other power to show itself reluctant in granting such rights. America herself only yesterday gained her liberty."

The Americans, the *Independance Belge* declares further, will only be the gainers by conciliating the Filipinos. It says: "They [the Americans] are not organized in a military sense to hold colonies as are the French and Germans, or as are the English in India. The only excuse they have in the Philippines is to secure commercial advantages." A "generously adjusted protectorate," it thinks, would answer the purpose; but, it concludes, "if Mr. McKinley seeks to realize in the Philippines his

imperialistic pretensions, it will be war, sickening war, for years and years to come." The *Kreuz-Zeitung* (Berlin) contains a very bitter article attacking "Yankee dollar politics," charging all sorts of official corruption in the Philippines and Cuba, and concluding with the remark that "all this hardly falls in with the boasts of the Jingo press as to America's godly destiny and how she is carrying her 'culture' to all lands, particularly into Eastern Asia."

*The Advertiser* (London, Canada) commends the United States for its "culture of law and order" in both the Philippines and Cuba. It says: "The United States is supplementing the civilizing work of Great Britain. As the other branch of the great Anglo-Saxon family, they are taking up in Cuba, Porto Rico, and the Philippine Islands their share of the 'white man's burden,' and doing it in such workmanlike manner as will be an ultimate advantage to themselves, the new possessions, and the world at large." Aguinaldo's capture, says *The Overland China Mail* (Hongkong), ought to sober the United States:

"With three years' experience to guide them, it is to be hoped the Americans will not repeat past blunders. The bumptious self-assertiveness of some of the earlier American discoverers of the Philippine Islands sowed the crop of troubles which the United States has been reaping ever since. A more reasonable and tactful attitude toward Aguinaldo and his immediate supporters would have prevented the explosion of February, 1899, and the subsequent disastrous upheaval throughout the islands."

American rule, declares *The Weekly Chronicle* (Kobe, Japan) means a thorough reform all around, and the world is to be congratulated. *The Celestial Empire* (Shanghai) quotes extensively from a recently issued report of Juan Mencarini, Spanish consul-general to China. Señor Mencarini writes on the Chinese labor question in the Philippines, and *The Celestial Empire* translates the following portion of the article as to the natural wealth of the islands and the inability of the natives to exploit it:

"It is an undoubted fact that the wealth and fertility of the soil and subsoil of the archipelago can not be exaggerated. Minerals of all descriptions are to be seen lying on the surface, as if inviting the passerby to the enormous wealth contained a few feet below the sole of man's foot. All experienced engineers have praised the wealth buried in the archipelago, only waiting for intelligent, arduous workmen to bring it to the surface. There is no one who has visited the islands who has not admired the evergreen, rich vegetation. In a few years an abandoned plot of ground is filled with a virgin forest impenetrable but with the ax. Productive plants of all sorts grow on its soil with the greatest luxuriance. Two, and even three rice crops per annum are reaped in some districts. Sugar-cane, tobacco, coffee, hemp, and other products are well known all over the world, and could in good, intelligent hands improve in quality. Its virgin forests are replete with most valuable woods which only want cutting down to enrich thousands of persons. I do not think any one will dispute the fact that the Philippine population is not sufficiently numerous to work out the enormous wealth contained in this unfortunate El Dorado, so long a prey to the cruel pangs of war."

The native Filipino, the Spanish consul-general believes, by reason of physical and temperamental unfitness, will never be able to work profitably in the islands. The Indian from British India and the Japanese are both unavailable, he further believes, because they are "not sufficiently docile, frugal, amenable to law, and industrious." The Chinaman, however, fulfils all these requirements. The writer reviews the history of the treatment accorded the Chinese by the Spanish Government, and arrives at the following conclusions:

"With the fact in mind that Chinese immigration is absolutely essential for the development of the wealth of the islands, laws encouraging and attracting them should be framed, so that the laborer would have special advantageous conditions conceded him in preference to the trader, who by his usurious proceedings has been the cause of the hatred of the native for the Chinaman. In a very short time the native finds himself a debtor to the storekeeper of the village, who is always a Chinese. After mortgaging his house he does the same with his crops, and finally with his fields. Soon finding himself ruined by his negligence and vices, he blames the Chinaman, who by his thrift and forethought has had the best of him. There is no doubt, tho, that the dislike the native bears toward the Chinese would soon be dispelled when the native understood that he did not come to labor as an opponent but as a help to develop the wealth of the ground."

The transformation brought about in the Straits Settlements by Chinese labor under the British régime leads Señor Mencarini to the conclusion that "the Chinese is the industrial magician of the East." "It was his labor, care, agricultural experience, and above all his indomitable energy, which converted these forests into beds of wealth and brought to light inestimable buried richness. Without the Chinaman the British would not have achieved such wonders, and the Malay would continue to be the same interesting but dreaded pirate as of yore, having energy only for fighting." In commenting on this report, *The Celestial Empire* hopes that the United States will so modify her "usually severe Chinese policy" that "immigration from China will flow toward their new possessions in such numbers as will insure a sufficient population for the development of the country and the distribution of its admitted wealth."—*Translations made for* THE LITERARY DIGEST.

## COUNT GOLUCHOWSKI ON THE BALKAN QUESTION.

COUNT GOLUCHOWSKI'S address to the foreign relations committee of the Hungarian Delegations has again directed European attention to the Balkans and the problems of the near East. The speech of the minister was an outline of the foreign policy of the Dual Monarchy and the present status of its foreign relations. He referred to three portions of the world in which Austria is now especially interested—China, Italy, and the Balkans. He defended the participation of the Dual Monarchy in the Chinese expedition on the ground that the "neglect to perform a duty incumbent upon a great power would have caused grave prejudice to its prestige and the concert of the powers," while he justified the modest proportions of that participation by the "comparatively slight material interest" of Austria-Hungary in China. With reference to the renewal of the Triple Alliance and Austro-Italian relations, Count Goluchowski declared that there was no direct connection between the renewal of the Dreibund and that of the commercial treaties. It is no longer possible, he contended, to maintain the thesis that "a state of war in the economic sphere is compatible with good political relations." But at the same time it is "thoroughly unsound" to hold that "political alliances, which have far higher objects, should be made dependent on an entirely satisfactory settlement of commercial differences." The most significant portion of the minister's address, however, dealt with the "unrest" in the Balkans. The troubles in China, he declared, have so burdened the powers that they have given up disputing about minor differences, and consequently there is at present "peace in the 'weather corner' of the continent." But the count fears for the future. Despite the understanding arrived at with Russia in 1897, to maintain the *status quo* in the Balkans, which "offers valuable guaranties against the prejudicial effects of events upon the relations of the two empires," "unsatisfactory symptoms have been frequent since that year, and never more so than at present." The count disclaimed any intention on the part of Austria to seek territorial expansion. She desires only to maintain the existing state of affairs. But, he continued, altho the monarchy has no thought of extending its own territory, it can not permit any attack on the existing political order or any changes prejudicial to its vital interests, to say nothing of such as may involve danger for its position in the future. "The unimpaired mainte-

nance of that position remains the leading principle of our Eastern policy. Consequently, we can not for a moment hesitate to resist with the utmost determination every attempt calculated to favor such a condition of affairs. There must be no doubt on that point." The count deplored the agitation in Macedonia and urged reform in that country. Referring to the new Servian constitution, he declared that Austria wished her neighbor success in the undertaking; but expressed a hope that the "care bestowed on the promotion of domestic prosperity by the holders of power in Servia will be combined with a constant effort to avoid everything calculated to affect unfavorably the maintenance of good relations with ourselves and consequently to occasion a coolness in the good will of the monarchy for Servia."

A charge of obsequiousness toward England Count Goluchowski said he could not allow.

The frankness of the Austrian foreign minister's words call forth abundant comment. The speech, says *The St. James's Gazette* (London), is "one of those pronouncements by which from time to time the statesmen of Europe permit the irresponsible crowd to obtain a hazy and momentary glimpse of what is passing behind the diplomatic veil." *The Gazette* believes that the speech is really a warning to Russia against "undue influence" in the Balkans, and says, in conclusion: "It can not be denied that this declaration is the gravest utterance that has been heard in Europe in recent times."

*The Times* (London) declares that everybody knew that the state of affairs exists just as the count has described it, and it commends his frankness. *The Standard* (London) says:

"Diplomatic caution in the use of language is not one of this statesman's characteristics; on the contrary, he has occasionally —as in his famous oration against encroaching Anglo-Saxondom —spoken with an excess of freedom. Yesterday, however, his indiscretions, if such they were, seem to have been calculated; and, if there was a tone of warning, and even menace, in his scarcely veiled hints, we may take it that this was done with a distinct and carefully considered object."

*The Standard* characterizes the count's remarks on Balkan politics as "sensational in their emphasis," and believes they were inspired by three occurrences—the propaganda of the Macedonian Committee, the furor over the Servian succession, and the trouble of the powers with Turkey over the foreign post-offices in the Ottoman Empire. The last question has now been settled satisfactorily, altho the powers "may still demand guaranties of no future tampering with the mails." The Macedonian Committee is agitating for the liberation of Macedonia from the Turkish yoke. Its organ, *The Reform*, preaches open and immediate revolt. Some of the agitators are clamoring for annexation to Bulgaria and some for absolute independence. Meanwhile, a Turkish army of 50,000 men is encamped in the province ready for emergencies. The propaganda of this Macedonian Committee is characterized by *The Speaker* (London) as "a system of terrorism in comparison with which the exactions of sluggish Ottoman tax-collectors are mild and ineffectual." *The Speaker* specifies as follows:

"To fill its war-chest and raise a fund for the liberation of Macedonia it [the Committee] levies contributions by armed force wherever its organization extends. In Macedonia itself it wields a second tyranny more vigorous than that of the Turks themselves. In Bulgaria it exacts contributions from high and low, and it is no uncommon thing to read that some wealthy merchant who has refused to pay his quota has been murdered in the open street in broad daylight. It even extended its operations to Rumania, assassinated a few prominent Rumanians and conspired against the life of King Charles. We are told that these operations were traced to the committee itself and in particular to its president, the ex-Lieutenant Saratoff. There was some excited talk of a war with Rumania over these incidents, but, tho the Bulgarian Government massed its troops in a menacing way, there was one thing which it did not dare to do. It has neither repressed the committee nor punished M. Saratoff. In point of fact this interesting organization has only grown the bolder for these exposures. Its rifle clubs are drilling all over the country, its exactions continue as before, and it openly publishes its plans for an invasion of Turkish territory in the early summer. Indeed, the sole thing that makes one doubt the seriousness of its aims is the levity with which it proclaims them to the world."

*The Standard* (London), however, believes that the Servian question is chiefly responsible for Count Goluchowski's "pointed exhortation." It will be remembered that considerable newspaper gossip was reported from Europe as to the expected birth of an heir to King Alexander of Servia. As this monarch has no collaterals, great preparations were made to celebrate the advent of the heir. Now the court physicians declare that Queen Draga is not pregnant and that it is doubtful from the state of her health whether she ever can be. The enemies of the dynasty are circulating stories about a plot to foist a supposititious child upon the people. The people, being ignorant, believe the stories, and there is danger, evidently believed by the Austrian Chancellor to be serious, of a rising either in favor of some other dynasty or of a republic. Any such rising would compel Austria and Russia to interfere, and if they interfered on opposite sides the situation would be more than grave. This scandal would not signify much, says *The Spectator* (London), if the results could be confined to Servia; but unhappily they can not be. This journal continues:

"Two great military empires think their interests and their prestige so far engaged in the fate of the little kingdom that they would not tolerate either a republic or a hostile monarch, and their struggles, at present only diplomatic, may be—in certain contingencies would be—transferred to the field. Neither would bear a republic so near their borders. If it were anarchical, as old Conservative statesmen, of course, think it would become, it would be a constant source of anxiety; and if it were tranquil and successful, its example might be most dangerous upon the states around, particularly Bosnia, Bulgaria, and Macedonia, one of which is governed as a military province, another is fiercely discontented with its prince, while the third is a Christian dependency of Turkey, and, therefore, of necessity seething with rebellion. A republic would, consequently, be put down at all hazards; but that is not such an easy matter as it looks. Sufficient Servians might, no doubt, be killed without much trouble; but who is to do the killing—Austria or Russia, or both? If either is trusted to do the work, that one will try to keep the province; while if both do it at once, their armies are, in their present temper, almost sure to clash. On the other hand, if a new prince is to be 'elected,' both must agree upon the 'choice of the people,' and how is that agreement to be secured?"

Says *The Spectator* in conclusion:

"Neither Russia nor Austria would be directly injured if the Balkan states were allowed to federate themselves under King Charles of Rumania, who is a good soldier and a wise administrator, and were thus allowed to develop their resources in security; but Russia would see an impediment in her road to Constantinople, and Austria a menace to her hope of Oriental trade through Salonica, and so sixteen millions of fairly industrious white men, who would be peaceful and contented if they could, have to suffer for generations. Their noisome little courts usually forbid them to prosper, and if they try to get rid of them they are flooded with foreign armies, and compelled to accept with seeming willingness the nominees of powers who do not wish them to be independent, or too prosperous, or too well regarded in the world. We know of nothing more discreditable alike to the statesmanship and to the philanthropy of Europe than the condition of the Balkan states, unless it be continental conduct in China; but, for the present, remedy there is none."

The Austrian papers endeavor to tranquillize the public mind, explaining that the unwonted gravity of Count Goluchowski's observations was intended to produce a salutary effect on restless neighbors and not to arouse anxiety at home. The *Fremdenblatt* (Vienna), organ of the Foreign Office, declares that it is never possible to say that peace is secure in the near East; but it should be known that conservative and moderate as the policy of Austria-Hungary has always been, it is prepared to play a strong solo part whenever the *status quo* in its immediate neighborhood is likely to be affected."

The German papers look upon the count's statements as evidence that the Austro-Russian understanding has ceased to exist. They also express satisfaction at the renewed affirmation of the value attached by Austria to the Triple Alliance. Count Goluchowski may be congratulated without reserve, says the *Neuesten Nachrichten* (Berlin), on his "refusal to degrade the alliance of peace with its exalted aims into a mere object of compensation to be bartered in the sphere of commercial policy."

The *Tribuna* (Rome) is the only leading Italian paper to comment at length upon the speech. This journal does not put much faith in Austria's repudiation of a non-expansion policy, and warns Italy to watch Albania.

The *Temps* and the *Journal des Débats* (Paris) contain articles on the unfortunate position of Queen Draga of Servia. The *Débats* believes that Count Goluchowski's speech will offend Russia.—*Translations made for* THE LITERARY DIGEST.

"Such a universal history as this series will present us with on its completion will be a possession such as no nation can now boast of."—*London Chronicle.*

# A History of the World

## Popular, Authoritative, Entertaining, Scholarly

**For Busy Men and Women, for School, for Home, for all except Specialists**

**THE STORY OF THE NATIONS** is the one history of the world which pleases every one.

Hitherto, all universal histories have been of two sorts; but who wants either a single-volume abridgement of dates and deeds since Adam, or, on the other hand, a houseful of the tomes of the voluminous, philosophical historians?

The only "happy medium," the only compromise is the Story of the Nations—history as Herodotus and Livy understood it—accurate and scholarly, but full of human sympathy, pleasing in style, and lighted up with pictures of the real life of the past.

**Look at the list of authors.** The most famous historians of modern times have contributed to

# The Story of the Nations

As serious history, this series is in the first rank, yet it is, without doubt, the most delightful instance of popular treatment of a serious subject. Each Story is an original work, and distinct from the others. Since the first volume appeared nothing but praise has been given to this (to borrow from *The Nation*) "admirable and scholarly series," the chief achievement which has been to present the product of highest scholarship in a form which charms even the casual reader. The "Stories" far surpass any fiction for interest; because not only are the "plots" of greater intensity, but every word is true.

*Over 3,000 Illustrations. Uniform Bindings. 12mo. Fine Paper. Large Type. Excellent Books in all Respects.*

*Green Buckram. Paper Labels. Per set of 61 vols.* - - - $91 50
*Half Morocco* " " " " " - - - $106 75

## Special Offers for One Month

Being convinced that "The Stories of the Nations" belong in **every home** in the country, and being desirous of placing them at once with readers of the DIGEST, we make the following offers, never before made, which are open until July 15, 1901: We will send any numbers in Half Morocco at $1.32 per volume in selections of 10 volumes. Any single "Story" in Half Morocco, will be sent for $1.75 per volume. The Green Buckram set, never sold at less than $91.50, may be had by DIGEST readers for $67.00.

**IMPORTANT.**—In addition to above-named cash discounts, orders will be accepted, at liberal discount, on terms to suit the convenience of the purchaser.

Write at once for free sample pages, illustrations, maps, cover design, descriptive brochure, etc.

### A Dream of Young Summer.

By EDITH M. THOMAS.

O haunter of the budding forest-side,
O mirrored pleasure of the happy stream
When into silent shade its ripples glide,
Who art thou, sovereign Dream within a dream?
Thy wings with many a prism-lighted gleam
Are overshot, and from a magic reed
Thou drawest forth those melodies supreme
That with unnamed delight the spirit feed.—
Who art thou, Vanisher; and whither wilt thou lead?

Once, wandered far in sunken lands of Sleep,
I, winter-weary, an enchantress met;
The rain-fed brook did at her coming leap;
From nether gloom arose the violet;
And music sweeter than Love's long regret
Cadenced her passing! But I woke to hear
The muted chord upon the icy fret,
While glittering frost-fire lit the wintry sphere.—
Of thee I dreamed—of thee, Desire of all the Year!

Thou leadest me unto a seat of joys
Long uninvaded, in a world antique;
For lo! that reed which all thy thought employs,
That reed of thine—it was not far to seek;
And still its strains of Pan and Syrinx speak.
Thy many-colored wings did Iris give;
Aurora fanned the rose upon thy cheek;
Love gave thee breath, and bade thee, conquering, live;
And Dian lent thee fleetness, thou so fugitive!

So fugitive, so sweet,—heart-breaker thou!
But yet not thee, thy beckoning Fate, I chide.
The blossom-wind from off the orchard bough
Hath blown the flaky petals far and wide;
Borne, wingèd as thou art, upon the tide
Of never-staying hours, borne singing too,
Thou fadest from the stream and forest-side,
Leaving a tearful splendor of the dew—
A world of sighing leaves—an arc of empty blue.

—In *Harper's Magazine* for June.

### Victory.

By ARTHUR COLTON.

Once more to the charge, and repeat
The fearless, undoubting endeavor,
The grasp of the hands and the spring of the feet
Unwearied forever.

The wind of the east and the north
Has smitten and stabbed with a knife;
The edict of death has gone forth,
And the issue is life.

Out of March through the mire and clay,
Over April's brown slope and wet dune,
It shall laugh from the summit of May,
Name its victory "June."

—In *Atlantic Monthly* for June.

### Death in the Desert.

By HAMLIN GARLAND.

He died and we buried him there—
In the sound of an unnamed stream;
The poison plants around him flare,
And the silence is deep as death.
There we left him in a wordless dream,
With a "Godspeed" spoken underbreath.

For Impaired Vitality
Take Horsford's Acid Phosphate.
Half a teaspoonful in half a glass of water, when exhausted, depressed or weary from overwork, worry or insomnia, nourishes, strengthens and imparts new life and vigor.

I laid a flower on the dead man's breast,
While the eaglets whistled in shrill dismay—
Nothing could then disturb his rest;
I gave him the rose, and we covered him up
With the cold, black earth, and rode away.
My heart was bitter—I could not weep.

He was so young to die so soon—
He was so gay to lie alone
Burned by sun and chilled by the moon,
There where the waters are cold and gray,
There by the slimy ledges of stone—
But there he must sleep till the sun is gray.
—In *The Munsey* for June.

## PERSONALS.

**The Emperor's Little Joke.**—The *Journal des Débats* not long ago published a story about the German Emperor and Chancellor von Bülow which the *Courrier des États Unis* has republished as follows:

"When Von Bülow, soon after his appointment as chancellor, was summoned to meet the Emperor at Hamburg, he expressed the deepest gratitude for the honor conferred upon him, but his manner was depressed and troubled, as if he were not altogether satisfied. The Emperor observed the count's depression and said, familiarly:

"'Well, Bülow, what is troubling you?'

"'A very little thing, sire, and in fact, it is not I, but the countess, who is troubled. She is, of course, very much gratified by my promotion, but she does not like the Chancellor's palace. We have a delightful little hotel which she has furnished in exquisite taste, and she can not, without regret, leave it for a musty old palace which, she says, it will take a year to make clean.'

"'Give the countess my respects,' replied the Emperor, 'and tell her that I will assist in cleaning the palace.'

"Von Bülow thanked the Emperor for his generosity, and retired to carry the good news to his wife. On the following day the countess received a large box of soap. It was the Emperor's contribution to the cleaning of the palace."—*Translation made for* THE LITERARY DIGEST.

## Current Events.

### Foreign.

CHINA.

June 3.—The departure of Count von Waldersee from Peking is marked by a great military display; an affray near Tien-Tsin between German, British, and French soldiers results in the death of a Frenchman.

June 5.—General Chaffee, with his staff and two companies of troops, arrives at Manila from China.

June 8.—The Chinese court decides to delay its return to Peking to September, owing to the heat and the advanced age of the Dowager-Empress; Count von Waldersee lands at Yokohama and proceeds to Tokyo.

SOUTH AFRICA.

June 3.—The Boers under Commandant Sheeper, seven hundred strong, attack the town of Willowmore, Cape Colony, but are repulsed after nine hours' fighting.

June 4.—The Boers under Kritzinger capture Jamestown, in Cape Colony.

June 6.—The Hague Arbitration Court is reported to have considered the Boer war at a secret session; a Boer commando suffers a defeat in the Northern Transvaal.

June 8.—The British capture two Boer laagers in Cape Colony, taking forty-two prisoners; it is hoped that the arrival of Mrs. Louis Botha and Mr. Fischer in London may hasten peace negotiations.

OTHER FOREIGN NEWS.

June 4.—Andrew Carnegie in London expresses the belief that the continental powers will combine against England, and that the latter will turn to the United States for help, which will not be refused.

Sir Alfred Hickman replies to the statement of Lord George Hamilton, the Indian secretary, renewing his charges against the Indian railway officials in relation to the purchase of locomotives in America.

June 5.—W. C. Whitney's horse, "Volodyovski," wins the English Derby in record time.

The American delegates of the New York Chamber of Commerce are entertained by

***"Half a Loaf is better than no loaf"***

is a good, true old saying, half a loaf is better than a whole loaf if that half loaf be made of

**Franklin MILLS FLOUR**

A FINE FLOUR OF THE ENTIRE WHEAT

***Containing all the wheat that's fit to eat.***

This is the trade-mark to be found on every package and every barrel of the genuine **Franklin Mills Flour.** It is sold by first-class grocers generally in original packages of from 6⅛ lbs. to full barrels of 196 lbs.

**THE SANITARY STILL**

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. **Hon. JUDSON W. LYONS,** Register of the Treasury, Washington, D. C., writes: "I can cheerfully recommend your Sanitary Still. My wife and friends are delighted with it. We have tried pretty much everything in the line of filters, but find them too much trouble to care for. The water from your Still is sparkling pure and palatable." The Sanitary Still used in the **WHITE HOUSE.** Highest award at Paris Exposition. DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS. **Cuprigraph Co., 68 N. Green St., Chicago**

the London Chamber, and speeches are made by Andrew Carnegie and Morris K. Jesup.

Maitre Labori, the French lawyer, is greeted with great ovations in London.

June 6.—The New York Chamber of Commerce delegates are the recipients of extraordinary honors in London.

*The Ophir*, with the Duke and Duchess of Cornwall and York on board, sails from Sydney, Australia, for Auckland, New Zealand.

June 7.—Andrew Carnegie turns over to trustees $10,000,000 in 5 per cent. bonds of the United States Steel Corporation for the promotion of education in Scotch universities.

A special embassy from the Sultan of Morocco, bearing gifts and congratulations to Edward VII., arrives in London.

It is announced that Sarah Bernhardt will play "Romeo" for a hundred nights in America to Maude Adams's "Juliet."

June 9.—In the Italian Parliament it is announced that as a result of Austro-Hungarian propaganda in Albania trouble is imminent in the Balkans.

The International Convention of Machinists at Toronto resolves not to modify its demands nor resume labor until the shorter work-day is granted.

## Domestic.

DOMESTIC NEWS.

June 3.—Senator McLaurin accedes to the request of Governor McSweeney, of South Carolina, and agrees to withdraw his resignation, for the good of the State.

Prof. Ira Remsen is elected president of Johns Hopkins University, to succeed Dr. D. C. Gilman.

W. H. Newman is elected president of the New York Central Railroad.

June 4.—The President and Cabinet decide not to call an extra session of Congress this summer; they also decide that no change in the Administration's Phillppine policy is required by the recent Supreme Court decisions.

The National Manufacturers' Association begins its sixth annual session in Detroit, and the American Medical Association opens its annual meeting in St. Paul.

The steel mast of the cup defender *Constitution* gives way off the shore of Connecticut.

June 5.—A verdict is directed for Mrs. Eddy, the defendant in the Christian Science libel suit, brought by Mrs. Woodbury, in Boston.

A slight improvement in Mrs. McKinley's condition is reported by the attending physicians.

June 6.—Senator McLaurin offers to resign unconditionally if Senator Tillman will do likewise; but the latter Senator declines to meet this proposition.

Justice Jerome continues his raids on the pool-rooms of New York.

June 8.—Thomas W. Lawson writes to the challenge committee of the New York Yacht Club that he agrees with the committee that no useful purpose can be served by further discussion of the entry of the *Independence* in the trial races.

A tornado in Oklahoma results in great loss of life and property.

AMERICAN DEPENDENCIES.

June 4.—*Philippines:* Aguinaldo sends a message to Cailles, the Filipino leader, advising him to surrender; organization of civil government is going on in the islands.

June 5.—*Cuba:* The Cuban constitutional convention meets in secret session to discuss the Platt amendment and the action of the President.

June 6.—*Philippines:* The last of the volunteers in the Philippines are on their way to the United States to be mustered out of service.

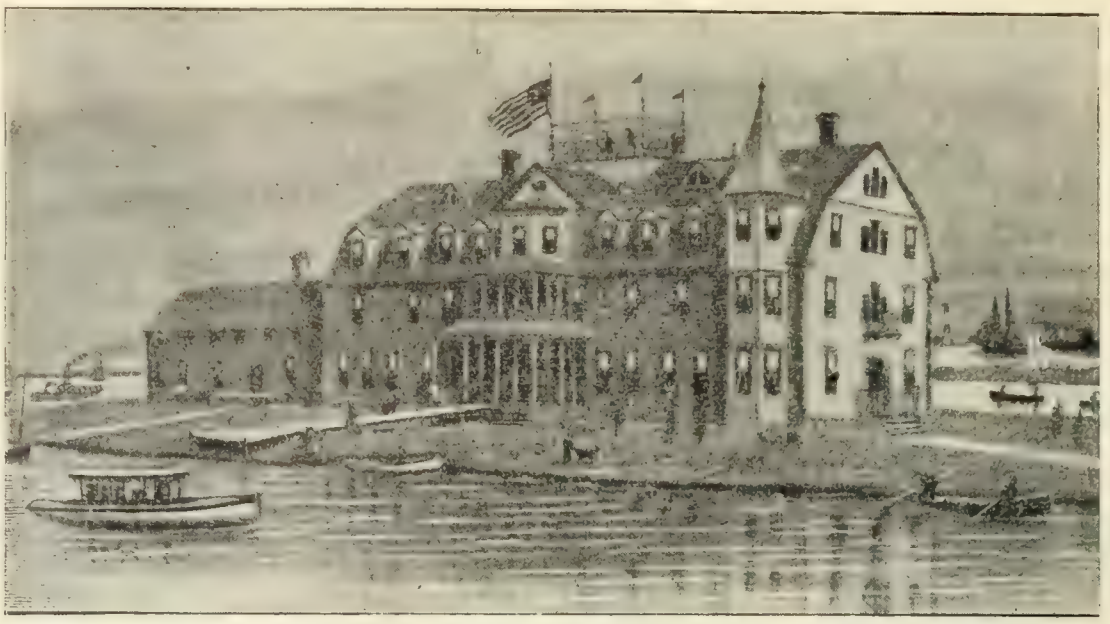
June 7.—*Cuba:* General Wood sends word to the President that the Cuban constitutional convention curtly refuses to rescind its action in the Platt amendment.

June 9.—*Philippines:* The Philippines civil commission organizes the province of Nueva Ecija in Luzon; renewed fighting in Southern Luzon is reported.

**SENT FREE AND PREPAID**

To any reader of LITERARY DIGEST, a bottle of Vernal Saw Palmetto Berry Wine. Only one dose a day perfectly cures Indigestion, Constipation, Kidneys, Bladder and Prostate to stay cured. Write now to Vernal Remedy Company, Buffalo, N. Y.

**The Natural Body Brace** advertised in this paper in the first issue of this month, is a delightful, certain remedy for ailments peculiar to women and girls. It makes walking and work easy; gives good figure and light step. Write the Natural Body Brace Co., Box 713, Salina, Kan., for free illustrated book.



# The Muncie Surf Sanatorium Hotel

IS situated on the Muncie Island in the Great South Bay opposite Babylon, L. I., N. Y., about thirty-nine miles from New York City, and open from June 15th to October 1st. For those who need rest and relaxation from business or domestic cares, it is ideal. The management aims to so conduct the house that it will seem more like a happy home than a hotel.

The house is constructed on the most approved principles, having sanitary plumbing, hot and cold water, and stationary clothes cabinets in every room. It is also furnished with elevator, gas illumination and open fireplaces. A spacious arcade through the centre of the building affords a cool breeze during the warmest days.

**A retreat for the overtaxed professional man. A rest for the overworked business man.**
**Ocean air tonics for invalids and convalescents.**
**Surf and still-water bathing, boating and fishing.**

TABLE.—The housekeeping department is under the care of an exceptionally capable and experienced woman, and special attention is given to the table, which is at all times abundant and satisfactory. Fresh fruits and vegetables during the summer are always included in the menu, and the kitchen is in charge of an experienced chef.

NURSES.—The nurses are all graduates from training schools of repute, and also have been thoroughly trained in this branch of work. In selecting our nurses we have sought and found those with true, noble hearts and cheerful dispositions, who will consider the best interests of the Sanatorium and the welfare of its inmates. To give perfect satisfaction in every detail is our design.

Write for illustrated booklet and terms. Address

MUNCIE SURF SANATORIUM HOTEL, BABYLON, LONG ISLAND.

# Does this Appeal to You?

EDUCATIONAL

## St. Agnes School,
*Albany, N. Y.*

With the buildings renovated and refurnished, and course of study carefully revised in accordance with the most approved methods, begins its 31st year, October 3, under the new principalship of Miss CATHERINE R. SEABURY, late of Wellesley.

For a generation recognized as one of the best schools in the country for the physical, moral, intellectual, domestic, and religious training of girls, and their preparation for college or a post-graduate course, it is believed that the rearrangement of study upon the newer lines, and other improvements, will largely increase its advantages. The high standards in Art and Music will be maintained. A laboratory for scientific work has been added, and separate sleeping-rooms provided. The school commands a magnificent view of the historic Hudson, and the hygienic conditions and environment are unexcelled. Rt. Rev. WM. CROSWELL DOANE, D.D., LL.D., President of the board of trustees. Send for Prospectus.

560 (only): A Knight, Hillsboro, Tex.

561 (only): W. R. Coumbe, Lakeland, Fla.; Dr. H. W. Fannin, Hackett, Ark.; J. P. Wilson, Youngstown, O.; H. M. Coss, Cattaraugus, N. Y.; W. R. T., Birmingham, Ala.; Prof. J. N. Smith, Allegheny, Pa.; J. T. Graves, Chicago; the Rev. D. O. G., St. Louis; A. N. Cherry, Salt Lake City; F. L. Hitchcock, Scranton, Pa.; W. M. J., New Plymouth, O.; C. E. Lloyd, Washington C.H., O.; Dr. A. Hazlewood, Grand Rapids, Mich.; the Rev. L. Burrows, Nashville Chess-club; A. R. Hann, Denton, Tex.; U. Naylor, Mason City, Ill.; A. H. Gansser, Bay City, Mich.; W. H. Woods, Baltimore; Lillian H. Kerr, Colorado Springs; L. A. Gouldie, Brooklyn, N. Y.; W. Hyde, Brooklyn, N. Y.; L. H. R., Bennington, Vt.; W. L. Allendorf, Sandusky, O.; R. J. Long, Jr., Medford, Mass.

Comments (560): "Very easy; but ingenious defenses, and an all-round clever conception"—H. W. B.; "Not a great 3-er, nor up to the Dr.'s standard"—M. M.; "Brilliant, but not very difficult"—G. D.; "One of the Dr.'s best"—J. G. L.; "Complicated and crafty"—J. H. S.; "Of excellent merit"—A. De R. M.; "Good, but hardly first-class - J. E. W.; "Giving up the biggest power"—D. G. H.; "Admirable and skilful"—A K.

(561): "A beautiful discovery"—G. D.; "A gem"—J. G. L.; "Well balanced"—J. H. S.; "Very good"—A. De R. M.; "First class"—J. E. W.; "Deserves first prize"—G. G. H.; "Very difficult and highly finished"—W. R. C.; "Well deserved a prize"—H. W. F.; Pretty, but obvious"—J. P. W.; "A hard key to turn"—H. M. C.; "Fine"—J. N. S.; "Ingeniously planned"—J. T. G.; "A two-er of the highest merit"—D. O. G.; "Key well concealed"—A. N. C.; "The analysis is tantalizing, but instructive"—F. L. H.

Very many solvers were caught by Kt—K 7 ch, and R—Q 3 ch., not noticing that K x P or K—Q 3 left the white K in check. Others were quite certain that B x Q Kt P would do the trick; but P x Kt stops this.

In addition to those reported, U. N. and G. Middleton, Savannah, Ga.. got 559; "Merope," Cincinnati, 557, 558, 559.

### The Forsyth Notation.

We intend to introduce the Forsyth notation of problems. It is easy to master. 1. The white pieces are indicated by capitals and the black pieces by small letters; 2. Use S for Kt; 3. Begin to count from White's Q R 8 (always count from left to right). 4. Indicate the number of vacant squares by a figure. Take Problem 561, and we notate it as follows: K (white K), 3 (three vacant squares), B (white B), 3 (three vacant squares). As there are no pieces on second row, we simply write 8. Here is the full notation of 561:

K 3 B 3; 8; 3 P 2 p 1; 1 p p k 1 S 2; 6 Q 1; 2 B 1 R 3; 3 S 4; b 3 r 2 b.

Problem 566 reads: 4 R 3; 2 p 5; 2 p 2 S p r; 2 B s K 1 Q p; q p 1 P 1 S 2; R b 2 k 2 p; 3 p P p 2; 3 r 1 s 2.

ILLINOIS, CHICAGO, 112 Clark Street.

## PIANO Do You Want a Genuine Bargain in a Piano?

We have hundreds of Upright Pianos returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our salesrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Uprights as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment, $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. Every piano warranted exactly as represented. **LYON & HEALY, 46 Adams St., Chicago.**
*The World's Largest Music House.*

# The Literary Digest

VOL. XXII., NO. 25 NEW YORK, JUNE 22, 1901. WHOLE NUMBER, 583

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### AMERICAN LOCOMOTIVES ABROAD.

IN the midst of the self-congratulatory comments of the American press on the way our manufactured products are "beating creation" in their invasion of the foreign market comes the disquieting news that many of the American locomotives in use abroad are proving unsatisfactory. They burn too much coal. The assistant chief engineer of the Orleans Railway in France, for example, said a few days ago, according to a cable despatch, that the result of their purchase of thirty American locomotives last year is "not encouraging." The engines were ordered in America "because they were needed in a hurry," he said, and "for this reason the company does not regret the purchase"; but "it is true that they burn more coal and that it is slightly more expensive to maintain them than other locomotives doing the same work"; so "the company does not contemplate further purchases except in similar circumstances, as the French locomotives are equally satisfactory and more economical." Another despatch reports Mr. Elliott, ex-manager of the railways of the Cape Colony, who is now in London, as paying a tribute to the Baldwin Locomotive Works, of Philadelphia, for their excellent material and prompt delivery, but also as saying that their engines burn twenty per cent. more fuel than the English locomotives. Some engines recently delivered from the Schenectady Locomotive Works, however, he added, have been found able to haul more than any other engines that have been used in the colony.

But what is perhaps the most specific charge comes from Mr. Samuel W. Johnson, superintendent of the locomotive department of the Midland Railway Company, in England. The Midland road purchased forty American locomotives about two years ago when the machinists' strike in England rendered the British firms unable to fill their orders. In a letter in the London *Daily Mail* Mr. Johnson says that he finds, as the result of a six months' test, that under the same conditions the American locomotive costs from twenty to twenty-five per cent. more than the British in fuel, fifty per cent. in oil, and sixty per cent. in repairs. "It must be said that the American engines worked the trains satisfactorily," admits Mr. Johnson, "but their inferiority in the three points named is incontestable." These American locomotives cost $2,000 apiece less than the British and were delivered far more quickly, and the Pittsburg *Dispatch* remarks that $2,000 "will pay for a good deal of coal and oil." Major Johnstone, a British officer in Egypt, reports home to England that the American locomotives in use there "average ten per cent. more coal than the other types," and Sir Alfred Hickman, ex-president of the British Iron Trade Association, comments: "This, so far, confirms the reports from Burma and Assam, and, if correct, would make American engines dear as a gift."

The American locomotive finds a friend, however, in Lord George Hamilton, Secretary of State for India, who has written to Sir Alfred Hickman a letter that is published in the London *Times*, in which he says of the American engines in use in India:

"The earlier reports were unfavorable, but when their working was better understood and alterations were made to suit the local fuel, a marked improvement was noticed, so much so that one company wishes to obtain more engines of a similar construction. That American locomotives obtained a footing in India was due to the strike I have referred to; but if, as I hope, British locomotives are for the future to regain their monopoly in that vast system of railways, the British engineers must profit by the hints and suggestions which these reports convey. . . . . .

"You seem to think that orders have only gone abroad because those who gave them did not understand their business. I wish that it were so. The competition we have to face is founded on something much more formidable and substantial. Chemical research, concentration of capital, thorough technical education, improved industrial organization have made in recent years greater advance in America than here. It is with the product of these combinations, and not with the assumed stupidity of Indian officials, that the British engineer has to contend."

In view of the criticisms quoted above, press representatives have been interviewing the officials of some of the more prominent American locomotive works, with interesting results. Charles D. Cooke, of the Cooke Locomotive Works, in Paterson, N. J., says it is his opinion "that the foreign builders are afraid of us, and the fact that they speak against us proves it." Angus Sinclair, editor of *Railway and Locomotive Engineering*, makes an interesting comment on the British criticisms. Mr. Sinclair is Scotch by birth, and years ago he drove locomotives on the Caledonian Railroad in Scotland. He says:

"It is hard to get a British or a European engine-driver to make a favorable report on a Yankee machine. But they will have to come to it, in spite of their prejudices. The American locomotive will win its way in Great Britain and Europe, that is certain. . . . . .

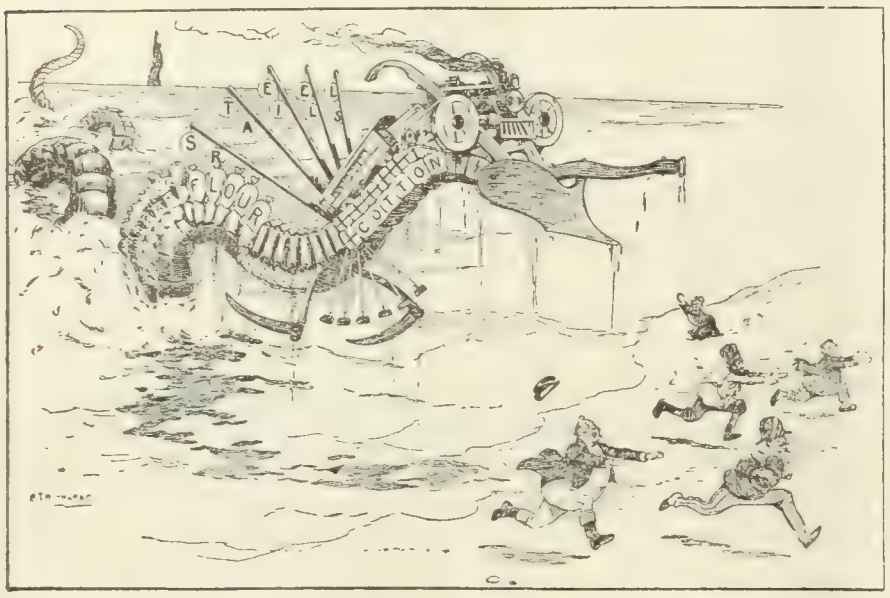
"I think our locomotives probably do burn more coal. That is due largely to the fact that in our locomotives the cylinders are more exposed, while in the British types the cylinders are protected from atmospheric conditions, and there is less loss of heat, and consequently of power.

"The great advantage of the American locomotive over its rivals is in its simplicity of construction. Passenger-engines in England rarely attain an average of one hundred and fifty miles. Indeed, that would be considered a big run. In this country three hundred miles a day is not at all uncommon.

"British locomotives are the product of theories. They are de-

signed by civil engineers. American locomotives are the product of experience—experience that keeps pace with the latest improvements, and does not hesitate to discard theories. They are designed and built by practical mechanics, and we do not expect or desire them to live after they are out of date. So we run them for all there is in them. There you have the difference in a nutshell."

Mr. Alba B. Johnson, of the Baldwin Locomotive Works of Philadelphia, whose locomotives on the Midland Railway are under criticism, says that "the company has yet to receive a direct complaint from the Midland Railway officials," and adds



THE AMERICAN PERIL AS VIEWED BY VARIOUS EUROPEAN JOURNALS.
—*The New York Herald.*

that "Baldwin locomotives are now running on railroads in France, Bavaria, Denmark, Norway, Finland—in fact in all parts of the world—and the builders have never had a single complaint as to their running qualities or the cost of operation." He goes on to say:

"The discussion now going on respecting the American locomotive and its cost and efficiency has really no interest for us. We are convinced that our locomotives will justify themselves; that when business, and not political considerations, determine what shall be used—and, eventually, business consideration will rule—the American locomotive will be acknowledged to be, as it is, superior. We are certain that France, Spain, Russia, Norway and Sweden, Bavaria, all will continue to buy our locomotives. The fact is, we are filling large orders for Egypt through the British War Office.

"It is true in a certain sense that the American locomotive costs more than the English; that is, if it is not worked as it should be, it is not as economical. Absolute economy, however, is in our favor. Our engines are more powerful than the English. The standard pressure with us is 180 pounds, as against 160 pounds in England. If the American locomotive is put to only the same amount of work as the English locomotive is capable of, it does consume more coal. But if it is put to its full capacity, it is actually more economical than the English engine."

Several American journals have expressed the opinion that unfriendly treatment by the British engineers and firemen may have had something to do with the untoward behavior of the American locomotives. "If a fireman does not want his engine," remarked George Blakely, an expert of the Cooke Locomotive Works, "he can make it more stubborn than an army mule." The New York *Journal of Commerce* says, similarly:

"Is it at all likely that the engineers and firemen would encourage their employers in going to the United States for engines? If a man in the position of Sir Alfred Hickman is bound to believe that an American locomotive is not much better than a lot of junk, how friendly would the attitude of a foreign engineer or stoker be to our machines? English papers have contained complaints of railway employees regarding our engines which the railway officials have contradicted. We shall not go very far astray if we conclude that, in spite of the efforts of the railway officials to give our machines a fair test, the foreign engine-drivers and firemen have given our engines about as unfriendly treatment as they could and keep their employment."

## THE THIRD-TERM PROPOSITION.

WHEN Senator Depew and General Grosvenor, a couple of weeks ago, came out almost simultaneously with a serious suggestion that President McKinley might be returned to the White House for a third term, it was a noticeable fact that the proposition met with practically no favorable response, even from the newspapers that are most outspoken in their admiration of the President. That this negative attitude was shared by Mr. McKinley himself became apparent a few days later, on the 11th, when his secretary gave out a brief but positive statement signed by the President in which he declared, in view of the reiteration of the third-term suggestion: "I will say now, once for all, expressing a long-settled conviction, that I not only am not and will not be a candidate for a third term, but would not accept a nomination for it if it were tendered me." This statement gave the newspapers a good opportunity to express their opinions of the suggestion made by the Senator from New York and the Congressman from Ohio, and they have not been slow to improve it.

The Philadelphia *Press* (Rep.) calls the suggestion "silly"; the Chicago *Inter Ocean* (Rep.) calls it "lunacy" and "the height of rattle-brained recklessness," and the St. Louis *Globe-Democrat* (Rep.) terms it "folly" and "nonsense." "In this matter," remarks the Milwaukee *Wisconsin* (Rep.), "Senator Depew has exhibited a want of that common sense which has usually pervaded his course." The St. Paul *Pioneer-Press* (Rep.), too, says that the Senator "is apparently incapable of reading the lessons of history"; and it rejoices that while the President "can not prevent officious courtiers and sycophants from making fools of themselves," he "will not permit them to make a fool of him."

The New York *Sun* (Rep.) says:

"No document that William McKinley ever signed will affect more profoundly the future estimate of the true greatness of this

RUSHING THE BABY SHOW.

UNCLE SAM: "You're altogether too early, ladies; the show doesn't open for a good while yet." —*The New York Journal.*

American citizen now acting as the servant of the nation. How petty and pitiable it makes seem the attitude of that fast decreasing number who impute to the President a disposition to-

ward personal imperialism, a willingness to strain our institutions for the same of his own renown! How foolish it leaves the equally mistaken few who have thought to win the gratitude of the President by sounding the third-term note within the hearing of his ears!"

Other papers turn to a consideration of the dangers of a third term. "It might not mean a life term for Mr. McKinley," says the Minneapolis *Tribune* (Rep.), "but if the barrier that limits an incumbent of the Presidential office to two consecutive terms is once broken down, the field for a life-tenure would be open to any sufficiently able and unscrupulous to scheme for it," and the Chicago *Evening Post* (Ind. Rep.) observes: "No sensible American, it may be repeated, apprehends Cæsarism or executive despotism. But only the superficial and the confirmed spoilsmen do not see that the constitutional division of powers and the delicate system of checks and balances would be gravely compromised and imperiled by third and fourth and fifth terms. The growth of executive power at the expense of the other departments of the Government has proceeded far enough."

And coming to a consideration of Mr. McKinley himself, the Boston *Journal* (Rep.) says: "We believe that at this stage in the history of the United States it is unwise and unnecessary that any man, even a McKinley, should continue at the head of the Government for more than eight consecutive years." The Portland *Orègonian* (Rep.) remarks, too, that "there are a number of leading Republicans superior to Mr. McKinley in intellectual power, and quite his equal in personal character"; and the Kansas City *Journal* says: "The high popularity which Mr. McKinley enjoys is his popularity as a President, not as a candidate for an additional term. There is not a particle of evidence that he would be greatly popular in the latter capacity. At least there is so much uncertainty on the subject that neither he nor the Republican party is likely to take risks." Says the New York *Tribune* (Rep.): "Nobody knows better than he [the President] that if it were possible under any conditions to set aside the unwritten rule which Washington established and the powerful partizans of Grant tried in vain to defy, deep and widespread resentment and bitterness would inevitably result. Probably the United States has never had a President to whom such a burden of ill-will would have been more intolerable than it would be to Mr. McKinley."

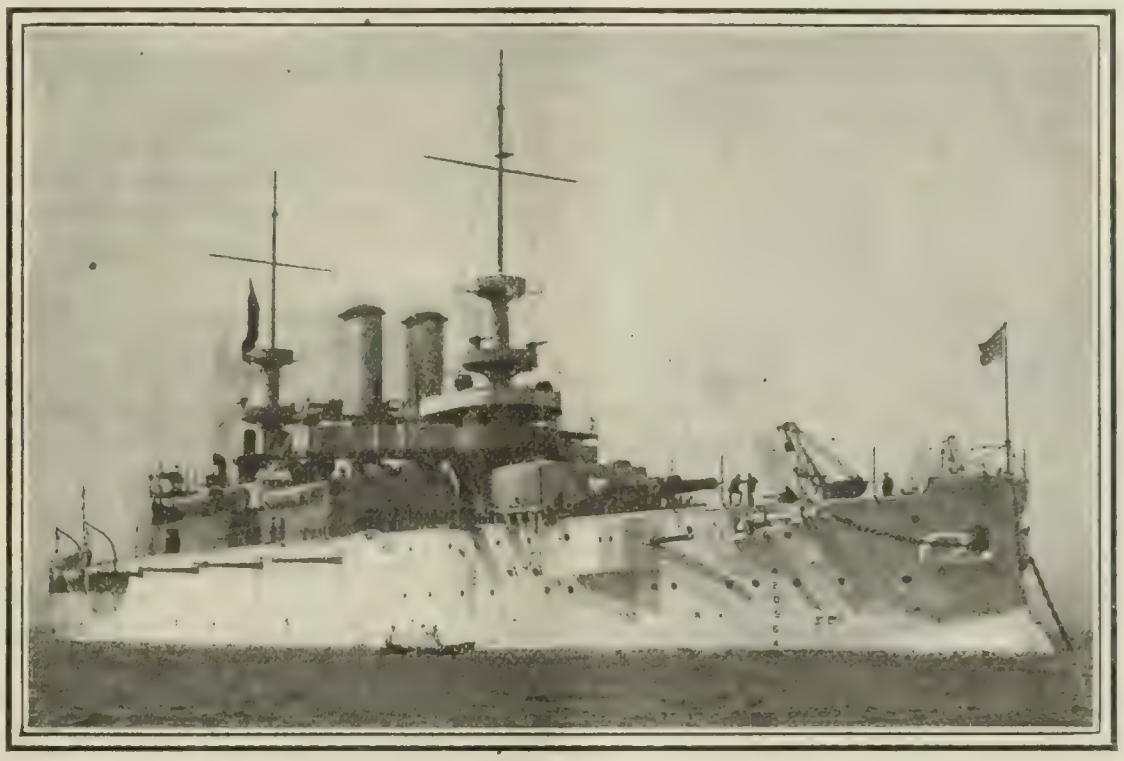
The Boston *Herald* (Ind.), however, believes that our Government has been changed so materially by expansion in the last few years that a third term would not be anything surprising; and the Boston *Transcript* (Rep.) observes:

"It is doubtful if it can be said with perfect candor that the American people have ever given a conclusive decision on this question. No contingency has ever risen calling for for permitting an unquestionable expression of their opinion. They have never, for instance, passed upon it toward the close of the second term of a President engaged in carrying on a war that was really a great struggle for maintaining our safety or power. Should the question ever arise under such circumstances, the people might be found following the homely advice of Lincoln against swapping horses while crossing a stream."

It will be noticed that nearly all the newspapers quoted above are Republican; it need hardly be said that the Democratic press do not favor a third term for Mr. McKinley, altho some of them are willing to see him nominated. The Hartford *Times* (Ind. Dem.), the New York *World* (Ind. Dem.), and the Detroit *News* (Ind.) would not be surprised if Mr. McKinley, in case his friends become too urgent, should reconsider his refusal of a third nomination. "The President was once just as positive," observes the Detroit *News*, "about the criminality of forcible annexation and the plain duty that we owed Porto Rico."

## THE "ILLINOIS," OUR FLEETEST BATTLE-SHIP.

THE new battle-ship *Illinois* attracted a good deal of attention last week by maintaining on her trial trip on Wednesday an average speed of 17.31 knots an hour for four consecutive hours, thus proving herself the fastest battle-ship in our navy. Not only that, but she revealed an extraordinary celerity in maneuvering by describing a complete circle within three hundred yards, or two and one-third times her length, in three minutes and ten seconds, while going at full speed. The Associated Press report of the trial says: "Steadiness and reserve power characterized the performance of the battle-ship throughout the severe test. The work of her engines was smooth and even, and the records of the day showed but one-tenth of a knot difference in speed between the northern run and the return. The machinery easily met every requirement, and not an accident of any kind marred the success of the day."



Copyrighted by Samuel E. Rusk.

THE NEW BATTLESHIP "ILLINOIS."

Courtesy of *The New York Journal*.

"But we shall be deluding ourselves," says the New York *Journal*, "if we imagine that the *Illinois* is above, or even up to, the modern standard of speed for battle-ships," and it goes on to say:

"We must bear in mind that while all foreign governments have recognized the value of high mobility in their fighting vessels, our Navy Department has systematically discouraged the construction of fast battle-ships. It was planning fifteen-knot ships when other nations were building craft of seventeen knots, sixteen-knot vessels when other nations had gone up to eighteen, and only now in its latest efforts has it been prodded into reluctantly conceding nineteen, the rate for which European constructors have been planning for some years.

"The British battle-ships *Duncan*, *Cornwallis*, *Russel*, *Exmouth*, *Montagu*, *Albemarle*, *Queen*, and *Prince of Wales* are all to make nineteen knots. The *Canopus*, *Ocean*, *Goliath*, *Albion*, *Glory*, and *Vengeance* make 18¾. Nine others make eighteen, and still others have been planned for nineteen.

"The new Japanese battle-ships make eighteen knots, and

Russia has several of the same speed. So have Germany and France.

"The partiality of our Navy Department for slow ships has been ably seconded by Congress, which has gone even beyond the Department's desire by compelling the construction of monitors that would have to be towed into action, and could hardly begin to fire before a battle would be over. Such craft can do nothing that a fast battle-ship could not do better, and the battle-ship can do many things that the monitor could not do at all.

"The theory of the slow battle-ship is that it must carry guns to pierce the heaviest armor and armor to resist the heaviest guns. This is substantially the reason just given by the Navy Department for its refusal to recommend twenty-knot battleships. It explains that any weight given to more powerful machinery would have to be taken from guns and armor.

"But as a matter of fact the shells from the heaviest guns do not hit the heaviest armor. As a rule they do not hit anything at all. The slow battle-ship goes into action with inordinately thick armor in spots to protect her from thirteen-inch shells that never reach those spots, and carrying sixty-ton guns with which she never succeeds in hitting an enemy. The real damage on both sides is done by the guns of moderate calibers, and the effective protection is armor of moderate thickness widely distributed."

The *Illinois* is a sister ship to the *Alabama* and the *Wisconsin*. She is 368 feet long on the load-water line, has an extreme beam measurement of 72 feet 2¼ inches, draws 23 feet 6 inches of water, and, with all ammunition and stores on board, has a displacement of 12,325 tons. Her maximum horse-power is estimated at 10,000. She carries four thirteen-inch breech-loading rifles in turrets and fourteen six-inch rapid-fire-guns. The secondary battery consists of sixteen six-pounder and four one-pounder rapid-fire guns, two Colt guns, and two field-guns. She also carries four torpedo-tubes. The armor belt, which extends from the stem to abaft the after-turret, is sixteen and one-half inches thick at the top and nine and one-half at the bottom, except at the forward end, where it is tapered to four inches at the stem. The *Illinois* has been under construction for a little over four years.

## WITHDRAWING OUR TROOPS FROM CUBA.

NOW that the Cuban Constitutional Convention has agreed, by a vote of 16 to 11, to add to the Cuban constitution the Platt amendment (which was printed in full in our issue for June 8), public attention is turning to the question of the withdrawal of our forces from Cuba. The Washington correspondent of the Philadelphia *Ledger* (Ind. Rep.) says: "The general idea entertained here among those who have stood near the President and Secretary Root and have had opportunity to know something of the plans of the Cubans themselves is that the new Government will be elected some time in November and inaugurated next February. Our troops and the provisional Government will remain in the island until the inauguration takes place, and will in all probability take part in the inaugural parade." The Washington correspondent of the New York *Evening Post* (Ind.) writes:

"The talk in Washington for a few hours after the news was received of the adoption of the Platt amendment by the Constitutional Convention at Havana was all about the immediate withdrawal of the United States troops. It was simply the Yankee mental trick of leaping ahead of the facts. There will be nothing precipitate about the withdrawal of the troops. Too few are in Cuba, and the distance to be moved is too slight to make the undertaking a serious one. There will still be much to do before the 'stable' government on which everything further depends can be assumed to have been established. A satisfactory electoral law must be enacted; the offices created by the Constitution must be filled by popular election, and the officers so chosen duly installed, and the new executive must negotiate a treaty with the United States covering the points laid down in the Platt program. All this was explained to the delegates who visited this city some weeks ago. . . . . .

"In the mean time, it is probable that a considerable number of our soldiers will be brought back to the United States, drawn almost wholly from the outlying provinces of the island which seem peacefully disposed. Our troops will hold Morro Castle till the formal evacuation, which, as will be seen from the outlines of the program given above, will not, in the ordinary course of events, occur till some time next winter. Cuba will have to raise something in the nature of an army between now and then, in order to have a garrison for the defense of the fort. Well defended, Havana is regarded as nearly impenetrable as any fortified city on this hemisphere, if not in the world.

"When the evacuation takes place, those United States troops who have been holding Morro are expected to retire to the places fixed upon for our naval stations, and the new Government will be launched and left to take care of itself."

The amendment was adopted on Wednesday of last week. The Havana correspondent of the New York *Sun* (Rep.) says that "many Spaniards, Cubans, and Americans here hoped that the amendment would be rejected and thus, perhaps, annexation would come about," and "this thought," he adds, "weighed powerfully with the convention." The Administration press believe that the Cubans' action is the best possible thing for both Cuba and the United States. The New York *Tribune* (Rep.) calls it "a long and important step in the right direction," and the Philadelphia *Press* (Rep.) says:

"No nation ever started out for itself under such favorable conditions. Order is assured from the start. Independent, the island will at the same time have the powerful protection of the United States against rebellion started by would-be dictators at home or attacks from abroad. That is the one thing necessary to invite capital and secure the rapid development and prosperity of the country.

"There will be no difficulty in arranging for the elections and the installation of the new government. The settlement of this difficult question in this way will be another great achievement for the McKinley Administration."

The Baltimore *News* (Ind.), however, remarks:

"Henceforth, 'Cuba's Choice' should take the place in the vocabulary heretofore so usefully occupied by 'Hobson's Choice.' The people of Cuba have been directed by the Government of the United States to exercise their free and independent volition in the matter of accepting the conditions named in the Platt amendment to precisely the same extent as the patrons of the immortal cockney stableman were invited to exercise theirs in the matter of a horse. It was 'this or nothing,' in the one case as in the other. To be sure, the Cubans had the alternative of fighting us if they chose; but of course that alternative was, under the circumstances, a little too absurd to be thought of. So the Cubans have made their 'choice,' and, by the free and independent action of the representatives of a free and independent people, the conditions offered by big America to the inhabitants of little Cuba, and handed to them on the point of a bayonet, have been accepted with all the grace possible in the situation.

"Now that the thing is done, it is proper to say, once more, that the conditions are not necessarily—that is, are not necessarily in themselves and on their face—of a kind to destroy the independence of Cuba. It rests with the people of America to see that the elastic terms of the third article of the conditions [regarding intervention] are not made to cover exploitation, rapacity, and overriding of the rights of the Cubans. Experience thus far of what may be accomplished by the sense of justice, as against grosser influences, in our dealings with the dependencies over which, for the present at least, we have decided to exercise dominion, does not hold out much encouragement as to any restraint upon the use of the powers which the Cubans have now formally conferred upon the United States Government. But it will not do to give up the principles of justice and fair play, in which, up to the Spanish war, this nation fondly fancied itself so superior to other nations; and it may yet prove to be the case that the American people will react from their present attitude and show that these principles had a deeper root among them than recent developments indicate."

A view not seen in many papers is expressed in the following comment by the Philadelphia *Inquirer* (Rep.) :

"We do not believe the convention represents the best elements of the island, but as this nation has officially agreed to the trial of independence it is inevitable that the experiment must be made. If it wins, it is under the overshadowing influence of this Government, which has managed to safeguard its interests. If it fails, there is nothing left but annexation, and we believe that this will be the inevitable result, after the politicians have played with their new toy until they are tired of it."

## STREET-RAILWAY FRANCHISES IN PENNSYLVANIA.

UNITED STATES Senators, Congressmen, and state officials in Pennsylvania are charged by the Philadelphia *Times* (Ind. Dem.) with "such a shameless prostitution of official power for private speculation" as has not been known in this country since "the hideous orgy of corruption and crime that attended the carpet-bag governments in the Southern States after the Civil War." In no less emphatic language, the Philadelphia *Record* (Ind. Dem.) declares that the history of the street-railway "rippers of Pennsylvania," from their inception and passage through the legislature to their final approval by the governor, is "the history of a great crime." "We do not recall anything bolder or more atrocious in the annals of legislative iniquity," it says. The following *résumé*, describing the rapid methods by which the "rippers" were "jammed through the legislature," is from the Chicago *Tribune* (Rep.) :

"These bills, having never previously been heard of by the public, were introduced into the Senate on the afternoon before Decoration Day. Within ten minutes they had been referred to a commitee and favorably reported back, and on the same day they were read a first time. The Senate remained in session on Decoration Day in order to advance them, and on Friday, just forty-three hours after their first appearance, they were passed by a vote of 32 to 6. On the following week the House, for the first time during the session, assembled on Monday, and through sharp practise the bills were not only received, but were railroaded to first reading the same day. The next day, on second reading, there was a fruitless fight and a fire of amendments by a few 'insurgents,' and on Wednesday last [June 5] the bills passed the House by a vote of 151 to 31, with certain 'friendly' amendments which were on the same day concurred in by the Senate.

"The purpose of these unprecedentedly expedited bills—which were apparently a part of a far-reaching deal—was to put certain promoters and politicians in exclusive possession of the possibilities of street-railway development at various important points in the State. The constitution of Pennsylvania forbids the construction of a street railway within any city, borough, or township without the consent of the local authorities. These bills provided, however, that whenever any person should have secured from the secretary of state, on application, a 'charter' for any proposed and unoccupied route—surface, elevated, or underground—he alone should have the right for two years thereafter to apply for such local consent. It was further provided that, after securing such consent, he should have two years in which to begin and three years more in which to complete construction. Important rights of eminent domain were also conferred."

The nature of the legislation is thus described by the Springfield *Republican* (Ind.) :

"Briefly, the measure authorizes the incorporation of surface, elevated, and underground street-railway companies. These companies can locate anywhere, wherever a city council can be found to indorse selected locations. The franchises thus obtained are made perpetual. No regulation of fares is provided. No compensation to the city is required. The charter or franchise is made a marketable quantity for seven years at least, and no building need be done in any case. Streets not used but included in the legalized plans of existing street-railway companies can be taken by the new companies. Overhead or underground roads can be built in streets now occupied by surface railways."

In order to still further intrench the state machine, an amendment introduced by Senator Scott and providing that no charters shall hereafter be granted for constructing railways, except in "congested localities" and by approval and consent of the governor, secretary of the commonwealth, and attorney-general, was passed last week.

On Friday, June 7, Governor Stone signed the bills. "Almost before the ink of the governor's signature was dry," narrates the New York *Times* (Ind. Dem.), "and before there was any appreciable chance for any one else, charters were obtained by the leading politicians. Among those openly interested were the son of Mr. Quay, the junior Senator, Congressman-at-Large Foerderer, Congressman Connell, State Senator Focht, the author, or sponsor, of the bills, and others of less note connected with the machine." Immediately following the legislation the select council of Philadelphia received and passed fourteen ordinances covering one hundred and twenty miles of proposed car

THE TWO PROPRIETORS.
*The Philadelphia North American.*

lines in the city. Applications have also been filed for lines in or about Pittsburg, Allegheny, Scranton, and other cities and towns.

The most sensational protest that has yet been made against the methods of the Pennsylvania politicians is that of John Wanamaker, who on June 13, just before Mayor Ashbridge signed the fourteen ordinances above referred to, wrote him a letter offering to pay $2,500,000 for the franchises involved, which have literally been given away. The letter was handed to the mayor at a public function, and he threw it away unopened. The mayor also disregarded an offer of $5,000,000 from New York and Western capitalists, and a proposition from A. L. Johnson to provide a trolley-system for Philadelphia with three-cent fares and universal exchanges. Mr. Wanamaker's offer, declares the Philadelphia *North American* (Rep.), meant "a direct saving to the taxpayers of a sum equal to two dollars for every man, woman, and child in Philadelphia." "Mayor Ashbridge has set a new and strange pace for public wrong," adds the Philadelphia *Public Ledger* (Ind.) ; "the mayor's arrogant effrontery in approving the gift, worth millions of dollars, to speculative, sordid politicians, has no precedent. It is official audacity unexampled."

The Philadelphia *Inquirer*, Senator Quay's paper, justifies that "ripper" legislation on the ground that under its provisions Philadelphia may now have a system of much-needed "rapid transit." Referring to the crowded condition of the surface cars,

it says that there is no traveler but will "welcome this promised relief from a situation that has become almost unbearable." It continues:

"There are those who are yet declaring that the whole proposition of rapid transit is but a mere scheme of grabbing franchises and bartering them to the highest bidder. We put no faith whatever in these charges. If it would prove a profitable investment to build elevated or underground railroads the incorporators, whoever they may be, would not give up the opportunity. On the other hand, if the enterprise did not promise to be profitable no one would care to buy the franchises. Indeed, they could not be given away. It may be taken for granted, therefore, that there is a genuine business proposition back of this whole enterprise, and that the details will develop in due time."

## MR. LAWSON'S YACHT AND THE "AMERICA'S" CUP.

THE possibility that the *Independence*, the new yacht built by Mr. Thomas W. Lawson, the Boston copper magnate, may be fleeter than the *Columbia* and the *Constitution*, and may therefore be better able to defend the *America's* cup in the coming races with the *Shamrock*, gives uncommon interest to the seemingly irreparable break between Mr. Lawson and the New York Yacht Club, which is the custodian of the cup. To state the dispute briefly, the club insists that the *Independence*, to take part in the races, must be "enrolled in the name of one or more members of the club and registered on the club's records in the name of such member or members," or must be "chartered to a member or members for a period of not less than two months." Mr. Lawson is willing to have his boat enrolled on the club's records, but is not willing that it should be enrolled as some one's else property. He says, in a newspaper interview: "I have held from the start that any boat that proves herself the better boat, owned by an American and built here, can race for the Cup. I never could agree that I was under any necessity, in order to have my boat compete, to give her away to another man or to surrender my ownership of her. I thoroughly agree that the boat should be enrolled in the New York Yacht Club, in order to be eligible, but I do not believe, and have never believed, that in order to be so enrolled it is necessary that she shall be owned by a member or members of the club." Mr. Lawson has expressed his willingness to give the charge of his boat during the races to the club, or to any members they may designate, but the club requires that he charter his boat to some member or members of the club by personal arrangement; and this Mr. Lawson refuses to do.

The New York *Evening Post*, while it thinks that "the general public has neither time nor taste to study all the technicalities of a dispute over the terms of a charter by which Mr. Lawson's boat may be temporarily turned over to the New York Yacht Club," and while it agrees that "the club may have the best of the controversy," says, however, that "it is a dearly bought victory which leaves it open to the imputation of caring more for its dignity than for getting the best boat in American waters to sail in the contest next fall." The Cleveland *Leader*, too, says: "For all that any one knows to the contrary, the *Independence* may be the fastest yacht in American waters to-day, and it is possible that to exclude that vessel from the preliminary races held to select a cup defender may make just the difference between victory and defeat in the international struggle to come later. Nothing so annoying is likely to happen, but the action of the New York Yacht Club is none the less narrow and ill-judged on that account."

On the other side, the New York *Tribune* thinks that if the *Independence* fails to take part in the races it will be the fault of Mr. Lawson himself, and the New York *Sun* considers his "jockeying" with the club's terms so unsportsmanlike that "it may be well to warn him that if he pursues his present course much longer he will bar the *Independence* from the desired competition, since it will soon become impossible for him to find a single member of the New York Yacht Club willing to raise his flag over the Lawson boat, and, in the traditional way, qualify her to enter the races."

## CAN THE SALOON BE ABOLISHED?

STUDENTS of the liquor problem have generally been ready to admit that the social functions of the saloon are a most important factor in maintaining and strengthening its influence over the community. This conclusion is amply sustained by Mr. Raymond Calkins in his new book on "Substitutes for the Saloon," published under the auspices of the influential "Committee of Fifty for the Investigation of the Liquor Problem," organized in 1893, "to secure a body of facts which may serve as a basis for intelligent public and private action." He says:

"The saloon is the poor man's club, in the sense that it often offers him, with much that is undoubtedly injurious, a measure of fellowship and recreation for which he would look elsewhere in vain. It does a vast amount of mischief, but at the same time supplies a legitimate want in the life of the workingman by giving him relief from the monotony and meagerness of his daily life. This want is so generally recognized that social workers have often remarked that, bad as the saloon is, they would hesitate to remove it unless there were something to take its place.

"The question arises, How may the evils of the saloon be eliminated, and at the same time the social wants of thousands in our great cities be satisfied? Two methods must evidently be pursued. The saloon must be confined by legislative restriction to its own normal function of the distribution of liquor, and other places of recreation be provided without the perils accessory to the saloon, where a man may enjoy the society of his fellows without being confronted with the evils of intoxication, of gambling, of social vice, and where he will not be tempted to squander his week's wages."

In reviewing the legislative attempts to restrict the influence of the saloon, Mr. Calkins gives it as his opinion that "both the low- and high-license systems have failed to counteract the social side of saloon life." He thinks that the same must be said of the prohibition laws, for "so long as public opinion does not insist upon the extinction of the formally banished saloon, just so long is it possible not only for it to exist, but to preserve all the elements of a social center, and to draw patronage as such." On the other hand, he regards the South Carolina dispensary system and the Gothenberg system in Norway and Sweden as examples of legislation which has been largely successful in destroying the social functions of the saloon. He continues:

"The ability of legislation to extirpate the social attractiveness of the saloon has been demonstrated; but in proportion to the degree in which legislation is successful in taking from the saloon its social features, the obligation becomes imperative to provide for the patrons of the saloon other places of social recreation and fellowship. . . . As yet adequate substitutes for the social benefits which thousands of the people actually derive daily from the saloons have not been developed. It is to this problem that the experience, the wisdom, and the wealth of those interested in social progress must now be directed."

Of the various recreational enterprises which have grown up out of the life of the masses, and which may fairly be included under the category of "substitutes" for the saloon, Mr. Calkins describes at some length the boys' and young men's clubs of our great cities; the open-air gymnasiums and playgrounds in which Boston excels; and the public libraries, free lecture courses, open-air concerts, popular theaters, temperance restaurants, etc., that have been organized in all parts of the country. One of the most successful efforts in rivaling the saloon has been that of

"The Workingman's Club and Institute Union," an English association founded in 1863. Its purpose was to help workingmen to establish clubs where they might meet for conversation, business, and mental improvement. Starting from smallest beginnings, the Union has grown until to-day it includes over 500 clubs and nearly 100,000 members. The sale of liquor to members proved to be necessary for self-support, but it is claimed that the introduction of a bar has not resulted in lowering the character of the organization.

Commenting on the facts and conclusions presented in this book, the New York *Evening Post* expresses the hope that the principle of "self-help" developed in the English workingmen's clubs may also take firmer root in American life. It says:

"The club instinct is becoming strong in all of our cities. In Baltimore, for example, there are one hundred and fifteen social clubs of the poorer classes, exclusive of political and religious organizations, most of which have rooms. In New York, between the social clubs, the benevolent orders, and the trades-unions, the framework for such a movement already exists. The meeting-halls of such organizations, which are now often open on stated occasions, might be made available for daily club use. The workingmen, by developing this club idea, might depend less and less on the saloon, with its demoralizing influence, and by cooperation supply at once liquor and social restraint in its use."

## "MR. DOOLEY" HANDS DOWN HIS OPINION OF THE DECISION.

NOW that "Mr. Dooley" has become, so to speak, a national figure, there has been a feeling in some quarters that the last word on the Constitution and the flag would not be said until he had spoken. The last instalment of his philosophy now makes the matter all clear. "No matter whether th' Constitution follows th' flag or not," he says, "th' Supreme Coort follows th' election returns." How the dispute started as to whether or not "ivrywhere th' Constitution wint, th' flag was sure to go," Mr. Dooley doesn't remember, but he knows that it was finally agreed to leave it to the "Supreme Coort":

"So it wint up to th' Supreme Coort. They'se wan thing about th' Supreme Coort, if ye lave annything to thim, ye lave it to thim. Ye don't get a check that entitles ye to call f'r it in an hour. Th' Supreme Coort iv th' United States ain't in anny hurry about catchin' th' mails. It don't have to make th' las' car.

"I'd back th' Aujitoroom again it anny day f'r a foot-race. If ye're lookin' f'r a game iv quick decisions an' base hits, ye've got to hire another empire. It niver gives a decision till th' crowd has dispersed an' th' players have packed their bats in th' bags an' started f'r home.

"F'r a while ivrybody watched to see what th' Supreme Coort wud do. I know mesilf I felt I cudden't make another move in th' game till I heerd fr'm thim. Buildin' op'rations was suspinded an' we sthud wringin' our hands outside th' dure waitin' f'r information fr'm th' bedside. 'What're they doin' now?'

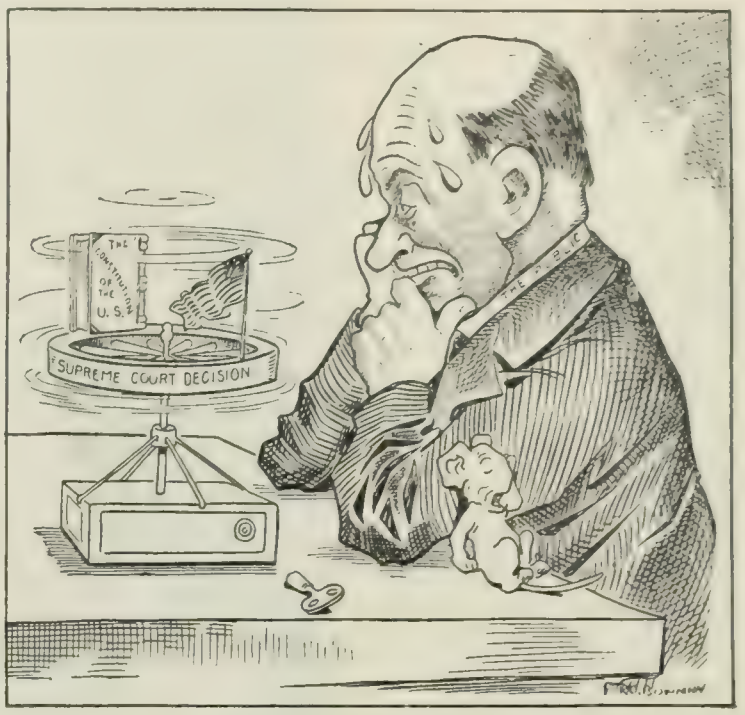
"'They just put th' argymints iv th' larned counsel in th' ice box an' th' Chief Justice is in a corner writin' a pome. Brown J. an' Harlan J. is discussin' th' condition iv th' Roman Impire befure th' fire. Th' r-rest iv th' coort is considherin' th' question whether they ought or ought not to wear ruchin' on their skirts an' hopin' crinoline won't come in again. No decision today.'

"An so it wint f'r days an' weeks an' months. Th' men that had argyied that th' Constitution ought to shadow th' flag to all th' tough resorts on th' Passyfic coast an' th' men that argyied that th' flag was so lively that no Constitution cud follow it an' survive, they died or lost their jobs or wint back to Salem an' wer f'rgotten. Expansionists contracted an' anti-expansionists blew up, an' little childher was born into th' wurruld an' grew to manhood an' niver heerd iv Pother Ricky except whin some wan got a job there.

"I'd about made up me mind to thry an' put th' thing out iv me thoughts an' go back to wurruk whin I wake up wan mornin' an' see be th' pa-aper that th' Supreme Coort had warned th' Constitution to lave th' flag alone an' tind to its own business. That's what th' pa-aper says, but I've r-read over th' decision an' I don't see annything iv th' kind there. They'se not a wurrud about th' flag an' not enough to tire ye about the Constitution.

"'Tis a matther iv limons, Hinnissy, that th' Supreme Coort has been settin' on f'r this gineration—a cargo iv limons sint fr'm Porther Ricky to some Eyetalian in Philydelphy. Th' decision was re-read be Brown J., him bein' th' las' justice to make up his mind, an' ex-officio, as Hogan says, th' first to speak, afther a crool an' bitther contest. Says Brown J., 'Th' question here is wan iv such gr-reat importance that we-ve been sthrugglin' over it iver since ye see us las', an' on'y come to a decision (Fuller C. J., Gray J., Harlan J., Shiras J., McKenna J., White J., Brewer J., an' Peckham J. dissentin' fr'm me an' each other) because iv th' hot weather comin' on.

"'Wash'n'ton is a dhreadful place in summer (Fuller C. J. dissentin'). The whole fabric iv our government is threatened, th' lives iv our people an' th' pro-gress iv civilization put to th' bad. Men ar-re excited. But why? We ar-re not. (Harlan J., "I am." Fuller C. J. dissentin', but not f'r th' same reason.)



THE WORST PUZZLE YET.

Does the constitution follow the flag, or does the flag follow the constitution, or does the flagstitution follow the const. or does the constiflution follow the gag, or—where are we, anyway?

—*The Minneapolis Tribune.*

"'This thing must be settled wan way or th' other undher that dear ol' Constitution be varchue iv which we are here an' ye ar-re there an' Congress is out West practisin' law. Now, what does th' Constitution say? We'll look it up thoroughly whin we get through with this case (th' rest iv th' coort dissentin').

"'In th' mane time we must be governed be th' ordnances iv th' Khan iv Beloochistan, th' laws iv Hinnery th' Eighth, th' opinyon iv Justice iv th' Peace Oscar Larson in th' case iv th' Township iv Red Wing varsus Petersen, an th' Dhred Scott decision. What do they say about limons? Nawthin' at all.

"'Again we take th' Dhred Scott decision. This is wan iv th' worst I iver r-read. If I cudden't write a betther wan with blindhers on I'd leap off th' bench. This horrible fluke iv a decision throws a gr-reat, an' almost blindin' light on th' case. I will turn it off. (McKenna J. concurs, but thinks it ought to be blowed out.)

"'But where was I? I must put on me specs. Oh, about th' limons. Well, th' decision iv th' coort (th' others dissentin') is as follows: First, that th' Disthrict iv Columbya is a State; second, that it is not; third, that New York is a State; fourth, that it is a crown colony; fifth, that all States ar-re States an' all Territories ar-re Territories in th' eyes iv other powers, but Gawd knows what they ar-re at home.

"'In th' case iv Hogan varsus Mullins, th' decision is he must paper th' barn. (Hinnery VIII., sixteen, six, four, eleven.) In Wiggins varsus et al., th' cow belonged. (Louis XIV., 90 in

rem.). In E. P. Vigore varsus Ad Lib., th' custody iv th' childher. I'll now fall back a furlong or two in me chair while me larned but misguided colleagues r-read th' Histhry iv Iceland to show ye how wrong I am.

"'But mind ye, what I've said goes. I let them talk because it exercises their throats, but ye-ve heard all th' decision on this limon case that'll get into th' Fourth Reader.' A voice fr'm th' audjeence: 'Do I get me money back?' Brown J.: 'Who ar-re ye?' Th' Voice: 'Th' man that ownded th' limons.' Brown J.: 'I don't know.' (Gray J,, White J. dissentin,' an' th' r-rest iv th' birds concurrin', but f'r entirely diff'rent reasons.)

"An' there ye have th' decision, Hinnissy, that's shaken th' intellicts iv th' nation to their very foundations, or will if they thry to read it. 'Tis all r-right. Look it over some time. 'Tis fine spoort if ye don't care f'r checkers.

"Some say it laves th' flag up in th' air, an' some say that's where it laves th' Constitution. Annyhow, something's in th' air. But there's wan thing I'm sure about."

"What's that?" asked Mr. Hennessy.

"That is," said Mr. Dooley, "no matter whether th' Constitution follows th' flag or not, th' Supreme Coort follows th' election returns."

## THE WORK OF NEW YORK'S "COMMITTEE OF FIFTEEN."

THE work of the "committee of fifteen," appointed last November by resolution of the New York Chamber of Commerce for the purpose of investigating the alarming "increase of gambling and the social evil" in the metropolis and of enforcing the laws and promoting new legislation against these evils, has attracted wide attention throughout the country. William H. Baldwin, Jr., has acted as chairman of the committee, which includes among others Dr. Felix Adler, Jacob H. Schiff, Prof. E. R. A. Seligman (of Columbia University), William J. O'Brien (of the Granite Cutters' Union), and Charles Sprague Smith. "The prime object of the committee was inquiry and the ascertainment of facts," remarks the New York *Times* (Ind. Dem.), adding that "this has been undertaken systematically, patiently, and with proper care." The work of the committee up to date has been chiefly confined to the exposure and suppression, by frequent "raids," of pool-rooms and gambling resorts, and to investigation of tenement conditions and the "social evil." Prominent in the raids undertaken has been Judge W. T. Jerome, who has accompanied the police in most instances, because, to give his own explanation, he wished to see the raids carried to a successful conclusion and the proprietors of the resorts brought to speedy justice. There is now every probability, however, that the raids of the committee, which have had so large a place in the public eye, are to be abandoned, and it is believed that the principal reason for this change of policy is the fact that one of the leading financial backers of the committee has declared that Justice Jerome's methods are "undignified" and harmful to the cause they are seeking to promote. The incident has aroused some interesting discussion. Says the Providence *Journal* (Ind.): "The rights and wrongs of the case are hard to judge at this distance, but certainly the fifteen have been successful in showing that protected vice exists in New York, and that the police, if they wished, could put a stop to a large proportion of it," and "if it has accomplished nothing more, the activity of the committee has herein been justified." The Rochester *Democrat and Chronicle* (Rep.) adds, in similar vein:

"The committee of fifteen is about the first reforming body of New Yorkers, since the overthrow of Tweed, that has really made things happen. It owes this distinction chiefly to the fact that Judge Jerome has had sense enough to see that if work is to be done somebody has got to take off his coat and roll up his sleeves and do it. His course has been fully justified by his own explanation of it as well as by the results. It is perfectly obvious that if Judge Jerome had not personally led the raids, the raids would have been resultless. Judge Jerome has saved the dignity of the committee instead of compromising it, because he has saved the committee from being made ridiculous by its futility."

On the other hand, the Brooklyn *Eagle* (Ind. Dem.), likens Judge Jerome's exploits to the raids of Mrs. Carrie Nation. "It is difficult to reconcile the public to the idea that lawbreakers should be dealt with in a sort of law-breaking fashion," it observes. The Baltimore *Sun* (Ind.) says:

"The incessant raiding is being used by Tammany as a powerfully persuasive argument with all the elements that make money by catering to the popular demand for sports, recreations, amusements, and indulgences of all sorts that come under the supervision of the authorities. The saloonkeepers, the beer garden proprietors, the Coney Island and other popular resorts that provide pleasure for the Sunday outing crowds are all being bidden by Croker's artful lieutenants to watch the committee of fifteen's raids and learn how little mercy they will all get if they allow an anti-Tammany government to be elected next fall. 'Remember the last citizens' government,' they say, 'and don't forget Police Commissioner Roosevelt's reign of Sunday blue-law enforcement.' And it is admitted that there is much potency in this appeal. The German-American Reform Union has taken a race census of the city and reported that one out of every three voters is a German by birth or descent. And the Germans hate any restrictions on what they consider their personal right to drink beer and enjoy themselves freely in all rational ways alike on Sundays and week-days. If this 'personal liberty' German vote is alienated, Croker will surely stay in power. And this explains why Tammany is better pleased than anybody else with the continuous raiding performances of Justice Jerome and the fifteen."

The same arguments find weight with some of those who are most prominent in organizing the anti-Tammany campaign. "I don't like Justice Jerome's methods, I have too much respect for the robe," says Mr. John D. Crimmins, who is talked of in some quarters as the "reform" candidate for mayor; and Mr. R. Fulton Cutting, president of the Citizens' Union, has declared against any platform demand for laws forbidding the sale of liquor on Sundays. Says the New York *Times* (Ind. Dem.):

"It is well to bear in mind that there is now in this city no large and influential body of public opinion in favor of Puritanical laws, except in Tammany Hall. The men who really control Tammany make their living by selling protection to lawbreakers. It is to their interest and for their benefit that the statutes shall be rigorous and repressive. A saloonkeeper who was protected by law in his right to sell beer on Sunday afternoons would open his front door and snap his fingers in the face of the captain's 'collector.' That is not what Tammany wants. Its corruptions are practicable only under laws of which the violation is tempting and profitable."

## LETTERS AND ART.

### ART AT THE PAN-AMERICAN EXPOSITION.

NOT since the World's Fair at Chicago has there been an American enterprise which has called forth more praise from the art critics than that elicited by the Pan-American Exposition at Buffalo. In architecture, sculpture, and painting, artists find much to praise. *The Critic* (June) contains a paper on this subject by Mr. Christian Brinton. As to the architectural side of the Exposition he says:

"Felicity of arrangement and fantasy in construction are the Exposition's cardinal merits. There have been displays more pompous and more monumental, but none so well devised, and none more bijou or more captivating. Altho the area at disposal was restricted, it has been utilized to ultimate advantage in respect to convenience and scenic effect. The undiscriminating will probably pronounce the color scheme the most engaging feature, but it is solely because of a carefully considered ground-plan and much forethought regarding problems of scale, distribution, and *ensemble* that this coloration counts for its best. Architect has played into the hands of colorist, while colorist has simply heightened a beauty which is primarily architectural—has merely added the after-glow. All the fancy and daring, the bizarrerie, and even the iridescence of this panorama derive from the scrupulous, almost academic precision of its diagram, and the fertile manner in which that diagram has been elaborated.

"Broadly speaking, the architects have adopted the urban or Roman, rather than the sylvan or Columbian plan used at Chicago. Conforming with lines employed in the construction of various flora, the chief buildings have been massed about a central space, with, as usual, a tower marking the extremity of the major axis. It will be difficult ever to evolve any distribution superior to the inverted T, and in selecting it the architects have displayed welcome sagacity. We have passed the stage of docile faith in purely natural or landscape vantages—these we subjugate rather than submit to. With all their majesty there was a certain guilelessness in the disposition of the buildings at Chicago, a lack of definite concert quite out of harmony with the classic severity of the structures themselves.

"Equally inspirational has been the selection of Spanish Renaissance architecture as a general type with which to accord. Several points converged toward this choice—historic reasons, a recollection of certain buildings at Chicago, and, beyond all, that unmistakable sense of fitness which has proven the informing spirit of the Exposition as a whole. No style of architecture is better adapted to the purposes of an Exposition than this, which emphasizes lightness and gaiety rather than massiveness or forbidding grandeur, which so lends itself to nuances whether plastic or chromatic. The vivid, animated aspect of the Rainbow City, with its clusters of dome and campanile, its long arcades and luxuriance of ornament, is entirely due to the adoption of a style which escapes on one side the chastity of the Classic and on the other the intricacy of the Gothic—a style which is frankly festal."

On the side of sculpture, Mr. Brinton finds pleasing indications at Buffalo of the great advance made in American art of late years:

"THE STANDARD BEARER."
By Karl Bitter.
Courtesy of *The Critic*.

"Only within the past decade has American sculpture proven its validity. At Chicago the first hopeful step was taken. The interval has been fecund, and now Buffalo witnesses the vigorous sweep and scope of an art long confined to grewsome portrait busts and hideous soldiers' monuments. For a dreary period the native sculptor had nothing to say and said it with persistence. The vitality displayed by the provisional sculpture at Chicago and at Buffalo is due to the fact that foreign trained men have here encountered expansive conditions and have developed through meeting those conditions. Such issues as these two expositions and such occasions as the late Dewey Arch give concise impetus to national expression in sculpture. The immediacy of these circumstances favors freedom and offers full play to creative imagination. While the results have been the reverse of academic and have rarely merited marble, they embody qualities which academism often lacks. The work has been hurried in conception and in execution, broad, almost loose in treatment, but there has been manifest that sense of movement and action which is a particular heritage—the heritage of the unrestful.

"Those special factors which contribute most to the quickening of local sculpture are the going to Europe of Americans and the coming to America of men from over seas. The best things in contemporary sculpture—the thing itself, almost—can be traced through these channels. That superior feeling for form which seems to be acquired only in Paris, and that inimitable Viennese *flott* have become, in a sense, naturalized and characteristic. Whether they are native or not matters little.

"At Buffalo the sculpture program, like the administering of color, has been scrupulously elaborated. In both cases preconcertion is manifest. If Mr. Turner in his color-scheme has tried to depict the struggle of man to overcome the elements, Mr. Bitter has attempted in his scenario to give a complete allegory of man and his development. The touch of platitude is here, and many specific instances are more humorous than profound, but ideas have in the main been expressed with conviction and appositeness; tho simple beauty is, however, preferable to obscure and clumsy symbolism.

"Following architectural leads, the Director of Sculpture has

aimed at giving plastic and ideal substance to the realities represented under each roof. The psychology of this is about as subtle as that of the sign-post. It will not dishearten the most irrelevant sightseer. In accordance with this scheme Mr. Bitter has divided his forces into three parts—left, right, and center, those on the left typifying Nature, those on the right Man, and those in the center the Genius of Man and his contributions to art, science, and industry. There is of course occasional sculpture, but the chief effort has been concentrated on these groups. . . . .

"If in general the sculpture at the Exposition fails to advance materially upon the average of merit sustained by the architecture, it must be recalled that much is lost through the enlargement of groups which may have been modeled with lingering finesse. In any event the undisputed impulse of the moment and the setting—the green of foliage and glistening water—do much toward equalizing values. One priceless legacy remains, which is, that the free use of plastic form has here attained new significance, that an art has here been widened in scope and broadened in application. And this, after all, is more than the relative finality of any chance bit of plaster or marble."

## SOME RECENT ASPECTS OF THE AMERICAN STAGE.

THE more significant developments of the American stage during the past few years have lately received notice in a volume by Mr. Norman Hapgood, the well-known dramatic critic of the New York *Commercial Advertiser*, entitled "The Stage in America: 1897–1900." In the course of a review of this book, Mr. Ingram A. Pyle says (in *The Dial*, Chicago, May 16):

"Mr. Hapgood touches upon the problems of the stage in a manner which reveals a clear and comprehensive insight. In speaking of the theatrical trust (a product of one of the gloomy qualities of American life: the excessive love of wealth) he says:

"'Its growth was rapid, its power immense, and the history of its rise, if intimately known, sounds like a melodrama or a satirical romance. . . . This syndicate can say to the theater owner: "If you do not do business with us on our own terms, we will not let you have first-rate attractions. If you do, we will destroy your rival, or force him to the same terms. For the bookings we will take a share of the profits." To the actor or traveling manager it can say: "You must play in our theaters or in barns. For our theaters we make our own terms." To both it can say: "Nominally, we act as your agents. In reality, we are your absolute masters."'

These sentiments are voiced by the majority of our actors and critics.

"Mr. Hapgood tells us that there is a drama, not large but distinct, which belongs especially to the United States of to-day, and, whether lasting or not, to contemporary observers seems to move on more artistic principles than any native plays of the past:

"'Two men stand, as far as we can see, clearly ahead of their predecessors: James A. Herne for intellectual qualities, supported by considerable stagecraft; William Gillette for the playwright's talents, working on ideas of his own. Their plays are equaled by single efforts of other men, but no other American dramatist has done as much of equal merit.'

Speaking of American humor, he reminds us that a certain form of humor, not the highest, and yet not unrelated to the larger kind, is found as incessantly in our farces and variety shows as in our presidential campaigns. 'Fatalism and buoyancy, love of exaggeration, and a taste for slang are some of the components.' But he merely lessens the dignity of his arguments by inserting some very insipid quotations from broad farces and burlesques which, for some reason or other, draw intellectual audiences to a certain metropolitan music-hall. Who was it that said human nature in America is somewhat like the articles in a great exhibition, where the largest and loudest things first catch the eye and usurp the attention? Upward of forty years ago George Henry Lewes, speaking of the frivolous character of our plays, said:

"'Unless a frank recognition of this inevitable tendency cause a decided separation of the drama which aims at art from those theatrical performances which only aim at amusement of a lower kind (just as classic music keeps aloof from all contact and all rivalry with comic songs and sentimental ballads), and unless this separation takes place in a decisive restriction of one or more theaters to the special performance of comedy and the poetic drama, the final disappearance of the art is near at hand.'

"This quotation is not inserted for the sake of calling attention to and praising the so-called 'palmy days' of the stage, but merely as a preliminary remark in calling attention to the fact that, according to Mr. Hapgood, there is only one high-class theater in America: the Irving Place Theater, in New York, where the running of a theater is looked upon more as an art than as a trade. But as all productions are here given in German, its clientelage is limited."

Still more recent appreciation of the work done for the American stage by Mr. Conried, manager of the Irving Place Theater, has been shown by the University of Pennsylvania, which has conferred upon him an honorary degree. The New York *Evening Post* (May 20), in commending the university for this act, says:

"His company, of all those regularly playing in New York, is the only one that deserves serious consideration by lovers of the drama and of the actor's art. Where a few other actors and actor-managers who hold high ideals of their profession make occasional incursions into New York, as into the enemy's country, Mr. Conried has actually maintained among us a capable stock company devoted chiefly to the literary drama. The fact that his company acts in German has somewhat obscured the real significance of his work. But it is generally recognized by students of the American stage that the direction for a revival of the lost art of acting is indicated by Mr. Conried's success."

## COLLEGE GREEK AND PROFESSOR GOODWIN.

THE retirement of Prof. W. W. Goodwin this month, after forty-five years of service in the Greek department at Harvard, has turned attention anew to two of the chief developments of American higher education during the past half-century—the growth of the elective system, and the widespread tendency to drop Greek as a required study for the baccalaureate degree. In a banquet given to Professor Goodwin in Boston, President Eliot, Bishop Laurence, and other speakers referred to him as belonging to the same roll of famous scholars as Bentley and Porson. Dr. Goodwin's remarks on the elective system and college Greek, made upon this occasion, have been received with particular interest because of his having always been one of the leaders of the conservative element in the Harvard faculty. The New York *Evening Post* (June 6) gives the following summary of his address:

"He said that the old elective system in vogue forty years ago was of no great value, because it simply gave a junior or senior a choice between two elementary studies. The development of the system, however, had been of great service to scholarship in that it had made possible advance work in every department. The common argument that the elective system enabled a boy to avoid subjects for which he had no special aptitude, and in which he took no interest, did not appeal to Professor Goodwin. In his view the real strength of the system lay in the fact that it enabled the willing and able to push ahead, and not be impeded in their progress by the dull or indifferent. The system is strong, then, in the opportunity that it affords to the best men. Of course, added Professor Goodwin, the system has many and grave defects. It may give too much license in choice of studies; it may afford the lazy an opportunity to shirk. 'But with all its faults,' concluded Professor Goodwin, 'I see no way but to accept it. I have considered the problem carefully, and I know of no substitute which has not even more serious defects.' In speaking of the effect of elective work on advanced study, he declared his belief that time would bring the graduate school up to the standard of the German university."

In an editorial comment on Professor Goodwin's career, *The Evening Post* says:

"The day when Greek gained a hearing at least from every boy in college is past; for everywhere Greek is dropping from the list of required studies, and among the electives it finds, year by year, more competitors. For good or for ill—and we trust for good—such is the inevitable tendency.

"So completely has the old order changed that it is hard for the youth of to-day to understand the place which Greek held forty-five years ago. Then Harvard contained 697 students, of whom 382 were college undergraduates; to-day, the corresponding figures are 4,737 and 1,992. Then there were 47 teachers in the university; to-day there are 496. In 1856 the backbone of the course, especially the earlier part, was the classics and mathematics. Freshmen, for example, studied Greek, Latin, and mathematics, and by way of filling up their time dipped into 'religious instruction' and elocution. Both Latin and Greek were required for the first three years, and seniors could elect both. It may fairly be said, then, that, willy-nilly, the student learned more of the classics than of any other one subject. To-day a boy may enter Harvard with a knowledge of only one of the ancient languages; and he may proceed to his bachelor's degree without studying another line of Latin or Greek. . . . . .

"Doubtless there has been a temporary loss from the discarding of the classics. The methods of teaching Latin and Greek had been developed during several centuries into an admirable discipline for boys. On the other hand, with modern languages and the sciences, no strong tradition has yet been established, no scheme of discipline yet thoroughly wrought out. In this stage of transition the conservatives fear that we have cut loose from the old moorings, and are adrift without chart or compass. There is every reason to believe, however, that we shall reach a harbor safe and sound. The methods of teaching the new subjects are rapidly taking shape; and unless the human mind has lost its power of adaptation, we shall soon see disciplines in modern languages and the sciences fully as efficient as anything that we have laid aside. Training in closeness of observation and accuracy may come as well from a mastery of the structure of the crayfish as from the analysis of a chorus in Sophocles; admiration of grace and beauty may spring as quickly from a study of the forms of the fleur-de-lys as of the forms of the Greek optative mood. When we consider also the fact that the average student must lose many of the nicer turns of phrase and thought in a foreign language, we may well question whether he does not, after all, get a juster notion of oratory at its highest from Burke than from Demosthenes; of sublime poetry from Milton than from Homer."

## A NEW AMERICAN POET.

THE recent publication of a new volume of "Poems," by Mr. William Vaughan Moody, has brought forth not a few critical notices of a highly appreciative nature. The highest compliment he has yet received is a nine-column review of his "Masque of Judgment" and his lately published "Poems" by Mr. William Morton Payne, in *The Dial* (Chicago, June 1). Mr. Moody is still a young poet. He was born in Indiana in 1869, was graduated at Harvard in 1893, and has for some few years past been instructor in English literature in the University of Chicago, besides editing the Cambridge edition of Milton, and contributing various critical and poetical work to the magazines. Mr. Payne, who is associate editor of *The Dial* and one of the best known of American critics, begins by according Mr. Moody this high praise:

"We are not going to say that he is a poet of the highest kind of accomplishment, or apply to him the language that must properly be reserved for poets whose work has stood the test of time and remained uncorroded by it. But we are going to say—and by our exhibits seek to prove—that no other new poet of the past score of years, either in America or in England, has displayed a finer promise upon the occasion of his first appearance, or has been deserving of more respectful consideration. There is no reason, for example, why his work should attract less attention than has been given of late to the work of Mr. Stephen Phillips, and we make not the slightest doubt that, had his work been the product of an Englishman, its author would have been accorded the resounding praise that has been accorded to the author of 'Marpessa' and 'Paolo and Francesca.' We wish to say, furthermore, that we have not for many years been so strongly tempted to cast aside critical restraints and indulge in 'the noble pleasure of praising,' after the fashion, let us say, of the late Mr. Hutton when dealing with the poetry of Mr. William Watson. Nor do we hesitate to add that, with the possible exception of what has been done by Professor Woodberry, no such note of high and serious song has been sounded in our recent American poetry as is now sounded in 'The Masque of Judgment' and the 'Poems' of Mr. Moody."

Mr. Payne then proceeds to give the following description of "The Masque of Judgment":

"Like the epics of Dante and Milton, it is concerned with no less a theme than the cosmogony; like 'Faust,' it sets speech upon the lips of archangels; like the 'Prometheus Unbound,' it personifies the creations of mythology. It might more fittingly be styled a Mystery than a Masque, but it can not take an easy refuge in the *naïvetés* of medievalism, for it is no imitative exercise in archaism, but a poem conceived in the spirit of modern philosophy. So true is this that we are impelled to provide it with texts from the writings of the philosophers. Professor Royce says:

'It is the fate of life to be restless, capricious, and therefore tragic. Happiness comes, indeed, but by all sorts of accidents; and it flies as it comes. One thing only that is greater than this fate endures in us if we are wise of heart; and this one thing endures forever in the heart of the great World-Spirit of whose wisdom ours is but a fragmentary reflection. This one thing, as I hold, is the eternal resolution that if the world *will* be tragic, it *shall* still, in Satan's despite, be spiritual. And this resolution is, I think, the very essence of the Spirit's own eternal joy.'

And Professor James, writing in much the same spirit, says: 'God himself, in short, may draw vital strength and increase of very being from our fidelity. For my own part, I do not know what the sweat and blood and tragedy of this life mean, if they mean anything short of this.' On the lips of Mr. Moody's Raphael, the archangelic lover of mankind, this philosophy is given melodious utterance.

> Darkly, but oh, for good, for good,
> The spirit infinite
> Was throned upon the perishable blood;
> To moan and to be abject at the neap,
> To ride portentous on the shrieking scud
> Of the arousèd flood,
> And halcyon hours to preen and prate in the boon
> Tropical afternoon.
>
> Not in vain, not in vain,
> The spirit hath its sanguine stain,
> And from its senses five doth peer
> As a fawn from the green windows of a wood;
> Slave of the panic woodland fear,
> Boon-fellow in the game of blood and lust
> That fills with tragic mirth the woodland year;
> Searched with starry agonies
> Through the breast and through the reins,
> Maddened and led by lone moon-wondering cries.
> Dust unto dust complains,
> Dust laugheth out to dust,
> Sod unto sod moves fellowship,
> And the soul utters, as she must,
> Her meanings with a loose and carnal lip
> But deep in her ambiguous eyes
> Forever shine and slip
> Quenchless expectancies,
> And in a far-off day she seems to put her trust.

Again, and in still clearer language, the archangel declares the glory of man's passionate self-contradictions:

> I have walked
> The rings of planets where strange-colored moons
> Hung thick as dew, in ocean orchards feared
> The glaucous tremble of the living boughs
> Whose fruit hath life and purpose; and nowhere
> Found any law but this: Passion is power,
> And, kindly tempered, saves. All things declare
> Struggle hath deeper peace than sleep can bring:
> The restlessness that put creation forth
> Impure and violent, held holier calm
> Than that Nirvana whence it wakened Him.

"Thus the way is prepared for the Divine Tragedy. God, having created the race of men, and having sought to save man

from himself by the mystery of the Incarnation, determines at last to destroy the impious brood.

> What if they rendered up their wills to His?
> Hushed and subdued their personality?
> Became as members of the living tree?

To Raphael, thus musing, the Angel of the Pale Horse makes reply:

> A whisper grows, various from tongue to tongue,
> That so He will attempt. Those who consent
> To render up their clamorous wills to Him,
> To merge their fretful being in His peace
> He will accept; the rest He will destroy.

In the fulness of time, the Day of Judgment dawns, and 'God's vengeance is full wrought' upon the wicked. . . . . .

"But the destruction of mankind is only the beginning of the Tragedy. When that awful fiat went forth, God likewise accomplished His own doom. To be dethroned and destroyed by the forces of His own creation is the fate that awaits Him, as it awaited the God of Scandinavian myth in the day of Ragnarök, as it awaited the God of Greek myth in Shelley's treatment of the tale of Prometheus. The instrument of His undoing is the Worm that Dieth not, His own monstrous miscreation, who, having swept mankind from the face of earth at the behest of his Creator, mounts upward to commit violent assault upon the hosts of Heaven:

> He mounts!
> He lays his length upward the visioned hills,
> The inviolable fundaments of Heaven!
> There where he climbs the kindled slopes grow pale,
> Ashen the amethystine dells, and dim
> The starry reaches.

The closing scene between the Spirits of the Lamps about the Throne, who have fled in terror from the terrific struggle, and the Archangels Raphael and Uriel, rises to a height of imaginative sublimity that leaves us fairly stricken with awe."

Mr. Payne considers the following "glorious apostrophe to mankind" the finest passage in the poem:

> O Dreamer! O Desirer! Goer down
> Unto untraveled seas in untried ships!
> O crusher of the unimagined grape
> On unconceivèd lips!
> O player upon a lordly instrument
> No man or god hath had in mind to invent;
> O cunning how to shape
> Effulgent Heaven and scoop out bitter Hell
> From the little shine and saltness of a tear;
> Sieger and harrier,
> Beyond the moon, of thine own builded town,
> Each morning won, each eve impregnable
> Each noon evanished sheer!

Among the poems that have attracted most attention in Mr. Moody's latest volume are "Gloucester Moors," "An Ode in Time of Hesitation," "On a Soldier Fallen in the Philippines," and "The Daguerreotype."

## A SUGGESTED BRITISH ACADEMY OF LITERATURE.

THE subject of a national or international academy for the English-speaking peoples, similar to the academies of France, Spain, and other continental countries, has often been considered. Many believe that now more than ever some such custodian of the integrity and purity of the English tongue is needed, which at the same time might stand for higher critical judgments in literature. Others believe that the independent spirit of the Anglo-Saxon race would never tolerate such an institution nor take it seriously.

A suggestion for a British Academy of Letters appears in a late number of the London *Morning Post*. The writer thinks that the money would be forthcoming with little doubt, and that Parliament might vote a yearly sum for salaries, pensions, and prizes. He says in support of his suggestion:

"Thousands of pounds have been and are spent in encouraging art and the sciences, but nothing on literature. There has been here and there an isolated publisher who has issued works with more regard to their literary than their commercial value. But publishing under such conditions is not a lucrative affair, and an individual can hardly fulfil the functions of a public body. Again, the book market is just at present in a somewhat parlous state. Publishers have always reckoned on America yearly accepting a large number of English novels for simultaneous issue, and authors have looked to that country for a considerable portion of their profits. But America is beginning to prefer American books written on American subjects by American writers. It is now no easy matter to 'place' the ordinary good book in America at all. This means that the British publisher, in his decision as to the publication of a work, will be almost entirely influenced by its selling value, and soon the position of a writer will depend, not on what he writes, but on the number of editions his books run to. Writing will be merely a manufacturing concern. The war, too, has had a somber effect on the book market. The books that were read when matters seemed desperate in South Africa were rather as narcotics to harrowed feelings than either thought-stimulating or pleasure-producing."

The London *Publishers' Circular* (May 25) doubts whether the money would be so readily forthcoming from successful business men as the writer hopes, nor would the nation be apt to accept willingly selections made by the British cabinet, even if approved by His Majesty. It goes on to say:

"It is quite true that American authors are obtaining more honor and profit in their own country than formerly, but as far as the British publisher is concerned we doubt if he ever got so much out of the American market as at the present time, and certainly British authors get far more than they ever did in the old days when their works were unprotected in America. We asked a leading American publisher, who was over here buying editions or rights of English books for America, how he accounted for the phenomenal sales of a few works published over there recently; he said that probably nobody had been more surprised than the publishers of them unless it was the authors—that it was perhaps a sort of literary craze or boom which carried such books as 'Trilby' and 'Quo Vadis' or native talent like 'David Harum' into editions of hundreds of thousands. He also explained that much of the enormous sales we have heard so much about was not due to even a passing fashion, but simply to the fact that many of the great dry-goods stores throughout the country contracted for big editions to sell at cost or below cost or even to give away—simply as an advertisement. He also said that the improvement in the publishing business was simply due to the fact that business generally was flourishing—too flourishing to last, he feared—and that the result of over-production in every branch of trade would bring the inevitable reaction and depression sooner or later.

"Whether the establishment of an Academy of Literature would be 'at any rate some compensation for a poor sale of books' seems doubtful."

## NOTES.

THE decision against Mr. Kipling in his suit against Messrs. G. P. Putnam's Sons has not created any surprise in England, where it was generally expected.

*The Academy* prints the following list of titles from an alleged book catalog: "The Double Thread," uncut; "The History of China," quaint plates; "The Mantle of Elijah," cloth, hardly soiled; "Mr. Sponge's Sporting Tour," badly foxed; "Le Jardinier Français," Plantin' Press; "The Compleat Angler," front missing; "History of the Sword," many cuts; "Don Quixote," original old calf; "Portrait of a Lady," name on title-page; "Frederick the Great," wants two pages; "Beyond the Dreams of Avarice," 2s. 6d.; "Success in Journalism," splendid copy.

MR. FRANK NORRIS, author of "McTeague" and "The Octopus," indulges in some interesting speculation about the future of American literature in a recent weekly letter to the new literary supplement of *Hearst's Chicago American*. In speaking of Mr. Grant Richards, the enterprising young London publisher now on a business trip to this country, Mr. Norris points out the great change that has come over the literary relations of London and New York in the past few years. Mr. Richards himself finds American authors sufficiently important to call him to this country once a year, and has on his list, among others, Miss Wilkins, Morgan Robertson, Irving Bachelor, and Peter Finley Dunne ("Mr. Dooley"). Says Mr. Norris: "Mr. Richards admits a possibility—remote, yet none the less worthy to be considered—of the literary center of the world moving from London to New York some day not too far distant. Already, he affirms, it is no longer necessary for the American publisher to make the old-time semi-annual trip to London. The English authors offer their works of themselves to the houses of New York, Boston, and Chicago; and instances are not wanting of English novels appearing in America before publication in London."

## SCIENCE AND INVENTION.

### IMPROVING THE WHEAT CROP BY BREEDING.

AN annual increase of income in three Western States alone of over $22,000,000 from improvement of the wheat crop—this is what is being accomplished by the work of experimental breeding now carried on at the Minnesota Agricultural Station. This calculated increase is based on the price of only two additional bushels per acre, which the new varieties bred at the station seem amply able to produce. This work and its results are described in *The World's Work* (May) by W. S. Harwood.

The work of wheat breeding, he says, was begun in France many years ago by M. Henri Vilmorin, more than a thousand new wheats having been tested by him. Ten years ago similar work was begun at the state institution in Minnesota. Mr. Harwood writes:

"To create a new wheat, the pollen from the flower of one wheat must be artificially transferred to the stigma of the flower of another wheat. Wheat is a self-fertilizing plant. Left to itself, it will reproduce itself throughout endless centuries. Great

PLANTING, ONE KERNEL AT A TIME.

care is necessary in the work, and trained men are essential. As soon as the pollen is transferred—which is done about four o'clock in the morning at the hour when the wheat florets open—the head of wheat is encased in a tissue sack so that the work may not be interfered with by any pilfering insect or bird. Two of the best-known varieties are selected, one for the father, the other for the mother of the new race. When the harvest comes it may be that the new wheat has some of the poor and few of

CUTTING AWAY THE FLORETS, AND A HEAD IN TISSUE SACK AFTER POLLENIZATION.

the good characteristics of the parents; or the reverse may be the case. It is impossible to say in advance what the new wheat will be.

"From the single head which results as the first harvest, only a handful of kernels is threshed out. This handful is of immense importance, for these kernels may become the source of a mighty race, destined not only to supplant the old wheats, but to add enormously to the wealth of the world. But the last results are slowly won; for the first harvest is very meager, and the second and even the third are small. But after a number of years enough wheat can be garnered to sow the twentieth of an acre; and then come tangible results. To breed a new wheat requires

TRANSFERRING THE POLLEN TO THE STIGMA OF A WHEAT PLANT.

infinite pains and patience. It has taken ten years to bring the new wheat varieties at the Minnesota Experiment Station to the farm test."

Selection, we are told, plays an important part in the process. At every step only the best kernels and stalks are preserved, and no effort is spared to give the new wheat the best start in life. In some ways this selection is more important than the breeding itself. During the experiments nearly five hundred wheats were thrown away and less than a dozen were retained. The writer goes on to say:

"In the spring of 1900, enough of one variety of the new wheat having accumulated to warrant field trials, a number of thrifty and intelligent farmers from various parts of Minnesota were selected, and to them enough seed was sent to give it a fair trial. Every farmer was supplied with an elaborate record-blank. If for any reason the new wheat should be given a better chance or a worse chance than the old, especial attention should be called to the fact. Some of the reports indicated by the abnormally large increase of the new wheat that the farmer had given it a better opportunity than the old wheat, even tho he did not say so, and all such instances were thrown out as being unfair to the

REMOVING THE POLLEN TO BE TRANSFERRED TO ANOTHER PLANT.

old wheat. Other farmers were as plainly unfair to the new wheat, and their data were rejected. Out of all the instances, about forty were selected as having complied with all the conditions.

"The new wheat averaged almost four and one-half bushels per acre more than the Fife wheat, one of the old standard varieties, and almost one and one-half bushels more than the average of all the wheats with which it was compared. In some few instances the new wheat was below the old, and there may be some regions where a new wheat will have to be bred to meet the climatic and soil conditions; for it is now possible to make a wheat to order.

"It seems fair to say that the increase of the new wheat over all old varieties will be at least two bushels per acre. In the three States of Minnesota, North Dakota, and South Dakota,

there are on an average about 15,000,000 acres of land planted to wheat. When the new wheat is in use over all this region, an increase of only two bushels per acre will make a crop at least 30,000,000 bushels larger than the old varieties would have yielded. At an average price of seventy-five cents per bushel, the increase in wealth in the region will be $22,500,000 a year."

The following table shows what the eight best wheats have accomplished at the station. The first three wheats named are the old, standard varieties; the eight others are known by numbers instead of names, prefaced by the word Minnesota:

YIELD OF VARIOUS WHEATS OVER A PERIOD OF YEARS.

| Variety. | Minn. Number | 1895 Yield. | 1896 Yield. | 1897 Yield. | 1898 Yield. | 1899 Yield. | 1900 Yield. | Average. |
|---|---|---|---|---|---|---|---|---|

## ISLANDS OF OYSTERS.

IN the tidal river known as Newport River, which empties into Beaufort Harbor, N. C., are curious reefs formed entirely of oyster shells. These have recently been studied by Dr. Caswell Grave, with the cooperation of the United States fish commission. Dr. Grave finds that oyster reefs, like coral reefs, become gradually converted into islands, and he shows that some of the islands in Newport River still show traces of their foundation of oyster shells, while other reefs exhibit the successive stages through which an oyster reef becomes changed into an island. The history of these reefs gives a scientific basis for the artificial establishment of new oyster beds, and Dr. Grave has already succeeded in founding new beds in spots where all previous attempts had failed. He publishes an account of his work in *The Johns Hopkins University Circular* (April), from which the following paragraphs are extracted:

"The reefs are composed of clusters of oysters, each rooted in a substratum of soft organic mud mixed with shells and shell fragments. The individual oysters of a cluster are long and narrow, and, from their fancied resemblance to the paw of a raccoon, they are known as 'coon' oysters. By some, this name is claimed to have been given to them from the fact that, at low tide, the reefs are visited by raccoons for the purpose of devouring the exposed oysters

"A cluster is a peculiar colony which represents from three to seven generations of oysters, all but two to four of which are dead. Each succeeding generation becomes attached to the shells of the preceding, and thus the cluster grows wider and higher in a way which may be described by comparing the cluster to a genealogical tree. The oldest or lowest oysters, dying either from being crowded by the oysters above or smothered by the sediment below, leave their empty shells as anchors or supports to the colony. Sediment being deposited between the clusters, the bottom keeps pace with the upward growth of the oysters. The individual oysters of a cluster assume a vertical position, the mouth being uppermost, and due to their crowded condition they become long and narrow."

Dr. Grave shows that the reefs form across the stream, because the swift current keeps the ends scoured off while the rest of the reef becomes muddy and foul. The most favorable place for the attachment of young oysters is thus at the end, and the reefs grow transversely. Reefs grow out from projecting points on the banks, but their connection with the latter is afterward broken by the current. In showing how these reefs develop into islands, Dr. Grave says:

"On 'Green' reef, opposite 'Cross' reef, grass has gotten a start in one spot on one of its permanently dead areas. . . . While a reef is low and its oysters living, its growth in length is much more rapid than its growth in width; but as soon as the oysters cease to thrive, its growth in length is stopped, and all further extension comes about through the action of waves which produces a growth in width only. In time, then, an island might be produced which would exhibit a width greater than the original length of the reef from which it started."

The lesson taught by these reefs to those interested in oyster-culture is that oysters should be planted in rows transverse to a good current, not sown broadcast or planted in sheltered areas. Muddy bottoms must especially be avoided. This advice, if followed, may improve the reputation of the oyster, which is getting to be a little shady since so many cases of typhoid have been traced to it.

## A KINETOSCOPIC MYSTERY.

THOSE who have watched closely any of the popular exhibitions of "moving pictures" have noticed that occasionally the wheels of moving vehicles are seen to stand still, or even to revolve in the wrong direction. This is, of course, an optical illusion. The whole "moving picture" is such an illusion, in the first place, and certain elements of it combined to give an impression precisely the opposite of what is intended. How this comes about is thus explained by C. H. Claudy in *The American Inventor* (June):

"It is rather odd to see the wheels of an otherwise well-observed Presidential carriage in a most orderly inaugural parade either obstinately standing still while the carriage moves smoothly along, or turning frantically backward without in any way upsetting the smiling serenity of the vehicle's occupants, and seems to dispute the often-quoted expression 'the camera can not lie.'

"Reference to the accompanying diagrams may make the apparently inexplicable wonder simple and commonplace. Consider a wheel of eight spokes making one complete revolution every second. The biograph picture-machine is to be presupposed as taking eight pictures in every second, altho in reality the number is much greater. The first picture taken shows the wheel (Fig. 1) with two spokes perpendicular, two horizontal, and four at angles of forty-five degrees. The second picture is taken one-eighth of a second later, during which time the wheel has made one-eighth of a revolution. It is obvious that spoke *A* has then moved to exactly the position (relative to the earth's plane) formerly occupied by spoke *B*, which in turn has moved to the place and taken the angle of spoke *C*. Now as all the spokes are of the same shape and color, the second picture is apparently an exact duplicate of the first, as some of the spokes are occupying the exact angles and positions that the other spokes occupied in the first picture. Providing the rate of picture-taking remains the same and the rate of the wheel's revolution does not alter, a succession of pictures of the wheel are secured, each one of which will have two longitudinal, two perpendicular, and four forty-five degrees

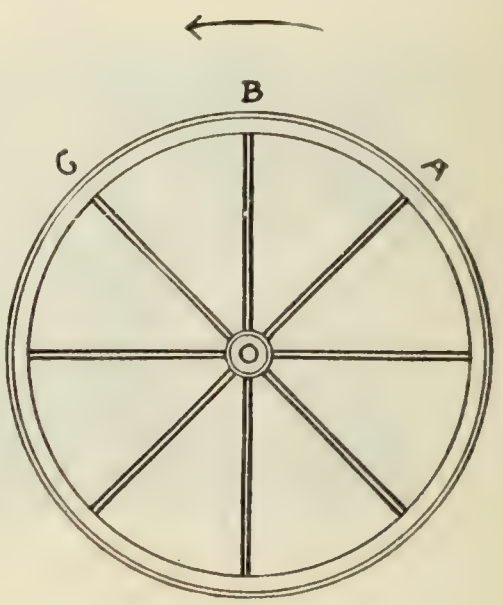

FIG. 1.

angular spokes. And, of course, when these are successively thrown on the screen it seems to the eye as if the wheel had not moved at all.

"To understand the reason of the backward revolving illusion, presuppose the wheel of eight spokes, with two of them longitudinal and two perpendicular and the camera taking pictures at the rate of eight per second. In this example, however, the wheel requires one and one-fourth or ten-eighths of a second to make one complete revolution. The first picture taken shows the wheel with its spokes longitudinal, perpendicular, and forty-five degrees angular. The second picture taken one-eighth of a second later shows the wheel having made but one-tenth of a revolution, because if the wheel requires ten-eighths of a second for one revolution, in one-eighth of a second it can make but one-tenth of a revolution. This brings spoke *A* to the position of the dotted spoke *a*, spoke *B* to the position of dotted spoke *b*, and spoke *C* to the position of the dotted spoke *c*. It will be noted in the diagram that the dotted spokes are slightly behind the first positions of the spokes, and that, therefore, the wheel must appear to revolve backward. If several spokes in a carriage wheel were painted white previous to the taking of the motion picture the illusion could not occur, as the eye could not then be deceived into mentally substituting one spoke for another, because it happened to be in a position just occupied by that particular spoke."

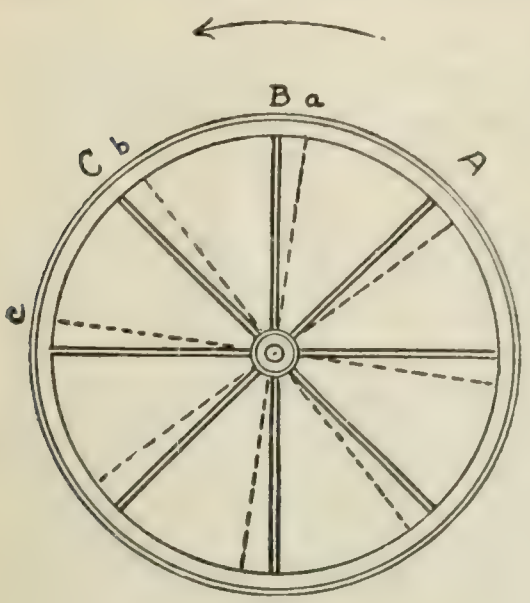

FIG. 2.

## UTILIZATION OF PINE NEEDLES.

THE gathering of pine needles is becoming an industry of considerable importance on the Oregon coast. The yellow Oregon pine (Pinus ponderosa) furnishes the needles most in demand, which are used both for the extraction of their oil and for their fiber. Says Enos Brown in an article on the subject in *The Scientific American*:

"Fifty years ago it was discovered that the extracts and products of the long, slender leaves of the pine possessed real efficacy in complaints of a pulmonary character. It is claimed that insomnia yields to the influence of the pungent odor, and asthmatics have found real relief in partaking of the oil and in sleeping upon pillows stuffed with the elastic and fragrant fiber manufactured from the interior substance of the pine leaves. The illimitable forests of yellow pine abounding in the State of Oregon, with their accessibility to through lines of transportation, suggested to a German from the forests of Thuringia the transfer of a lucrative business to the Pacific coast. In Germany the leaves never exceed two inches in length, while in Oregon they often exceed thirty inches, and average twenty. In the former country the forest laws are extremely strict and often prohibitive, obliging the maker of the product to use the dried leaves that have fallen to the ground and thus insuring an inferior and less effective quality of goods. In the Western State denuding the yellow pine of its leaves has been encouraged, the expert of the forestry commission having pronounced the process beneficial. A tally kept of the weight gathered from a certain number of trees indicated that the crop taken in April weighed 650 pounds, while that of the same trees in October yielded 775 pounds."

Two crops are gathered yearly, Mr. Brown tells us, and the later one is always the larger. The leaves of young trees are preferred, being supposed to yield a better quality of oil. The leaves are stripped from the trees by women and men, who are paid 25 cents a hundred pounds for the needles. Says the writer:

"Five hundred pounds is regarded as an average day's work. The leaves are picked into sacks and hurriedly sent to the factory. Exposure to the sun causes the leaves to wilt, and impairs the quality of the product. In picking, the thickest bunches of leaves are selected, and the scanty ones neglected. The vast quantity available, so far beyond any present demand, permits the picker to thus discriminate. The factory at which the essences and extracts of the needles are manufactured has a capacity for handling 2,000 pounds of leaves per day; but it is soon to be enlarged to about four times its present size.

"In the extraction of pine oil, 2,000 pounds of green leaves are required to produce ten pounds of oil. The process is the ordinary one of distillation. In the manufacture of fiber the leaves pass through a process of steaming, washing, drying, etc., twelve in all, occupying four days. Two qualities are produced, first and second. The first, from which no oil has been distilled, is worth, upon the market, about ten cents per pound. The fiber is elastic, and the staple only little shorter than the green leaf from which it was made, and with strength sufficient to enable it to be spun and woven into fabrics. Mixed with hair, the fiber makes an excellent material for mattresses or pillows, and repose comes quickly when resting upon them. It is also used as a partial filling for cigars, imparting a flavor not the least disagreeable, and calming to the nerves. The oil extracted gives an agreeable flavor to candies. Toilet soaps are made, strongly impregnated with essential oil of pine needles.

"The fiber itself, after curing, looks like a slender shaving of some dark wood, retaining its odor indefinitely. Insects abhor it on that account. It is said that the Oregon factory is the only one in the world outside of Germany."

## INSECT BAROMETERS.

WEATHER prophets of a certain stamp are very fond of attempts to foretell atmospheric changes by watching the behavior of animals and insects. Some popular ideas along this line have been proved to be incorrect; yet it is by no means certain that we ought to treat all investigation of this sort with contempt. Some insects, especially, are certainly sensitive to alterations in the temperature and humidity of the air, and in some cases this may enable an observer to detect the approach of altered conditions before they would be noticeable in the ordinary way. Some recent investigations on the subject are described in *Cosmos* (Paris, May 25) by Prof. A. L. Clément, who holds the chair of agricultural entomology at the Luxembourg. He quotes M. Dumeril, professor in the Museum of Natural History, as saying in 1863: "Tree toads foretell rain by their piping, and a living hygrometer may be made by confining one of these creatures in a glass. . . . If they are furnished with a little ladder, their ascension shows that the weather will be fine." Later Marshal Vaillant insisted on the necessity of observations of this kind in French African possessions. And yet, after all, says Professor Clément, it has been proved experimentally that the tree toad can furnish no information at all about the weather, and is inferior for this purpose to the most modest of barometers.

GEOTRUPES (DUNG BEETLES) IN FLIGHT.

Recent observations have been made by the celebrated entomologist, M. J. H. Fabre, on creatures of a very different kind—

the "geotrupes." It is a common belief in the country, says M. Fabre, that the geotrupes [a genus of beetles, including the dung-beetle] fly about in greater numbers in the evening, when the weather is about to be fine. For their work they require a warm, still atmosphere. If it rains, or is cold, they do not stir out. To test the value of this popular belief, he made careful observation of numbers of these beetles, which he confined in cages for the purpose. He finds that they are very lively at the approach of fine weather and quiet when a storm impends, even when there is no sign of it in the sky. They seem to be influenced also by electricity in the atmosphere, and in November, 1894, M. Fabre believes that they foretold the approach of an unusually heavy storm from the north of France. And this is not the only case where atmospheric disturbances seem to affect insects. Says Professor Clément:

"A caterpillar found on pines in the south of France furnishes a remarkable example. It leaves the egg in September and lives in great numbers in thick silky nests on pine-trees, whose needles it eats. It passes the whole winter in these nests, going out only at night to feed on the neighboring branches. . . . Now, when a barometric depression is approaching, these worms keep at home and do not venture out on the branches, when wind, rain, and snow might take them by surprise and overcome them.

"They are furnished with eight special organs, which appear on their backs in January. These are formed of retractile feelers, which the creatures can push out or withdraw at will. M. Fabre regards these organs as 'meteorological apparatus.'

"The geotrupes and the caterpillars are not the only insects that may be able to furnish useful weather indications. Bees are very sensitive to atmospheric variations, and they are often to be seen, before storms that no one could foresee under ordinary conditions, flying about near the doors of their hives and refusing to leave them, although the sun is shining brightly. Likewise at the approach of a storm some spiders cut certain threads of their webs so that they will offer less resistance to the wind, and then hide themselves in some sheltered place. Other spiders take refuge in the bottom of the tubes that they build for themselves as retreats, at whose entrances they are seen again when the weather becomes calm."—*Translation made for* THE LITERARY DIGEST.

## RIGHT-HANDEDNESS OR BOTH-HANDEDNESS?

MEDICAL writers have usually lamented the "one-sided" training that we give to our bodies, and have advised parents and teachers to see that children use both sides of the body equally, as far as possible. This view is condemned by a writer in *The American Journal of Insanity* on the ground that, while coarse movements may be performed nearly as well by one-half of the body as by the other, accurate and expert movements require a higher organization of one-half of the brain than the other. He believes, therefore, that to make the ordinarily quiescent half of the brain assume control tends to impair mental processes and to lessen physiologic speed and dexterity. This theory is said by an editorial writer in *American Medicine* to be untrue in fact and inference. He says:

"The writer has doubtless been misled by observation of the function of speech, which is single and in execution requires the control of a single center. We have but one voice, but we have two hands which in many cases at different instants may be put in action with the same dexterity. Many surgeons can operate equally well with either hand; many artists paint with either hand, and we have seen men who could write as well with the one hand as with the other. The critic of ambidexterity may reply that this is impossible with synchronous movements, forgetting that in the musician, and especially in the pianist and organist, there is the most marvelous expertness of both hands executing most complicated and entirely different functions, and at the same instant. The arguments against ambidexterity appear not only inconclusive, but are squarely contradicted by facts. Surely also they are against a desirable freedom of the mind. Without the musician's ambidexterity life would be deprived of much charm. We should encourage 'divided attention,' and that large power of the mind over the body shown in the synchronous control of multiform activities."

**Magnetic Surgery.**—Bits of iron have frequently been drawn from the eye by powerful electromagnets. A more difficult surgical feat of the same kind was recently performed by Dr. Garvel, of Lyons, France. *Electricity* gives the following account:

"A two-year-old child living at Buenos Ayres, South America, while at play had swallowed a very large nail, six centimeters [2.5 inches] long. After a short time the child came near to suffocating, but finally by the next day all respiratory trouble had disappeared and it was supposed that the nail had passed through the digestive tract; but while on a visit to France the child commenced to cough desperately and it was thought to be afflicted with chronic bronchitis, and trouble in breathing was found to come from the right side. After having heard the history of the child, Dr. Garvel thought the nail might be in the bronchial tubes. He made a radiographic examination of the child and it was found that the nail had lodged in the right bronchial tube. There was no hesitation in selecting a method to extract it. Tracheotomy was resorted to under an anesthetic, and then an electromagnet was inserted through the opening and pushed down into the trachea as far as possible. The nail was immediately drawn from the bottom of the bronchial tube and became attached to the magnet. . . . Several days afterward a Bordeaux physician learned of this curious operation and performed a similar one on a three-year-old child who was supposed to have swallowed a nail. By following the same methods he succeeded in drawing out the nail, which had become fixed in the left bronchial tube for a year."

## SCIENCE BREVITIES.

"MODERN artillery," says *The Engineering Magazine*, "owes the greater part of its efficiency and accuracy to the genius of the mechanical engineer. Hydraulic, pneumatic, and electric appliances bring the ammunition to the modern large gun, load, lay, and train the piece, and take up the recoil. The improvement of mining practise has furnished valuable help in the search for low-temperature and high-power explosives; the metallurgist has contributed the materials necessary to meet the difficult requirements; and all this aside from the admirable mechanical skill developed in the design and construction of the ordnance and its auxiliaries."

IT often happens, according to *L'Eleveur*, "that in cleaning fowls we find pins, bits of iron wire or the like, in their gizzards. This is the case with fowls that have no gravel at their disposal and are driven by instinct to swallow hard bodies. If a pin thus swallowed issues from the intestine and reaches the shell-sac at the moment when an egg without a shell reaches the same point, it will be enveloped in the shell and thus enclosed in the egg. Perrauet, the famous architect of the eighteenth century, relates a case in his memoirs. He tells of an egg in which a pin was found without anything to show how it got there. The pin was covered with a thin whitish crust which made it look like a frog's thigh-bone. Under this crust the pin was black and somewhat corroded."—*Translation made for* THE LITERARY DIGEST.

"IT is not generally known," says *The Marine Review*, that "there is a schedule trip now around the world in sixty-two days, and thus is Jules Verne outdone by prosaic fact. Atlantic greyhounds and American overland expresses now admit of the following mail schedule every three weeks: London to San Francisco, eleven days; Honolulu, sixteen days; Samoa, twenty-two days; Auckland, twenty-seven days; and Sydney, thirty-one days. The A. & A line, cooperating with the great steamship companies which ply to the Antipodes via the Suez and the Cape, has established a series of 'round the world' routes which are almost certain to meet the requirements of the most fastidious passengers. . . . . This trip around the world can be made for $685, exclusive of the cost of a berth across the American continent."

"THERE is no question," says Dr. John H. Girdner in *Munsey's* (June), "but that the confusing and discordant noises of large cities are detrimental to the health of those who are obliged to dwell in them for the greater part of the year. The injury to health from this source is not entirely of a local character. In fact, the irritation to the auditory apparatus—that is, the ear itself, its nerves, and its other appendages—is of less importance than the harm done to the brain and general nervous system by the roar and din of modern cities. . . . Noise thus plays an important part in producing neurasthenia, or nervous prostration, a disease of cities and of modern civilization. Aside from the destructive effect on the general health, noise produces local changes in the ear itself which sometimes amount to chronic inflammation, and very often to partial deafness." Dr. Girdner advocates the prohibition of unnecessary noises by municipal ordinance.

## THE RELIGIOUS WORLD.

### SHOULD THE OFFICE OF PRIEST AND PHYSICIAN BE COMBINED?

THAT the reported advance of Christian Science in numbers, wealth, and power is having its effect upon other and older denominations seems to be indicated by various signs, some of which we have lately commented upon. One of the most striking of these is the suggestion recently made in a conservative religious journal, the New York *Churchman* (Prot. Episc.), that Christian ministers should be physicians of both souls and bodies. Writing in that paper, the Rev. W. R. Inge, fellow of Hertford College, Oxford, and Bampton lecturer for 1899, says:

"The words in which Jesus Christ proclaims Himself the Good Physician (Matt. ix. 12) are found in all the three synoptic gospels. They point to what was indeed the most obvious and prominent fact in His ministry, that He went about doing good, and healing those who were afflicted in mind or body. The mission of Christ on earth was primarily a mission of healing. It is a mistake to suppose that the wonderful cures which He wrought were intended chiefly as evidences of His supernatural power and credentials of His mission. Considering how emphatically He protested against the demand for miracles, and refused to comply with it (Mark viii. 12), it is impossible to believe that He journeyed from place to place in order to give a series of thaumaturgic exhibitions, of exactly the kind which in His words He had refused to offer. We may even guess that the supernatural element in some of these cures is somewhat unduly emphasized in our narratives. In any case, it is the healing, not the miracle, that is the important fact. Our Lord performed these cures as part of the Gospel of the Kingdom; and the lesson which He meant to teach by them can hardly be missed. Human nature, we are to understand, is not to be divided into two separate parts, a body and a soul, of which the body is comparatively unimportant; man is one complex personality, the whole of which is the object of the Redeemer's care and love. And as the function of the church is to carry on His work, it is plain that the church, too, in dealing with the problem of evil, must take into account the whole man, and as an undivided personality.

"There is ample evidence that the early Christians had learned this lesson. We find clear signs of medical interest in the third Gospel, confirming the tradition that its author was the beloved physician; and St. Luke was only the first of a long line of Christian healers. We hear of Alexander the Phrygian, mentioned by Eusebius, a physician and martyr; of Julius Africanus, about 225; of Zenobius of Sidon, a martyr under Diocletian; of Theodotus, physician and bishop at Laodicea about 305; of Cosmos and Damian, Christian physicians. The systematic care of the sick in the early church is a fact too well known to need illustration. More significant for our purpose is the passage in the Epistle of St. James, where a religious ceremony is said to be efficacious in cases of sickness; and still more so, perhaps, is the vexed subject of demoniacal possession, in which mental and moral disease seem to have been mysteriously blended. Prominent men of science have poured ridicule over the New Testament narratives of casting out devils, forgetting that the types which mental disease assumes vary greatly in different periods, and are strongly affected by the current beliefs about the spiritual world. The real interest of the narratives surely lies in this—that our Lord applied His powers of healing not only to cases of bodily disease, but to some cases of what looked like desperate moral depravity, thus showing that apparent wickedness may proceed from causes partly external to the will of the agent—causes analogous to mere bodily disease, which Christ, we know, spoke of in the same terms, as 'bondage to Satan.' In other words, our Lord recognized the mutual interdependence of soul and body, and taught us that not only is sin disease, but that bodily and mental disease may be the cause of moral evil."

Indeed, says Mr. Inge, Christianity largely won its ascendancy in the Roman empire as a religion of healing because, as Christian Scientists would say, its disciples could "demonstrate" better than the disciples of Æsculapius. The post-apostolic Fathers down to the time of Constantine are full of allusions to the thaumaturgic side of Christianity. Origen, answering the argument of Celsus that Æsculapius, not Christ, is the true Healer, is plainly troubled by the wonderful cures wrought by the Greek god, which he can not deny, says Mr. Inge; yet he "magnifies those wrought in the name of Christ, and rather weakly suggests that the others may be the work of a demon." The important point here, observes Mr. Inge, is not the question, Were the cures genuine? but "the fact that pagan and Christian alike believed that the true Savior of mankind must be a healer of bodies and minds as well as of souls." The alliance between Christianity and the healing art, remarks the writer, was gradually dissolved during the Middle Ages, altho neither the Latin nor the Greek Church lost the belief in miraculous cures in answer to prayer and pilgrimage. But now, asks Mr. Inge, "has not the time come for a better understanding, if not for a stable alliance, between the two branches of the healing art?" And he continues:

"I can not but feel that there is something wrong, when I take up (for instance) a biological work dealing with 'Degeneration' and morbid states of the nervous system in relation to heredity, and then a religious manual dealing with sin, repentance, conversion, and growth in the spiritual life. The subjects are manifestly the same—the same bad habits and evil dispositions are treated of; the objects are the same—how to prevent or cure these morbid conditions; but the methods are utterly different. Not only do the theologian and the biologist completely ignore each other, but their theories as to the cause of moral evil seem often to be diametrically opposed. The favorite theological doctrine is that sin is in its essence rebellion, a revolt of the will against the law of God. It is assumed that we are rational and self-determining agents, and that when we sin we deliberately choose the worse instead of the better course. Biologists, on the other hand, tend more and more to regard almost all immoral and anti-social conduct as symptoms of nervous degeneration, inherited or acquired. It seems to be proved beyond question that the children of parents suffering from neurasthenia are liable not only to such physical maladies as epilepsy, deaf-mutism, cleft palate, etc., but to extreme irritability and depression, to violent or perverted appetites, to callous selfishness and coldness, and to other unlovely vices. There is indeed hardly a single offense against the laws of God and man, from the colossal egoism and unscrupulousness of a Napoleon to the degraded sottishness of the common drunkard, which these authorities are not ready to explain as typical symptoms of some neurosis. . . . .

"On the one hand, I am convinced that all ministers of religion, and those who are engaged in education, ought to acquaint themselves with some of the ascertained facts of biology which bear upon character. We meet every day persons who have received some portion of the *damnosa hereditas* above mentioned. Would it not be better if, instead of trying to appraise the extent of their moral culpability (the very thing which Christ tells us that we must not do), we were to investigate the *natural* causes of these infirmities, and, if we have any influence over the sufferers, endeavor to persuade them to apply the *natural* remedies? The parent and the teacher ought to know what are the temptations to which an obviously neurotic child will probably be exposed. Timely warnings and a judicious regimen will often avail to prevent mischief, and the child may grow up to lead an honorable and perhaps eminently useful life. . . . Can it be denied that religion supplies a motive power both for the prevention and cure of morbid moral conditions, which no other agency can bestow?"

In commenting editorially upon this article, *The Churchman* (May 11) says:

"May not the time have come—may not the very eagerness with which multitudes have embraced Christian Science show that it has come—when that stable alliance between the two branches of the healing art, that existed centuries ago, when each was groping in comparative darkness, may be restored again? Each has gone on its own way; each has acquired a manifold weight of experience; each may come to the other bringing precious gifts for the cure of souls. Many a clergyman

is already a consulting physician, many a physician is constrained to be a moralist and to master the therapeutics of sin. Each can help the other."

A similar opinion as to the necessity of uniting the function of physician and priest is expressed by the "National Health League" of New York. In its recent circular (New York *Sun*, May 23) the writers, after specifying some of the evils which proceed from treating disease from the side of matter only, say:

"The projectors of the National Health League intend to establish health colleges where the main stress of study shall be laid on the maintenance of health. They desire to establish a sufficient number of free scholarships to enable poor theological students to obtain this knowledge regarding health free of charge. The hygienic care of the pastor for his congregation seems to be most natural, as the welfare of the soul and body are interdependent and as the founders of all great religions recognized this dual service of the priesthood.

"By thus combining the two vocations—that of the clergy and physician—a better remuneration would be willingly tendered to many a clergyman now struggling under an insufficient salary."

## THE RELIGIOUS PRESS ON PRESBYTERIAN CREED REVISION.

THE decision of the General Assembly in Philadelphia late last month in regard to the question of creed revision has met with general commendation from Presbyterian journals of all parties. The report of the committee on revision, adopted by the assembly, was in part as follows:

"(A) In view of these facts [the purposes for which the committee had been appointed], we recommend that a committee, as provided for by the form of government, Chapter XXIII., Section 3, be appointed by this Assembly.

"(B) We recommend that this committee be instructed to prepare a brief summary of the Reformed Faith, bearing the same relation to the Confession which the Shorter Catechism bears to the Larger Catechism, and formed on the general model of the consensus creed prepared for the Assembly of 1892, or the 'Articles of Faith' of the Presbyterian Church of England, both of which documents are appended to the committee's report, and submitted to the Assembly, to be referred to the committee that may be appointed.

"This summary is not to be a substitute for the Confession, and is not to affect the terms of subscription, but 'to vindicate and clear the doctrines of the church from all false aspersions and misconceptions,' to give a better understanding of what is most surely believed among us, and is in no sense to impair, but rather to manifest and maintain, the integrity of the Reformed Faith.

"(C) We further recommend that this committee be instructed to prepare amendments of Chapter III.; Chapter X., Section 3; Chapter XVI., Section 7; Chapter XXII., Section 3, and Chapter XXV., Section 6, of our Confession of Faith, either by modifications of the text or by the declaratory statement, so as more clearly to express the mind of the church with additional statements concerning the love of God for all men, missions and the Holy Spirit; it being understood that the revision shall in no way impair the integrity of the system of doctrine set forth in our Confession and taught in the Holy Scripture."

The Philadelphia *Presbyterian* (June 5), one of the chief opponents of revision, appears to be satisfied with this result, and congratulates the church on the one year's armistice:

"From the outstart we have battled for the old Confession intact. We argued from the Presbyterial returns that there was no show for either textual revision or a new creed in a church so divided as to methods and preferences. The sky is somewhat clearer by the action of the Assembly. The movement is better safeguarded and more circumscribed, and greater unity abounds. Wisdom and moderation may produce under these more favorable conditions something that, while preserving intact and of binding force the Westminster document, will remove alleged misunderstandings of and aspersions upon it. The result will be awaited with interest.

"Meanwhile, it is a consolation to know that we will have a year of rest from doctrinal discussion and can prosecute our work for the Lord without distraction and in the spirit of unity and love. We have too grand and precious a deposit of truth to ignore or give up, too magnificent a church to have disturbed and marred by division and strife, and too great a work to have hindered and weakened in any way, and we trust the Lord will, in His own good time and way, grant us a happy deliverance out of the agitations through which we have passed, or may have to pass in the future."

The New York *Observer* (June 9), another conservative Presbyterian journal, says:

"The result achieved by this method is satisfactory to all who took part in the debate, as well as to those who listened to it. No one has gone home disgruntled; no one has scored a victory; no one's back is scarred—there are no sores to be healed. As the interviews published elsewhere indicate, Dismissionists, Revisionists, and New Creedists—to use terms employed in the debate—are satisfied. This does not mean that there is to be no change or that there is to be a great change, but that all are satisfied with the steps taken this year, and are ready to meet the next issue when it rises a year hence in the Assembly in this city, or during the year following in the Presbyteries. The decision reached in Philadelphia means simply that Presbyterians are not ashamed of the old, nor afraid of the new—they have no apologies to make for the Westminster divines nor their work, and at the same time if there are men in their church to-day who think that they can improve upon the present Confession of Faith, they are willing that they should put their thoughts into a statement which can be examined, and if it meets the approval of two-thirds of the church, can be placed alongside of the other standards that have stood a similar test."

The Chicago *Interior* (June 6), one of the chief liberal Presbyterian journals, is happy over the result:

"The new-creed men are to have what they desire—'a brief statement of the reformed faith' and by the amendment of President Moffat they obtained a much broader and less specific instruction than the committee's section B. By comparison of the two it will be seen that much larger liberty and range of action is given to the committee by the amendment than by the unamended section. In regard to the work of revision it is provided that it shall in no wise impair the confessional system. And yet section C proposes to dispose of no less than four confessional propositions, one of which lies at the foundation of the system. A declaratory statement is also provided for. Well, the committee will not fail for lack of tools and topography in finding the way out. . . . . .

"The history of this reform, beginning actively only a little more than a year ago, is a notable evidence of the common sense and catholicity of the church. She has no desire or intent to abandon anything that is doctrinally good and useful. She does not intend to put her ax into anything that is living. She only intends to cut away the dead wood, the dry, unsightly branches, the decay of which carries bitterness into the sweet sap of the tree. When this is done, she will have lost nothing of strength, grace, or fruitfulness, nothing that is not a hindrance because it is useless."

*The Independent* (non-denom., June 5) is not so hopeful, yet it sees progress:

"It seems that, logically at least, the Presbyterians are not yet out of the woods, in spite of the Doxology. The liberals must notice that Calvinism is reaffirmed, and the conservatives must admit that it is not the Calvinism of the Westminster divines. Logically, then, it is the adoption of a truce rather than a declaration of peace. The conservatives 'save their face,' but the liberals can not tell just what they have won.

"Still there is progress. This Assembly is further along than that which condemned Prof. Henry P. Smith, and which unblushingly maintained that the truth or falsehood of Professor Smith's views was an irrelevant issue, the only pertinent question being whether they agreed with the Confession of Faith.

The advance of scholarship, the strong protest of the moral nature, and the impracticability of the creed in the concrete have produced vast working modifications. Such questions are settled by growth and life rather than speculative discussion and grammatical exegesis. The stalwarts may rage and prophesy fearsome things, but in vain. The actual working creed of the Presbyterians, as we have said, is no longer that of the Westminster divines; it will depart from their creed more and more. Whatever verbal identities in statement may remain, the real meaning has changed from the Calvinism of Calvin to the Gospel of Christ. The former exists only as men get away from real life and begin to raise insoluble questions, or weave verbal spells and speculative incantations."

## THE "WHOLE-WORLD SOUL COMMUNION" AND THE NEW CONCEPTION OF PRAYER.

NO religious development of the present day is more notable than the great growth of movements founded upon philosophical idealism, such as Mental and Christian Science. Among these modern restatements of a doctrine older than Plato and the Pyramids, one of the most singular—perhaps even incomprehensible to the materialist—is the spiritual movement known as the "Whole-World Soul Communion," inaugurated on the Pacific coast in 1886, and said now to have thousands of followers in every part of the globe. The organ of this movement is *The World's Advance Thought*, published in Portland, Ore. On the twenty-seventh day of each month, from 12 M. to 12:30, the associates of this movement throughout the world concentrate their thoughts in a silent prayer, "regardless of race or creed . . . to invoke, through cooperation of thought and unity in spiritual aspiration, the blessings of universal peace and higher spiritual life." In order that people in all parts of the earth may take part in this psychic communion at the same moment, a lengthy time-table has been prepared, giving the corresponding times in various localities. Thus, the time at San Francisco is 12:01 P.M., at Salt Lake City 12:43, at Chicago 2:30, at New York 3:15, at Buenos Ayres 4:18, at London 8:11, and at Jerusalem 10:31. The first "Whole-World Soul Communion" was held on the 27th of July, 1886, and the custom has been observed on the same day of the month ever since. It is said to be participated in monthly by over a million of people, in every part of the civilized and uncivilized world. The editor of *The World's Advance Thought* writes of it: "Thousands have sent notice of the unfoldment of their spiritual senses, and that enlightenment, peace, and happiness have been the result of their joining with this combined effort for spiritual unfoldment. Money-making has no part in this movement, its promoter never having received one cent; yet it has been in operation for fifteen years and has spread all over the world. We believe that the absence of the mercenary spirit has all to do with its success."

A movement similar in spirit is that known as "the Society of Silent Unity," the organ of which is the monthly journal *Unity*, published in Kansas City. A "class thought," changed each month, is chosen for the noon-day hour and for nine in the evening of each day, and is participated in by a large number of people throughout the country. "This "class thought" is generally an aspiration for a higher knowledge of truth, for good health, or for success in life. The society, which is in no way connected with the Christian Science organization, thus explains its point of view on prayer (we quote from a tract on this subject recently issued):

"Many people seem to think that prayer means simply petition or supplication—beseeching God to take away a sin, sickness, or sorrow. Prayer is not the beseeching a reluctant God, but it is intercommunion with God. 'Ye pray and receive not, because you ask amiss.' Not that we ask for what God is not willing to give, nor what we, as His children, may not rightfully ask for and claim; but because we beseech and supplicate, as tho God were not willing but possibly might be induced to change and grant our petition. This is a false notion. 'For I, the Lord, I change not.' 'God is the same yesterday, to-day, and forever.' If God ever did answer prayer, He always does, being the same God. Therefore if there seems to be any lack of principle, it is in the one who prays. Misunderstanding of the will and nature of our God prevents our prayers from being answered. Prayer does not change God, the unchangeable, but it changes mortals and makes them receptive to that good which is being given without limit. 'God is Spirit: and they that worship Him must worship in spirit and in truth.' Translate material desires into their spiritual correspondence, and then declare that in truth and in spirit you receive that which you desire, and then you will have it materially as well as spiritually. 'But seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you.' . . . . . .

"There must be a realization of God as the one and only Power and Presence in the universe. This universal Power and Presence is Life, Love, Intelligence, Truth, Spirit. Man, the divine idea, created in the image and likeness of God, is perfect, even as his Father in heaven is perfect. 'If I expect to regulate my environments, I must regulate myself, by finding that I am the very substance of the thing I want.' 'The kingdom of heaven is within you.' Upon becoming self-conscious of our oneness with the Universal Good, beliefs in evil—sin, sickness, sorrow, and death—pass away, and we are not deceived by appearances. We realize that the kingdom of heaven is within us, and that according to our faith it will be manifested on earth, showing forth in peace, joy, health, satisfaction, abundance, and all that constitutes our highest conception of heaven as a state of mind."

## MODERN BIBLICAL CRITICISM CRITICIZED.

IN Germany, opposition to the teachings of modern Biblical criticism comes from non-professional theologians and from laymen, while the official representatives of Biblical learning in the Protestant theological faculties are substantially agreed as to the literary phases of the great problem. This is true even of Professor Klostermann, of Kiel, who is otherwise a pronounced opponent of the Wellhausen scheme and has undertaken a new readjustment of the Old-Testament sources, but who recognizes the underlying principles of analysis current in all recent critical work. The most outspoken university man in Germany who opposes the whole spirit and method of the critics is Professor Hommel, of Munich, an Orientalist, not a theologian, who, working along parallel lines with those pursued by Professor Sayce, in England, tries in the name of archeology to undermine the whole modern scheme of reconstruction, appealing, as does also Margoliouth, of Cambridge, to the philological argument. Hommel has recently published two brochures in which he sharply attacks the Wellhausen ideas and searches out a new path for the attainment of his goal. One of these writings, "Der Mondkult bei den alten Hebräern," is said by a leading church paper of Germany to signalize "the beginning of a new epoch in Old-Testament research." Hommel himself thinks that by this archeological and philological line of investigation Wellhausenism will be overthrown. The line of thought developed by him is the following:

In order to make it appear that the sources of the Old Testament really teach a religion that is the result of a gradual and natural development, it has been the constant aim of the advocates of the newer criticism to make the beginnings of the Israelitish religion as crude and low as possible. The claim is generally made that it was a worship of natural things and forces, such as stones, wells, trees, etc. Now, however, it appears that the Hebrews at an early date during the period before Abraham and Moses entertained higher ideas of worship, and especially did they cultivate a comparatively high type of moon worship. The oldest archeological data show that this was done by the generation of Abraham. A single fact like this demonstrates

that the natural development hypothesis can not be applied to the religious process unfolded in the Old Testament.

Hommel says further:

"The view of the so-called modern Pentateuchal criticism as championed by the followers of Wellhausen, claiming a gradual and natural development of Israel's religious history and the successive stages in this process, is, in part, a purely arbitrary reconstruction of the contents of the Pentateuch, and as such has really outlived itself and is now recognized to be in open conflict with the known historical development of the children of Israel, as also with the clear evidences of the monuments and other Oriental sources. According to Wellhausen, the worship of stones, wells, and trees constituted a prominent feature of the religion of primitive Israel, while the worship of the stars was not introduced until after the fall of Samaria, and the Book of Deuteronomy was written in protest against this innovation. Now the stones themselves, in the shape and form of the Babylonian inscriptions, have raised their voices in favor of the Biblical records. This voice has not been sufficiently heeded, and to cap the climax the old moon and the eternal stars have furnished the evidences for old traditional views; and these voices will, unless all signs fail, be heeded and heard."

The other brochure on this subject is entitled "Die Insel der Seligen in Mythus und Sage der Vorzeit," in which the story of the Island of the Blessed is utilized in the interest of anti-Wellhausen criticism.—*Translation made for* THE LITERARY DIGEST.

## THE WIT AND HUMOR OF JESUS.

A RUSSIAN author has defined humor as "an invisible tear seen through a visible smile"; and it is in somewhat this sense that an American critical writer, Mr. George Wright Buckley, treats of the "Wit and Wisdom of Jesus" in a recent book of that title. The humor of Jesus, he says, was akin in religion to that of Thomas Carlyle in literature, or to that of the sad and thoughtful Lincoln in politics; but just as "some of the choicest specimens of antique art were lost in the accumulated rubbish of centuries, to be resurrected by the zealous efforts of modern archeologists, so the Son of Man was lost," in the aftergrowths of belief that have sprung up around His personality. "The real Jesus is brought back in literature, in art, in the pulpit itself; there is no mistaking the tendency to view Him in human aspects and relations—to view Him as under a universal law of human development and limitation, whereby even the greatest of men are linked to the imperfect age in which they live and to the more or less specialized nature of the work given them to do." Among the traits of Jesus that the world has lost sight of, says Mr. Buckley, is His humor, which belonged to the subtlest type of that quality, and has therefore the more readily been overlooked. The writer says:

"A contemporary of Emerson, in describing this American seer and prophet on the lecture-platform, speaks of his indulging in the 'inaudible laugh,' as here and there he slipped into grave discourse some expression of subtle and quiet humor. Very likely, too, the 'inaudible laugh' and pleasant humor lent, not infrequently, winsome grace both to the preaching and the social converse of the seer and prophet of Galilee. I imagine Him in His early ministry going forth with buoyant faith in men—body healthy, mind teeming with lively imagery; loving nature and solitude, heartily loving men and their comradeship; open to the comedy of life rather more than when further along the journey, when the tragedy of it projects itself more conspicuously into the foreground.

"To behold Him a son of joyous humor as well as of tragic sadness surely enhances the lovableness and perfection of His character. Yea, to think of His having now and then a good laugh in Him, a free and genuine laugh, with the ring of innocent childhood and nature's own sincerity—this also is not so shocking to the writer as once it was. Without losing his 'weeping Christ,' he sees Him otherwise than holding the finical sentiment which Emerson seems to quote with approval from Lord Chesterfield: 'I am sure that since I have had the full use of my reason, nobody has ever heard me laugh.' But indeed, the same Emerson, who had true Platonic vision of both sides of all questions, speaks much more to our notion elsewhere: 'A perception of the comic seems to be a balance-wheel in our metaphysical structure. It appears to be an essential element in a fine character. Wherever the intellect is constructive, it will be found. We feel the absence of it as a defect in the noblest and most oracular soul. The perception of the comic is a tie of sympathy with other men, a pledge of sanity, and a protection from those perverse tendencies and gloomy insanities in which fine intellects sometimes lose themselves.' And Carlyle, too, England's prophet—how strongly he declares himself on this matter: 'How much lies in laughter; the cipher-key wherewith we decipher the whole man! . . . The man who can not laugh is not only fit for treasons, stratagems, and spoils, but his own life is already a treason and a stratagem.' Humor and laughter, with due measure of gravity behind them, are sign and seal of health and sanity; sign and seal of true kinship with humanity. Therefore Jesus, when He took upon Him, or had put upon Him, this humanity, was given them in goodly measure. No vender of jokes; but perceiver and revealer of disparities between folly and wisdom, pretense and practise, perceiver and revealer of the lie masquerading as truth, of wickedness skulking under outward seemings of the good.

"Meager as the records are, they disclose plays of humor on the part of the Son of Man which, whatever His own bearing, must have worked the risibles of some hearers into no uncertain smile, perhaps sometimes into explosive laugh:

> Folly-painting humor, grave himself,
> Calls laughter forth.

Let the reader catch this aspect from a few illustrations in the present chapter, and also from some in the succeeding chapter. The traditional habit of viewing Jesus as given only to grave discourse has invested some of His utterances with a significance altogether different from what they have when the fine flavor of the speaker's humor is tasted in them. A curious instance of this is the account given in the fifteenth chapter of Matthew, which describes the peculiar treatment of the poor Canaanitish woman who beseeches Him to heal her daughter, 'grievously vexed with a devil.' When the disciples tried to keep her away, she cried the more, 'Lord, help me!' And what reply does she get? Surely one neither consistent nor pleasant to hear from the lips of the Messiah of all nations, if we construe it with literal seriousness: 'I was not sent but unto the lost sheep of the house of Israel.' 'It is not meet to take the children's bread, and cast it to the dogs.' Some would make these convict Jesus of that Jewish narrowness so prevalent with His countrymen at the time; and, indeed, a certain learned rabbi of to-day finds in them a warning against throwing the bread of the new Gospel to strangers, instead of keeping it wholly for his own people—a view less tenable than the opposite one. Had we the complete record of this incident, we should behold no narrowness on the part of the Master, but only on the part of the disciples and the author of the Matthew Gospel. Likely enough these words were thrown into the interrogatory form: 'Is it not that I was sent only to the lost sheep of the house of Israel?' 'Is it meet to take the children's bread and cast it to the dogs?' The very witty reply comes, 'Yea, Lord, for even the dogs eat of the crumbs that fall from their master's table.' According to the text in Mark, Jesus so far appreciated the wit of the woman that He healed her daughter because of it: 'For this saying, go thy way,' etc."

Pleasantry, repartee, satire, ridicule, irony, invective, all these, says the writer, are used by Jesus for the furtherance of His master-motive of advancing the kingdom of heaven upon earth.

---

AMONG the many associations to meet at Buffalo this summer is the Pan-American Bible Study Congress, which is to be in session from July 17 to July 31. The aims of the congress are a discussion of principles and methods of Bible study and the exhibition and comparison of the various appliances used for this purpose. Many prominent clergymen and laymen of different denominations are members of the board of direction.

# FOREIGN TOPICS.

## INCONSISTENCIES OF SPANISH ELECTIONS.

PARTICULAR significance attaches to the results of the election just completed in Spain, in view of the fact that the new Cortes will be the first for the young King to face as monarch. Grave problems growing out of the question of the religious orders in the kingdom will also make the present session of the parliament a memorable one. The results of the election show a substantial majority for the present Government, two hundred and forty-four ministerialists being returned, while the total number of seats secured by the opposition is reported as one hundred and fifty-seven. The fact of a government victory in the face of a strong overwhelming opposition calls forth considerable comment on the electoral methods in vogue in Spain. The hollowness of the Spanish constitution, declares *The Guardian* (Manchester), has been illustrated afresh:

"Every two or three years the rulers of Spain think it well to dissolve the Cortes and hold elections. But there is never any doubt as to the result; the Government of the day always obtains a large majority. The telegrams have shown how this is done. In Barcelona, for example, we are told that the electors returned three Republicans and four members of the Catalan Home Rule Party at the head of the poll, but the Government proclaimed that Monarchists had been elected. The Government, that is to say, will only recognize the election of such candidates as it approves of. In some cases the same result is attained by the less direct methods of bribery and of filling the ballot-boxes with sham voting-papers for the Government candidates. It is not surprising that the vast majority of Spaniards do not trouble to record their votes; the apathy goes so far that there seem to be only a few constituencies in which the electors protest against the frauds committed by the returning officers and create disturbances when denied their constitutional rights. It is true that the Government in power never claims all the seats, but allots about two-fifths to the various opposition parties. But this only shows how far the practice of manipulating elections has been developed. Nominally Spain is a democratic country; it is actually ruled by an oligarchy of priests, soldiers, and politicians who call themselves Liberals and Conservatives for the sake of appearances."

Spain, which has sent forth so many great discoverers, says *The Daily News* (London), has found out the way to adjust representative institutions to a strong monarchical government. This journal refers to the news despatch that, altho Barcelona elected three Republicans and four Regionalists,* the Government has placed only Monarchists at the head of the poll." Says *The News:* "There is no nonsense or hypocrisy about such a method. No underhand schemes to discredit the political foe; no appeals to mob sentiment; no reliance upon war-fever. You simply take the election return, and put your own candidate at the top of the poll." English ministers, concludes *The News*, "might turn this over in their minds. The day is coming when they will stand in desperate need of seats, and we know of no other expedient whereby they will have the least chance of securing them. And there is not so very much difference between stating that an honorable Englishman is a hater of his country and cooking an election return." *The Spectator* refers to the apathy of Spanish voters, and says: "The function of the electorate is reduced to the mere registration of results obtained by a process with which the electors have nothing to do. Cabinets are made and unmade by an intrigue at Madrid. The country is only expected to confirm the change which that intrigue has effected. This is not a function to excite enthusiasm, or to tempt man away from his business or his pleasure."

The Spanish papers have very little to say on the election. The *Epoca* (Madrid), in an editorial which shows many signs of the censor's hand, lays all the blame for legislative "fatuity and corruption" on the opposition voters. If they would support the Government, is the somewhat surprising logic of this journal, there would be less corruption and more interest in politics. The *Vossische-Zeitung* (Berlin) has a sarcastic article on the "peaceful scene" in Spain. Referring to the election riots and loss of life in several cities, this German journal remarks that elections in Spain seem to partake of the nature of human sacrifices. The bayonet, it says, is evidently one of the necessary adjuncts of voting among the Spanish.

Elections south of the Pyrenees, says the *Temps* (Paris), are different from those in any other representative country. In Spain it is the ministry that creates the parliament instead of the parliament creating the ministry. Representative government in Spain, concludes the *Temps*, altho nearly three-quarters of a century old, is still a mere fiction, and "the statesman who will restore to Spanish elections their really representative and independent character, will render the greatest possible service to his country, his King, and the noble but unfortunate Spanish people." No student of contemporary history will deny that "insincerity in elections is apparently an incurable vice of our Southern neighbors," declares Alcide Ebray, writing in the *Journal des Débats* (Paris). Despite the best intentions on the part of cabinet ministers, the electors evidently prefer to go to the bull-fight rather than to the voting-booth. And, if the result is "fixed" beforehand, how can they be blamed?—*Translations made for* THE LITERARY DIGEST.

* The Regionalists are elected avowedly on sectional and local issues, and do not pretend to represent the nation at large.

## BRITISH OPINION ON THE SUPREME COURT DECISION.

THE journals of Great Britain are practically unanimous in expressing the opinion that, while there may have been politics in the decision of the Supreme Court with regard to the status of our new "possessions," the situation in which the United States has placed itself leaves no other course open to it, as a practical nation, than that which the court sanctions. And yet a general tone of regret pervades the British comment that we have reached such a situation. *The Times* (London) believes that, while the intentions of the founders of the republic may have been outraged, it is evident that the court "yields to a law of development to which all institutions are amenable." Says this journal further:

"The cause of the anti-expansionists was lost long ago—lost, some would say, in the far-off times when the State of Massachusetts protested against the admission into the Union of Louisiana as unconstitutional. It was all very well to preach the doctrine that the Constitution followed the flag in days when Calhoun and others using that expression had in view a definite result which they had much at heart. Literally applied to-day, that doctrine would be fatal to expansion along the lines which the people of the United States have marked out for themselves. They are not prepared to part with what they have won or to shut themselves out of the possibility of one day acquiring more. Neither are they prepared to force republican institutions upon people totally unfitted for them, or to welcome at Washington batches of black and yellow Senators. They mean to be free to do as other countries have done in like circumstances."

The impossible has happened, observes *The Westminster Gazette* (London), and "imperialism has been sanctioned by the United States Supreme Court—by one vote." This journal believes that the departure "modifies profoundly" the relation of the United States to Europe and the rest of the world. It says:

"Colonies over-seas mean a navy, a navy means naval bases and coaling-stations, and naval bases are found to be insecure unless backed up by the possession of the Hinterland. This is

the logic of imperialism, and it may lead the Americans far, as it has led us. Moreover, by stepping outside their continent, the American people undoubtedly weaken the force of their Monroe doctrine. It is one thing for the United States to say 'hands off' as regards the American continent, if she in return is prepared to keep her hands off other continents. There is a certain reciprocity in that arrangement which helps to reconcile European nations to their exclusion from South America. But if she plunges into the welter of world politics, equipped with a strong navy and an American canal enabling it to concentrate in either ocean, she can hardly claim to compete on a principle which limits her liability while putting no limit upon her expansion."

The decision is in accordance with common sense and with all the facts of the situation, declares *The Spectator* (London). It believes, however, that, while the fate of the American dependencies will undoubtedly be a good one, Spanish-Americans have reason for alarm:

"If for any reason in the future, near or distant, the statesmen of the Union should desire to rule a Spanish-American State, we do not see what is to prevent that desire from fulfilment. Suppose they buy or conquer Nicaragua, and so terminate all complications as to the control of the canal by cutting it through territory absolutely their own, what except force, which would hardly be applied, is to prevent them? Or suppose, what is quite possible, that under a new and less wise President than Porfirio Diaz a furious quarrel arose with Mexico, what is to prevent the Union from annexing it entire? Formerly they were restrained by dread of including so many colored voters, and of anarchy arising in so many new and half-civilized states; but under the decision of Monday they can hold Mexico as we hold India, without feeling any reflex effect from their new possession. The dominant caste in the conquered lands would be American and the army, but in Washington the Executive would remain as before, no party within the Union would be stronger or weaker by a vote, and Congress, even in numbers, would be unchanged. The only effect felt by the Administration would be a large increase of patronage and a considerable increase in national well-being, all the potentialities of wealth in Mexico falling into American hands."

Our American friends, continues this journal, will say that they do not desire conquest, and we believe them; but "the future has many necessities in store, an open road *produces* traffic, and seeing what we see around us, we have little faith in the want of ambition of a commercial people." Says *The Spectator* in conclusion:

"The community which longed for Texas might long for more. It is true slavery is dead, and no one will plan invasions in order to enlarge the range of the 'peculiar institution'; but still, if we were Spaniards of Mexico or of Central America, we should feel that the judges at Washington had, however unintentionally, made the sky for us perceptibly more full of clouds."

*The Saturday Review* (London), usually unfriendly to the United States, declares that the "decision amounts to the statement that the legislative authority has the power of doing that which the Constitution said it had not, and beyond this of reducing to a ridiculous fiction the sacred words of the 'Declaration of Independence' itself." The only honest way to solve the problem, in the opinion of this journal, was "to force the Government to amend the Constitution," for in its present condition the American Constitution is not fitted to be the basis of a conquering and imperialistic state, and "the decision of the Supreme Court may have stayed a momentary difficulty, but at the cost of begetting a hundred more."

The same journal believes that the decision seriously compromises the position of the Territories. Henceforth, it says, Congress will have unlimited power over the Territories. If annexation does not carry the Constitution with it, "what legal distinction exists between the inhabitants of Arizona and those of Porto Rico?" The difficulties which may be created by the decision, concludes this journal, are endless:

"If the new theory be accepted that the 'United States' is a phrase which does not include all annexed territories, then we are landed in the dilemma that either Congress has unlimited sovereign power or all the inhabitants of districts not actually States, and not actually contemplated by the Constitution, or that there is a distinction by reason of race or color, which is a theory directly in defiance of the cherished and boasted privileges on behalf of which the Civil War was waged. . . . Apart from peculiar temptations there is no force of tradition in the United States to regulate the government of subjects. We are told that Congress would never exercise the oppression which it has power to do under this decision. But this is exactly the argument that was used by the supporters of slavery, as the argument that the duties imposed on Porto Rico are to be expended for her benefit is precisely that used by the supporters of the Stamp Act in the English Parliament. Nor is there any power of the crown to check or control the legislature. The story of the Roman republic shows how grave an opportunity for adoption at home and tyranny abroad may be found in the administration of distant territories by a venal and decadent assembly."

We do not understand the legal justification of the American judges, says *The St. James's Gazette* (London), but the result has no doubt been reached by one of those fictions which have had so much to do with the development of our own [British] institutions. The capacity of English courts and of those descended from them, says *The Standard* (London), arguing in the same vein, to construct "useful and statesmanlike legal fictions is boundless." Evidently, remarks *The Guardian* (Manchester), "it is very difficult to fit the new imperialism into a Constitution drawn up by men who would have scouted the imperialist principles. . . . This is a victory for Mr. McKinley's administration, which is protectionist first and imperialist afterward." We deplore the decision with all our heart, says *The Daily News* (London), and it continues as follows:

"It can only give fresh encouragement to the already ominously large party which seems bent on shaping American destinies after the worst models of the Old World. If ever there was a country whose sole mission seemed to be the building up of an orderly, prosperous, and intelligent commonwealth, of developing a new and higher type of civilization, that country was America. The force that the nations of Europe waste in arming themselves against one another, Americans have turned to 'fruitful strifes and rivalries of peace,' to subduing their vast continent, to making it, what it now is, a homogeneous and unconquerable whole. Not one of the causes that make colonization a necessity for the powers of the Old World is applicable to the United States. Stupendous as is their population, they still have room enough and to spare for twice their present numbers. There is no population question, no labor question, no question of a submerged tenth to make an outlet for emigration imperative. Their foreign commerce is large, for a European nation it would be immense, but it represents barely four per cent. of the value of the interstate trade. It will be generations before their new possessions bring in a tithe of what has been already sunk in them. And as for the fantastic notion that imperialism will steady the national character and bring a better tone into domestic politics, we confess to some skepticism as to the possibility of reforming Tammany Hall by way of Luzon."

It is retrogression of the worst kind, concludes *The News:*

"The Supreme Court has pronounced in effect, if not in words, that, so far as the law goes, there is nothing to prevent the Americans treating the Filipinos and Porto Ricans as the Russians are treating the Finns. The thoroughfare of imperialism, which is the thoroughfare of autocracy, is declared legally open to the descendants of the signers of the Declaration of Independence. A curious issue, this, to a hundred and twenty years of triumphant democracy. . . . It is not progress which the Constitution has been stretched to cover, but retrogression; not the advancement of humanity, but that disheartening product of our times, the militarism of a democracy. The American Constitution never showed its amazing elasticity on behalf of a poorer cause."

The Canadian press so seldom lose an opportunity to criticize Americans and American policy that it is somewhat surprising

to note the favorable trend of comment in the Dominion, tho there also criticism is not lacking. *The Advertiser* (London, Ontario) says:

"No other course was practicable. No other course would have been consistent with necessity or common sense. To talk of the incorporation of new peoples and lands with immediate possession of the rights and privileges enjoyed by citizens or States, such as Michigan or Maine, is the extreme of childish impracticability. If the United States Constitution had been interpreted as disallowing a reasonable time of tutelage for constitutionally immature possessions, either conquered or acquired by purchase, it would have been necessary to make a new Constitution more in accord with reason. We do not believe the United States wishes to hold any of its new possessions as mere wards a moment longer than is necessary. But that some of these new possessions have not as yet had the probationary schooling essential to full citizenship and full statehood, should be obvious to all who think."

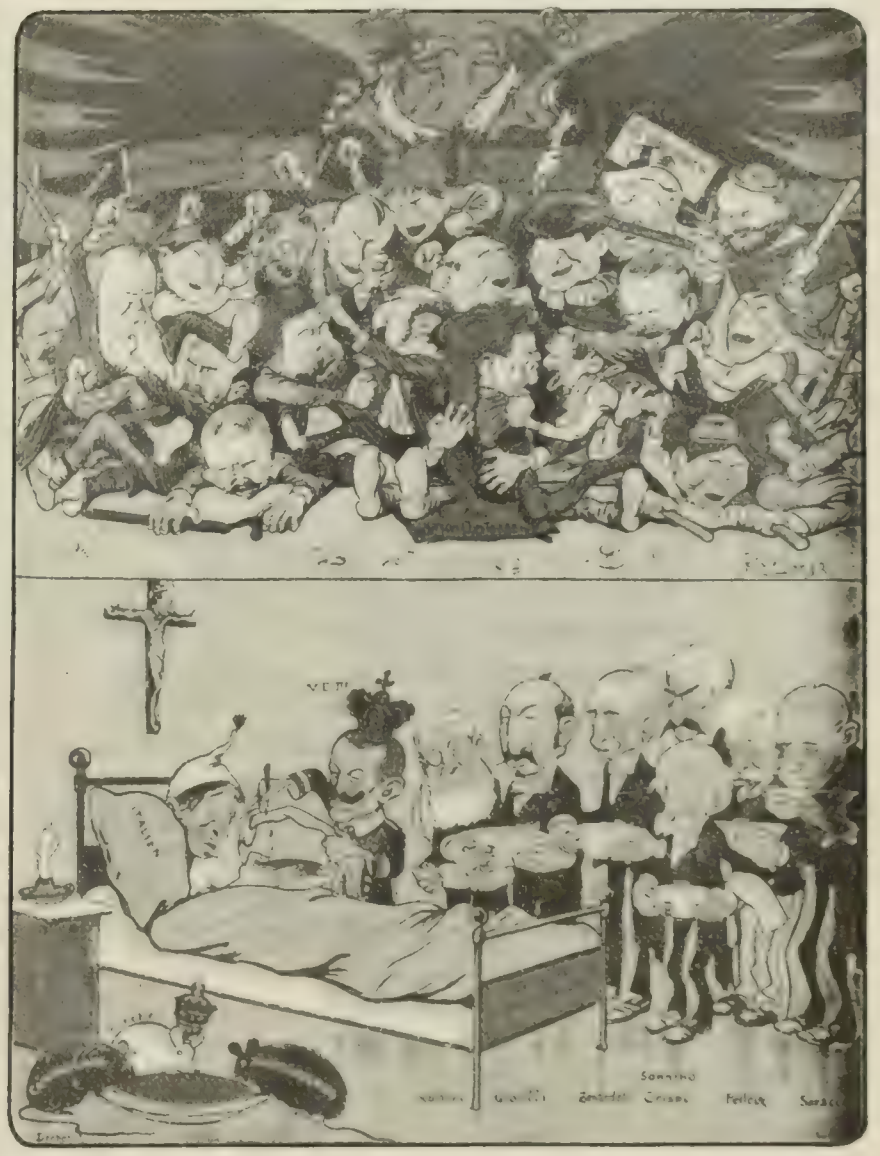
The decision places the United States in a position with regard to foreign possessions analogous to that of Great Britain, says *The Daily Witness* (Montreal). It says further:

"No one will pretend that it would be wise or politic to place the uncivilized, half-civilized, or wholly unprepared inhabitants of the Spanish islands on the same footing of citizenship as men trained for many generations in freedom and self-government. It is hardly necessary to point out that the decision of the Supreme Court is a justification of the policy of Britain in relation to foreign possessions and the government of subject races. The United States has practically fallen into line with Britain, as it was inevitable that it should when it emerged from its colonial stage of existence, which only really occurred after the late war with Spain. The United States is now a world power, with ample powers to annex and govern foreign possessions and assume its share of the 'white man's burden.'"

It is a disturbing decision, declares *The Herald* (Montreal). "The Americans are clearly becoming uncomfortable over their imperialism, and it is becoming less a question of what they will do with the Filipinos and more what, as Bishop Potter said, 'the Filipinos will do with us.'" If we were the Filipinos, observes *Events* (Ottawa), after reading the two decisions, we would not know really what we were. The United States is now an empire, observes the *Patrie* (Montreal). This French-Canadian journal continues: "The Constitution does not follow the flag. What is liberty in New York becomes despotism in San Juan and Manila. One is a citizen in the former, a subject in the latter section of the American realm. Mr. McKinley can now go on to further conquests. But we can not help asking ourselves, 'What would his glorious ancestors have thought?'"—*Translations made for* THE LITERARY DIGEST.

## TOLSTOY'S IDEAS OF REFORM FOR RUSSIA.

WHEN the Czar Alexander III. was approached by a Russian grand duke with a petition for the suppression of Count Tolstoy as "a menace to religion and the state," the Emperor, it is said, replied, in the words used by Louis XIV. of France on a similar occasion: "*Je ne veux pas ajouter à sa gloire une couronne d'un martyr*" ("I do not wish to add the martyr's crown to his glory"). This, however, in the opinion of the European press generally (outside of Russia), is just what has been brought about by Nicholas II., as a result of the excommunication and partial banishment of the count. He has rebuilt a true and beautiful religion in the souls of a thousand modern men, says *The Speaker* (London), and excommunication or banishment can not alter this tremendous fact. The whole cam-



THE TRIPLE ALLIANCE AT HOME.

III. ITALY. The Last Blood-letting.

—*Wahre Jacob, Stuttgart.*

paign against Tolstoy "is a melancholy example of that tendency to deliver dramatic and thrilling judgments against the wrong man which has so often marred the good work of ecclesiastical institutions." It says in conclusion:

"A great many things may be said against this brilliant and fearless man. He may be described as somber, fantastic, hyper-idealistic; in popular language he may legitimately be described as mad; but no one on earth can call him anti-Christian. He is the supreme exponent, in an age of righteous and unrighteous wars, of lawful and unlawful frivolity, of those very Catholic doctrines of peace and purity the appointed professors of which have just cast him out among atheists and pagans. It is pitiful, indeed, that the priests of a great religion can find no better occupation than watching jealously for the slips and staggers of their last great swordsman in an age of doubt."

EXCOMMUNICATION OF TOLSTOY.

TOLSTOY: "This persecution is making something of a saint out of me." *Le Rire du Rire, Paris.*

All the accusers, secular and ecclesiastical, declares *The Daily News* (London) are like the jury who condemned Faithful, in "Pilgrim's Progress." They repudiate him because he in so unlike themselves. No wonder, it concludes, that "the church and the world, the worldly church and the church ly world, should combine against the author of 'Resurrection.'"

"He does not spare them. He is not of their way. His pitiless satire falls with the impartiality of Providence upon judges and bishops, upon ministers of state and governors of jails. Tolstoy makes no terms. He never minces his words. It is not this man nor that man, but the whole fabric of Russian society, against which he lifts up his voice. The three judges who try the heroine in 'Resurrection' are absolutely different one from the other in almost every respect. The only thing in which they agree is incompetence for the discharge of their functions."

We are sorry for the Czar who can not take care of himself, says *The Anglo-Russian* (published in London "in the interest of Russian thought denied utterance at home"); but we have no condolence to offer to Count Tolstoy. He needs none. "Assuredly the orders of his majesty the Czar will not be so blindly executed by the sentinels at the gates of heaven as they are at those of the Winter Palace, and nothing could be more desirable for ourselves, indeed even exhilarating, than to see our enemies most earnestly engaged in defeating their own ends."

The *Handelsblad* (Amsterdam) declares that both excommunication and banishment were "stupid things," but necessary, as, in Russia, what harms the church harms the state, and *vice versa*.

An Englishman who has lived many years in Moscow contributes to *The Review of Reviews* (London, May) a character sketch of Tolstoy which contains a good deal of new personalia. He points out that the count, despite his fondness for the country, is for half the year more a settled townsman than the lord mayor of London; but the Tolstoy of Moscow is but an "abstraction and shadow of himself." He preaches in the city and practises in the country. On a visit to the Moscow residence of the Tolstoys several years ago, this writer (Mr. R. E. C. Long) questioned the great Russian as to what he would do were he to become "as dominant in action in Russia to-morrow as he has become in Russia's thought." In the conversation, Tolstoy declared that he had no definite constructive program of reform to offer. By reforms, he declared, he does not mean changes based on stereotyped European models.

"If reforms are wanted in Russia, it is not either Western or Eastern reforms, but measures suited for the people, and not for other peoples. The assumption that reforms so-called must be constructed upon Western models is a pure product of Western exclusiveness, and is opposed both to Christianity and to common sense."

No European policy, he contended further, is any more suited to European races than Russia policy is suited to Russia. Both are bad and opposed to Christianity. Legal guaranties of any kind would be ineffective and out of place in Russia, because for the mass of the Russian people the law does not exist at all:

"They either regard the law, as I do, as a matter wholly external to them, with which they have nothing to do, or despise it actively as a fetter which retards the development of their internal life. Western life differs from Russian in being rich in outward manifestations, civic, political, and artistic. The law is necessary to it, and it regards the law as the crown and safeguard of its being. The life of the Russian people is less expensive, and they do not regard the law as an active factor."

But, he was asked, do not Russians in general submit to their own laws as Europeans do to theirs? They submit to them, he said, but are not guided by them:

"It is not their submission, but their neglect of the law which makes our people so peaceful and long-suffering. And that neglect of the law is also what makes our officials the greatest knaves in the world. You ask why? Because the mass of the people, while they despise external restrictions, are guided by their consciences. But our educated officials continue to neglect the law and they have emancipated themselves from their consciences. They have neither principle nor restraint, and in consequence become what they are."

When he says that Russians are led by conscience, he explained, he does not mean to say that there is less crime and preventable misery among them than in Europe. "I merely say that conscience plays here the part played by law in the West, and just as your law fails to secure freedom from crime, so conscience here, through ignorance and error, is not infallible." Count Tolstoy laid down the essential difference between the Russians and Western Europeans as follows:

"The difference is quite evident to those who know them. It is that they [the Russians] are more Christian—more Christian. And that distinction arises not from the fact that they are of lower culture, but from the spirit of the people, and that for centuries and centuries they have found in the teachings of Christ their only guide and protection. Your people, from the time of the Reformation, have read their Bibles intelligently and read them critically. Ours have never read them, and are only beginning to read them now. But the Russian people have preserved the tradition and the teaching of Christ, and in the absence of protective laws and institutions, such as have always existed in the West, where else should they seek for guidance of their lives? It is this element, this reliance upon conscience and Christianity as opposed to law, which forms the great gulf between Russia and Western Europe. Between Western countries there has always seemed to me very little difference. The conception of the French as vain, of the Italians as excitable, of your own countrymen as cold and calculating, may be very true. But to a Russian they are but sections of a general empire, in essentials the same, but all differing from Russia by their material spirit and their legal basis. In Russia Christianity and conscience play the part which material considerations and legal formalities play in Western Europe."

When pressed to suggest improvements in Russian conditions, he declared that reforms in Russia must come "as they must come in all countries, from the development of the consciences and moral sense of mankind." He also spoke in opposition to Socialism, which he regards as not much better than autocratic despotism, saying on this point: "Our Government keeps one class in idleness by means of violence; the Socialists would keep every one at work by violence." He condemned industrialism in all its forms, but spoke with some respect of cooperation.

A writer in the *Vita Internazionale* (Rome), in the course of a long review of Tolstoy's work, "The Resurrection," calls him the greatest thinker since the days of Greece's supremacy in philosophy.—*Translation made for* THE LITERARY DIGEST.

## CURRENT POETRY.

### Bobolink.

By JOHN BURROUGHS

Daises, clover, buttercup,
Red-top, trefoil, meadow sweet,
Ecstatic wing, soaring up,
Then gliding down to grassy seat.

Sunshine, laughter, mad desires,
May day, June day, lucid skies,
All reckless things that love inspires,
The gladdest bird that sings and flies.

Meadows, orchards, bending sprays,
Rushes, lilies, billowy wheat,
Song and frolic fill his days,
A feathered rondeau all complete

Pink bloom, gold bloom, fleabane white,
Dewdrop, raindrop, cooling shade,
Bubbling throat and hovering flight,
And jubilant heart as e'er was made.

—In *McClure's Magazine* for June.

### Song of the South Wind.

By HANFORD CHASE JUDSON.

Lo, I blow across the meadows that are brown and sear with winter,
And the grass grows green about me and it joys to see me pass,
And I get a banquet ready for the young bee, wing unsteady,
And I blow two hearts together, of a man and of a lass.

Soft my hand is on the harpstrings of the forest in the summer,
And with modulated music I have lulled the world to sleep.
By the pool the sunbeam brightens, where the water-lily whitens,
At the open doors of dreamland I my noontide vigil keep.

When the Norns, relentless, weaving, spin the autumn spell of dreaming,
And my spirit feels the burden of the sleep-inducing haze,
When the withered leaves together whirl in frantic, mad endeavor
To regain the golden gladness of the pristine summer days,

When the thrush his farewell tuneth, sad as Balder's funeral music,
While the purple tint of sunset on the crimson hillside dies,
Then I turn me; yet my sorrow reaches outward toward to-morrow—
I have buried springtime's treasure; yet remember where it lies.

—In *Scribner's* for June.

## PERSONALS.

**James J. Hill.**—To the energy of one man, James J. Hill, is chiefly due the solution of the transportation problems of the Northwest. The story of his career is told in the May *World's Work*, by Mary C. Blossom.

At the age of eighteen, Mr. Hill, in the village of St. Paul, became "check-clerk and caretaker of freight" at the steamboat landing:

"In 1862 the first ten miles of railroads in the State were finished with great effort. It ran from the levee in St. Paul to the riverside in St. Anthony, and was known as the St. Paul and Pacific Railroad, of which Mr. Hill later became the agent. It was then that he noticed that a poor quantity of wood for fuel was brought into town. He made a contract with the railroad to haul the better wood that he cut; and he thus founded the Northwestern Fuel Company, which still exists."

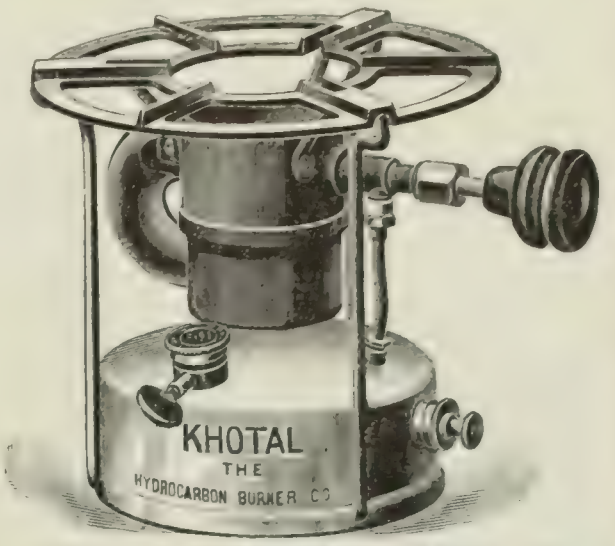
Soon Mr. Hill began to realize the great possibilities of a transportation line that should make the wealth of the Northwest accessible to the world.

"He became possessed by this idea; on the

# A Portable, Practical, Blue-Flame Oil-Burning Gas Stove

—that's what the "Khotal" is; available in city or country, on land or water; anywhere that a supply of its fuel (kerosene) can be bought or carried; and that means everywhere!

The "Khotal" Blue-Flame Wickless Kerosene Stove, Price $3.75



NO. 200A ROYAL BLUE "KHOTAL."

Handsomely and strongly made of heavy brass and tinned iron. It measures 8¼ inches high, with a top diameter of 8¾ inches, and weighs 4½ pounds only.

The oil is forced by air pressure into the generator, where it is converted, as rapidly as used, into gas. This burns with a transparent, almost invisible blue flame, of intense and concentrated heat. The combustion is so perfect that there is no smoky odor, no soot.

From full flame (with twice the power of a gas range) you may turn it down, up again, or out, as you would gas. The self-cleaning needle-valve keeps the burner free and clear. One gallon of oil suffices for twelve to sixteen hours' use.

**GUARANTEE OFFER OF TWO WEEKS' FREE TRIAL.**

**Send us your dealer's name and address. If he keeps "Khotal," we will arrange with him to supply you. If not, send his name and the money, and we will ship you, by express, a complete stove. If you are not entirely satisfied with it in every way, return it to us within two weeks, and we will return your money by the next mail, without demur.**

It is the greatest of modern conveniences for camping, yachting, picnics; a hot-weather comfort in the household kitchen; capable of meeting any cooking requirement. By it a quart of water may be brought to a boil in 3 minutes, a six-pound roast done to a turn in 60.

The "Khotal" is thoroughly reliable, and made to stay in order. Not only is it the best of oil-burning blue-flame stoves, but the most satisfactory stove of any kind.

*Other sizes; stands; special finish for yachts. Descriptive pamphlet "b" sent on application.*

OHIO STEAM COOKER CO. 50 Ontario Building, TOLEDO, OHIO.

street, at the club, wherever he met men, he buttonholed them and talked of a great road and of the possibilities of the Northwest, until even his friends were worn out with hearing. It is told of him at this period that while watching for several nights by the sick-bed of a friend, he would look into the fire, sing Scotch songs and tell Scotch stories, reverting ever and again to his beloved project, and talking into the night oblivious of time, until he was sent home leaving his friends with doubts of his entire sanity."

In 1879, Mr. Hill formed a syndicate, and the St Paul, Minnesota, and Manitoba Railroad Company began its existence:

"While the work was going on through this region, [the Cascade Mountains] Mr. Hill rode over the rough mountain roads on horseback, deciding problems of tunnels and the like. He knows the cost of a bridge as well as his engineers, and more than once he has torn up specifications and saved money by using his own plans. One reason why the road has held its own while others failed is that before putting it into operation he spent $5,000,000 in grading. It was Mr. Hill who taught the workers in the lumber country to alternate the thick and thin ends of the shingle so as to make flat, square packages, and thus economize space in the cars. He is sometimes called exacting with the employees of the road. It is because the work must be done the best way; and, when a division superintendent is not packing his freight to the best advantage, he is not retained because he is a nice old man, but his place is taken by a man who can load cars well. . . . .

"To ship valuable lumber eastward was an excellent plan; but to send empty cars after it was out of the question; so Mr. Hill conceived the idea of shipping grain for the Japanese steamers to carry to the Orient. An agent was sent to China and Japan to find out what the cost of wheat must be to compete with rice, and the result was that the Japanese Navigation Company, the third largest steamship company in the world, began to carry large shipments of grain to China and Japan. This was a foresighted piece of work surely. These boats were soon found to be inadequate for the shipment of grain, lumber, cotton, steel rails, tobacco and silver which soon became a part of our exports to the Orient. Two large new steamers are therefore now in process of construction at New London for the Oriental trade. They each carry 20,000 tons of freight, and draw thirty-six feet of water. They are 680 feet long, 75 feet wide, and their height to the top of the bridge is as great as a six-story building."

Mr. Hill's next large enterprise was the establishment of docks to receive these large steamers. Of the railroad system, the writer of this article says:

"The original 437 miles of completed road of which Mr. Hill took charge as manager now number, as the Great Northern System, 6,000 miles. In 1883 he became president of the company. While other trans-continental roads have collapsed and gone into the hands of receivers, the Great Northern has never once defaulted the interest on its bonds or passed a dividend. The road extends from Puget Sound to St. Paul, or during the season of navigation to Duluth and Superior, where it connects for Buffalo with its own two most luxurious steamers. A fleet of six freight vessels are added to these. The grain ships moving through the 'Soo' give that canal rank over the Suez in point of tonnage."

While at times Mr. Hill, in his business way, may seem hard and cold, the writer continues, still his philanthropy is of wide range and may in part be illustrated by a few interesting anecdotes:

"The widow of an early friend of his applied to

**For Nervous Exhaustion**

**Use Horsford's Acid Phosphate**

Dr. A. L. TURNER, Bloomsburg Sanitarium, Philadelphia, Pa., says: "As an adjunct to the recuperative powers of the nervous system, I know of nothing equal to it."

**THE SANITARY STILL**

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. **Hon. BOIES PENROSE,** U. S. Senator from Pennsylvania, writes: "The Sanitary Still is useful and satisfactory. The water obtained from it is palatable and pure. I take pleasure in recommending it to any one who wants pure water." The Sanitary Still used in the **WHITE HOUSE** Highest award at Paris Exposition. DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

**Cuprigraph Co., 68 N. Green St., Chicago.**

If afflicted with sore eyes, use **Thompson's Eye Water**

Mr. Hill for a small loan. She said she was going to open a boarding-house. 'Sorry, Mrs. X., but can't let you have it. But you'd better get your boarding-house started.' 'Why, Mr. Hill, how can I? I have no money.' 'Don't need money.' 'Why, surely, I must pay for the furniture.' 'No, you mustn't; get a good house, get a bill for six months' rent, furnish the house, send bills to me. I'll pay 'em—sorry can't let you have any money. Good-morning, Mrs. X.'

"At another time Mr. Hill was walking down Third Street, once a flourishing thoroughfare, but now deserted by the general public. He stepped into a little tobacco shop kept by a German who had known him in the village days of 1860. 'Hello, Joe,' exclaimed the railroad president, 'how's business?' 'Bat, ferry bat. I haf de chop, but vere is der beeples?' Mr. Hill glanced over the shop. There was no assistant tobacconist whose discharge could be recommended. But Mr. Hill asked for a blank check, and the following week the old tobacconist was besieged by 'beeples' in a modern well-stocked shop on the principal retail thoroughfare."

## MORE OR LESS PUNGENT.

**The Report.**—CLUB MEMBER: "What sort of a looking man is he?"

THE NEW BOY: "He didn't say, sir."—*Puck.*

**In These Days of Weddings.**—THE MOTHER: "She says she'll elope."

THE FATHER: "Let her do it. It's cheaper."—*Life.*

**A Paradoxical Talesman.**—JUDGE: "Have you formed any opinion on this case?"

WOULDBEIGH JUROR: "No, sir; I haven't mentioned it to my wife."—*Smart Set.*

**Classical Music.**—TOMMY: "Say, Jimmie, what is classical music?"

JIMMIE: "It's the kind you can't understand unless you wear long hair."—*Tit-Bits.*

**Appearances.**—SMITHERS: "How old are you?"

MISS RANDOLPH: "Oh, I don't tell my age. As old as I look."

SMITHERS (with deep feeling): "No!"—*Tit-Bits.*

**Ideals.**—MAGGIE (aged 6): "My ideal uv a man is a soda-water clerk; dey's simply perfect!"

KATIE (aged 8): "How young you are! Jes' wait till yer old enough ter go ter a circus and see a guy wot kin turn three somesaults over seven elephants and a camel!"—*Puck.*

## Current Events.

### Foreign.

CHINA.

June 10.—The United States Government formally communicates to the foreign powers the impossibility of joining in a joint guarantee for the payment of the Chinese indemnity; Count von Waldersee arrives at Tokyo.

June 14.—It is announced that the recent communication between the cabinets at Washington and other capitals has not resulted in any agreement on the question of the Chinese indemnity, and the matter has been recommitted to the ministers at Peking; Sir Claude MacDonald, ex-British minister to China, reaches San Francisco on his way home.

SOUTH AFRICA.

June 11.—Mr. Kruger issues a statement disclaiming knowledge of any peace negotiations alleged to be proceeding with the Boer leaders.

June 13.—A. J. Balfour, answering a question in the British House of Commons, declares there is no foundation for the rumors afloat of peace negotiations with the Boers; General Pultenay captures a party of Boers on the Swaziland border.

June 14.—Mrs. Botha arrives at The Hague, with a view to conferring with Mr. Kruger.

June 15.—General Eliot engages De Wet near Vrede. British and Boers both losing heavily.

June 16.—Two hundred men of the Victorian Mounted Rifles are captured by the Boers

# Spanish-French-German

SPOKEN, TAUGHT AND MASTERED IN TEN WEEKS THROUGH OUR

# Language Phone Method

AND

## Marvelous Speaking Records

Any person can, at his own home, Without a Teacher, in spare moments acquire perfect conversational fluency in Spanish, French or German.

THE Rosenthal Common Sense Method of Practical Linguistry, which we use, has been endorsed by 853,000 pupils and teachers as the only system by which a Practical Speaking Mastery of Foreign Tongues can be acquired. We give our students not only the complete text books of the "Common Sense Method" but by our Language Phone, Listening Device, and Speaking Records, bring the living voices of Dr. Richard S. Rosenthal and his staff of able professors, who speak to you and teach you, at any moment most convenient to you, just as if you were in our own class-rooms.

**Pronunciation must be heard in order to be imitated. This problem we have solved**

By our combination you learn to speak from the very first lesson in connected practical sentences adapted to your every day necessities and desires. No arduous, discouraging efforts necessary. You study at spare moments the living voices of Dr. Rosenthal and his assistants enabling you to hear every word clearly, repeating each word or sentence thousands of times. You cannot help learning to speak, and absolute mastery is attained in a marvelously short time.

## Prevention of Disease.

### Keep the Stomach Right.

It is surprising what a safeguard a healthy stomach is against disease. And again it is not so surprising when it is remembered that the only way to get pure blood, strong nerves and firm flesh is from wholesome food, *well digested.* It is the half-digested food that causes the mischief. When the stomach is weak, slow, inactive, the food lies in the stomach for hours, fermenting, forming gases which poison the blood and the whole system, causing headache, pains in the back, shoulder blades and chest, loss of appetite, palpitation, biliousness.

The safest cure for indigestion is Stuart's Dyspepsia Tablets, composed of vegetable essences, fruit sal s, pure pepsin, and Golden Seal. Dissolve one or two of these tablets in the mouth after each meal. They are pleasant-tasting and mingling with the food so assist the weak stomach that the food is perfectly digested before it *has time to ferment.*

Stuart's Dyspepsia Tablets cure indigestion and increase flesh because they digest flesh-forming foods like meat, eggs, etc.

Sold by druggists at 50 cents per package. Absolutely safe and harmless.

*Direct From Our Factory*

## The "Graeme" Handy Box Seat

Renshaw, Boyce, Va.; W. R. Coumbe, Lakeland, Fla.; A. H. Cherry, Salt Lake City; W. W. Stevens, Youngstown, O.; G. Middleton, Savannah, Ga.

Comments (562): "Very good"—M. W. H.; "Some good points; but on the whole below the standard"—M. M.; "An excellent key"—G. D.; "One of the best and hardest 2-ers that has appeared in the Chess-column of THE DIGEST"—J. G. L.; "Good, but not difficult"—W. W. S.; "Quite easy"—J. H. S.; "Beautiful"—A K.; "Not in the usual line; but all the more pleasing"—A. De R. M.; "Not very difficult, Black hasn't much defense"—H. W. F.; "Of first-class merit"—J. H. R.; "A good one"—A. O. J.; "Key well concealed"—H. M. C.; "Very easy"—H. E. D.

(563): "Excellent"—M. W. H.; "A fine 3-er. The key is below the average, for the Kt is so obviously out of play that we perceive, at once, that he is to make the coup"—M. M.; "Wonderfully fine and delightfully difficult throughout"—W. W.; "Rather baffling at first sight"—G. D.; "Well deserves the prize"—J. G. L.; "Excellent and with key well hidden; only the uselessness of the Kt on Kt 8 indicates that it should be moved"—W. W. S.; "Tough; marvellously complex and accurate; the work of a master"—J. H. S.

In addition to those reported, W. W. and T. H. got 560 and 561; W. R. C., G. M., W. W. S., 559, 560; A K., 562.

### "Worthy Homer Nods."

We are under obligations to Dr. E. M. Sala, Rock Island, Ill., for the score of his game with Dr. Lasker. It is the only game that Lasker lost out of seventeen played simultaneously in the Davenport Chess-Club, on May 23. Notice has been called to the fact that the majority of players get frightened when playing with a person of Lasker's distinguished ability. Evidently Dr. Sala was not scared at all, judging from the way in which he went at the Champion, and the wind-up puts the Doctor among those who do brilliant things—from his 22d move there is an ever increasing blaze of glory.

VOL. XXII., NO. 26 NEW YORK, JUNE 29, 1901 WHOLE NUMBER, 584

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given**.

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**PUBLISHERS' NOTE.**

The index of Vol. XXII. of THE LITERARY DIGEST will be ready before July 15, and will be mailed free to subscribers whose application for indexes are already on file in our office. Other subscribers who wish to be supplied regularly with the indexes in future will please send us a postal-card request to that effect.

PUBLISHERS OF THE LITERARY DIGEST,
30 Lafayette Place, New York City.

## TOPICS OF THE DAY.

### TARIFF SKIRMISHES WITH RUSSIA AND ITALY.

THE renewed tariff friction with Russia and the little unpleasantness of the same kind with Italy are considered by the newspapers to be not so serious in fact as in possibility. Count Cassini, too, the Russian ambassador at Washington, said last week in a newspaper interview: "I deplore these small commercial issues that have arisen, as they are like small pin-pricks, not very serious in themselves, yet irritating in the general condition of good relations." To sketch the matter briefly, Secretary Gage, finding that Russia paid what was virtually an export bounty on sugar, levied a countervailing duty on Russian sugar imported into the United States, as he was directed to do by the Dingley tariff law. The Russian Government took umbrage at this, and, in turn, laid a heavy additional tariff on American machinery imported into Russia. This was in February; and many newspapers seemed to fear that our export trade with Russia in this class of goods would be ruined; but subsequent reports show that they are still going there in large quantities, and it may turn out that the only result of Russia's action will be that the Russians will have to pay more for their machinery. Soon afterward the Russian Government decided, for some reason not made very clear as yet, to levy a tariff on American petroleum, and Secretary Gage, as directed by the Dingley law, levied a similar duty on Russian petroleum. Now Russia and the United States are the two great petroleum-producing countries of the world, and, as the New York *Journal of Commerce* says: "We import no Russian petroleum; it is not in the least likely that Russia imports any of our petroleum." Russia resented our tariff on her petroleum, however, and last week Count Cassini notified Secretary Gage that Russia has increased the tariff on colophony, galipot, brewer's pitch, and bicycles. Why M. De Witte, the Russian Minister of Finance, hit upon this odd combination of articles has not been explained. The records do not show that any brewer's pitch has been sent to Russia recently, or any galipot, but about $220,000 worth of colophony (rosin) and $75,000 worth of bicycles were exported to Russia last year. The total loss of this trade, says the New York *Tribune*, "would not figure perceptibly in our annual trade returns, and would scarcely be felt by the houses engaged in those particular branches of our export trade."

So much for Russia. As for Italy, Secretary Gage found a short time ago that Italy was paying an export bounty on sugar, so he levied on Italian sugar entering this country a countervailing duty equal to the amount of the bounty, as directed by law. Italy resents this, and has raised the duty on American plows with one wheel by changing their classification from agricultural implements to implements of art and industry. Whether these small tariff differences with European countries will develop into anything grave remains to be seen; some of the newspapers think they are surface indications of a European hostility to our trade that may some day take on a serious aspect.

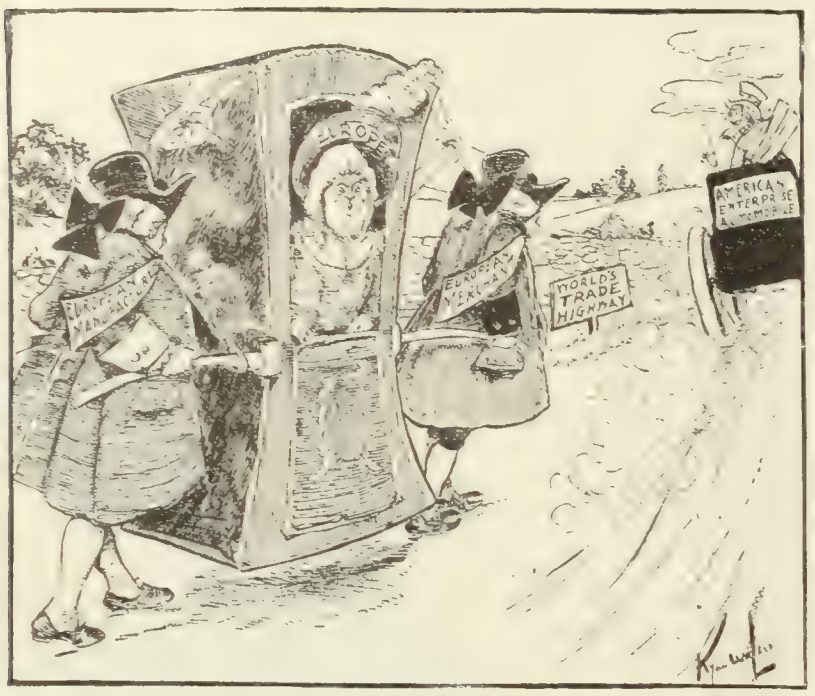
The Boston *Transcript*, for instance, remarks that the Russian reprisals cast "a broad, unveiling light on the claim of Russia to great friendship for the United States." The Pittsburg *Commercial Gazette* says: "We would just as soon quarrel with Russia as with any other nation we know of, and if the Czar and his advisers want to hear the eagle scream they will be accommodated. . . . If the Russians are hunting trouble, they are coming to the right place to find it." The New York *Tribune*, in a similarly independent tone, says: "There is no provocation to Russia in the tariff policy of the United States. We may confidently assume there will be none. But neither will there be any supineness. The United States tariff laws will continue to be made, interpreted, and executed at Washington, and not at St. Petersburg. The United States will continue to give to Russia the 'most-favored nation' treatment, expecting, of course, the same in return. More than that it can not give, in justice to itself and to others, and more than that Russia surely will not ask." Says the New York *Press*:

"Let us make no mistake about it; the two great tendencies which are to wrestle for the mastery of the East are American trade expansion, seeking the preservation of the Chinese empire, and Russian territorial annexation, seeking its dismemberment. Herein is a great, probably the principal, source of the Russian hostility which, in striking contradistinction to the traditional policy of his Government, M. de Witte has so frankly revealed. As the conflict is irrepressible beyond a doubt, we thank the honorable minister for assisting us to enter it with open eyes and without a remaining particle of the 'traditional friendship' myth which has so long beguiled so many of our people."

The New York *Journal of Commerce* makes this comment:

"Of course Russia has a right to impose any duties it likes upon imports; we have the same right and make pretty free exercise of it. But a discrimination against our goods as compared with those of other countries is a very different thing; it is subject to the agreements of commercial treaties, and to those Secretary Gage has called the attention of Secretary Hay. To retali-

ate upon us for levying a duty on Russian oil, which is levied solely because Russia has already levied a duty on our oil, is the most impudent act that a government could perform. Of course this petroleum altercation would never have arisen but for the sugar controversy. In regard to sugar we are treating Russia precisely as we are treating other countries; we are simply offsetting her bounty as we offset the bounty allowed by all countries that assist exports, and putting Russian sugar on an equality with German, French, Austrian, Dutch, and Italian sugar. Russia is attempting by the use of her tariff, as she has attempted elsewhere by the use of troops, to secure exclusive privileges for her trade. By shifting the burden of the export bounty on sugar from the public treasury to the pockets of the domestic consumers, Russia seeks to pose as a non-bounty-paying country at the very moment that she is participating in conferences of the bounty-paying countries and objecting to the abandonment of the bounty system. Of course if Russia did not pay a bounty she would be more anxious than any other country to have bounties abolished; yet she is the one obstacle to the abolition of the wasteful system. And if we defeat her efforts to secure special privileges for her exports, then she will attack our trade wherever she sees a chance. Valuable as our Russian trade is, our national self-respect is worth much more to us."



OLD LADY EUROPE. "Lud! Something's just gone scooting by us!"
—*The St. Louis Republic.*

## SIR THOMAS SUGGESTS AN OCEAN RACE.

THE proposal of Sir Thomas Lipton that the *Constitution*, the *Independence*, the *Columbia*, and the two *Shamrocks* race across the ocean under yawl rig, with each owner sailing his own craft, has brought out some interesting remarks. The New York *Tribune* declares that the suggestion "has the exhilaration of champagne in it," and goes on to say:

"Even in the most important yachting season that has ever been known this may be rightly called the greatest proposal of the year, and it incidentally provides a keen reply to the croakers on both sides of the ocean who have been deploring the alleged tendency of modern yacht designing to produce unseaworthy racing machines. Sir Thomas Lipton's compliment to his designer, Mr. Watson, is none the less eloquent because it comes by implication. He says, in effect: 'I have a boat that can do the trick. She is built of steel, and can defy any storm. I will race her across the ocean against anything that is pushed by sails.' Mr. Thomas W. Lawson says: 'I have a world-beater, and I will race anything in existence from Hull to Heligoland.'

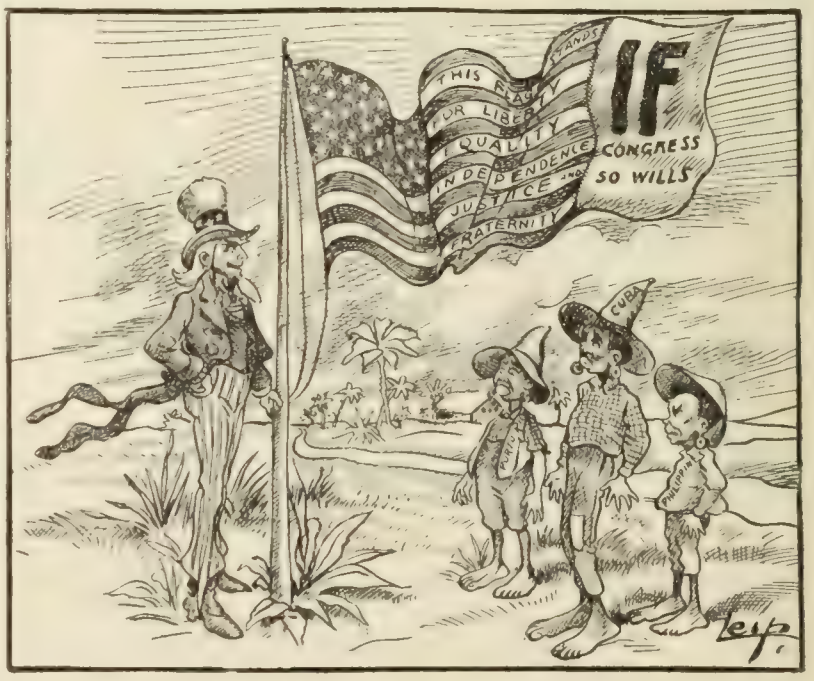
"It must be delightful to be able to talk in this large, Homeric way, and even those who only stand and wait can grow deep-chested with the breaths that the large game brings. What a proposal! From shore to shore with the big racing sticks on end! Four hundred mile runs with the spinnaker winged! Balloon jibs to the truck for a thousand miles! Truly, a sport for the princes of the earth and the masters of the sea!"

The Boston *Advertiser* says, somewhat satirically:

"What does Sir Thomas Lipton mean by proposing a race across the ocean? Does he seriously think that the N. Y. Yacht Club would consider the question for one moment? No wonder that the commodore of the club characterizes the offer as a 'wild proposition.' It is just that, from the New York point of view. The peculiar deed of gift is framed with the very idea of making the challenger a boat so heavy that it will be handicapped in the cup races. The restriction on the challenger is not only that its dimensions must be given to the cup-holders, but also that it must be sailed across the ocean under its own canvas. The cup defender is built as light as possible, and probably no perfectly sane man would dare to take the frail machine into deep water during a storm. The present deed of gift is a beautiful exponent of the stock-jobber's motto: 'Heads, I win. Tails, you lose.'"

## CUBAN PAPERS ON THE ACCEPTANCE OF THE PLATT AMENDMENT.

THE reports from Cuba do not show that any noticeable public excitement or disturbance has followed the Constitutional Convention's acceptance of the Platt amendment. Some of the Cuban newspapers, however, voice very decided opinions on the subject. *Patria* (Havana), for example, declares that "in the eyes of all honest men of all countries and of all times the Platt law will never be anything else than a monument of hypocrital covetousness, an act of covert violence and a tremendous offense against the independence of the Cuban people, who confided too much in the righteousness of those who appeared before them as disinterested friends, to transform themselves, when once in the house, into the enemies of their honor, of their happiness, and of their rights." *El Mundo* (Havana) also says in substance that Cuba has made a shameful sacrifice, and all to no effect, as the United States will give nothing in return; and *El Diario* (Havana), in a similar tone, observes: "One thing must be remembered, that since the battle of Santiago we have been and shall always be at the absolute mercy of the conqueror, and all we can hope is that the Americanization of Cuba may be less rapid and less disastrous for us than the expansionists of the great republic desire." *El Nuevo Pais* (Havana), however,



FLAG DAY IN THE DEPENDENCIES.
—*The Detroit News.*

takes the more hopeful view that now "the republic of Cuba will be established upon firm foundations, safe from external and internal ambitions," and it urges that factional differences be reconcile.

The approaching withdrawal of the United States troops recalls to some of the Cuban papers the fact that in a number of

towns and cities election riots have been prevented heretofore only by the presence of our soldiers, and these papers intimate a belief that it would be better for the island if our forces remain. *La Lucha* (Havana), for example, declares that it "is directly proved by the facts" that "without the steadying effect of the American troops in Cuba, election time would be the signal for a series of disturbances and riots right through the island," and it goes on to predict that "the ignorant rabble, the plaything of its own impulses, will, without the restraining presence of the Americans, stop short at nothing, and every town, especially in the Oriente, will become during election time a chaos of passions run rife." *La Realidad* (Havana) also fears that the new republic may not appear to advantage at election time, and it urges the convention, in framing the electoral law, to restrict the suffrage. "Universal suffrage," it declares, "is universal anarchy."

## CIVIL GOVERNMENT FOR THE PHILIPPINES.

THE President has chosen the Fourth of July as a fitting date for handing over to Judge Taft, as civil governor of the Philippines, such portions of the archipelago as are ready for civil rule. The portions not yet peaceful enough for civil government will be under the rule of General Chaffee, the new military governor. As Secretary Root's order puts it:

"On and after the 4th day of July, 1901, until it shall be otherwise ordered, the president of the Philippine commission will exercise the executive authority in all civil affairs in the government of the Philippine Islands heretofore exercised in such affairs by the military governor of the Philippines, and to that end the Hon. William H. Taft, president of the said commission, is hereby appointed civil governor of the Philippine Islands. . . . .

"The military governor of the Philippines is hereby relieved from the performance on and after the said 4th day of July of the civil duties hereinbefore described, but his authority will continue to be exercised as heretofore in those districts in which insurrection against the authority of the United States continues to exist, or in which public order is not sufficiently restored to enable provincial civil governments to be established under the instructions to the commission, dated April 7, 1900."

AFTER THIS ALL WILL BE EASY.
—*The Indianapolis News.*

The Philadelphia *Press* (Rep.) remarks that "this great consideration for the Filipinos is in line with the President's course from the beginning," and it adds that "military rule will be as light as possible, and the Filipinos will themselves participate in their own government, just as the Cubans are doing. It will be such a blessing as the Filipinos have never before experienced, and will unquestionably soon bring peace, contentment, and prosperity to the people of the Philippine Islands." The Brooklyn *Standard-Union* (Rep.), in a similar vein, says:

"Not the most virulent and narrow-minded 'anti-imperialist' can accuse the McKinley Administration of undue slowness in carrying out its announced purpose to establish civil government in the Philippines. If there is any fault it is in the direction of going too fast. The risks are undeniable. We really know very little as yet of the true Filipino character—there has not been time enough to fairly test it—and recent disclosures regarding the prevalence of Oriental ideas among the native magistrates as to bribe-taking from litigants are somewhat discouraging, it must be confessed. Yet it would be absurd to expect that the Filipinos could throw off the influences of ancient traditions and of semi-barbarous environment in a few months, or even years. Then it must be remembered that whatever of modern civilization exists in the Philippines has been introduced by the Spaniards. All judicial procedure is according to Spanish law, and for a long time yet the Spanish language must be used in court proceedings as well as English. It will take years of teaching and experience to Americanize the Filipinos, and manifestly we could not wait so long before abolishing military rule."

JUDGE WILLIAM H. TAFT,
Civil Governor of the Philippine Islands.

**The Referendum in South Dakota.**—The failure of the first attempt to refer acts of the legislature to the people under the new referendum law in South Dakota presents some features of interest. Under the new provisions, five per cent. of the voters can by petition require any law to be submitted to the people, provided the petition is presented within ninety days after the adjournment of the legislature. In the present instance the direct-legislation advocates attempted to secure enough signatures to enforce the demand that two of the laws passed at the recent session—one referring to an unpopular scavenger tax, the other to a county commission measure—be submitted to the voters of the State. They were successful in getting the signatures of only about four per cent. of the voters, so the demand fell through. "The people in South Dakota evidently feel that they have sufficient referendum in their privilege of reelecting or defeating members of the legislature," remarks the Topeka *Capital*; "the new law will remain a dead letter." In similar spirit, the Chicago *Chronicle* declares that the incident "shows that even in a late Populistic State the people do not want the 'referendum.' The humbug has collapsed in the special atmosphere selected by its advocates for a test." On the other hand, the Washington *Post* says:

"This failure strikes us as more of a vindication than condemnation of the referendum. It simply shows that in the case of one act the people generally are satisfied. That will quiet the small minority of dissenters. In another case there may be such wide dissatisfaction with an act that the voters in large numbers will call for its submission. We think the South Dakota five per cent. is much too small. It should be raised to at least thirty

per cent. But that does not affect the principle involved. This experiment has not finally disposed of the referendum. 'The humbug' has not totally 'collapsed.'"

## DEATH OF HAZEN S. PINGREE.

DURING his seven years as mayor of Detroit and his four years as governor of Michigan, Mr. Pingree, who died in London on June 18, became, in the words of the Chicago *Tribune* (Rep.), "one of the most conspicuous, original, and dynamic figures in contemporary American public life." The following sketch of his career is condensed from the newspapers:

Hazen S. Pingree was a native of Denmark, Me., and was at the time of death sixty-one years old. At the close of the Civil War, in which he participated, he settled in Detroit, and worked at shoemaking until he had saved enough to start a small factory of his own, in partnership with C. H. Smith. He built up his business until it employed one thousand men and had an annual output of $1,000,000, and when he entered politics twelve years ago he was a wealthy man. His political career was one of great intensity and picturesqueness. When he was first nominated for mayor of Detroit in 1889 by the Republicans, he had a normal Democratic majority of 3,000 to overcome. He entered the campaign with tremendous energy. There was hardly a voter in Detroit he did not reach in one way or another. He won by a large majority, and began a public career which lacked no elements of sensationalism. He antagonized great interests, and was bitterly attacked by his political enemies. He effected reductions in the gas rate, car fares, and telephone rates, and made a determined, tho unsuccessful, effort to secure municipal ownership of the street railroads. He also reformed the contract system, repaved the city, started a public lighting-plant, and when the hard times of 1894 came on, he threw open vacant land in the city for the poor to use in gardening, which won for him the title of "Potato" Pingree.

HAZEN S. PINGREE.

Mr. Pingree was first elected governor of Michigan in 1896, after serving continuously as mayor of Detroit seven years. He was reelected governor in 1898 and retired in 1900, after many stormy struggles with the legislature. While the Michigan Republican machine had become entirely alienated from him, he retained much of his popularity among the masses, and a great public reception was being planned for him on the occasion of his return from Europe.

Since Mr. Pingree's death, it has come to light that his recent transatlantic trip was undertaken largely for the purpose of putting into practical effect two gigantic schemes for the benefit of his State. The first was a plan for the reclamation of the immense pine waste in Michigan. He went to the Bavarian Black forest to make observations for such a project. The second was a plan for the rotation of crops, which took him to Egypt. He also went to South Africa in the interest of plans for Boer emigration to this country.

"This man really tried to do something for others," remarks the New York *Journal* (Dem.); "he was laughed at for his efforts in his lifetime. He is honored after death and will be honored long after the selfish fools who mocked him shall have long been forgotten. The news of his death will bring satisfaction to everybody who hopes to make a fortune by robbing the people in the State of Michigan, and will bring sorrow to hundreds of thousands of the poor who profited by his aiblity and honesty." He was a "unique figure in our politics; a crank who succeeded," adds the Brooklyn *Eagle* (Ind. Dem.). The Chicago *Evening Post* (Rep.) says:

"His methods were spectacular, and to many he appeared insincere, self-seeking, offensively egotistical, and, in a word, a demagog. But he was not a demagog. He was earnest, but narrow. He saw certain evils in politics and society, and jumped at the conclusion that those who failed to see them, or who had different views from his as to the right remedy, were either conscious knaves or fools. And what he believed he bluntly expressed 'in open meeting.' . . . At bottom he had a strong sense of justice and of fair play. He would have played a far more useful and conspicuous (as distinguished from notoriety) part had he been less erratic and more reasonable and sane.

"His was a picturesque, remarkable, and peculiar life. He will be remembered by his city and State more for his undertakings than for any solid legacy traceable to his official career."

The Detroit papers, which during his lifetime were full of invective and satire directed against him, pay only kindly tribute to him since his death, and are already beginning a movement to perpetuate his memory in a monument. "Mr. Pingree was in many respects the most remarkable personage who ever loomed up in American politics," says the Detroit *Tribune* (Rep.). "He was a distinct innovation, a bold and defiant departure," declares the Detroit *Free Press* (Ind.), but his individual creed was "an inspiration rather than a rule of action." The Detroit *News* (Ind.) says: "He was the type of man behind whom half of medieval Europe might have marched on a crusade to Palestine. In another state of society he might have founded a religion or an empire. In the closing years of the nineteenth century, he spent his force against such social abuses as contact had forced upon his attention, and he left indelible marks upon them."

## CONTROLLER COLER'S VIEW OF "PROFESSIONAL REFORMERS."

AS the political caldron in New York begins to warm up with the heat of the approaching fall election, the effect on the various public men who have been "mentioned" for the mayoralty is decidedly interesting. It is not thought unlikely by some observers that Tammany may place at the head of its ticket Controller Bird S. Coler, who has won fame by the close guard he has kept over the New York city treasury. This fact lends a good deal of interest to an article Mr. Coler writes for *The Independent* ridiculing the "professional reformers," who try to cleanse the city in what he regards as a blind and fanatical manner, and who favor the enactment of "puritanical" laws that public sentiment will not support. As Mr. Coler himself has sometimes been denounced by certain of his fellow Democrats of New York as a visionary who does not understand rightly the great fundamental principles of "practical politics," his view of those who are still more visionary becomes all the most interesting. The professional reformers, he says, are "well-meaning but narrow-minded men who are constantly agitating for the correction of political or social conditions in large cities," and he adds that "their mistakes are so apparent to the public and so fatal to the end in view that the wonder is that these men go on year after year in the same useless and hopeless way." He continues:

"It seems they can not learn from experience or accept a new idea, but must blunder along the mistaken way of denunciation,

often blocking and delaying progress toward better civic conditions. These men are always against something, never for anything. Their only policy is destruction; their platform is denunciation. The science of government or finance is to them a closed book. They consider themselves competent to cope with any proposition without the experience or preparation. Being better than all in their own opinion, they think that whatever they may conceive is infallible.

"In every large city we find banded together in social organizations or clubs with a semi-public purpose a number of citizens who, as a whole, are rather proud of the designation, usually applied in ridicule, of 'the better element.' At frequent intervals these men, in person, or through hired agents, make a hasty and superficial examination of some particular political condition, or some department of the city government, find something wrong, somebody corrupt or incompetent, and they at once inaugurate a 'reform movement.' Their movement is invariably aimed at some particular party or person, or at some isolated situation that does not fairly represent municipal affairs as a whole. They assail and denounce with violence and persistence, and in all sincerity promise honesty and economy if they can gain control of the government. Their constructive declarations always begin and end with honesty and economy. They seem to believe that the vast and complicated machine of municipal government may be properly regulated and operated by the policy implied in those two words.

"At the outset such reformers make a fatal mistake. Admitting their perfect honesty and nobility of intention, their actions invariably prove their utter ignorance of the work they have undertaken. As a rule they have little or no general knowledge of the vast social, political, industrial, and economic conditions and problems involved in the regulation of all the affairs of a great city. A slight disturbance at one point has revealed to them the fact that the water of the pool is foul and unclean. They promptly seize sticks and poles, disturb the pollution below the surface, turn some of it up to the light, scatter the poison, then retire to the safe seclusion of their individual respectability, leaving the disturbed water to settle back to its former condition."

Mr. Coler's opinion of "blue laws" and "puritanical" legislation may be seen in the following paragraphs:

"With some show of reason the name of reform in the government of the great cities of this country has come to be regarded as synonymous with bigotry and intolerance, a reputation fatal to the best efforts of the wisest men. The blue laws of Puritan New England and the intolerance of the egotistical virtue of Pharisees can never again be successfully enforced or peaceably endured in the great cities of America, where all races, creeds, and social conditions are so largely represented in the population, and each is a political factor strong enough to command consideration. The reformers who would make their own standard of personal virtue the public standard, and limit personal liberty to their own horizon of unreasoning intolerance, are so many stumbling-blocks, delaying the real improvement of political and social conditions in large cities. Personal liberty without license must be preserved and extended rather than suppressed. The spirit that demands it is dominant in population and voting strength in every large city, and ill-advised attempts to curb or suppress that spirit will result in outbursts of vice and crime dangerous to good order and fatal to good government.

"The professional reformers, when they enter politics, present platforms built of stale platitudes which, reduced to their substance, mean something like this: 'We would suppress gambling and the social evil, eradicate vice of all kinds, enforce all Sunday laws, make the city good and virtuous by force, reduce expenditures and taxation, and conduct the public business honestly and economically.'

"The first three propositions are impossible to a very large extent until human nature itself is changed. The absolute enforcement of the Sunday law is not desired by nine-tenths of the population. The fifth is absurd, and the others may mean anything or nothing, therefore the entire platform of the professional reformer is a mistake, or a mass of unreasonableness and impossibilities."

Some "professional reformer," after reading all this, may feel led to ask what he may do. Says Mr. Coler:

"The great charities of the city—the never-ending fight to save the waste humanity, ever pouring out of crowded habitations and the mills of unfortunate environment—to save that humanity while it is young and train it into material for intelligent citizenship—there is a field for true reform, a task for the combined effort of constructive statesmanship and broad philanthropy. The reform that will succeed must be a movement with a broad and liberal policy for building up, not a mere negative force to stop progress in order to show a smaller expense account. It must be a movement broad enough to embrace all the vast and complicated interests that must be wisely managed in order to produce better citizenship as well as better politics and cheaper government. The spirit of intolerance and narrow-minded economy is not reform."

## A JUDICIAL DECISION UPHOLDING BLACKLISTING.

THE decision of Judge Waterman, of the superior court of Chicago, following that of Judge Baker, of the same court, in a case originating in a strike of packing-girls at the stockyards, establishes the right of employers to maintain a black-list against working-people who have taken part in strikes or otherwise made themselves "objectionable." In arriving at this conclusion, Judge Waterman declares that "it is now the undisputed right of every man to determine upon what terms he will work, and no inquiry can be made into the motives which induce him to refuse to labor more than certain hours." Moreover, "the fact that the refusal to work is in pursuance of a combination" does not alter the rights in the case. In the same way, employers are within their legal rights in acting in concert for the purpose of refusing to employ any person or class of persons. The existence of an intent to injury, on either side, is immaterial, for "if an act be lawful, it is not actionable, however intentional or malicious it may be." The judge continues:

"The consequence of a refusal to employ any man may be deleterious and pitiful; so the consequence of refusing to work for another may be disastrous and ruinous; but the fact that one refuses to employ another because he wishes to see him come to want, or that a man refuses to work for another because he wishes to see his business broken up and him thrown into bankruptcy, does not give a cause of action."

The Chicago *Evening Post*, commenting on this decision, calls attention to the "essential similarity" between blacklisting and boycotting, and shows that under the provisions of this ruling labor has the same right to the boycott that capital has to the black-list. "The law only asks," it says, "that the contending interests shall remain within the limits of equality of rights." The Chicago *Chronicle* adds:

"This repeated declaration of the law will be useful as a warning against the impulse to precipitate labor wars. The employee will learn that if he strikes he can not use the law to enforce a reinstatement in the place which he abandoned nor to collect damages if he is refused reemployment.

"Employers will learn that employees have the legal right to work or not, as they may choose, either individually or as organized bodies. The atmosphere is cleared.

"All sides can see the duty of moderation, of conciliation, of a just regard for the rights and welfare of all. That should be the fruit of these reiterated decisions."

The issues involved from the standpoint of the wage-earner are thus vigorously stated by the New York *Worker*:

"In times of strikes we hear a great deal about the 'right to work.' The capitalist judges, politicians, and editors loudly proclaim the inalienable right of every man to work when and where and how he will, and denounce the 'tyranny' of the trade-unions which seek to abridge this right by establishing rules that men must not work for more than specified hours or for less than specified wages, and that one workingman shall not take the place of another who has gone out in resistance to aggressions on the part of the employer.

"But when it is a case of blacklisting, as in Chicago, or of a

lockout, as now in Dayton or in the building trades in this city —when capitalists make an agreement not to employ members of trade-unions or persons who have had the impudence to resist the lowering of wages—the right to work is forgotten and the same capitalist apologists are loud in their defense of the 'right to organize.'

"Thus it appears that, in the mouths of the sufferers of the present system, the 'inalienable right to work' means only the right of capitalists to employ scabs, and the 'inalienable right of organization' means only the right of capitalists to conspire to starve workingmen or poor, defenseless working-girls into abject submission. And this interpretation is upheld by the power of government in the hands of both Republican and Democratic parties."

## BOOKER T. WASHINGTON'S STORY OF HIS LIFE.

BOOKER T. WASHINGTON'S simple and unaffected autobiography presents a striking contrast to the sweeping arraignment of the American negro by W. H. Thomas (in THE LITERARY DIGEST, February 9). Both these men are of African blood, each is unusually intelligent, and each has had superior advantages in studying his own race. Their diverse conclusions show that the race problem is far from being a simple one.

Booker T. Washington was born a slave on a plantation in Franklin County, Va., either in 1858 or 1859. He does not know who his father was, but believes that he was a white man, as his mother had intimated so much to him. His life had its beginnings in the midst of the most desolate and miserable surroundings. Born and brought up in rags, in an open log cabin, with earth for a floor and with very little food, yet, he says, his lot as a slave boy was comparatively easy. When he was large enough to carry his young mistress's books to school for her, he saw the white children studying books, and the scene put into his head the determination that he, too, must learn to read. A "Webster's Blue-Back Spelling-Book" came into his hands, and, unaided, he learned the alphabet and in a little time was able to read.

Soon after emancipation his mother took him to West Virginia and put him at work in a salt-mine near Charleston. The number 18 was stamped on all the salt barrels, and after much effort he succeeded in mastering these figures. While here, he got the chance to attend a school by working early and late in the mine. He remarks that one of the ambitions of negro school-children was to wear fancy headgear. He had all his life gone bareheaded, as he was not able to buy a cap, and he tells with much pride how his mother made his first cap out of an old blanket. He was never called by any other name than Booker up to this time, altho his stepfather's name was Taliaferro. When he entered school, he heard the children giving as surnames the names of distinguished white families. He cast about in his mind for a name for himself when his turn come. Booker alone, he knew, would not do. Washington seemed to be the most appropriate he could think of on the spur of the moment, and thus came his name Booker Washington, the T., for Taliaferro, afterward being used.

The little learning that young Booker received at this school whetted his ambition for more. He never for a moment, even during his long, laborious hours in the salt-mine, surrendered his determination to have an education. One day he overheard some men speaking of a place called Hampton Institute where negroes could be educated. He was now only twelve, and had no idea where Hampton was and how he could get there, for he had not a dollar; but he went to his mother and told her he was going to Hampton. His plan was not looked upon with favor; but, with a bag of clothing on his back and a very little money, he started out to make his way as best he could across the mountains of two States to Hampton. When the lad of twelve reached Richmond, it was the first time he had ever been in a city; he was penniless and in rags, and he tells how he wandered about the streets hungry and was turned from every door where he asked for food. At last, exhausted, he crawled under the shelter of a wooden sidewalk, and, putting his bag of clothing under his head for a pillow, fell into a sleep which was often broken by the tramp of pedestrians above his head. Years after, when the negroes of Richmond gave him a great reception, his mind was more occupied with the memory of that sidewalk than with the reception.

After his broken sleep the lad saw a vessel being loaded at the wharf. On begging the captain for work he was given a trial, and he did his work so well that, when ready to leave for Hampton, the captain begged him in vain to stay. Young Washington was not received with open arms at Hampton. The institution was overcrowded with students who had to depend upon working their way. Finally, one of the lady principals asked the boy to sweep a hall. He swept and dusted the place four times, sweeping absolutely every square inch in sight. After it was done the lady took out her white handkerchief and went rubbing here and there, but she failed to find a speck of dirt. She turned to the young sweeper and remarked: "You will do; I will appoint you janitor of the building." Booker T. Washington declares that it was the happiest and proudest moment of all his life. He had literally passed his entrance examination into Hampton Institute with a broom; as janitor he earned his board; a kindly friend paid his tuition; he was clothed out of gift-barrels of second-hand clothing sent from the North; and his books were borrowed from his mates. Never before had he sat at a table to eat his meals, slept on a bed between two sheets, or enjoyed the pleasure of a bath-tub or tooth-brush. The use of the tooth-brush seems to have made a deeper impression upon his imagination than any other article of the toilet. He often refers to its value, and says that he has great hope of a student if he buys a second brush after wearing out the first.

Tuskegee Normal and Industrial School is wholly the conception and creation of Booker T. Washington. He went to Tuskegee upon the invitation of two gentlemen of the town and began teaching school with thirty pupils in an old tumble-down shanty. Soon he obtained money enough to buy an old plantation in the neighborhood. He used the dilapidated houses until, with the aid of his teachers and students, he could put up one or more of the splendid buildings which now shelter his scholars. Every stroke of work on these buildings was done by the school itself, and it was after three complete failures, the expenditure of the last cent of money, and the pawning of Mr. Washington's watch for a few dollars that his young men succeeded in making bricks that would do to put into a wall. Brick-making, brick-laying, carpentry, shoemaking, furniture-making, electrical work, tailoring, blacksmithing, cooking, farming, and, in fact, all the chief trades, are now taught.

Mr. Washington admits that beside securing money to run the institution, nothing else has been so difficult as to teach young men and women who attend this school that it is necessary for them to learn some trade. Most of them come to the school with the idea that the chief value of an education is to enable one to avoid all manual labor. It is a rude shock for a young fellow to enter this institution and to be told next morning that he must go to making brick. A young woman goes there with the expectation of studying Latin and Greek. She is put at work in a laundry and is deeply chagrined. But in spite of the strenuous objections of the parents and the students, the latter continue to come to Tuskegee in ever-increasing numbers, and the institution sends them away at last, not only carpenters and bricklayers, seamstresses and cooks, but men and women.

Mr. Washington says little concerning the negro's social and political status. He is convinced, however, that the negro can not be saved by political agitation. He must work out his own salvation through his industry, his skill, his accumulated wealth, and his general usefulness to society.

A chapter on the raising of funds for Tuskegee contains many humorous incidents. He says he has never begged for money. He has presented the facts about his work and its needs, and such men as the late Collis P. Huntington, Andrew Carnegie, and Morris K. Jesup have only been too glad to help. Boston has been most generous to Tuskegee.

The greatest triumph of his life, Mr. Washington says, was his speech at the Atlanta Exposition. Never before had a negro been invited as the representative of his race to speak from the same platform with Southern white men. He felt painfully the great responsibility of his position. His task was an extremely delicate one. He must not offend the white people of the South, he must not offend his own race, nor the people of the North, and yet he must be absolutely sincere and honest in his words. He had the supreme satisfaction of making an address that told the straight truth and yet pleased almost every one, and more especially the Southern white people. The Atlanta *Constitution* called it a "platform upon which blacks and whites can stand with full justice to each other." Mr. Washington, after this address, received the most tempting financial offer to go on the lecture platform; but he has made it a rule to speak only when he could make a plea for his race.

## RETIREMENT OF SENATOR T. C. PLATT.

WHILE Senator O. H. Platt, of Connecticut (author of the "amendment" that has just been accepted by the Cubans) is being "mentioned" by some of his friends as a Presidential possibility, Senator Thomas C. Platt, of New York, makes the announcement that he will retire from public office at the close of his term in the Senate in 1903. This announcement from the New York Senator is received by most of the daily newspapers with equanimity, tempered by such reflections as they have been accustomed to make upon the "easy boss" whenever they have had occasion to speak of him. Says the Washington *Times* (Dem.): "In sober truth, Mr. Platt, who holds the Republican Party of New York in the hollow of his hand, has made a most insignificant Senator—a good double for Quay of Pennsylvania, and probably no better than Richard Croker would make. Neither as a debater upon the floor nor as a worker in committee has Mr. Platt developed any strength whatever, and the American public is prepared to witness with perfect indifference his retirement from the Senate at the expiration of his term, or as much sooner as he pleases." The Buffalo *Express* (Rep.), in a similar vein, adds: "His name is connected with no national legislation or Republican policy. The only part of his work as Senator that he has performed with industry and energy has been that of office-broker, and his efforts in this direction certainly have not tended to improve the public service."

The Senator's friends say that he finds the duties of his position so onerous that he has determined to give them up, altho he may continue at the head of the Republican organization in New York State. The Rochester *Post-Express* (Rep.) says, however: "His friends omit to call attention to the fact that one reason for the Senator's retirement is his loss of political power and influence. He is no longer the dictator of the Republican organization in this State, no longer its master, no longer able to control the legislature, and recognizing the fact that he can not possibly win back his old position, he prefers to quit now, when some prestige remains, rather than to be forced out, beaten and discredited, later on. This view of the situation is decidedly creditable to his good sense and political sagacity." Senator Platt has not yet indicated whom he would prefer for a successor. The New York *Times* (Ind.) says on this point:

"The new Senator must be able to get for the organization all the appointments to federal office in the State of New York. He must persuade or compel the President to make such appointments as the organization desires. Its candidates may be blackguards, towering monuments of unfitness; towns, cities, counties, and the public opinion of the entire State may protest against them—all that makes no difference. Mr. Platt is able to get his men in over such obstacles. The new man must be active and energetic in the departments. His footfall must be known and dreaded by every secretary. Shame and squeamishness he must not have. The organization demands that its Senator shall get down into the dirt of patronage-mongering and like it. Platt has always liked it. He has lately been engaged in trying to get a very efficient and acceptable federal officer in this city turned out in order that a henchman of a Senator from another State may get the place and the salary. It is an unspeakably vile business, but Platt's eminence consists in his fondness for it and his very great success in the pursuit.

"Lieutenant-Governor Woodruff has been named among those in waiting for Platt's place. It seems to us that he is a shade too fat to do the necessary running around. What brains and voice were to the old type of Senator legs and wind are to the new. . . . It will be seen that character and dignity and statesmanship would disqualify a Senator for the work the Republican organization demands. A barroom loafer, if he was a hot spoilsman, would fill the bill perfectly, save that barroom loafers are not usually presentable or impressive in White House interviews."

## TOPICS IN BRIEF.

IN MANILA.—The churches will be open to-day as well as the races.—*The Manila New American*, May 12.

THE "General Funston March," a new piece of music, must be full of runs, with no rests.—*The Baltimore American.*

Unfortunately for New York's Committee of Fifteen, it can not raid police headquarters.—*The Philadelphia Ledger.*

HIGHLY sensational reports continue to come from the Texas oil-fields. It is now rumored that a farm has been discovered in the Beaumont district on which there is no oil whatever.—*The Kansas City Journal.*

IT may be through kindness to Sir Tommy that the New York Yacht club refuses to allow the Boston man's boat to race for the cup.—*The Chicago News.*

TIME: 100 years hence. Scene: Liverpool.—Aged British Inhabitant (pointing to liner steaming out of harbor): "That boat, sir, is one of the most remarkable vessels in this country." Stranger: "Indeed! How is that?" British Inhabitant: "It's the only British steamship that doesn't belong to an American syndicate."—*Fun, London.*

THE "FULL DINNER-PAIL" IS HERE.—Prosperous conditions are manifesting themselves in curious ways. The statement is made by a large tinware manufacturing company in a Western city that their trade in dinner-pails has for some time been running heavily to the five and six quart sizes, the largest made. This is distinctly a new development. The dinner-pails in ordinary use are the three and four quart sizes. The inference seems unmistakable that workingmen are able to supply themselves with more food and a greater variety of it for their lunches.—*The Iron Age.*

HARD ON SCHLEY.

The Naval Board of Rewards has stamped Sampson's face on the medals to be worn by all who took part in the fight.

—*The Minneapolis Tribune.*

# LETTERS AND ART.

## THE "DEGENERATION" OF THE ENGLISH STAGE.

FOR several years numerous criticisms of the stage in this country and in England have found expression. One of the best-known of American dramatic critics, Mr. Norman Hapgood, as we pointed out last week, has asserted, in his recent "Stage in America," that we possess only "one high-class theater" in this country—the Irving Place Theater, New York. Similarly sweeping arraignments of the British theater have lately been made by two prominent men practically connected with the stage, Mr. Henry Arthur Jones, commonly regarded as England's leading playwright, and Mr. F. R. Benson, a manager to whom the British drama is deeply indebted. Both, while highly successful in their different fields, agree in condemning the modern stage. Altho trivial plays are rapturously applauded, they point out, the art of acting is dying of disuse; and the single measure of success in the drama, as for the most part in literature, is in the mercenary returns, gained by vast popular successes.

A writer in *Blackwood's Magazine* (June) discusses some of the symptoms of the disease, and its remedy. He says:

"If the theater is ailing, whence comes the malady? The diagnosis is not difficult, since the symptoms are obvious and universal: the drama dies because it has confused its functions; it has wasted its true strength to enhance a spurious beauty, and it resembles a man who should sacrifice both brain and muscle to increase by an inch or two the growth of his beard. As we have before pointed out in these pages, the drama is made up of three elements—the play, the actors, the scenic ornament; and the presentation is only perfect when the three elements are harmoniously composed. The play, of course, comes first, being the one and only excuse for the theater. Actors and the scene are but a means—the best available—of expressing a writer's meaning. If only we could perfect the mechanism of marionettes, the theater were easily reformed; but the awkwardness of puppets compels us to accept the existing materials. A brief retrospect will show that when the theater commanded an intelligent admiration, the poet was an omnipotent and unquestioned master. The simple decoration of the Greek stage was ordained by a holy tradition. The actors, whose heads were hidden in conventional masks, and whose feet were propped on clumsy pattens, could neither ogle nor strut. They were neither discussed nor advertised. Nobody knew their names nor cared about their visages. Their business was to speak clearly and simply the lines intrusted to them by the author, whose supremacy was undisputed. So, too, the actors who entertained the Romans, when leisure came to that arduous people, were commonly slaves or persons of no account, nor did the works of Plautus and Terence need any other embellishment than a rigidly prescribed back-scene. And when the drama was revived after centuries of oblivion, the simple fashion still prevailed. The splendor of Shakespeare depended no more upon the mouthing of an actor than upon the ingenuity of a stage-carpenter. The round O was sufficient for his most splendid effects, and the highest attribute of an actor was 'harmonious elocution.' No foolish attempt was made to 'act' the poet's masterpieces. Even in Cibber's time it was enough to say that Betterton 'spoke' Shakespeare with a finer distinction than any of his contemporaries, while the absence of women from the stage suggests that the vanity of realism was not yet invented. Yet soon after Shakespeare's day the actor and scene-shifter began to raise their heads. Inigo Jones adorned the masques of Ben Jonson with cumbrous machines, and the Restoration insured the ultimate ruin of the stage. . . . . .

"Thus the servant already encroached upon the master's province. The poet, eclipsed by the actor, the carpenter, and the musician, saw his supremacy threatened. The less a limb is used, the weaker it becomes; and when once it was discovered that the actor might be a match for the arrogant poet, the poet began to understand that the stage was not for him. He declined the unequal combat, and appealed not to the theater, but to the study."

And what is the modern actor whom we have received in exchange for the vanished poet? asks the writer. "He is distinguished from the ancient by a gentlemanly incompetence":

"He has had little chance of learning his profession, for if he has been fortunate he has played but a dozen parts in a dozen years. He is educated as often as not, and his manners off the stage are said to be irreproachable. In fact, he has been told by the tongue of flattery that he has but to stride the stage as a drawing-room and his elegance will be patent to all. He has never worked, and it is not altogether his fault. Long runs and railway-trains have extinguished the old stock companies. . . . .

"Yet how many absurdities has the stage revealed during the last decade! We have heard real horses clattering over boards with their real hoofs. We have seen a sham jockey chucked into a sham water-jump from the back of a real winner of the Grand National. We have heard the ripple of a rivulet flowing through the forest of Arden—a rivulet of the Company's water, which traced its source to the nearest tap. We have seen primroses and violets, fresh from Covent Garden, pretending that they had struck their roots into the hard floor of the stage. And the actors never see the incongruity. They believe they are intensifying the illusion, and all the while they are but exposing the hollowness of their art. It is the business of the theater to represent, not to present; and the stage-manager who thinks that 'a real donkey means real dramatic art' is as foolish as a painter would be who, having painted a portrait, pasted a real silk hat upon the canvas."

If the stage is to be reformed, concludes the writer, it will not be by the single device of a national theater; it must be by only one method—"the suppression of the actor and the upholsterer."

## STEPHEN PHILLIPS AND THE PHILISTINES.

MR. WILLIAM ARCHER'S series of "Real Conversations," which appears monthly in the London *Pall Mall Magazine* and the New York *Critic*, deals this month with Mr. Stephen Phillips, author of "Marpessa," "Paolo and Francesca," and "Herod." Notwithstanding the brilliant reception accorded the two latter plays by the English critics and public, Mr. Phillips appears to be sore over the way "Herod" has been dealt with by some of the London "paragraphists," whom he accuses of falsification in their statements as to the play's success; and in this tendency of the daily press to make deliberate misstatements he sees a "hostility to the higher drama." The conversation proceeds thus (*The Critic*, June):

"*Mr. Phillips.* It is all very well to treat the thing lightly, but it is a serious matter for the future of the drama. You may judge what was said of 'Herod' from one little incident. On the morning after the production, before I had read the papers, I noticed a visible embarrassment in the demeanor of the station-master and porters (very good friends of mine) at the roadside station where I take the train for town. At last the station-master came up to me, very much as you might to the chief-mourner at a funeral, and said: 'Well, well, sir, we mustn't take these things too much to heart.' 'What do you mean?' I asked. 'I saw all about it in The Paper,' he said—as if there were only one in all England. He had received the impression that the play was a dead failure; and you know whether that impression was a just one, either as regards its first-night reception or its chances of popularity.

"*W. A.* But did Mr. Blank's disapprobation do the play any harm? The influence of The Paper in theatrical matters must have declined enormously of late years.

"*Mr. Phillips.* The play suffered at first, tho it very soon righted itself. But I am not thinking merely of the business effect of such notices. It is horribly discouraging—to some people it would be paralyzing—to think of having to submit one's work at all to the judgment of men who positively make a boast of despising literature and knowing nothing about poetry. This man, at the very outset of his notice, said, 'We do not propose to treat this piece as literature.' Good heavens! what *did* he propose to treat it as? Surely it is literature, or it is nothing.

It may be bad literature, and if any one who can possibly be supposed competent to judge on such a point tells me that it is, I shall be sorry—I shall probably be unconvinced—but I shall not murmur. What I do take to be an outrage, not only upon literature, but upon common sense, is that men whose judgment of any other form of poetry no one would dream of accepting or regarding for a moment should be held competent to pass a life-or-death sentence upon what is admitted to be, potentially at any rate, the very highest form of poetry, merely because it happens to be presented on the stage. There is an injustice, an unreason, in this that would make me indignant, even if I were never going to write another line of drama. And I can't help looking to the future. I can't help thinking of the other and bigger men that will come after. Just consider the disastrous effect such criticism might have on a man of much finer talent than mine—disastrous in proportion to the delicacy of his talent. . . . They [the critics] have persuaded themselves that literature is one thing, drama another; and that, tho they may not know anything about literature, they do know something about drama. If they kept to the drama, which is remote from literature, there would be no harm done; and it is not their fault that they do not. It is the fault of the editors, or proprietors, whoever they may be, who despise the stage, and think that any moderately fluent writer is capable of taking all drama for his province, from 'In the Soup' to 'Mrs. Ebbsmith,' from 'The Belle of New York' to 'Herod.'

"*W. A.* Of course you are quite right. I have preached the same sermon over and over again. But there is this to be said in extenuation of the editor's inertia: that the supply of dramatic critics who are at the same time men of letters, or (what amounts to the same thing) of men of letters who have in them the makings of dramatic critics, is incredibly limited. If I were proprietor of a daily paper, I should not know where to lay my hand on a theatrical critic of anything like the French standard of accomplishment."

After stating that his new play "Ulysses" is not to be anything in the nature of an Elizabethan masque, as has been asserted, but a "well-knit drama, with a 'beginning, a middle, and an end,'" Mr. Phillips turns the conversation upon Tennyson as a dramatic poet, and upon his own dramatic ideals:

"*Mr. Phillips.* . . . I do not think that at any time of his life he [Tennyson] would have made a great dramatist. He lacked two essential qualities: directness and passion. Tennyson winds round and round a thing; he never faces it, fair and square, as Byron often does. And of real passion, as opposed to ornamental and often inappropriate rhetoric, I know of only one utterance in Tennyson—the poem called 'Love and Duty.' Don't you remember the lines?—

> O then, like those who clench their nerves and rush
> Upon their dissolution, we two rose
> There—closing like an individual life—
> In one blind cry of passion, and of pain,
> Like bitter accusation ev'n to death,
> Caught up the whole of love and utter'd it,
> And bade adieu forever.

No man who had the making of a dramatist in him could have written the parting of Lancelot and Guinevere in the 'Idylls.'

"*W. A.* What do you make of 'Maud'?

"*Mr. Phillips.* For 'Monodrama' read 'Melodrama.' No, it is as a lyrist that Tennyson is incomparable.

"*W. A.* I shall always maintain that there are splendidly dramatic things in 'Queen Mary' and 'Harold,' tho as a whole they fail, because, coming to his task too old, the poet had not the strength to rebel against the Shakespearian form, but rather slavishly imitated it.

"*Mr. Phillips.* Well, then, we come back to our point of agreement, which is, that a deliberate rebellion against the Elizabethan tradition is the best hope for English poetic drama. That, at any rate, has always been my view; and I have tried to act up to it and enfranchise myself from the Shakespearian ideal. But people can't, or won't, see that. They assume as a matter of course that I am imitating Shakespeare and imitating him badly. All they know about the poetic drama being gathered from Shakespeare, they think every drama that is printed in verse must be judged by Shakespearian canons and no other.

"*W. A.* I have heard people whose judgment is more or less entitled to respect complaining of both 'Paolo and Francesca' and 'Herod' that they are thin, sketchy—spirited scenarios rather than fully elaborated dramas.

"*Mr. Phillips.* Yes, there you have it! There is no underplot, no philosophic embroidery, no minute development of character. I know there is not—but is drama impossible without these things? I may yet come to do more in the way of characterization than I have hitherto attempted. But is there not such a thing as large and simple character? Must it always be subtle and complex? And is character the only element in drama? Do not action and passion count for something? The Greeks thought they did; Corneille thought so, and Racine. It is no new thing I am attempting. It is a thing familiar to every one who knows anything of dramatic literature beyond the beaten track of Shakespeare. I seek after unity of effect, where the Elizabethans sought after multiplicity. They tried to get the whole variegated texture of life into their pictures.

"*W. A.* That is the very ideal which our ablest neo-Elizabethan, John Davidson, put forward the other day as his own. 'Art is selection,' he said, 'and great art always selects as much of the world as it can. I should like to put the whole universe into everything I write.'

"*Mr. Phillips.* My effort is to eliminate everything except the essentials of character, action, and passion—to admit nothing that shall not help on the action, tho possibly by seeming to retard it. I strive after compression, not expansion—after surface calm, even quietude, with the glow of passion beneath it."

## THE "AUTHORESS" OF THE ODYSSEY.

IN an attempt to show what remarkable results may be achieved along the lines of modern scientific criticism, Dr. A. Baumeister, writing in the *Allgemeine Zeitung* (Munich), describes two recent critical studies of the "Odyssey." The first is a book by an English writer, Samuel Butler, entitled "The Authoress of the Odyssey: Where and When She Wrote, Who She Was, the Use She Made of the Iliad, and How the Poem Grew Under Her Hands." The purpose of the author is to demonstrate that Ithaca, the scene of most of the events described in the "Odyssey," is not the historic island known by that name, but is the northwestern portion of Sicily; that this poem is not from the pen of the writer of the "Iliad," nor indeed written by an Ionian at all, but was composed in Drepanon (modern Trapani) in northwestern Sicily, and is the production of a woman, which woman, under the circumstances, can not have been anybody else than the famous Princess Nausicaa, of the Phæacians. The author is thoroughly in earnest and believes that an inner analysis of the poem leads to this conclusion. The whole contents are evidently the production of a woman's heart and mind, as is evident from the exalted position assigned to woman, and nearly all the geographical names mentioned in these twenty-four books can be located in these portions of Sicily. A vast amount of learning and research has been spent in the demonstration of this hypothesis, and the author has examined almost every foot of territory in northern Sicily in order to find confirmation of his views. The whole, however, in the judgment of Dr. Baumeister, is a remarkable example of what erratic zeal combined with a vast amount of learning may do, when not controlled by common sense.

The second book mentioned by the same writer is by Joseph Schreiner, a German author. It is entitled "Die Odyssee ein mysteröser Epos," who endeavors to show that "the glorious history of Israel was depicted by the poet Homer with the eye of a genius and under the penetrable veil of a secret language, as a memento for all ages to study." References to Israel's history, the author thinks, are found everywhere throughout this poem. The Ithaca is nothing but Jaffa; Calypso is Rahab, who lived in a grotto near Jericho; Ogygia is the Dead Sea; the Phæacians are the Phenicians; Nausicaa is Salomith, etc. In

this way the whole of Israel's ups and downs is found embedded in mysterious form in the lines of the Odyssey!—*Translation made for* THE LITERARY DIGEST.

## PADEREWSKI'S NEW OPERA "MANRU."

ADMIRERS of Paderewski are enthusiastic over his new opera, which was brought out with great popular éclat in Dresden late last month. The libretto, indeed, a work by Alfred Nossig, is not regarded as by any means a remarkable achievement; but the melody and richness of the musical composition were sufficient to make the opera a brilliant success. Of the libretto, the special Dresden correspondent of the New York *Evening Post* writes:

"It is the story of a Hungarian gypsy, who, after having eloped with and married a village maiden, finds himself ostracized both by his own tribe and her people, and rendered miserable by the conflict between his love for his wife and the longing for the old life. Ulanas, feeling her husband's restlessness, seeks to charm him to her by the aid of a love philter secured by a faithful and tattered gypsy follower, Urok. But a chance meeting with his old tribe, together with the wiles of a former gypsy sweetheart, Asa, who loves him still, suffices to make him forget his wife and to join the companions of his lifetime. To the love philter the listener owes one of the most touching love duets imaginable, well worth comparison with Wagner's greatest effort in the same direction in 'Tristan and Isolde.' As a means of seducing Manru from his marital allegiance, Paderewski has skilfully employed the violin and other characteristic instruments of the Hungarians, as well as of choruses, and some stirring dancing. There are remarkably rich and beautiful stage pictures throughout.

"Thus far the story has run along fairly well, albeit limpingly because of the undue length of a passage here and there. With Manru carried away by the passionate music of his race and the fascinations of Asa, it is as if the librettist had suddenly awakened to the fact that his story was long enough, and decided to end it at once. With delightful and ingenious facility he promptly disposes of the deserter and the deserted. The abandoned wife throws herself into a lake after giving but a minute or two to the expression of her desolation. Hardly has she disappeared in the waters, when the errant husband appears upon the neighboring heights, only to be promptly rolled down into the self-same waters which have but just closed over his unfortunate spouse. In his case, the old gypsy Urok and the jealous gypsy chief Oros are the instruments of destruction used by Herr Nossig to end the play. All this is perilously near to bathos, or would be but for the composer, who is equal to the task of thrilling the audience at both deaths, despite the immediate proximity of the greatest climax of the play—the carrying off of Manru amid the wild cries and singing of the gypsies."

This story, the writer says, Paderewski has told "with a wealth of melody, a warmth of feeling, a richness of orchestration, a vivid sense of the dramatic, and a variety of episode and coloring which, as one of the leading Dresden critics has truly said, puts him at a bound in the first rank of opera composers." The writer thus comments on Paderewski's work as a composer:

"As he was from the first the undisputed mon arch of the pianoforte, so he is now one of the great successes of the all too limited operatic world. In his hands the story takes on a strength which neither plot nor versification warrants. In his hands something of the real life and feeling of the greatest natural race of musicians—the Hungarians—has found a true expression and surely a permanent place in music libraries the world over.

"There is so much that is good, so much that is original, and so much that is unusual in the orchestration of 'Manru' that the critic is reluctant to admit that Mr. Paderewski has been influenced not a little by Wagner as well as by the modern French school in putting his ideas on paper. Yet such is the case. In the second act, for instance, the imitation of Wagner is occasionally very marked, both 'Siegfried' and the 'Walküre' having been drawn upon for themes. This is the most serious criticism that has been passed upon 'Manru.' That Paderewski has conceived his work as a whole and as a coherent portrayal of Hungarian gypsy life, with all its good and evil passions, is conceded. But the *Anklänge* of Wagner, of Bizet, and of Saint-Saëns, as the German politely puts it, are there, and mark at least the care with which Paderewski studied other masters before completing the work which is said to have taken him years. Few new composers can wholly avoid this generally unconscious imitation, but few can show in addition such marked originality, such color-warmth, such brilliancy, and such mastery of the new art to which Paderewski has turned as are to be found in his first effort."

## AN ENGLISH CHURCHMAN'S APPRECIATION OF WALT WHITMAN.

THE clergy have not thus far been prominent among Walt Whitman's devotees. Walt himself sang:

> More than any Priest I too believe in God;

and throughout his poems, while he can find delight in the inner heart of Christian thought and liturgy, just as he can in all other productions of the human spirit, he does not rank the priest among the chief benefactors of mankind. For this reason the exceptionally high appreciation of him which lately appeared in the London *Guardian*, the chief organ of the moderate High-Church Party in the Anglican establishment, is noteworthy. Mr. Barrett Wendell in his recent "Literary History of America" gave small space to the "bard of American democracy," because, it is whispered by the poet's lovers, Walt's "barbaric yawp" put Boston's nerves on edge, and his democracy did not possess the Cambridge stamp. *The Guardian* takes Professor Wendell soundly to task for this. It says:

"Perhaps the chief defect of Mr. Wendell's volume is his scanty recognition of Walt Whitman. We have no space here to discuss at all fully the question of Whitman's poetic greatness. But what puzzles his English admirers, even those most conscious of his weak points, is that American criticism seems so often unaware that, with all his faults, he is the one great original force which American literature has produced. We may place Longfellow, Whittier, and the rest, high or low, as we please; in any case, the one thing certain about them is that they belong to the old literary stock of Europe. Their way of looking at things has, in each case, plenty of English parallels. The thing we notice about Whitman is that his way of looking at things is entirely new. It is, no doubt, above all, his own; but we shall also believe, in spite of Mr. Wendell, that it is also American. And here, perhaps, Englishmen are better judges than any American, especially a Harvard professor, can be. We are outside America and can read its larger characteristics more plainly than those who are inside and can see only what happens to be nearest to themselves. . . . . .

"We think that there are three things about Whitman which ought to be plain to every open-minded lover of literature. He is, first of all, the man of the largest and deepest poetic vision produced by America. And his way of looking at things is a new way; that is the second point of importance. And the third is that this way of looking at things is one which could only have come to a citizen of the United States.

"Now, to all these points, many Americans, and among them Mr. Wendell, are entirely or partially blind. Whitman has plenty of faults, of course; above all that of thinking that everything of every sort that came into his head was worth saying and that any words would do to say it in. But his faults are on the surface; no one can miss them, least of all a professor of English. And it is a poor and narrow conception of what the English language and English poetry can be and can do that allows Whitman's verbal eccentricities and vulgarities to hide the central facts about him, which are that he has written a few poems which are among the noblest of the century, and that in his whole poetic attitude he is the greatest original force that has uttered itself in verse since the death of Wordsworth. He is the seer of the new world, the discoverer of poetry where even Wordsworth could not discover it, in the seething, sordid life of great modern cities, where the rest of us can only see incredible ugliness and

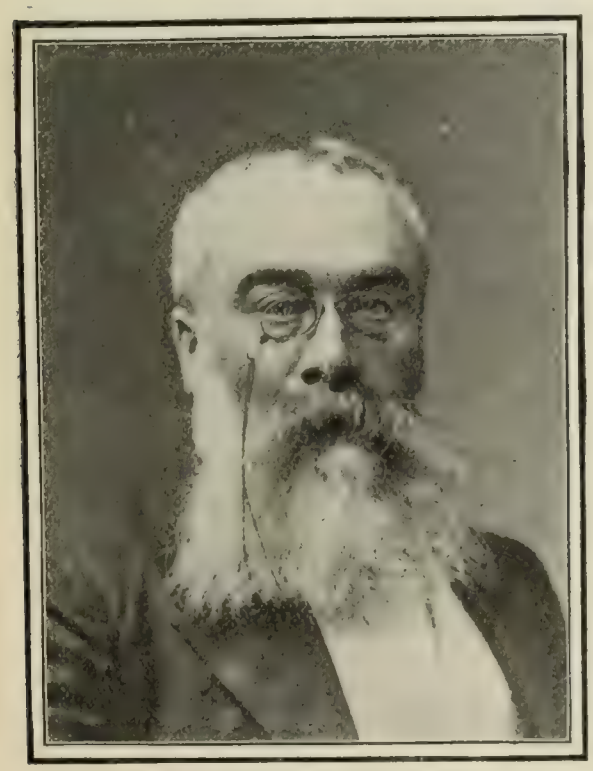
meanness. He is, above all, the spokesman of the brave individualism, of the erect and self-reliant hopefulness, of the untiring energy and equal liberty, which are the noblest possessions of the United States."

The Philadelphia *Conservator* (June), edited by Whitman's literary executor, Horace Traubel, and devoted to the Whitman ideal of life, in commenting on this churchly judgment, remarks: "It is not easy to believe that this eulogium must be credited to an ecclesiastical organ and an Anglican reviewer. Words not grudged Whitman in less conservative circles have a new emphasis and a fresh accent when uttered by the conformist."

## TWO ENGLISH MEN OF LETTERS.

BY the passing of two well-known English authors on the same day—Robert Buchanan and Sir Walter Besant, both of the older school of writers—England has lost two men who have done much for literature. Sir Walter Besant, especially, is regarded as one of the most industrious and worthy of English literary workers, and on account of his persistent and unselfish work in behalf of his brother authors he has long been regarded as a sort of dean of the literary corps. The literary life of Sir Walter Besant (who was born in 1838, in Portsmouth, and educated at King's College, London) practically began in 1871, when he entered into partnership with Mr. James Rice in the writing of the well-known "Besant and Rice" novels. Among the best of these were "By Celia's Arbour" and "The Golden Butterfly." After Rice's death, Besant wrote "All Sorts and Conditions of Men," which attracted great public attention and ultimately led to the establishment of the People's Palace in the East of London; besides this he wrote "Beyond the Dreams of Avarice," and many other novels. He was also a high authority on the antiquities of London.

Robert Buchanan, who, tho Scotch by descent and education, was born in Staffordshire in 1841, is known as a poet, playwright, novelist, and critic. In the latter capacity his attack on Swinburne and Rossetti, written in 1872, attracted world-wide attention.



THE LATE SIR WALTER BESANT.

Comparing the two men, *The Evening Post* gives the following editorial estimate:

"The death of Sir Walter Besant and of Robert Williams Buchanan in one day can hardly be called a great loss to English letters, for neither man stood in the first rank. Nevertheless, each did a work worthy of consideration. Buchanan, the smaller figure of the two, was exceedingly facile and versatile, but he can not be regarded as one of the immortals. Altho he wrote many plays, poems, and novels, which he reviewed with entire seriousness, his name probably brings up to most minds his attack upon Swinburne, Rossetti, and their cult—'The Fleshly School of Poetry.' Buchanan as an author must rank below either Swinburne or Rossetti; and in all likelihood a century hence he may be remembered only because Swinburne and Rossetti are still read.

Mr. Julian Hawthorne, who had some knowledge of the two authors in London, gives his impressions of them in the Philadelphia *North American*. Of Sir Walter Besant he says:

"He chose wisely in choosing literature instead of the church as his profession. The pulpit would have been too circumscribed for his tendencies. He was deeply interested in people, in their social and economic aspects. No doubt his religion was orthodox, but it was the practical side of life that was the more significant to him. The novel—the typical English novel—was his precise vehicle and instrument, and he did a great deal of good with it. He became personally known in England, and in London especially—known and liked. His People's Palace was a splendid advertisement, tho I am sure that nothing was further from his thoughts than any personal advantage in regard to it. He was content with himself, but he was not egotistic or selfish. The Queen did just right in making him Sir Walter. It is the fitting reward in England of middle-class merit among the middle-class folks. Sir Walter was not a great man, any more than he was a great writer. He was a good, honest man, and a fair writer. He had a right to be Sir Walter, and the fact that he was Sir Walter had the effect of enlarging his usefulness. He could not have done all he did toward advancing the cause of copyright and in helping his literary brethren in many other ways had he remained plain Mr. Besant. Such is human nature, at least in England. And for my own part, I think none the worse of it on that account. But I need not pretend that I esteem Besant, the novelist, nearly so much as I do Besant, the man, the faithful servant, who did the utmost he could with his talent. I was never able to read one of his novels through, tho I have dipped into several of them pleasurably enough. He belonged to another generation than this, and in the end his success was chiefly personal. I do not think he will be read much in the twentieth century."

THE LATE ROBERT BUCHANAN.

Of Robert Buchanan Mr. Hawthorne says:

"The Scotchman had the genius that the Englishman lacked, but he lacked the other's winning human qualities. The fact was that Buchanan was born awry; he was cross-grained from the start; he was essentially irritable. He more easily made foes than friends, and he really seemed to get as much satisfaction out of his hostilities as he did out of his affections. He had a tongue as bitter and relentless as a shrew's, and a pen to match it. In Yates he met a man quite as well equipped as himself in this respect, and with a vulgarity and petty spitefulness that Buchanan was free from. In their quarrel Yates, writing in his own paper, *The World*, fastened upon him the title of 'The Scrofulous Scotch Poet.' That was just the style that Yates thought proper in his warfare; a style impossible for a gentleman. Buchanan, however, was very exasperating and an excellent hater. Yates was a man one might legitimately hate; but when it came to fighting Rossetti, it was another story. He and Buchanan were both generous at bottom, and they were reconciled before the former's death. Buchanan, with all his faults, was a fine fellow; and he wrote some poetry which was poetry in the full sense of the word. It will be read for a long time to come; it has its own native flavor and beauty. He wrote many novels, too, or rather they were romances, and some of them came near being great. They were not quite great, and I do not think any of them were popular. Buchanan could stimulate the imagination more easily than he could touch the heart. He had lofty thoughts and high ambition, but he lacked patience and real knowledge of human nature, and life seems to have taught him little. He was never a happy man; he lived under a cloud that was self-impelled; he was prone to fancy that he was the victim of cabals and jealousies, and this conviction injured his work; he had not the dignity and the magnanimity to rise above personal consideration. Still, he had elements of greatness in him, and his death is even now an event to be noted."

# SCIENCE AND INVENTION.

## DEFORMITIES OF OCCUPATION.

THE redoubtable Sherlock Holmes could easily tell a man's occupation by observing his attitude, the color of his skin, or the callous spots on his hands. Every employment leaves its mark on the human body in the shape of some deformity, says Gabriel Prévost, who contributes an article on the subject to *La Science pour Tous* (May 19). Says M. Prévost:

"Looked at closely, all occupations cause deformity—even the state of being without an occupation. Complete leisure, if such a thing exists, causes fatty degeneration, anæmia, arrest of growth. Diderot was right when he wrote: 'It is the daily occupations that determine not only the whole size of the figure, but the true proportions of each limb and of their combinations.' Police magistrates, who have practised eyes, are rarely deceived at first sight about the profession of a workman.

"Among professional deformities, some affect the health directly, others only alter the normal attitude of the body to the prejudice of hygiene and esthetics. The first, which fall within the domain of medicine, still await a proper scientific description. Here and there we read of the necrosis of match-manufacturers, the cataract of blacksmiths, miners' paralysis, etc.; but there remains to be written a whole treatise, of the greatest interest, to indicate the means of guarding against the dangers that beset a numerous class of indispensable workmen devoted to various special interests.

"The principle at the bottom of it all is that we were not created to be always standing up, nor always sitting down, nor always kneeling, nor always bending over; and that, with the exception of climate, we were created to obey the law of variety, as well in movement as in nourishment. The best proof is that, apart from accidents, longevity attaches to just those professions that give the whole organism the most exercise—those of the soldier, the painter, the sculptor, and the actor.

"M. Chevalier has concluded from his investigations that compositors, who are always standing, are apt to suffer from palsy, fatigue, and, with age and abuse of alcoholic liquors, from varicose veins and ulcers. The same is true of women employed in shops, who have to stand for twelve or thirteen hours consecutively. Some of them, the cleaners, who have to kneel a long time while scrubbing, are subject to swelling of the knee, and to hydarthrosis, especially when they are rheumatic.

"Occupations requiring a bending posture comprise those of the clerk, the tailor, the shoemaker, the gardener, the miner, the engraver, the wood-sawyer, the laundress, etc. Here all the trouble comes from the engorgement of the abdominal viscera, whence arise affections of the digestive organs and the resulting headaches, etc. The vertebral column tends also to be deformed, as we see too often with old gardeners as well as old students.

"The metallic vapors of mercury, copper, and arsenic are very pernicious. Workmen exposed to those of copper have a marked green color of the hair, skin, and mucous membrane. The effects of arsenic are very injurious. As for mercury, we may cite the case of an English vessel, the *Triumph*, which, having taken on board a cargo of mercury, had her whole crew attacked by salivation, ulceration, and partial paralysis. . . . . .

"Among instrumental musicians, flutists and clarinetists may be recognized by the position of their lips and the puffing out of their cheeks. . . . The violinists who hold their violins in place with their chins hang their heads and incline them toward one side. Harpists and players on the guitar have callosities of the fingers. Pianists have a tendency to exaggerated development of the hands—witness Weber, who could stretch nearly two octaves. Grooms and cavalry officers have bow-legs and tend to 'toe in'; priests and magistrates, and all those who wear skirts, are inclined to drag their legs, in distinction from soldiers, who raise them. Dancers who have worked hard at 'pointing' have a deviation of the internal metatarsus, commonly known as the 'onion.' Painters have the mark of the palette-hole on their left thumbs.

"Both hygiene and esthetics bid us, one and all, to be careful of the equilibrium of forces. . . . A good example is furnished in Sweden, where evening gymnasium classes have been established for the two sexes; not those places of torture which turn out acrobats or clowns, but real places of amusement, where people go as they do to the theater. Those who attend them return to their homes in better condition than if they had been in a smoky café drinking alcoholic beverages over cards or dominoes."—*Translation made for* THE LITERARY DIGEST.

## GEOLOGY AND THE DELUGE.

GEOLOGICAL conditions in Central Asia are such as can be explained only on the theory of extensive submergence of the region where the Scriptures and tradition locate the Flood. This is the conclusion which has been reached by Prof. G. F. Wright, of Oberlin College, the well-known geologist, in a recent journey through Mongolia and Siberia, and stated by him in an article in *McClure's Magazine* (June). Dr. Wright asserts that the evidences of a deluge are not one, but several, and extend from Mongolia to the western borders of Russia. In the first place, he tells us, there is no evidence in this region of a glacial period such as once existed in Europe and North America. He writes:

"On the contrary, throughout this entire region, we were confronted with the evidence of a great subsidence of the land which had taken place in recent geological time, and which, in date, would correspond roughly with that of the glacial period in North America. For several hundred miles, while driving through the region south of Lake Balkash and the Aral Sea, we were evidently upon a terrace of the fine loam which is called loess, about 2,500 feet above sea-level. Indeed, at different elevations this loess extends continuously in a broad shelf along the base of the mountains, from the Irtish River to the Caspian Sea, and is found in extensive level areas over various portions of the Caucasus and Northern Persia around the base of Mount Ararat; while the so called 'black earth' of Southern Russia is a deposit of the same material, and probably of the same age, 100 or more feet in thickness. The distribution of this loess is the key to the whole situation."

That these deposits are the result of submergence and are not wind-transported as some travelers have maintained, Dr. Wright is convinced. To quote again:

"On coming around to the northwestern side of the great Asiatic plateau, in Turkestan, which is in almost the exact center of the continent, the wind hypothesis became entirely incredible, and the evidence accumulated that the land had lately been depressed to such an extent that the water of the ocean reached the base of the bordering mountains, rising to a height, certainly, of about 3,000 feet; for, at this level, south and southwest of Lake Balkash, we found the loess spread out in such an extensive terrace that the wind would be entirely incompetent to produce the results. We were interested to find, upon visiting St. Petersburg, that the chief Russian geologists had arrived at substantially the same conclusions which we had formed."

The recent depression of Central Asia, Dr. Wright holds, is also proved by the fact that Lake Baikal and the Aral Sea are fresh. We should expect both to be salt, like the Dead Sea and our own Salt Lake, as they have no outlets. Says the writer:

"The only explanation of the freshness of the water in these two great seas is that there have recently been great changes both in the climate and in the level of that region. Salt is washed into such inclosed basins so rapidly that it would take no prolonged period of evaporation to render them salter than the ocean. In general, such seas may be compared to enormous salt vats which are approaching nearer and nearer the point of saturation. In the case of Great Salt Lake and the Dead Sea this point was long since reached; but in the case of the Aral and Caspian seas little progress has been made.

"It is therefore clear that this region has lately emerged from below sea-level, and, in consequence, rapidly passed through climatic changes which have transformed it from a recently well-watered region to one that is now a desert. During this transition stage, the rivers coming into the Aral Sea were so much

larger than now that the sea overflowed the rim of its basin in such volume that nearly all of its salt was carried into the Caspian, and the sea thus became practically fresh."

This submergence took place after the creation of man. Says Dr. Wright:

"The crowning point of interest is reached in the discovery by Professor Armashevsky at Kief of flint implements and burnt stones in connection with the bones of extinct animals fifty-seven feet below the undisturbed surface of this soil. The discovery was made in the bluff of loess bordering the river Dnieper, whose general surface is 633 feet above the sea and 340 feet above the present stream, and totally unconnected with any deposits that may have been made by it. In this discovery we have the link connecting the recent geological changes in the East with those in the West. The flint implements of glacial man found in France, England, and the United States indicate the same stage of culture as that attained by the men who were overwhelmed in the great subsidence of Central Asia and Southeastern Russia, and of the region about the base of Mount Ararat."

In the opinion of the writer the Biblical story of the Deluge is shown by these facts to be in substantial harmony with geological history. He says:

"If . . . we may be permitted briefly and provisionally to summarize the facts as they appear probable, both from the Biblical story and the illustrative geological facts, the completed narrative might be made to read something as follows:

"Some time during the prevalence of glacial ice over Northern America and Northwestern Europe man came into existence in Central Asia, where the climate was still congenial. From this point he spread as far west as the Atlantic seaboard in Europe, and eastward to the Pacific coast, whence he succeeded in reaching, by way of the Bering Sea and Alaska, the western coast of North America, and thence migrated to the Atlantic coast, where his remains are found in the glacial gravels of Trenton, N. J. But the extreme and rapid changes incident to the closing stages of the glacial period naturally, and very likely, exterminated man in company with many of the animals accompanying him both in America and in Europe. The destruction of many of the species of animals accompanying man at the close of the glacial period is a well-known fact. It also seems probable, from scientific evidence, that man shared largely in the destruction. There is everywhere a sharp line of distinction between Paleolithic and Neolithic man, *i.e.*, between the men who were limited to the use of flaked or rough stone implements and those who used smoothed stone implements. It is Paleolithic implements only which are found in the glacial gravels of America and Northwestern Europe, and beneath the loess at Kief and at three or four other localities in Southern Russia. The Palæolithic man of science may well be the antediluvian man of Genesis.

"In Asia the rapidity of the subsidence spoken of, tho so great that man could not adjust himself to it, might still have been so slow as to be almost imperceptible. But toward the close of this period there were 120 years (specially mentioned in the Bible as a time of warning) in which the movement was accelerated to such a degree that the rising waters gave point to the preaching of Noah. During the last 371 days of this period the catastrophe culminated in the facts specifically related in the Book of Genesis, when the reverse movement began and cleared a space near Mount Ararat on which the ark could rest, and where the race could make a new start under more favorable conditions."

---

**Do Plants Melt Snow?**—At the beginning of spring, before the last snow has disappeared, numerous plants put forth shoots that pierce the layer of snow above them. This perforation, according to Hadangard, a Swedish naturalist, is not the result of simple mechanical action due to the growth of the plant; but is due to the heat given off by the plant. This naturalist has made a special study of the question, and the results of his investigations appear in the Norwegian review *Naturen* and are reproduced by *Ciel et Terre* (Paris). Several wild flowers were observed by him, including the common anemone, and he affirms that the shoots put forth so rapidly by these plants in spring make their way through the snow by melting it in their path." We quote further from *Ciel et Terre:*

"Some of the shoots have even succeeded in thus pushing through a layer of ice several centimeters thick. In all cases, by means of this melting action, the plant forms a little channel adapted to the size of the shoot to which it gives passage. Those who are not well up in vegetable physiology will ask with some surprise whether a plant really gives off heat. It certainly does. The plant, like the animal, is an organism that breathes, and we know that respiration is an oxidation of organic material accompanied by the emission of heat. This emission causes in certain parts of the plant an elevation of temperature that may reach 15° to 20° [27° to 36° F.]. . . . It goes without saying that these are exceptional cases, but it is an established fact that plants give off heat. Respiration is thus the great factor that causes the melting of the snow through which the plant grows. This opinion certainly seems admissible at first sight, and may form a starting-point for future interesting observations."—*Translation made for* THE LITERARY DIGEST.

## INVISIBLE PHOSPHORESCENCE.

EXPERIMENTS on this curious phenomenon, whose name seems at first sight a contradiction in terms, have just been described by Dr. Gustave Le Bon before the Paris Academy of Sciences, where they attracted much attention. Dr. Le Bon's work on so-called "dark light" has been noticed from time to time in these columns. His earlier experiments were received by scientific men with caution, if not with incredulity; but his later ones seem to have brought the phenomena into which they inquire more into line with recognized scientific investigation, and they are certainly most interesting. M. A. de Marsy thus writes of them in *La Nature* (Paris, May 25):

Photograph taken in the dark by means of invisible radiation due to exposure to sunlight eighteen months previous. Exposure ten days. The shadows depend on the position of the statue when exposed to the light.

"Dr. Le Bon has shown that certain bodies possessing visible phosphorescence, such as calcium sulfid, preserve for a long period, sometimes nearly two years, the power of giving out completely invisible radiations in darkness. These radiations have a spectrum similar to that of light. They are refracted, polarized, and can impress photographic plates. A statue covered with calcium sulfid, left in the dark and completely invisible to the eye, may be photographed in a dark room in a cellar where no ray of light penetrates for eight days to one month after its last exposure to light. In this way was obtained the photograph of the Venus of Milo reproduced herewith. . . . .

"This fact regarding the long persistence of the emission of obscure radiation in the dark is very curious, but those discovered next by Dr. Le Bon are still more so.

"Those bodies which, after emitting dark radiations for two years, finally cease to do so, still retain a considerable residual charge, which they will preserve indefinitely until it is expelled by directing upon their surfaces certain entirely dark rays. They then become luminous in the dark, and may be photographed in a few minutes."

The dark rays that have the property of making luminous a substance that possesses residual phosphorescence are comprised

within a definite part of the spectrum, beyond the limits of luminosity, which Dr. Le Bon has measured with some accuracy. These rays are obtained by covering a lamp either with black paper or ebonite, which combination is called by Le Bon a "dark lamp." Says the writer again:

"If we project these rays upon a statue covered with sulfid of calcium, which has been kept in darkness for some time, the statue will become luminous in the dark and can be photographed in less than half an hour's exposure.

"In this striking experiment, dark rays added to other equally dark rays produce light. This is the inverse of Tresnel's celebrated interference experiment, in which light added to light produces darkness. . . . . .

"All substances can not serve for these experiments. They succeed very well with the sulfids of calcium, barium, and strontium, but not at all with other substances, such as sulfid of zinc, the diamond, apatite, etc. These latter have also an indefinite residual phosphorescence; but it appears only when they are heated to about 150°, and not at all when the dark rays described above are directed toward them. These bodies belong to the well-known class of substances phosphorescent by heat, of which certain ones respond also to light."

Dr. Le Bon bases on his experiments a theory of phosphorescence which assumes that it is the result of extremely sensitive chemical combinations that take place within very rigid bodies like the diamond. These are quite different from ordinary chemical combinations, one of the elements concerned being always present in infinitely small amount. By this theory he has been able to explain various phenomena of phosphorescence hitherto obscure.—*Translation made for* THE LITERARY DIGEST.

## THE SOLITARY MEAL AS A CAUSE OF DYSPEPSIA.

IN an article entitled "The Indigestion of Loneliness," a writer in *The Lancet* (London, May 25) tells us that one of the reasons why it "is not good for man to be alone" is that lack of company at dinner will cause his food to disagree with him. He says:

"There are some few happily disposed individuals who can dine alone and not eat too fast, nor too much nor too little. With the majority it is different. The average man puts his novel or his paper before him and thinks that he will lengthen out the meal with due deliberation by reading a little with, and more between, the courses. He will just employ his mind enough to help, and too little to interfere with, digestion. In fact, he will provide that gentle mental accompaniment which with happier people conversation gives to a meal. This is your solitary's excellent idea. In reality he becomes engrossed in what he is reading, till suddenly finding his chop cold he demolishes it in a few mouthfuls; or else he finds that he is hungry, and, paying no attention to the book, which he flings aside, he rushes through his food as fast as possible, to plunge into his armchair and literature afterward. In either case the lonely man must digest at a disadvantage. For due and easy nutrition food should be slowly taken and the mind should not be intensely exercised during the process. Every one knows that violent bodily exercise is bad just after a meal, and mental exertion is equally so. Wise people do not even argue during or just after dinner, and observation of after-dinner speeches will convince any one that most speakers neither endure themselves nor excite in their hearers any severe intellectual effort. In fact, the experience of countless generations, from the Red Indian of the woods to the white-shirted diners of a modern party, has perpetuated the lesson that a man should not eat alone, nor think much at this time, but should talk and be talked to while he feeds. Most people do not think much when they talk, and talking is a natural accompaniment of eating and drinking."

Women, we are told, fare even worse than men when obliged to make a solitary meal. A man may generally be trusted to take food enough, even if alone; but a woman "is less inclined to realize the gross necessities of existence, therefore when doomed to dine alone she often does not dine at all." Says the writer further:

"She gets dyspepsia because her digestion has not sufficient practise; a man gets it because his functions practise it too often in the wrong way. Worst of all, perhaps, is the case of the solitary cook. In the myriads of small flats in London there are thousands of women 'doing' for their solitary masters or mistresses. These women, whose main occupation is to prepare food for others, find it impossible to enjoy, or even to take, food themselves. As confectioners are said to give their apprentices a free run of the stock of the shop for the first few days, knowing that it will effectually cure appetite afterward, so the women who are always occupied with buying and preparing food grow unable to use it for themselves. These people suffer from dyspepsia, which is cured if somebody else manages their kitchen for a week, allowing them to take meals without preparing them. It needs no moralist to declare the evils of solitariness. Man and woman is a gregarious animal. Physically and intellectually we improve with companionship. Certainly it is not good to eat and to drink alone. It is a sad fact of our big cities that they hold hundreds of men and women who in the day are too busy and at night too lonely to feed with profit, much less with any pleasure."

## THE SOUND OF CANNONADING.

RECORDS of distances at which the minute guns fired at Queen Victoria's funeral were heard have been collected by Mr. C. Davison, who has compared the reports of observers in 84 places. The results, published in the June number of *Knowledge*, are unexpected. Observations were received from places as far distant as Alderton (Suffolk), 139 miles from the *Majestic*. At several places, 50 or 60 miles distant, the vibrations were occasionally strong enough to make windows shake. Says Mr. Davison:

"While the sound-waves were thus heard at great distances, it is remarkable that in the immediate neighborhood of Spithead they were almost or quite inaudible. The nearest place to the *Majestic* from which I received any record is Holrey in Surrey, distant 50 miles. It does not of course follow that reports were never heard at a less distance, for most persons so situated would imagine their observations to be of little consequence; but the undoubted fact remains that many who went out to listen to the guns returned home disappointed. Thus one correspondent who was on a steamer just outside the line of battle-ships could hear only the reports from the vessel nearest to him. At Portsmouth, the first signal that the procession was approaching the harbor came from a gun fired from the *Victory*, which is stationed there; for even the sound of the guns on the coast defenses were scarcely audible in the town. It is said that not a report was heard at Chichester (15 miles from the nearest battleship), Midhurst (22 miles), Winchester (20 miles), Fritham Plain (2 miles northwest of Lyndhurst, 16 miles), Newbury (44 miles), Bournemouth (27 miles), and Yarmouth (I.W., only 10 miles). . . . There can be little doubt, I think, that the varying direction of the wind over the southern half of England is mainly responsible for this curious result. If there were no wind, and the temperature were uniform, the sound-waves from any gun would be spherical and the sound-rays rectilinear."

Mr. Davison concludes by saying:

"Thus, the sound-rays were first of all refracted by contrary winds over the heads of observers between 10 and 45 miles, and were afterward brought down again by favorable upper currents, so that the reports were clearly audible beyond 50 miles and up to 140 miles from Spithead, and were so loud at a distance of 84 miles that laborers in the fields put down their spades and listened."

**A New Dead Sea.**—The Swedish explorer Sven Hedin has discovered a very curious lake in Tibet, says the *Revue Scientifique* (May 25), which he describes as follows:

"It is a very large sheet of water, hitherto unknown—a new

Dead Sea—almost as interesting as that of Palestine. It is one of the strangest sheets of water that I have ever seen, writes the learned traveler. It is of enormous extent, but not very deep. To sail on it you have to walk through it on foot for a kilometer [over half a mile] from the edge, to reach the boat; then the boat must be dragged another kilometer, so that a distance of two kilometers must be traversed from the shore before the boat with its equipment can be really floated. But the most curious and most remarkable feature of this inland sea is the incredible quantity of salt that it contains. The bottom is a compact mass of salt, on whose rough surface it is very disagreeable to walk, as one must do to reach the boat. The boat itself, our oars, our clothes, adds M. Hedin, were all as white as chalk, and when drops of the water fell on the ground they left globules behind them as if they were sap from a candle. It is not remarkable that this sea and its neighborhood are as sterile as the Dead Sea of Palestine."—*Translation made for* THE LITERARY DIGEST.

**The Hygiene of Fasting.**—Almost all the great founders of religions have deemed it salutary to prescribe a certain amount of fasting for their disciples. The reason for this, says a writer in the *Blätter für Volksgesundheitspflege*, is not only the knowledge that it is well for man to conquer his bodily desires, but also the experience that most persons eat too much. To overload the stomach with food is not less unhealthy than to deluge it with beverages; the more nutritious the food the more hazardous are the consequences when excess is habitual. Of all the sins of nutrition, the immoderate use of meat is certainly the most grievous. It gives to the body in a form that is favorable for easy assimilation the albumen that is absolutely necessary to life, and hence the earliest effect of its excessive use must be to surcharge the body with nutrients.

The chief point here is the critical examination of what is called hunger. Many persons believe that any and every sensation of hunger must be satisfied immediately, but this is a great mistake. An equally great, if not worse, mistake is the opinion that one must eat until a sense of satiety arises. These two mistakes combined lead to an unfavorable development of the human body, for the weight of the body grows to a degree that is detrimental to the activity of most of the chief and finer organs. For every stature an approximate weight may be stated that may be accepted as normal, and in accordance with this weight are adjusted the vital organs, particularly the heart. When a heart has volume sufficient only for a body of 150 pounds and is put to work to satisfy the demands of a body of 200 pounds, it soon shows that it is unequal to its task. It is just as if an engine that was built to pull only a prescribed weight were used to pull a large additional weight. The activity of the other organs as well as of the heart is hindered by the fat that is deposited about the latter. Excessive nutrition injuries the mental capabilities also. Of the particular consequences of excessive nutrition, such as hypochondria (the very name of which refers the reader to the region of the abdomen), and the gout, it is hardly necessary to speak."—*Translation made for* THE LITERARY DIGEST.

**An Ocean "Limited Express."**—A story that is at least interesting, no matter what else may be said of it, is quoted by *The Marine Review* from the London *Express*, regarding two great ships which Mr. Morgan is said to have planned for the ocean ferry:

"They are to excel anything that has ever been seen on the water, and will be to sea travel what the 'limited train' is to the American railway. According to *The Express* story, an official of a leading American line who has been in consultation with Mr. Morgan at Aix-les-Bains says that he was allowed to see the plans for the two liners de luxe, which are to be constructed for the comfort of that class which does not have to consider money when luxurious living is concerned. In the first place, these boats, both of which will be five-day vessels, will carry none but first-class passengers. There will be no single cabins, but suites of apartments, consisting of parlor, bedroom, and tiled bathroom. There will be suites with more rooms, but the majority will have three. The suites will be furnished in the richest fashion and variously decorated. There will be color schemes to suit all fancies, and many styles of furniture will be represented. The passageways will be broad and well lighted. The public rooms will be magnificent creations, decorated by famous artists. The dining-room will have no long general tables, the arrangement being one of small tables, similar to that of the restaurant of the Hotel Ritz in Paris. Ingenious devices will be used to prevent upsets in stormy weather, and each table will have two attendants. A pleasant feature will be a grill-room. A dairy will be maintained on board, ship quarters being provided, in the space usually devoted to steerage, for a small herd of Jerseys. Along with the cows there will be carried a number of hens. Thus the millionaire can have fresh milk and new-laid eggs tho 1,000 miles from land. The arrangements for providing and keeping food are perfection. The greatest novelty will be a café chantant, where an excellent entertainment will be given each evening, the intention being to engage high-class artists. A theater supper will be served after the performance. There will be a gymnasium, a large library, a sun room, a full-stocked conservatory to provide fresh flowers daily, a skilled medical staff, readers, stenographers, manicures, masseurs, and special rooms for dogs. The cheapest passage will be £200 [$1,000]."

**Electricity and Vegetable Life.**—It has been discovered by Dr. A. D. Waller, an English scientist, that in the case of the particular class of vegetable seeds with which he has experimented, namely, beans, the seed is alive if it responds in a particular way to an electric stimulus, and that, on the contrary, it is dead if it fails so to respond. "The method of distinguishing," says *The Electrical World and Engineer* (May 18), "consists in placing the bean between a pair of suitable moist electrodes, and sending an electric discharge or impulse through the same, such as the discharge of a one-microfarad condenser, which has been charged by a couple of Leclanché cells. After the electric impulse, the bean electrodes are connected to a sensitive galvanometer. . . . Two such stimuli are usually given, one in the positive and the other in the negative direction. If the bean is alive, it will give a relatively powerful discharge usually in the same direction as that of the stimulus, while if the bean is dead, it will give only a relatively feeble polarization electromotive force in the opposite direction to that of the stimulus. The process of distinguishing seems usually to have killed the bean, but in some cases the bean has been successfully planted after the test. . . . From a theoretical standpoint the subject is highly interesting, since it opens up a wide avenue for the study of the relations between life—that wonderful enigma—on the one hand, and electric actions, so completely capable of measurement and control, on the other hand."

**Transportation Through Tubes.**—One development of the coming century worthy of at least passing thought, says *Cassier's Magazine*, is the extent to which the pneumatic-tube principle will be employed to expedite transportation. Mr. Vauclain has directed attention to the long lines of loaded coal-cars on their way from the mines to the seaboard, and back again, empty, to the mines. If the weight of a car is 25 per cent. of the gross load, there is in this instance more than 50 per cent. non-paying freight. The writer in *Cassier's* comments on the subject as follows:

"It does not seem altogether unreasonable to think that just as the miles of tank-cars loaded with oil, which were seen in former years, have disappeared, and that commodity is now sent hundreds of miles through pipe lines, so may coal, grain, and ore be sent speeding through tubes to central depots for local distribution. In the matter of coal transportation, in fact, just such pipe-line conveyance was tried experimentally something like ten or twelve years ago by the late W. C. Andrews, of New York, the coal for that purpose being ground into powder, mixed with water in sufficiently large proportion, and carried through the pipes in semi-liquid form. At the delivery end of the pipe line there were to be settling chambers for the mixture, enabling the water to be drained off and the coal paste, if we may so term it, to be pressed into cakes and dried for consumption. The project, however, did not extend beyond a brief experimental career. In woolen mills, on the other hand, it is a common thing to blow wool from one building to another through pipes by means of fans, and in potteries, too, clay paste is frequently carried from one point to another through pipes. There is, thus, a fairly good beginning for pipe-line engineering with solids."

# THE RELIGIOUS WORLD.

## DOES CHRISTIANITY NEED RESTORATION TO THE NEW-TESTAMENT MODEL?

THE appeal to the primitive church in usage and doctrine has been an argument of more or less weight in all denominations of Christians. Perhaps among Anglicans and the rapidly growing body who call themselves "The Disciples of Christ," the appeal has been most marked in recent days. The Roman Church, while holding in the highest esteem the Apostolic and post-Apostolic traditions, and believing that a complete deposit of truth was made by Christ to the Apostolic Church, yet rather makes its appeal to the church of all ages, which, according to this theory, is guided by the ever-present Holy Spirit, and is competent to establish new usages and define and make plain the original doctrine committed to it, in accordance with new and varying needs; and with this view—minus the papacy—the more advanced High-Church Anglicans, as well as the Orthodox Eastern Christians, in the main agree. A view somewhat similar to that of "The Disciples of Christ," whose chief aim is defined as "to restore primitive Christianity," is taken by an English Free-Church paper, *The Christian Commonwealth* (London, May 2). It says:

"The temporary and permanent features of New-Testament Christianity are not difficult to discover by the careful reader and student of the New Testament. The temporary served its purpose and passed away with the time of Christ and His apostles. The permanent remains for all time and will be contemporary with every age. The temporary need not be restored, for its mission has been fulfilled. The permanent is to remain, and if, in the changes of the years or centuries, any part has been lost, covered up, or overlooked, it is to be restored. Has any part of the Christianity of the New Testament been displaced or overlooked and lost? If so, what has been lost should be restored:

"1. In the New Testament we find (Matt. xvi. 16) a simple and comprehensive confession of faith—'Thou art the Christ, the Son of the living God'—on which Jesus the Christ said, 'I will build my church.' This confession declared the Messiahship and Deity of Jesus of Nazareth. This confession has been practically displaced by human formulas of doctrine more or less complex and elaborate which have been made the basis of denominational churches. This simple comprehensive and sublime confession should be restored to its proper place; and until it is restored there can be no unity in New-Testament doctrine and practise.

"2. That this confession is the only creed which divine wisdom has formulated for the faith of each person who desires salvation is manifest to all who study the great commission Jesus has given to His apostles; and their preaching and practise as recorded in the Acts of Apostles (see Matt. xxviii. 16–20; Mark xvi. 14–18; Luke xxiv. 44–49; John xx. 21–31; Acts ii. 32–39; Acts iv. 10–12 and onward). This creed without addition or subtraction should be *restored*.

"3. In regard to preaching the Gospel, both in matter and manner, there have been serious and fatal departures from the New-Testament teaching and practise. 'Preach the Word,' said the apostle (2 Tim. iv. 2), and 'they so spake that a great multitude both of Jews and of Greeks believed' (Acts xiv. 1; see 1 Cor. xv. 1–2). The Gospel proclamation consists of facts concerning Jesus the Christ to be believed; of commands to be obeyed; of promises to be *enjoyed;* and threatenings to be feared. These facts, commands, promises, and threatenings are found in the great commission of Christ to His apostles, and constitute the basis of all apostolic preaching and the practise of all apostolic disciples (see Matt. xxviii. 16–20; Mark xvi. 14–16; Luke xxiv. 44–49; John xx. 21–31). The great commission embraces all the constitutional requirements of complete conversion from sin. As these requirements are constitutional, they can not be changed until the great Lawgiver changes them. No body of men however gifted, no church court however constituted, no human tribunal however venerable, has any authority or right to change them. The apostles of Christ declared this Gospel, preached this word, and insisted on the 'obedience of faith'—nothing more, nothing less, in order to salvation from sin and entry into the church of God. In so far as this preaching has been varied from or perverted, to that extent it must be restored.

"4. The memory ordinance of the New Testament is the Lord's Supper. In the realm of God's grace in which all Christians are to grow, divine wisdom has placed this ordinance at regular weekly intervals. In Acts xx. 7 it is written: 'And upon the first day of the week, when the disciples came together to break bread, Paul preached unto them.' Beyond seven days no Christian need go without being reminded of the fact that Jesus 'died for our sins according to the Scriptures.' And on the first day of every week—the resurrection day—every disciple who desires to honor his Lord will do so, if possible, by regarding the day and the ordinance. The weekly observance of the Lord's Supper should be restored to the place it occupied in New-Testament times, for its observance was not to be temporary, but 'until He come' (1 Cor. xi. 26). For as often as ye eat this bread and drink the cup ye proclaim the Lord's death till He come.'

"5. If we study carefully the life of Christ and His true disciples as revealed in the New Testament you will find that their main characteristics are universal kindness and beneficence, or grace and love; purity in word and deed; real holiness or consecration to God; the truthfulness and absolute sincerity; humility and lowliness. These are essentially Christian principles, and are all represented in New-Testament teaching and practise, and in so far as they have been overlooked or lost sight of by modern Christians should be restored."

It is in connection with the first and fourth of these suggested "restorations" that the largest measure of discussion and change has taken place of late years. The present movements for creed revision and for simple "irenic" statements of faith may be regarded as in some sense an attempt to return to apostolic simplicity. In connection with the fourth "restoration," it may be noted that the Disciples of Christ stand officially for the weekly celebration of the Eucharist or Communion; while in the Anglican Church, both of England and America, there has been a vast increase of "weekly celebrations," and it is now held by many Anglican theologians that the Book of Common Prayer requires, or at least contemplates, the celebration of communion on all the Sundays and holy days of the year. At the beginning of the century it is said that there were but three Anglican churches in London which had a weekly communion, while now there are several hundred, some of these having several celebrations on Sunday and others having daily celebrations. In New York it is doubtful whether there are a dozen Episcopal churches, out of the eighty and more, which do not have at least one weekly communion.

**A Newly Found Early Christian Document.**—When the "Didache" or "The Teaching of the Apostles" was discovered some sixteen years ago, it was surmised by many scholars that the first portion of the treatise was a separate work, believed to be the book often referred to and quoted by Patristic writers as "The Two Ways," to which the "Didache" had become attached in the course of its textual history. German critics had even gone so far as to restore this initial work by selecting and arranging the ancient quotations from it. Since 1886, the date of the discovery of the "Didache," scholars have been on the lookout for the hypothetical manuscript, somewhat in the same way as astronomers, having determined by calculations that a planet exists, search for it until it is discovered. This feat has now been accomplished, and the newly discovered manuscript of "The Two Ways" has been published at Freibaring by Dr. I. Schlecht under the title "Doctrina XII. Apostolorum una cum antiqua versione Latina prius partis de Duabus Viis." In *Biblia* (June), Mr. Joseph Offord, of the Society of Biblical Archeology, says of the new discovery:

"It is an eleventh-century manuscript, and coincides almost precisely with the little book as known from the Greek 'Teaching of the Apostles,' the earlier restoration, and a Latin fragment previously known. It is one of the most interesting literary finds of the closing century, and will enable a full appreciation of the treatise, which may be of pre-Christian Jewish origin, to be made. If it was Jewish as suggested, it was of course utilized by the Christian composer of the 'Didache.'"

## SUNDAY OPENING AND SUNDAY SPORTS.

THE movement for and against greater freedom in recreation and in the use of educational privileges on the first day of the week has lately assumed almost national proportions. In various parts of the country, largely, it is thought, through the influence of the "American Sabbath Union," a determined attempt has been made to enforce strictly certain laws which have long been on the statute books, and which are sometimes referred to as "blue laws." Not long ago Mr. De Wolf Hopper, Mr. W. A. Brady, and some other actors who were giving an excerpt from "Uncle Tom's Cabin" on Sunday night, as a benefit for the Actors' Fund of America, were arrested and compelled to forego further performances. Mr. Hopper, who himself attributed his arrest to the instigation of a clergyman, said in defense that actors were so busy during the rest of the week that Sunday evening was the only time they had to devote to their unfortunate brethren. In spite of the interference, $3,000 was cleared for indigent actors. Another case that has attracted much attention is the recent arrest and acquittal of Mr. Benjamin Adams, of the Saegkill Golf Club, for playing golf on Sunday, at the demand of the Rev. J. E. Price, pastor of the First Methodist Church of Yonkers, N. Y. Most attention, however, has been directed to the attempt on the part of the majority of the Protestant ministers of Buffalo to close the Pan-American Exposition on Sunday. Partly through the arguments advanced by Mr. Moncure D. Conway, the well-known scholar and historian, the directors decided to have certain educational exhibits open to the public, closing the Midway Plaisance and certain other features. The clergy and the American Sabbath Union, however, have not given up the effort to close the gates entirely, and an appeal was made, and subsequently disallowed, to the appellate court of New York for an order to show why the two Buffalo police commissioners and the mayor should not be removed from office for failure to close the fair.

Among the chief defenders of what is called by the clergy "The American Sabbath" is the Rev. Dr. George C. Lorimer, of the Tremont Temple Baptist Church, Boston. At the thirteenth anniversary of the American Sabbath Union, held in that city on May 26, he is reported to have said:

"The desecration of the Lord's Day has become a national sin, and is rapidly becoming a national peril as well. We need rest as a nation just as surely as we do as individuals. The strenuous life may become too strenuous. And if rest was ever necessary, it is now. If the seventh day was needed as a day of rest by a peasant nation, or by our Puritan forefathers, it certainly is now, when the Stock Exhange and the corn pit are but exaggerations of the ordinary life of the time. As to theaters and concert halls, where most unsacred entertainments are given as 'sacred concerts,' I will say that such performances never did and never can give rest. I object to Sunday entertainments because they deprive those who take part in them from having their rest."

The Rev. A. B. Sanford, a Methodist minister of Brooklyn, thus writes in the New York *Tribune* (June 7):

"The attitude of our church—as the leading branch of Methodism in the United States, and numbering a membership of nearly three millions—is one of unchanging opposition to the invasion of the Lord's day by secular sports of any sort, as well as by traffic and business. . . . . .

"From the standpoint of the Methodist Episcopal Church, as well as that of all other orthodox and aggressive branches of the Christian Church, the maintenance of the Sabbath in its integrity is absolutely necessary to the well-being of the community. For Sunday sports of any description, and played by any one, there can be no justification in the divine sight."

*The Christian Intelligencer* (Reformed, New York, June 5) quotes with approval the following remarks of *The Southern Presbyterian* on the closing of certain features of the Pan-American Exposition:

"This sort of a compromise is not a compromise at all. In fact, there is no such thing as reaching a compromise on a moral question. Either a thing is right or it is wrong. In this case the ministers of Buffalo are making things hot for the Exposition authorities. An injunction against opening the Exposition on the Sabbath will be secured in case the authorities persist in their determination to open on that day. There can be no more reason for an exposition breaking the Sabbath by forcing its employees to work and tempting the general public than there is for a farmer working his farm. The only possible object the authorities can have is that of making more money. The Sabbath was not made for money-making."

Not all the Christian clergy are opposed to a more liberal construction of Sunday. As a whole, the Episcopal Church and the Roman Catholic Church have always stood for considerable freedom on that day, for "harmless sports" and the opening of museums and public libraries. The Jewish clergy and the several Christian bodies that observe the seventh day of the week are also opposed to Sunday legislation. To these may also be added most Unitarians, Universalists, Lutherans, and Continental Protestants. Even in the American Evangelical Protestant churches not all are believers in the enforcement of a strict observance of Sunday. The New York *Christian Advocate*, (Meth. Episc.), altho itself in favor of Sunday legislation, takes a pessimistic view of the situation. "Judged by the fine passages uttered in favor of the Sabbath," it remarks, "there is a large majority in this country who believe it should be perpetuated and honored; but from the practise of many and the great number of instances of surrender to the demands of mammon in connection with its observance, it is to be feared its real friends are in the minority."

The New York *Churchman* (May 25) probably represents the opinions of the majority of Episcopalians in the following remarks:

"The Exposition, we are informed, is opened in the afternoon after church hours, as a place of recreation. The halls are open, but the machinery is not running, nor are exhibitions permitted in the Midway. The issue is thus distinctly drawn between Sunday for worship and rest, and Sunday for worship and recreation. The hours of opening do not interfere materially with church attendance. Of course there are church services in the afternoon and evening, but it would be idle to pretend that the opening of the fair in the afternoon hindered any person from religious worship, nor does the opening of the Exposition hinder any one, save some hundred and fifty employees, from passing a Puritanic Sunday, if they so elect. It simply recognizes the fact that beside the old ideal there has grown up a new one of the uses of Sunday, probably in quite as close accord with primitive Christian usage as the other, certainly more in accord with that of Calvin and primitive Protestantism and as consistent with Christian thinking and feeling. Any one who will take pains to visit on Sunday afternoon the museums, botanical gardens, and zoological parks of New York will readily convince himself of the class that they serve, and feel that they are not abused, and that it is right and wise that the few care-takers should labor on this day, and rest upon some other, that the working multitude may have healthful recreation, when alone it is possible for them to have it at all. The argument that applies to these museums applies to the Pan-American Exposition, under the restrictions that now attend its Sunday opening. Taking human nature as it is, and not as we would like to have it, we believe that more moral harm to Buffalo, and to its visitors,

would come from the closing than from the opening. Human nature does not sleep on Sundays. If you close the upward path, it finds downward ones. *The Congregationalist*, once the advocate of the strictest Sabbatarianism, now urges Congress to open to the public on Sunday the doors of the National Library."

The New York *Truthseeker*, commenting on the Buffalo "compromise," says:

"If the directors of the Buffalo Exposition thought to placate the clergy by their compromise on the Sunday-opening matter, they little knew their men. Nothing less than the whole thing will satisfy these would-be monopolists of Sunday. Anything not in accord with their puritanical notions meets their wholesale condemnation, and anything which takes a customer away from their shops is denounced as inimical to religion—meaning their trade. . . . As for the ministers of the country, they could not rail any harder at a completely open Exposition than they will at a partially open one. The only policy that will really suit them is to close everything but the churches on Sunday, and then use the police force to drive the people into them. The preachers would undoubtedly be willing to labor themselves and let the policemen work if this pious state of things could be brought about."

The historical side of the question is touched on in a letter by the Rev. Dr. A. H. Lewis to the New York *Tribune* (June 6). Many defenders of enforcing Sunday laws, as, for instance, the Rev. C. E. Locke, from whom we have quoted (THE LITERARY DIGEST, April 27, p. 515) have asserted that they were not trying to enforce a religious observance, but only a "civil Sunday," for the general physical and moral benefit of the laboring man. "Seen in the light of history," says Dr. Lewis, "this statement can not be sustained for a moment." He continues:

"Every student of the question knows that Sunday legislation had its beginning in the most intense form of the pagan state-church system, under Constantine, in 321 A.D. With slight modifications Sunday legislation continued as part of the state-church system when the empire became nominally Christian. This tendency increased as the centuries went forward, and the largest type of civil legislation concerning religious matters obtained throughout the Middle Ages.

"Christianity among English-speaking people was developed under the same state-church system. The Puritan supremacy in England—1640–60 A.D.—was marked by an extreme union of church and state. While Puritanism did not legislate concerning saints' days, it intensified the legislation concerning Sundays and days of humiliation and thanksgiving. English legislation with the strong Puritan coloring was transferred to the American colonies and became the source of all Sunday laws in the United States. These laws have gradually fallen into disuse, but they have never been removed from their original religious basis. Some decisions from lower courts have attempted to evade the religious feature of the Sunday laws, tho the majority of these decisions maintain or admit the religious character of the laws. . . . . .

"If our Sunday laws be analyzed, they show a positively religious basis in their structure as plainly as they do in their historical genesis. Sunday would have no feature of 'A Civil Sabbath' except as the civil law protects it as a day upon which it is wrong to do those things which are wholly harmless on other days. For example, there is no peril to the interests of the State, local or general, from the playing of golf or similar recreations on other days. It is not a breach of good order. It does not inculcate treason, nor menace the welfare of communities in any way. Seen from the standpoint of good health and rational enjoyment, it is much to be desired. The attempt to prohibit it on Sunday is based upon the idea that Sunday is different from other days, and that men are under obligation to refrain from business, labor, and sports on that day for the day's sake. This fact makes it impossible to evade the truth that religion is at the basis of all legislation concerning Sunday. The term 'desecration' has no meaning if the day is not sacred in the eye of the civil law. Certain exemptions based upon 'necessity and mercy' have no meaning except from the religious basis. This idea is drawn directly from the Fourth Commandment of the Decalog. It is needless to continue statements and suggestions in this direction. Golf-playing being harmless and in keeping with the best interests of society on all other days, can not be harmful and opposed to the interests of the commonwealth except upon the assumption that Sunday is a day upon which 'worldly business and amusements' are wrong because they are worldly, in contrast with spiritual or religious duties.

"Until the friends of Sunday legislation are willing to separate the civil law from the religious day and let the latter take its chances alone, it is useless for them to claim that they do not seek the support of Sunday as a religious institution through civil law. This theoretical distinction between the civil Sabbath and the religious Sabbath did not appear in history until the right of the civil law to interfere in religious matters was challenged. Since then men have labored to make this impossible distinction. If the Bible be accepted as the standard of religious duty, the seventh day alone is the Sabbath. In any case the whole question of Sabbath observance is a religious one, and should be left to the individual conscience without any interference on the part of the civil law."

A widely prevalent secular view is thus given by the New York *Evening Post* (June 4), in commenting on the Yonkers golf case:

"Whatever may be the technicalities of the law in regard to the matter, there can be no doubt that strict Sabbatarians are guilty of a grave tactical blunder when they try to stop Sunday golf. A game which is noisy and which actually interferes with the quiet of the day, or with the devotions of churchgoers, may reasonably be suppressed; but golf is not such a game. The players do not disturb any one except those that are filled with anguish at the sight of a man who fails to choose their method of spending Sunday. The plain fact is that the year 1901 is too late a date to dragoon men into attending church, or to forbid their indulgence in wholesome and innocent outdoor pastimes; and the attempt to enforce blue laws, so far from advancing, will be absolutely certain to harm the cause both of the churches and of general morality."

One of the most recent developments in this matter is the protest of the New York Sabbath committee against the renewal of the licenses of the Dewey Theater and the Bon Ton Music Hall. Altho these places are not, in popular repute, regarded exactly as feeders to the Sunday-school, vicious influence was not the ground of the complaint. "The Sabbath committee," its counsel, John N. Perry, is reported to have said (New York *Tribune*, June 8), "is not trying to suppress vice. There are other organizations which make it their business to do that. We are working solely to enforce a respectful regard for the sanctity of the Sabbath, and complain against the respectable theaters which offend as well as against places of the character of the Dewey and the Bon Ton."

---

**A New Text of the Lord's Prayer.**—A valuable, tho small, addition to the early documents of Christianity has lately come from Greece. It is the fragment of a clay sherd, found at Megara, and now in the National Museum at Athens. A writer in the London *Pilot* thus describes it:

"What remains (about a third of the whole area) is some 5½ by 4¾ inches in size, and contains part of the Greek text of the Lord's Prayer, from the words 'Give us this day our daily bread' onward. The Doxology [*i.e.*, the final clause beginning "For thine is the kingdom," absent also from the majority of the earliest manuscripts, as well as from the Roman Catholic Vulgate and the Revised Version, and believed by most scholars to be a later addition] is absent at the end. After the words 'from the evil one' follows a short phrase, the beginning of which is broken away, but which ended 'O Lord,' probably 'Help,' or 'Save, O Lord.' The whole is closed by the Christian monogram [*i.e.* the Greek letters X and P, which begin the Greek name *Christos*]. Dr. Knopf, who publishes the fragment in the 'Mittheilungen' of the German Archeological Institute, notes that the text was scratched on the wet clay, before it was baked; hence the sherd must have been made actually for the purpose of receiving the inscription; we have not to do with a mere graffito. From the

style of the lettering, combined with the form of the *crux monogrammatica* [*i.e.*, the X P in the form of a cross], and the absence of the Doxology, he concludes that the text belongs to the fourth century A.D. From the many blunders in orthography he infers that it was written by an ill-educated person. Every one, however, who is familiar with Greek inscriptions of this time knows that the Greeks wrote them, as many decently educated Greeks write now, more or less phonetically. The orthography of our text, and therefore the education of its writer, do not seem to be much below the average."

## TWO MORE AMERICAN PASSION PLAYS.

IN a recent issue we gave some account of a passion play given each Good Friday by the *penitentes* of New Mexico. It appears that this is not the only drama of the Passion performed in America. The Californian journals have been devoting considerable space lately to the play of "Nazareth," just performed for the second time in California in connection with the golden jubilee of the Jesuit College at Santa Clara. The play is written by Mr. Clay M. Greene, the playwright, an alumnus of the college. The San Francisco *Argonaut* (June 10) thus speaks of it:

"The most delicate point that presented itself to the playwright was the rôle of the Christ. After mature reflection, he decided to eliminate it entirely. This made the production of the play an experiment in stagecraft—a somewhat ticklish one. The experiment has succeeded in the present production. It remains to be seen whether it will succeed when the play is presented before the mixed audiences of large cities. Presented as the play was by inexperienced boys, its effect was none the less most impressive. . . . Its principal point of interest from the playwright's viewpoint is the omission of the character of Christ. Did His absence make the play a failure? The answer must be 'No.' Is His absence disappointing? The answer must again be 'No.' What effect then does His absence have upon the mind of the auditor?

"It is provocative. It seems to excite the curiosity of the audience. It gives an air of expectant mystery to the play. And when the end comes, and the Christ does not appear, the audience rises, draws a long breath, and goes away—possibly baffled but certainly not disappointed. It is a very curious study in stagecraft.

"'But how is it done?' the reader may ask. Very simply. The sayings and doings of the Christ are put into the mouths of the other actors. His actions are narrated. His sayings are repeated. When His actual presence seems vitally necessary—as when He is summoned before Herod—His guard files in, a strong light pours among them from the wing, and the curtain falls. In the scene before Pontius Pilate the Christ apparently stands in the place appointed for prisoners in the space between two great pillars; from between the pillars there proceeds the same mysterious light. In the march to Calvary a low wall lines the roadside, on one side of which the disciples kneel; along the other pour soldiery and rabble, while the audience sees spearheads, helmet-plumes, tossing caps, and finally the top of the cross, wavering uncertainly, apparently borne by the Man of Sorrows, staggering beneath His heavy load.

"The play as a play is a good piece of work. The dialog is simple, well written, and strong. It follows the text of the Scripture wherever possible, and where much new dialog-matter is necessary it is couched in the same simple style as the sacred book. As to construction, the play is well put together. Its scenes are well rounded and symmetrical, and its conception is homogeneous. It is not a mere collection of scenes, it is a real drama. It is too long, but it has already been curtailed, and will have to be still further cut down if it is to take its place among the dramas of the day. But this is not extraordinary. The story of the Passion is a long one, and as played at Ober-Ammergau it takes about eight hours. On our stage it must be compressed into about three hours acting time. Mr. Greene has got it into about three hours and a half. He will have to cut another half-hour."

Another Passion play, also given under the auspices of the Roman Catholic Church, was lately presented by the Siwashe Indians at St. Mary's Mission, Vancouver. From the Vancouver *Province* (June 10) we take the following account:

"The presentation of the Passion play by the British Columbia natives is not an elaborate affair by any means, and while by some thought not to equal the celebrated portrayal at Ober-Ammergau, in the Bavarian Alps, others maintained that in general tone it did, and contended that the beauty of the production lay in the simplicity of the actors and their earnest conviction and piety, which religious faith alone could inspire. . . . What was done formerly in the observance of a vow is now performed at Ober-Ammergau for money, and the enchantment has disappeared. Not so with the Indians of this province. They are now at that stage where were the European peasants one hundred years ago, and their work is for the love of the Master alone and comes from the heart. . . . . .

"The first scene represented Our Lord kneeling in the garden of Gethsemane surrounded by His three sleeping apostles. In the next, Judas was depicted as coming into the garden accompanied by the knaves. Here took place the betrayal of Jesus. Following was shown Christ before Pilate, the background filled with soldiers. In the next tableau was presented a realistic crowning of Christ with thorns, two soldiers on either side pressing the emblem of disdain upon His brow till the blood ran copiously. Pilate was next represented in the famous Ecce Homo scene, wherein the rabble would not entertain the pardon of Our Savior, but cried 'Crucify Him.' The fall of Jesus under the weight of the cross and the subsequent meeting with His mother formed the succeeding tableaux, followed by a portrayal of Saint Veronica [traditional, not scriptural] wiping the blood from His face. The next was indicative of the sorrow of the Jewish women at Christ's condemnation and His prophecy of the sins of the fathers being visited upon future generations of Israel. The partition of our Lord's garments in fulfilment of the prophecy, and the nailing of Christ to the cross at Golgotha, or the place of the skull, were represented in the two succeeding scenes; and altho true to the life, the acme of realism was not apparent till the final tableau, the Crucifixion, was reached.

"When the last of the procession had filed past Calvary with bared and bent heads, accompanied by suitable acknowledgments, a halt was made in front of the cross, and for nearly one hour, while devotional exercises were being held, the principal actors in the *tableau finale* remained so rigid that not a movement could be seen. This last scene was at once sublime and awful in its grandeur. In the foreground were hundreds of kneeling Indians intently engaged in their devotions—in the background Christ upon the cross, Mary Magdalen at His feet, Mary, His mother, at His side, and soldiers surrounding.

"As will have been noticed, Christ appeared in each tableau, but in that of the crucifixion He was represented by a life-size image. After He was stabbed in the side, blood commenced to flow, to such ends had the true pictorial production been carried. It only needed the dripping of the blood down His breast and onto the kneeling form of Mary Magdalene to complete the awe-inspiring picture, and when the little red streams representative of His blood commenced to trickle, the sight was indeed inspiring, and for the moment one actually expected to see the lips of the figure of Our Savior part and His last words, according to the epistles [*sic*] of the apostles, issue therefrom.

"While kneeling, the Indians were addressed by Father Rohr in Chinook. He retold to them the story of Christ's life in its principal features and followed this up with an exhortation to them to follow in the footsteps of the Master. At this stage the scene was one which will probably remain unequaled in the religious annals of British Columbia for many a long day."

THE members of the Young Men's Christian Association who have lately been in Boston to attend the jubilee celebration of that society have recorded their disapproval of the nude in art. In a circular signed by the Methodist bishop Mallalieu and other prominent members, the following protest is made:

"The undersigned respectfully protest against the holding of a reception given by the ladies' auxiliaries to the Young Men's Christian Association delegates in the Museum of Fine Arts, on the ground of its being a place hardly proper for a mixed social gathering of young men and women, because of the presence there in many parts of the building of large numbers of fully developed and entirely nude masculine statues.

"Is there anything in the magic word 'art' to eradicate indecency? How can the obscene exposure of the human form be any less potent in seducing thought when chiseled by a master-hand? Rather, may it not be said that the more exactly art follows the lines of the flesh the more effectively does it exert the same temptation as the flesh? . . . . . .

"The Young Men's Christian Association is a soul-winning organization, with a splendid record of half a century. Nude art never helped a soul to belief on the Lord Jesus."

# FOREIGN TOPICS.

## THE PRESENT SITUATION IN CHINA.

THE semi-official announcement that Count von Waldersee is about to return to Europe is hailed by the press of the Continent as confirmation of the report, current for several weeks, that the allied Powers have finally agreed upon a plan for the withdrawal of their forces from China. The Peking correspondent of the usually well-informed *Lokal-Anzeiger* (Berlin) states that the basis of evacuation is as follows:

In Peking, Germany, France, England, Russia, and Japan will each leave a legation guard of 300 men, Italy and Austria will leave one of 200 each, and the United States one of 150. Tien-Tsin will be occupied by an international force aggregating at first 6,000 men; later 4,000 of this force will be withdrawn to garrison Shan-hai-Kwang and Tsinan-Tan. Along the Peking-Shan-hai-Kwang railway 1,500 men will be distributed for purposes of protection, and at nine central stations along the railway will be placed garrisons of 300 men each, no garrison to consist of troops of more than one nationality. Posts along the Peiho will be occupied by contingents of all nationalities except Austrian and American. Altogether, with various other small posts, there will remain in China a mixed force aggregating 12,500 men.

RUSSIA'S GUARANTY TO THE POWERS.

THE CZAR (to the Powers): "I will guarantee that my good friend here pays promptly."
LI HUNG CHANG: "O, Confucius! What was that squeezed me so?" —*Amsterdammer*.

The comment of the European press is directed to three phases of the question: the general results of the occupation, the manner in which the indemnity demands must be met by China, and the leadership of Count von Waldersee. Of all the objects of the expedition to China, says the *Neue Freie Presse* (Vienna), the only one actually accomplished was the liberation of the ministers and legations. The disappointment of Europe is keen, continues this journal, as this Chinese expedition is the most complete fiasco that has ever yet resulted from an attempt to reconcile the conflicting interests of the Powers. The *Neue Freie Presse* concludes:

"A survey of the whole affair leaves the impression that the Chinese problem has not only been left unsolved, but that a solution was never more remote than at present. Nothing has been secured, not even adequate protection for the residents, nor an extension of trade. Nor has a salutary lesson been given to the mandarins calculated to impress upon them the superiority of European and American civilization and military might. It is Russia alone that has gained any advantage. She has laid hands on Manchuria and is hardly likely to loosen her hold, in spite of the solemn renunciation by all the Powers of territorial aims."

The Powers should have retired as soon as their single common aim [that of rescuing the legations] had been reached, declares the *Journal des Débats* (Paris). They were led on, however, continues this journal, by the "mailed-fist" talk of Germany to a military rivalry which has done none of them any good. "Indeed, it has given the Chinese an example of disunion for which the Celestials can have nothing but contempt." One good result of the expedition, perhaps not generally recognized, concludes the *Débats*, is the improved status of foreign-managed railroads in China.

German comment is directed chiefly to Count von Waldersee's leadership. The field-marshal and his men, says the *Kölnische Zeitung* (Cologne), altho they met no adversary worthy of their steel, displayed the same qualities which insured the victories of the German armies thirty years ago. Discipline, equipment, and commissariat department, continues this journal, were admirable. The *Vossische Zeitung*, the Liberal organ of Berlin, thinks the "perfunctory encomiums" passed on Count von Waldersee are "foolish and unnecessary." It will be wise, says this journal, to avoid, on the field-marshal's return, a repetition of the theatricals which attended his departure. A little of the sober spirit with which people now look back upon the successes of the Chinese campaign would have been of advantage last year. That spirit will be eminently appropriate on the occasion of his return to Germany. The *Frankfurter Zeitung* blames Count von Waldersee for assuming an air of arrogant authority to which he had no right or title. He was "but a poor imitation of Bonaparte, however," it observes. The German field-marshal is all right and we respect him, says *The Times* (London), but, at the present moment, all that we wish to emphasize is that "the system of placing British troops under a foreign commander is evidently not calculated to further British interests." We British should have left long ago, says *The St. James's Gazette* (London), which continues: "There is not the smallest necessity for us to be dragged about Chinese provinces because German generals have at last got the chance of doing some fighting, and mean to use that chance. . . . The difficulty in China is not Russia—we know what Russia wants—but Germany, for we do not know what Germany wants. Whatever it is, it is high time that we ceased to be compelled to help her to get it." The total result of the expedition, in the opinion of *The Spectator* (London), is a new experience for Europe, and not a pleasant one. This journal believes that the worst result of the failure is the "demonstrated fact that the states of Europe can not act together for any length of time even when they try." It says further on this point:

"The British suspect the Germans, the Germans suspect the British, the French would trust neither, and the Russians pursued a policy of their own. There was not only no real coherence, there was genuine tho concealed antagonism, which, springing, as it obviously has done, not so much from immediate interests as from abiding convictions, must sooner or later influence action in Europe, and immediately renders true cordiality impossible. . . . A common expedition with common objects and common results has decreased, instead of increasing, the harmony of Europe. We ourselves in particular are less near a thorough understanding with Russia, or Germany, or France than we were before."

The British proposal that China pay the Powers in bonds, the interest and (ultimately) the principal on which are to be secured by "certain sources of Chinese revenue," is condemned by the

*Journal des Débats* (Paris), and M. Delcassé, French Minister of Foreign Affairs, in reply to an interpellation in the Chamber, has declared that France, "whose policy and interests in the Chinese matter are one and the same with Russia's," will probably contend for a collective guaranty of payment by the powers, as China has not the necessary sum at her disposal. This indemnity business does not look bright for England, says *The Daily News* (London), which continues:

"A new gulf divides us from China—a gulf of our own making. And in bringing this about, Great Britain, who once led the world in the Far East, has followed miserably in the train of Germany and Russia. But it is Great Britain who will chiefly pay the bill, and it is part of the irony of the situation that, if China pays her indemnities to Europe, she will probably have to do it by putting on duties against British trade."

John Chinaman is far from being defeated, declares *The Celestial Empire* (Shanghai); indeed he is everywhere winning, but by other means than that of war. "The Chinaman's great strength lies in his ability to sit still. . . . Yet he moves; gently, imperceptibly, and, what is more to the purpose, irresistibly. There is no more chance of stopping the advance of 400 millions than there is of arresting the course of a Himalayan glacier." China has not stood still, altho such is the popular superstition. Chinese science, art, and general culture have not progressed; but the Chinese people have. "They have never ceased to expand. Not for one moment has Chinese influence in the Far East ever been really stayed." Chinese progress has been like the invasion of new territory by a plant, quiet, unnoticed, but certain. China has never dominated much of the world by her political influence, but mainly through the influence of her people and their capacity for hard work and keen trade. This influence, so far from having ceased, has only just begun. *The Celestial Empire* continues:

"Visit Singapore and see what he [the Chinaman] has done there. Go to Penang, travel through the Straits generally, extend your researches farther afield, and visit the Indian archipelago, go to Borneo, and what is your experience? Chinamen everywhere. Wherever there is hard work to be done, wages to be earned, profits to be made, and savings to be accumulated, he is there, smiling, obliging, untiring, competent. What he does is, as a rule, done well. He can be trusted; the native can not. Does it require much of the divine afflatus to enable one to foresee the future of these lands? Go on to Burma and the same holds true. Since the English have had control there and safety has been assured, the number of Chinese has increased by leaps and bounds. They do absolutely everything. As farmers, planters, carpenters, builders, clerks, and general factotums they are as indispensable as they are ubiquitous. If we turn to the North the same condition of affairs confronts us. The Russian is at his wit's end to know how to keep the southern provinces of Siberia Russian. The old tactics of the years before Christ are being applied to-day. Chinamen make themselves indispensable, and can no more be ousted from lands upon which they have fastened than the American Indian could turn out the American Saxon. . . . The political influence of Western lands may last for a long while, but the commercial and industrial future must in time revert to the hard-working, hard-living native. Nobody else is capable of competing with him. His conquest will in time be complete."

The gist of the Chinese question, declares Sir Robert Hart, chief of the customs service of the Chinese empire, is that the Chinese are a proud race, and their justifiable pride has been wantonly offended. The crux of the missionary question, he says further (*Deutsche Revue*, Berlin), is this:

"It is an acknowledged fact that the missionaries strive to do good in various ways, and the medical assistance they render is accepted thankfully indeed; *but the very fact that they are bold enough to teach offends persistently*, and those of their neighbors who accept their doctrines expose themselves to unequivocal danger, while certain abuses evoked by their situation have caused excitement from time to time in their district and filled the people and their officials with displeasure. For instance, the so-called converts apply to the missionary assemblies for protection from the consequences of violation of the law or to profit by the ecclesiastical influence in merely personal suits, just as the missionaries themselves, with presumption or intrusion, ask the local government for privileges which the mandarins would not hesitate to deem their own."

COUNT WALDERSEE RETURNS.

Goee out, shoutee—"Chinaman me lick!"
Comee home—velly still—sick, sick, sick.
—*Figaro, Paris.*

Sir Robert believes that there is something in the treaties with Western Powers which has "almost incurably wounded Chinese pride and trust in the rest of the world." He concludes:

"It is not only the claim to equal rights, or the proof of physical superiority, or the compulsory extension of trade, or the autocratic imposition of treaties, that has wounded this pride. If it were merely that, time would have healed the wounds long ago, but there is something in these treaties that keeps the scars open and hinders a cure. Just as the body of a human being may be crippled, its soul ruined, just so the spirit of a people may be abused and unequivocal hostility shown to the nature of this spirit; *and something like this has been done to China by the Western peoples, unintentionally to be sure, but not less fatally.*

"The most important, and, in the opinion of the foreigners, the really essential, feature of the treaties is that which releases the foreigner from Chinese sovereignty; it is the principle on which the treaties are based and its spirit is observable in every clause: in consequence of it no Chinese court can proceed against a foreigner, and a decision against the latter can be given only by the officials of his own country; and this principle is so elastic that its sphere of influence comprises the fact that not only is it applied to the individual personally, but also to his property, and therefore leads to the supposition that the foreigner is not only amenable to his own laws exclusively but is free from every obligation to respect the Chinese laws."—*Translations made for* THE LITERARY DIGEST.

---

**The Portuguese "Clerical Kidnaping."**—According to *The Saturday Review* (London), the entire anti-clerical campaign in Portugal was "an artificially gotten-up demonstration," the work of a sort of "renegade Masonic brotherhood." From a "trustworthy correspondent," *The Saturday Review* gives the following true account of the alleged kidnaping of a young girl and her incarceration in a convent against her parents' wishes:

"The lady in question is not a young girl, being over thirty-three years of age. For a long time past the unfortunate terms on which this lady lived with her father were well known to her circle of friends and acquaintances. The specific charges which she brought against him are no concern of ours, but in the end they led to such scenes of violence between the pair that the gentleman threatened to shut his daughter up in a lunatic asylum, whereupon she appealed to law for protection and even obtained it. After this, as may well be imagined, her home existence became less pleasant than ever. One day she went for a walk, met some friends, who were neither priests nor Jesuits, assured them that she was very miserable at home, and they advised her to enter a certain convent as a parlor boarder, which she did. The populace, misinformed as to the facts of the case, worked

itself up to a frenzy of indignation, not only against the Jesuits of Oporto, but against the members of all the religious orders, the majority of whom were probably not even aware of Mlle. Calmon's existence. Instead of arresting and trying the accused monks individually or in a batch, the Portuguese Government has ordered the Jesuits and other religious orders straightway to leave the country, which, to their great inconvenience, some of them being very aged people, they have been compelled to do."

The action of the Portuguese Government in this matter this journal characterizes as "worthy of indignant resentment by all who love fair play."

## PROBLEMS BEFORE THE AUSTRALIAN PARLIAMENT.

THE two most formidable problems which confront the new Australian Parliament are those of labor and the tariff. The solution of these problems is rendered difficult at this time by the fact, as pointed out by *The Times* (London), that the Parliament meets without any decisive majority in favor of any particular policy or any person. The labor question hinges chiefly on the matter of color. An immense amount of capital has been invested in the Queensland sugar plantations, and the planters contend that to exclude the Kanaka coolies, as the labor party demands, would be to ruin a prosperous industry in which the other colonies are also heavily interested. There are eight labor members in the Senate, in a total membership of thirty-six, and sixteen in the House of Representatives, in a total of seventy-five. They are counted on as supporters of Premier Barton and the high-tariff policy, but are bitterly opposed to Kanaka labor. Mr. Barton needs them to hold his majority; but, as he can not conciliate them without endangering much of his other support, his position, declares *The Times*, is a ticklish one. He has "wobbled" a good deal, we are told:

"He began by pronouncing decidedly in favor of a 'White Australia,' and his speech was acclaimed by the labor party as foreshadowing the exclusion of all workmen not of European blood, with the result of raising wages to an exceptionally high level for the white laborers, who in that event would have to be brought in to work on the semi-tropical sugar plantations. Since then he has become alarmed at the consequences of his pronouncement, and has promised that whatever is to be done shall be done gradually and with the utmost consideration for the great interests involved."

Labor legislation in Victoria is also making trouble, according to *The Australasian Review of Reviews* (Sydney). The action of the Government in raising the rate of unskilled labor to seven shillings a day has brought it into competition with rural industries. Says *The Review:*

"Why should a farm laborer work ten hours a day in the fields, and earn, say, 17*s.* 6*s.* or 20*s.* a week with board, when a paternal government will pay him 42*s.* a week for an eight hours' day, with only that mild exercise known as 'the government stroke'? So country labor drifts into the city, and clamors for government employment; while farmers and fruit-growers are left with harvests they can not reap and fruit they can not gather. The unemployed in Melbourne have interviewed Lord Hopetoun [governor-general]. . . . One incident illustrates the situation. The Government Labor Bureau in Melbourne summoned two hundred of the unemployed registered on its lists for the purpose of sending them to cut water-channels in the Mallee. Only one hundred answered the call; every fifth man refused to 'go into the country,' and less than fifty actually went. The new unemployed want, in brief, high wages, a short working-day, and city life!"

The tariff question is also likely to cause the Premier considerable trouble. He himself is in favor of a protective policy; but in the two houses of Parliament there is a total of fifty-six members who are opposed to him, while but fifty-five support him. *The Argus* (Melbourne) claims that there is a popular majority for low tariff in every state except Victoria, and a total popular majority for low tariff throughout the commonwealth. In Tasmania, West Australia, South Australia, and Queensland, it says, parties are pretty evenly matched; there is a majority of 31,000 for low tariff in New South Wales and a majority of 11,000 for high tariff in Victoria. *The Telegraph* (Sydney) sums up the situation as follows:

"One thing is, at all events, certain. The Government has not been armed with power to force any drastic system of protection on the commonwealth during the present Parliament. There must be mutual toleration if conflict is to be avoided. To the extent that this fact is recognized by the Government its majority may work. During the elections, however, ministers made various conflicting pledges, which, as soon as the tariff question is approached, promise to plunge them into a sea of difficulties."

Commenting on the presence of foreign war-ships in Melbourne harbor during the recent celebrations, *The Argus*, of that city, says:

"To a considerable extent the commonwealth's industrial and commercial interests rest upon an international basis. Great Britain lends us money on cheap terms and offers an open market. She is our best friend in business. Yet our prosperity would receive a shock and our progress a check if we were suddenly called upon to buy and sell only within the British empire. Great Britain, for instance, does not want all the wool grown in this continent. The more we, like Great Britain, can share in a universal exchange, the greater and more rapid will be our growth. And that is not all. Every year the commonwealth will have a larger volume of surplus produce to be carried across the seas. So we have large and increasing interests in the Pacific, Indian, and Atlantic oceans as highways of commerce. Let them be traversed by armed ships hostile to the British flag, and the commonwealth's trade and intercourse with distant countries would be seriously affected."

## THE KAISER AS AN ORATOR AGAIN.

IN three recent speeches, Kaiser Wilhelm has again drawn the attention of the world to his imperial personality. In the matriculation of the German Crown Prince at Bonn University, the alma mater of the Kaiser and of his father, he found an opportunity for calling the attention of the students to the necessity for the consolidation of the Germanic race. The Kaiser spoke of the youth of the empire, the need of a national feeling, as opposed to the "universalism of the Holy Roman Empire," and declared that "even in the peaceful university the German must be ever a fighter." He closed by saying:

"The future awaits you and will need your strength, not simply to squander it in cosmopolitan dreams or in the service of one-sided party tendencies, but to foster the stability of national thought and our ideals which the German race, by God's grace, has been permitted to bring forth from Boniface and Walther von der Vogelweide to Goethe and Schiller. They have become a light and blessing to all mankind. We need them now more than then. May you all strive to become such."

This speech, for the most part free from political references, is generally commended in Germany for its originality and sincerity. Several of the Berlin journals, however, find considerable political significance in it. Commenting on a brief reference to Queen Victoria and her consort Prince Albert (who was for a time a student at Bonn), the *National Zeitung* (Berlin), the National Liberal organ, says:

"After many incidents, public and private, which amount to an anti-English agitation which is a mockery of all political common sense, it is not surprising that the Emperor should have felt constrained to speak as he did. . . . It often happens that the German empire is exhorted to make conquests on every foreign continent. The people who advocate such ambitions are the same as those who would like a war with England, and the sooner the better; tho that war would hardly tend to further the realization of their schemes."

The *Vossische Zeitung* (Berlin), also Liberal, declares that the Emperor's references to a "strictly defined German nation" should not be interpreted as in favor of pushing this principle too far in a country where there are so many Wends, Poles, and Danes, as well as Germans of French extraction. The Emperor's speech, it believes, should have a sobering effect on colonial ambitions, as the enthusiasm for the acquisition of colonies, which now prevails in many quarters, is not compatible with "narrow and firm limitation within the framework of the German race." The *Hamburger Nachrichten*, the *St. Petersburger Zeitung*, the *Aftonbladet* (Stockholm), and the *Tribuna* (Rome) commend the speech as appropriate and eloquent. *The Times* (London) also expresses admiration for the Kaiser's gifts as an orator. The two speeches at Bonn, it says, were among the best and most eloquent he has ever delivered, and in them there is little or nothing which even the most perverse of critics can misinterpret.

Two addresses made soon after the Bonn speeches have brought forth a good deal of comment, directed principally at their assumed political significance. It is the custom of the emperors of Austria, Germany, and Russia to celebrate one another's birthdays with speeches and toasts. The fact that this year the Kaiser was reviewing the German army at Metz on the Czar's birthday, and that the Russian ambassador was present to answer the congratulatory toast upon that occasion, has caused some excitement in the French press. Metz is in the heart of the territory Germany took from France in 1871, and the presence of the Russian ambassdor at the review is looked upon by some of the journals of Paris as an indication that the Kaiser is trying to secure the sanction of Russia to the retention by Germany of Alsace-Lorraine. What is the use of our alliance with Russia, asks the *Libre Parole* and the *République Française* (Paris), both Radical sheets, if that power is to hobnob with Germany in celebration of our national humiliation? If, by his toast and speech, however, continues the latter journal, the German Emperor, always young, thought he had done something to get us excited, he was very much mistaken." The *République* concludes as follows:

"The strangest and most curious feature of the affair is the toast. It was devoted very little to the health of the Czar and a great deal to the Chinese question. After having expressed the hope that most of the allied troops would soon leave China, he added that 'the result will be due in great part to the confidence which the Emperor of Russia placed in Count von Waldersee and which he still entertains.' If Wilhelm II. was joking, this was surely an impertinence considering the presence of Count Osten-Sacken [Russian ambassador to Germany]. If he spoke seriously, it must be remarked that it was an odd confidence which was manifested in removing from Peking the greater part of the Russian troops as soon as Count Waldersee arrived and in refusing to place the remainder under the orders of the German commander."

The *Petite Journal* (Paris) believes that the Kaiser is aiming at a Russo-German *rapprochement*, but declares that he is not going about it in the right way. He is given to taking a malicious pleasure in troubling the imagination of Europe, and worrying nervous people, but the French will not take him seriously. The *Journal des Débats* and the *Temps* (Paris), which support the Russian alliance, make light of what the former calls a "trivial incident." It is an impertinent rôle that the Kaiser has now elected to play, says the *Autorité*, another Radical newspaper of Paris, but even the sensitiveness of the French people will not be moved by it when the realize just what it means. The Russian telegraph agency has circulated a "semi-official statement" to the effect that the celebration of the Czar's birthday "which this year happened to be kept by the German Emperor while he was at Metz," must "not be considered to have the slightest political significance."

German journals regard this declaration as intended to tranquillize the minds of the French. The *Neueste Nachrichten* (Berlin), the organ of the Prussian Conservatives, thinks the French foolishly sensitive, and says: "To ask that out of consideration for France Germany should not regard Metz as a German city would really be too foolish." The *Vossische Zeitung* (Berlin) says:

"The relations of Russia to Germany are unchanged. German policy is just as independent of Russia as it is of England, and the relations of the German empire are quite as friendly with the one power as with the other. At the same time the presence of the Russian ambassador at the luncheon at Metz is merely an act of strict courtesy in accordance with ancient usage, and the toast to the Czar's health proposed by the Emperor can not be regarded as anything more than an evidence of normal relations. Special cordiality is out of the question in view of the close ties which unite Russia and France. Nevertheless, the luncheon and the toast are enough to confirm in the minds of the French—even after the return of M. Delcassé from St. Petersburg—the conviction that it can not possibly occur to the Czar to set his troops in motion in order to recover for the republic the 'capital of the French Irredentists,' as the *Libre Parole* calls Metz."

The next speech of the Kaiser's was conciliatory toward the French, as a sort of antidote, some of the Paris journals declare, for "the Metz impertinence." The week following the Metz speech, the Emperor, at the review of the second regiment of the Guards in Berlin, entertained Major-General Bonnal of the French army and his aide. In speaking of the congratulations to Count Waldersee which had been received upon the announcement that the allied troops are prepared to leave China, the Kaiser referred to the fact that "for the first time two French officers have been the guests of the German army, just as, for the first time, German and French troops have fought shoulder to shoulder [in China] against a common foe in good brotherhood-in-arms and in faithful comradeship." He then proposed the health of the two French officers "and the whole of their army." In responding to the toast (which was drunk heartily), General Bonnal made a neat speech closing with the words: "Long live the German army! Long live the Emperor of soldiers!" The Kaiser afterward conferred upon General Bonnal the Order of the Crown.

The German press expresses satisfaction at the Kaiser's compliments to France, and declare that, if the republic still remains obdurate, it is her own fault. The toast, says the *Neueste Nachrichten* (Berlin), "will awaken a joyful echo not only in Germany, but throughout the world." The *Vossische Zeitung* (Berlin) declares that the Kaiser has repeatedly shown his desire to cultivate more friendly relations between Germany and France, but fears that the republic will remain sulky. The *Kölnische Zeitung* (Cologne) generally regarded as the organ of the Foreign Office, says:

"Our Western neighbors may believe it of us that, without sentimentality, the German people gladly join in this 'Hoch!' More, they wish that the friendly words of the French general may have as willing an echo. The old struggles between Frenchmen and Germans have, by the changing fortunes of war, brought to both peoples so much suffering and glory that the descendants of the old fighters should bury the hatchet in the common tasks of progress. Just because both peoples stand upright in arms for all emergencies, such words should be spoken to-day."

The French journals compliment the Kaiser on his "politeness," but make very little comment on the speech.

*The St. James's Gazette* (London) believes that the old spirit of "*revanche*" will never die out in France. It says:

"Tho it may be taken as a proof that French appetite for '*la revanche*' is less passionate than it was, and French hatred of Germans less personally bitter, we do not believe for a moment that the reciprocal compliments paid at the Berlin luncheon mean

that France has abandoned her determination some day or other to regain her lost territory. National aspirations of that sort do not depend on bitterness of popular sentiment, and are not extinguished by mere international courtesies."—*Translations made for* THE LITERARY DIGEST.

## EUROPE'S INTEREST IN THE NICARAGUA CANAL.

EUROPE seems to be reaching the conclusion that, no matter what opposition may be made, the United States intends to build and fortify a Central American canal, if not by the Nicaragua route, then through the Isthmus at Panama. British journals generally, while resenting the "lack of international manners" shown by the United States Senate in the matter of the amendment to the Hay-Pauncefote treaty, admit that England would lose nothing and would probably gain much by permitting the American Government to do as it pleases. We have all the diplomatic cards in the game in our own hands, declares *The Spectator* (London), and we can gain a complete diplomatic victory, if that will satisfy us. But, it says further, what is the use of a mere diplomatic triumph? We want to know, not whether we have a right to stop the United States, but whether it is worth our while to do so. For our part, it continues, we believe that "the decision, after an impartial inquiry, will be (1) that it is to our interests to have the canal made, and (2) that it is to our interests that America shall make the canal and be its guardian and protector, subject to the provision that the canal shall always be open to our shipping on equal terms, and that there shall be no differentiation of dues against us." If Great Britain does not adopt this view, but stands "strictly on her rights" under the Clayton-Bulwer treaty, *The Spectator* believes that it is quite evident from the tone and temper of American opinion that one of two things must happen: "Either the Americans will refuse further negotiations and the canal will not be dug, in which case we shall lose the great advantages which would accrue to us from the new Isthmian waterway as they did from the Suez waterway; or else the Americans, contrary to all international right and usage, will tear up the Clayton-Bulwer treaty, and will tell us that if we want to stop the construction of the canal on American terms we must do so by force." England, this paper declares, would never fight over a question of this kind. Consequently, the British stand to lose in either case. "We lose a benefit if we succeed in stopping the canal. If we do not succeed because we are not prepared to back our *non possumus* by war, we suffer a gratuitous humiliation, tho no doubt we should gain a famous diplomatic victory." Only two very small points now separate the two countries, says *The Spectator:* the control of the canal by America in case of war, and the communication of the new treaty to the Powers, *i.e.*, making the Powers parties to the neutralization of the canal. The first point is "really not a substantial one":

"The Americans do not now ask to be allowed to fortify the canal—tho, as we have always contended, fortification is not a matter of real importance—but merely claim in effect that, if they were at war with another power, they must be allowed to use the canal to protect the national safety, *i.e.*, use it themselves for their war-vessels, but not allow the enemy's ships to do so. After all, that claim is very natural. The canal will have been made by American public money, or by means of an American subsidy, and the Americans therefore can not tolerate the idea of it ever being used to endanger the republic. But tho we understand American feeling on the subject, it is in reality quite unnecessary to express the matter in a treaty. The canal will be worked by an American company, every one of the great locks will be worked and controlled by American engineers, every pilot will be an American. Under such circumstances, does any sane man imagine that, treaty or no treaty, a power at war with America would be able to use the canal? A hostile ship may get as far as the great Nicaraguan Lake, but it would never leave it till the war was over. These being the plain facts, we can not see why we should quarrel with America because she is, as we hold foolishly, anxious to express in words a right which we know she must be able to exercise, and will exercise in fact. To deny a man a paper right when you are bound by the nature of things to leave him a substantial right, does not seem to us a very wise or businesslike proceeding."

As to the asking for the assent of other interested powers, this journal regards the American objection to that course as "very absurd." Germany, France, and Italy will not be content to leave the question of the canal ignored and undiscussed. The treaty will become public law whether the United States wishes it or not, and the new treaty will produce many more difficulties and complications with foreign powers than the original Hay-Pauncefote instrument.

Canada has an interest in the canal, declares *The Telegram* (Winnipeg) in a jingo editorial. "This interest is not so great as that of the United States, it is true, but still great enough to make us no indifferent spectators of the course of events. We can not be willing to see Britain yield everything, since she has already yielded what gives her the right to have a voice in the management of the canal."

The *Independance Belge* (Brussels) doubts that the new treaty will really assure the neutrality of the canal to all the world. France, Germany, Italy, Spain, have special treaties with Nicaragua as to neutrality. When the intentions of the Americans in regard to the commercial and industrial war between the United States and Europe are fully known, it will no doubt be seen that the Yankees have very little respect for British pretensions, and it will not do to be too confiding in their sincerity as to safeguarding the interests of other nations. The *Hamburger Nachrichten* says that it will be much more vital to the United States to control the Nicaragua Canal than it is to Great Britain to be mistress of the Suez waterway. The *Nachrichten* prints a long article setting forth in detail the work to be done in constructing a canal at Nicaragua. The only interest other powers outside of the United States and Great Britain can have, it says, is that the canal shall be absolutely neutral, free in times of peace and of war to the ships of all nations. The *Frankfurter Zeitung* wants to know why the United States doesn't take up the Panama route. Colombia, it believes, would be willing to grant rights and the canal company only too glad to sell out. It is part of the American scheme for the commercial supremacy of the world, says the *Handelsblad* (Amsterdam), and is perhaps inevitable.—*Translations made for* THE LITERARY DIGEST.

**Is Chile Fortifying the Straits of Magellan?**—A report has recently gained currency in South America that the Chilean Government is secretly constructing military works on the coast of the Straits of Magellan. This report is causing considerable discussion in the papers of the Argentine Republic. The *Prensa* (Buenos Ayres) points out that such construction of military works is in direct violation of the treaty of 1881 between Chile and Argentine, this treaty providing for the absolute neutrality of the straits and explicitly prohibiting the fortifying of the coasts. Says the *Prensa:* "The pretext has been formulated that it is necessary to illuminate these coasts in the interests of universal navigation. We, however, learn from reliable authority that these works are the result of a plan of fortification to establish a line of torpedoes which could be rapidly erected on the base of these constructions; and the Argentine Government has been lately informed that the undertaking is being conducted by responsible parties."

The *Prensa* declares further that Chile has always shown that she regards the region of the Straits as the natural basis for her maritime operations, and concludes as follows: "The military works before alluded to must form part of the vast program which, when developed, would militarize the whole country. . . . Doubtless, the Government of Argentina will institute a judicial process suitable to the grave accusation now widely circulated."—*Translation made for* THE LITERARY DIGEST.

## CURRENT POETRY.

### To a Girl Singing.

By W. E. Henley.

[In "The May Book," published in aid of Charing Cross Hospital, London.]

Sing to me sing—and sing again—
My good, great-throated nightingale,
Sing, as the sun sings through the rain,
Sing, as the home-wind in the sail.

Sing me of life and toil and time—
O bugle of dawn, O flute of rest,
Sing, and once more, as in the prime,
There shall be nothing but the best!

And sing me, at the last, of love—
Sing that old magic of the May,
That makes the gray world laugh and move
As lightly as our dream to-day!

### In Angel Court.

By Austin Dobson.

[These verses, the New York *Evening Post* thinks, might well be applied to summer charitable work in New York.]

In Angel Court the sunless air
Grows faint and sick; to left and right
The cowering houses shrink from sight,
Huddling and hopeless, eyeless, bare.

Misnamed, you say. For surely rare
Must be the angel-shapes that light
In Angel Court!

Nay: the Eternities are there.
Death by the doorway stands to smite;
Life in its garrets leaps to light:
And Love has climbed the crumbling stair
In Angel Court!

—From "The May Book."

### Cherry-Boughs.

By Lizette Woodworth Reese.

Oh, who shall run and greet me in the alleys of the spring?
Oh, who shall seek and find me, and go remembering?
And what is this that waits me in the orchard long and white?
What can it be, my heart of hearts, except our Lost Delight!

And oh, the haunting cherry-boughs, that are so good to know!
And oh, the heavenly cherry-boughs, straight up to God they grow!
And oh, that lonely foot I hear a-following through the trees,
And in the stopping of the wind the little, wrangling bees!

Ye clerks, fare from the counting-house; ye shepherds, from the hill!
Make fast the latch, ye careful wives, of April take your fill!
Yet what is this that waits you in the orchard long and white?
What can it be, ye sons of men, except your Lost Delight!

To you the word, to you the dream, to you the quest shall fall;
For every vexing thing shall pass, but not the Best of All!
Under the cherry-boughs it stands, so lonely and so kind,
And you will hear it following in the stopping of the wind!

—In June "New" *Lippincott*.

**Summer Coolness.**

The familiar process of cooling water by wrapping wet woolen cloths around the jug, illustrates one of the points of advantages of Jaeger Underwear for Summer use. The natural perspiration is absorbed by the wool, and easily evaporated, producing the same delightful cooling process as is found in the experiment named. Linen or cotton underwear will absorb the perspiration, but evaporation is very slow. Hence the clumsy feeling and the chills and other ailments resulting from their use.

# Sent on Suspicion

Our offer of 30 nights' FREE trial—*money returned without argument*—the guarantee that no hair mattress made at any price can equal it—this is what sells *the first* Ostermoor Patent Elastic Felt Mattress in a home. The satisfaction of the sleeper accounts for the scores of duplicate orders that are received every month.

Standard size $15, express charges prepaid to any point. Smaller sizes at smaller prices. Not for sale by stores—this is important, as unscrupulous dealers are offering worthless substitutes.

**Every Man that Shaves** owes it to himself to be fully informed about the excellence of the Masterpiece razor, which we sell in pairs, ready for use for $5.00. Our pamphlet, "All about Good Razors" mailed free. **C. Klauberg**, 173 William St., New York.

## MORE OR LESS PUNGENT.

**The Function of Iron.**—TEACHER: "What is the function of the iron in the blood?"

TOMMY TUCKER: "It's what makes the fingernails."—*Chicago Tribune.*

**German Epitaphs.**—Here are some gems of wit and humor—intentional or unconscious—collected from German and Austrian cemeteries and published in the Vienna *Freie Presse:*

"An angel has flown to heaven; her earthly shell remains. Nothing is dead except the happiness of her parents."

On a carter, killed in a runaway:

"The road to eternity is not long. He started at seven o'clock and arrived at eight."

On a man of letters:

"Here lies the best man in the world. He deprived himself of sleep to bestow it upon others."

A tomb in a rural cemetery bears a bas-relief depicting a peasant impaled on the horns of a bull. Below is the inscription:

"It was a bull's horn that sent me to heaven. I died in a moment, leaving wife and child. Oh, bull, bull! To think that I owe to you everlasting repose!"

The following does not speak well for the married life of the deceased:

"Here rests in God F. K., who lived 26 years as a man and 37 as a husband."—*Translation made for* THE LITERARY DIGEST.

**They Resume.**—"Possibly," began the information editor, glancing furtively at a memorandum on his desk, "you can tell me why Carter Harrison is like the letter 'g.'"

"That's easy," replied the exchange editor, placing a heavy inkstand within reach. "He's the head and tail of the gang. Perhaps you can tell why——"

"That's wrong. It's because he's near the latter end of the campaign."

"Gee! That isn't half as good as mine. What is the difference between a fish-dealer and an untruthful newsboy?"

"None. Both do a scaly business. Why is——"

"I say there is. One sighs for Lent and the other lies for a cent."

"Hang that on the hook. What's the difference between a schoolmaster and a sheep-market?"

"No difference. One boards around and the other has boards around——"

"Saw it off! One has his eye on the pupil and the other has the pupil in his eye."

"What has the sheep market to do with it?"

"That's where you get sold. Ha! ha!"

"Enough to make a donkey laugh, is it?"

"Who's a donkey?"

"Who's a sheep?"

"Ewe are. Why is a pound of putty——"

"Like a cage of panthers? Sixteen ounces. Why is——"

"A pound of putty——"

"Like a dose of laudanum?" "Stops the pane. That reminds me. Why is a hatchet like arnica?"

"One is a window smasher and the other is a pane killer."

"Oh, no! Thought you'd bite at it. It hits a nail on the head."

**Over-Exertion of Brain or Body**

## THE SANITARY STILL

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. **Hon. WM. YOUNGBLOOD**, Auditor for the Interior Dept., Washington, D. C., writes: "We have used your Sanitary Still in our family, and find that it gives satisfaction in every respect. The water is soft and pleasant to the taste. Distillation is the best means of purifying water, and that produced by your still is pure and pleasant and is certainly healthful. I can conscientiously recommend your still. The Sanitary Still used in the **WHITE HOUSE.** Highest award at Paris Exposition. DURABILTY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

Cuprigraph Co., 68 N. Green St., Chicago.

**KLIPS** Write for price-list. H. H. Ballard, 327 Pittsfield, Mass.

"The Nation it does! Why is the wreck of a fruit-train——"

"Gets its dates mixed. Why does a——"

"It doesn't. It only wabbles its nostrils. Can you tell why Pettigrew——"

"Couldn't grow any other way. Why is a ballot-box——"

"Stuff! What's the difference between the tin can trust and——"

"The other can't rust. Why is a riotous insurrection——"

"Like a deaf and dumb man? One's a mute, and so is the other émeute. Why is Bob Burke like a papier-maché walking-stick?"

"Falstaff. Why are the Drainage Canal Commissioners like a horse-race?"

"Have to pay so much to Wenter——"

"Naw!"

"Get a good run for their money?"

"Naw! The job ends with a big, big——"

"Stop! Don't be profane. What the difference between a mackintosh and a seasick boy?"

"One's an overcoat and the other's a pale tot. Why is ——"

"Stop! It isn't pronounced that way."

"Pronounce it any way I please. One's a glad rag and the other's a draggled lad——"

At this critical juncture the Sunday editor came in and swore at them, and they broke away. —*Chicago Tribune.*

PAN-AMERICAN EXPOSITION, BUFFALO.

*May 1 to November 1, 1901.*

"Picturesque Pan-American Route to Buffalo" is a beautifully illustrated and comprehensive publication issued by the "Grand Trunk Railway System," giving accurate information of the Exhibition with plan of the grounds, also map giving complete information of Buffalo, and will be sent free on receipt of two cents postage.

Those planning a trip to Buffalo and Pan-American Exposition this year should make arrangements to take in one of the popular side trips offered by the Grand Trunk Railway to the most beautiful and healthful summer resorts, situated in the "Highlands of Ontario," located 1000 feet above sea level, a few hours' run from Buffalo. Good hotel accommodation, magnificent scenery, perfect immunity from Hay Fever; a place where Health and Pleasure go hand in hand. The Highlands of Ontario include the following well-known and popular districts:—"Muskoka Lakes," "Lake of Bays," "Magnetawan River," "30,000 Islands of the Georgian Bay," "Kawartha Lakes" and the region around "Lakes Simcoe and Couchiching."

Illustrated descriptive publications, maps and all information can be had free by applying to FRANK P. DWYER, Eastern Passenger Agent, 290 Broadway, New York.

Our New Policy

Guarantees an annual income to your beneficiary, for a number of years or for life, as may be arranged. You thus avoid the danger of unwise investment of the proceeds of your Life Insurance and assure your family absolute protection.

Epworth League California Excursions

Account Fifth International Convention of Epworth League, San Francisco, July 18-21.

San Francisco is an ideal summer resort—weather always cool.

Trip thither in summer, across high tablelands of New Mexico and Arizona, is pleasant—air bracing, no oppressive heat or dust.

Best way to go is via Santa Fe Route, only line under one management, Chicago to San Francisco; three daily trains to California, Fred Harvey meal service, personally-conducted excursions.

On the way visit Indian pueblos, and petrified forest, also Grand Cañon of Arizona—world's greatest scenic spectacle, now easily accessible.

See southern California—its noted resort hotels, idyllic valleys, majestic mountains, smooth beaches and lovely islands, its old missions, its semi-tropic fruits and flowers, its great oil wells. This important section reached via Santa Fe Route cheaper than most other lines and with greater comfort.

Extremely low round-trip rates; liberal stop-over privileges; choice of routes returning; open to everybody. All ticket agents sell via Santa Fe Route. Descriptive literature on request.

Address Gen. Pass. Office, A. T. & S. F. R'y, Chicago.

THE ANGLE LAMP

The Light that never fails

is the one light you can use during the warm months with genuine comfort. Its comparatively little heat, together with the little attention it requires makes it the ideal warm weather light. Many **Summer Homes** are equipped with it to the exclusion of all other illumination. While more brilliant than gas or electricity, it never smokes, smells or gets out of order, is lighted and extinguished as easily as gas, and burns but a few cents worth of oil a month. It is a perfect substitute for gas and [illegible] our catalogue W shows all styles from $1.80 up. Sent on request. The Angle Lamp Co., 76 Park Pl., N. Y.

THE ANGLE LAMP IS GUARANTEED.

**Your money will be refunded if you do not find it exactly as represented.**

EDUCATIONAL

**St. Agnes School,**
*Albany, N. Y.*

With the buildings renovated and refurnished, and course of study carefully revised in accordance with the most approved methods, begins its 31st year, October 3, under the new principalship of Miss CATHERINE R. SEABURY, late of Wellesley.

For a generation recognized as one of the best schools in the country for the physical, moral, intellectual, domestic, and religious training of girls, and their preparation for college or a post-graduate course, it is believed that the rearrangement of study upon the newer lines, and other improvements, will largely increase its advantages. The high standards in Art and Music will be maintained. A laboratory for scientific work has been added, and separate sleeping-rooms provided. The school commands a magnificent view of the historic Hudson, and the hygienic conditions and environment are unexcelled. Rt. Rev. WM. CROSWELL DOANE, D.D., LL.D., President of the board of trustees. Send for Prospectus.

**The University Preparatory School,**
**ITHACA, N. Y.**

Prepares for all courses of Cornell University. Certificate has been accepted since 1895. **Boarding** and **Day** Departments. **Complete Home.** Regents Certificates in **Law** and **Medicine.** **Summer Term** from July 16th to September 15th. **Fall Term** opens September 26th for year 1901-02.

Of the school, **President Schurman** says:—

"I give most cheerful testimony to the high quality of work done in your school. The excellent management and complete curriculum render it a most desirable preparatory school for the University."

## CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

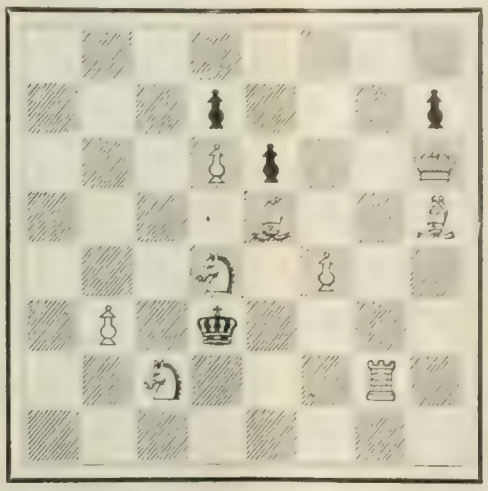
### Problem 569.

Composed by A. H. ROBBINS.

Dedicated to Dr. W. R. I. Dalton.

From *The Independent*, Lincoln, Neb.

Black—Four Pieces.



White—Nine Pieces.

8; 3p3p; 3Pp2K; 4B2B; 3S1P2; 1P1k4; 2S3R1; 8.

White mates in three moves.

### Solution of Problems.

No. 564.

Key-move, Kt—B 6.

No. 565.

Key-move, Kt—B 7.

The point of this problem is to capture the R, compelling Black to move P—K 6. Several solvers do not see the use of the White R. It is necessary to give mate in this variation:

| Kt—B 7 | B x R | B—B 3, mate |
|---|---|---|
| 1. ——— | 2. ——— | 3. ——— |
| B—Q 8 | B any | |

Both problems solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; W. W., Cambridge, Mass; the Rev. G. Dobbs, New Orleans; W. R. Coumbe, Lakeland, Fla.; Dr. H. W. Fannin, Hackett, Ark.; J. E. Wharton, Sherman, Tex.; O. S. Adams, Rochester, N. Y.; Dr. J. T. Glass, Womack, Tex.; W. W. S., Randolph-Macon System, Lynchburg, Va.; Dr. J. H. Stebbins, Geneva, N. Y.; the Rev. A. De R. Meares, Baltimore, Md.; A. H. Cherry, Salt Lake City; A. O. Jones, Corvallis, Mont.; H. M. Coss, Cattaraugus, N. Y.; W. J. Leake, Richmond, Va.; R. H. Renshaw, Boyce, Va.; T. R. Denison, Mobile, Ala.; S. H. D., St. Thomas, N. D.; O. C. Brett, Humboldt, Kan.; Prof. M. A. T., Woodberry Forest High School, Orange, Va.; H. A. Seade, Mahomet, Ill.; O. C. Pitkin, Syracuse, N. Y.; L. H. R., Bennington, Vt.; C. Q. De France, Lincoln, Neb.; L. A. Gouldie, Brooklyn, N. Y.; T. Hilgers, Paterson, N. J.; G. Patterson, Winnipeg, Can.; D. G. Harris, Memphis, Tenn.

564 (only): The Rev. F. H. Johnston, Tarboro, N. C.; H. E. Davis, Cattaraugus, N. Y.; W. W. Stevens, B.A., Youngstown, O.; G. C. Spencer, Greenwich, Conn.; C. E. Lloyd, Washington C.H., O.; W. M. J., New Plymouth, O.; W. Hyde, Brooklyn, N. Y.

565 (only): A Knight, Hillsboro, Tex.; the Rev. J. G. Law, Walhalla, S. C.; Dr. H. Sleeper, Meriden, N. H.

Comments (564): "Very good"—M. W. H.; "A fine and beautiful 2-er"—M. M.; "A case of creating and removing obstructions"—G. D.; Six distinct mates to six clearly separate defenses"—W.

**A Loaf for a King** *All the Wheat that's Fit to Eat Goes into FRANKLIN MILLS FLOUR.*

There is a part of the wheat which is not fit to eat and this part—the outer, woody covering of the berry—goes into most so-called "whole wheat" flours. There is a part of the wheat, however, lying between the outer covering and the starchy interior which contains the gluten—the nerve, brain, bone and muscle nourishing portions of the grain. In the milling of white flour this, the best part of the wheat, is discarded because it is of a brownish color

**Franklin MILLS FLOUR**

A FINE FLOUR OF THE ENTIRE WHEAT

except the woody, indigestible outer covering is the only entire wheat flour which contains all of the nutriment of the grain without the flints [illegible].

From it is made golden brown bread and pastry of that rich, nutty flavor imparted by the gluttinous portion of the wheat. Leading grocers everywhere sell it in original packages containing from 6½ lbs. to full barrels of 196 lbs. It is manufactured only by

**THE FRANKLIN MILLS CO., Lockport, N. Y.**
WRITE FOR FREE BOOKLET.

**Bargains in Violins**

An opportunity to get a fine instrument very low. Students violins dated 1700 (?) from $50 up. Concert instruments by the old masters, in fine preservation, from $150 up. Note these few examples: Testore 1750, $150; Grancino, $200; Pressenda, $200; Gabrielli, $200; Kloz, $125; Old Strad copy, $100, and many others. Four magnificent Stradivarius, Guarnerius and Amati very low. Send for our beautiful catalog of old violins Free. Contains historical sketches of the old masters of Cremona and Brescia from 1540; illustrated; with fac-simile labels, also a descriptive list of old violins possessing the pure mellow tone, and costing from $25.00 to $5,000.00. A formal Certificate of Genuineness accompanies each violin. Monthly payments accepted.

**A SPECIAL OFFER.** We will send several old violins on approval and allow ten days examination.
**LYON & HEALY, 20 Adams St., Chicago.**

**PIANO** Our unique method of selling may interest you. Where no dealer sells our pianos we sell direct; practically bring our large Boston establishment, Factory and Warerooms to your door. We will quote you our lowest prices, explain our Easy Pay System, as available in the most remote village in the United States as if you lived in Boston or New York. More than this, if our careful selection of a piano fails to please you, in other words, if you don't want it after seeing and trying it, it returns to us and we pay railroad freights both ways. We solicit correspondence.

To Our Solvers.

Will you be satisfied to have only the initials of your names published? This would save much space for other items of interest.

## Another "Boy Wonder."

Albert Whiting Fox, seventeen years of age, has been revealing wonderful Chess genius. He is in Paris studying mathematics, and has played a number of games in the Café de la Régence, which take rank at once, among the Brilliancies. Those who do not see *The American Chess World*, in which four of his games appeared, will thank us for giving two specimens of the youth's brilliant play:

Giuoco Piano.

| | FOX. *White.* | KALLER. *Black.* | | FOX. *White.* | KALLER. *Black.* |

| 12 | K R sq | Kt—R 4 | 24 | R—Q 5 (e) | Resigns. |

*Notes from The A. C. W.*

(a) The first eighteen moves of this game aspire to the commonplace; but they are tolerable as leading to an exquisite finale.

(b) Black takes time to thrust this Bishop into a corner, when he might have delayed the evil day by Kt x B.

(c) Black has peacefully been sitting on a volcano, and he now gets an insight into rapid transit, of the most approved style. This is the key move, drawing the Queen from protection of K 7.

(d) In point of audacity this move is without a parallel.

(e) Throwing another posy to the Queen, after which Black concedes the point. The mate by R—K 5 is not to be averted.

Second Game—Ruy Lopez.

The Chess-editor of *The Chicago Tribune* says: "This is unquestionably a remarkable game, and if any recognized master had played it, it would rank among his brilliancies.

## A Study in "Opposition."

The following position from *The Sunday Post*, Boston, looks like a Draw if Black makes the proper defense; but White can win by getting the "opposition." Expert players are acquainted with this, but, as Dr. Shapiro, Chess-editor, *Baltimore American*, says, "correct King-play is one of the most delicate of tasks, and, withal, one of the most difficult for a beginner to learn."

By J. Grier.

White (3 pieces): K on K Kt sq; Ps on Q 5 and Q B 4.

Black (2 pieces): K on K B 2; P on Q 3.

White to play and win.

AN IDEAL SUMMER RESTING-PLACE, SURROUNDED BY THE SEA!

# Muncie Surf Sanatorium Hotel

"O sweet sea air. How bland and refreshing art thou!"

# Don't Cut Corns

**Don't do it Yourself—Don't Let Anybody do it for You.**

What man or woman suffering with painful and annoying corns will not give 25 cents to have them removed?

For 25 cents you get

**LEONARD'S**
**Hamburg**
## Corn Remover

sent to your house, postpaid, which will remove every corn you have, no matter where it is, how long you have had it or how torturing it is. Razors are dangerous; pastes, salves and plasters are worthless. Send 25 c. to-day for this article of genuine merit—the only one that will do the work quickly and properly—it "Acts Like Lightning." Rids feet of corns, soft, hard or otherwise; on the joints, between the toes, or on the soles of the feet. Your money refunded if it does not do all this. Sent prepaid on receipt of 25 cents by

*Clean, Painless, Certain and GUARANTEED.*

**LEONARD & CO., 847 Unity Bldg., Chicago, Ill.**
Be sure to write to-day.

# For Personal Comfort,
